The carcass, I should say, was much in the same situation. Those of the Short-horn and Devon, "are to be long, straight and well developed;" how this is to be summed up in 3 points is a very singular mystery, coming from a "*scientific breeder.*" The flanks all about the same. The Devon has no plates; so I say nothing about the others. I suppose the springing rib answers for plates for them. The carriage I consider a fashionable point. The udder—to be thin in its *texture*, and with this it is "to reach well forward, roomy behind, and teats standing wide apart." It can never be "thin in its texture" in such a shape. A fleshy udder could not be better described. Look at this, ye men with your cheese and butter, and tell me whether you ever *milked a good cow* with a *fleshy bag*. I hope this is not set forth as an example for Devons and Herefords, as I see they are "*to afford the best promise of capacity and product.*" Quality, for which he allows "15," is just the reverse of what it should be, of which I see *all breeds are equal*. Its handling "is too soft."—There is only one point of excellence in it, and that is "elastic," but Mr. R. has injured the *character* of that by connecting it with "*cellular substance.*"

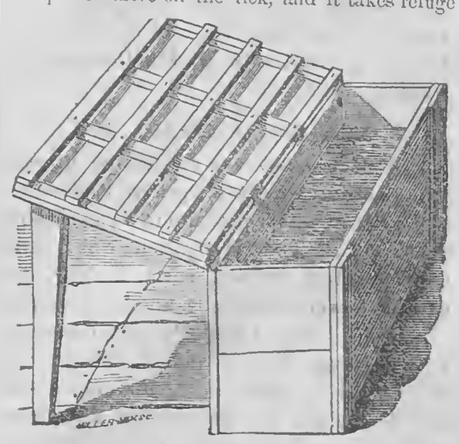
I am, dear sir, yours truly,

WM. H.'Y SOTHAM.

Pittard, Liv. Co., N. Y., June, 1853.

### HOW TO DESTROY TICKS.

TICKS, when very numerous, greatly annoy and enfeeble sheep in the winter, and should be kept entirely out of the flock. After shearing, the heat and cold, the rubbing and biting of the sheep soon drive off the tick, and it takes refuge



DIPPING BOX.

in the long wool of the lamb. Wait a fortnight after shearing to allow all to make this transfer of residence. Then boil refuse tobacco leaves until the decoction is strong enough to kill ticks beyond a peradventure. This may be readily tested by experiment. Five or six pounds of cheap plug tobacco or an equivalent in stems &c., may be made to answer for 100 lambs. The decoction is poured into a deep, narrow box, kept for this purpose, and which has an inclined shelf one side, covered with a wooden grate, as shown in the cut. One man holds the lamb by the hind legs, another clasps the fore-legs in one hand, and shuts the other about the nostrils to prevent the liquid entering them, and then the lamb is entirely immersed. It is immediately lifted out, laid on one side on the grate, and the water squeezed out of its wool. It is then turned over and squeezed on the other side. The grate conducts the fluid back into the box. If the lambs are annually dipped, ticks will never trouble a flock.—*Randall.*

COLIC IN SHEEP.—For this RANDALL prescribes "half an ounce of Epsom salts, a drachm of ginger, and sixty drops of essence of peppermint. The salts alone, however, will effect the cure, as will an equivalent dose of linseed oil, or even hogs's lard."

## CONDENSED CORRESPONDENCE.

### "Deep Plowing vs. Subsoil Plowing."

Eds. Rural:—Being one of those who have "thought and experimented" some upon the subjects mentioned in the Rural of June 18, under the above head, I reply briefly that, according to my experience, subsoiling flat land with a clayey subsoil without first draining it, would work a great injury to the soil, and would be the means of lessoning the amount of crops raised thereon; but that land lying so that the surplus water will pass quickly from it may be subsoiled to advantage without permanent draining. Such a soil and subsoil as your correspondent mentions, needs draining in some way, either by permanent drains or by deep water furrows not more than three rods apart. Surface plowing, even if land is subsoiled, should in no case be less than one foot deep, and if deeper than that it would be better and would well pay the extra expense.

To keep the surface of land even and facilitate drainage fields should be plowed but one way of the field, never cross plowed. Soil can be more thoroughly mixed and pulverized with the same amount of labor with a good wheel cultivator than by frequent plowings. Land cross plowed will invariably present an uneven surface, being in ridges and hollows both ways, which, to say nothing of the appearance of the field, doubles the amount of labor in constructing water furrows to secure the grain crop against being damaged by water.—Linus Cone, *Troy, Mich.*, July 1853.

### About Killing Thistles.

Eds. Rural:—I desire to be permitted to say a few words to I. H., through the medium of your paper, particularly in regard to killing thistles. I. H. will go on and manure his ground, and prepare it, plow and plant it with corn. Then proceed in a few days with his men, and spades, to cutting up thistles, with some profit, (I presume.) I will simply state my own experience.

Three years ago I purchased a farm. On the field I summer fallowed, the thistles grew to such an enormous size, that I was under the necessity of mowing them to get my team along. I broke it up the last of June and the first of July, about nine inches deep; harrowed directly after breaking, then allowed it to remain until after harvest, when I drew on about 12 loads to the acre, of barn-yard manure, and spread it evenly over the ground: again harrowed it thoroughly, and before seeding went over it twice with a cultivator; (I use Hudnut's spring steel teeth wheel cultivator, of Geneseo.) From that day to this, no thistles have made their appearance. I raised about twenty-five bushels of wheat to the acre.—Have the same field in wheat this season, and it is the best piece that I ever have raised; and no thistles have made their appearance, though my neighbors told me that that they would grow spontaneously.

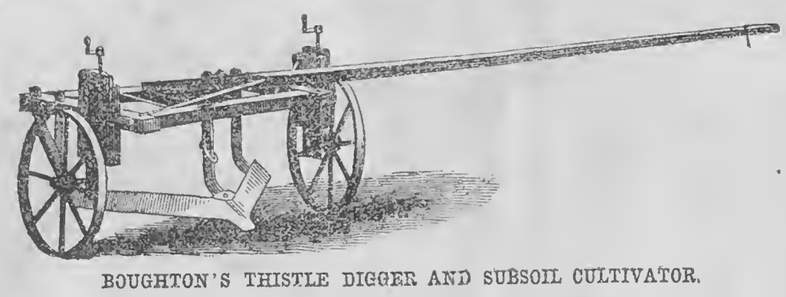
I can take my team and cultivator, and cut up as many thistles in a day as Mr. I. H. can, with a dozen hands, with their spades, (and he to superintend them;) which with us would be worth $12 per day. If my team would be worth $2, there would be a saving of $10 per day, and a fallow well fitted for wheat.—O. H. M., *Pavilion, N. Y.*, July, 1853.

### New Grains, Grasses, &c.

Eds. Rural:—I am cultivating a great variety of foreign grasses, grains, vegetables, &c., some of which promise to be a valuable acquisition. The Hungarian Snow and Chilian Flint wheats, sown in Nov. are now in flower, heads long and large—straw very large. The Japan Pea is a curiosity. I have seven thrifty plants. Unlike all other peas, it throws out no tendrils—is not dependant for support on any thing else. The stalk or stem is as hard and stiff as wood of this year's growth in the nursery. The Pea resembles in form and size the smallest bean, but is of a rich cream color.

I have also the Thanet and Chevalier Barley, Alrike and Flesh-colored Clover, Perrennial Rye Grass, Melons, Squashes, &c., &c., for most of which I am indebted to the Rural New-Yorker—and hope to be able to pay in some of the fruit in due time. The "flesh colored clover," is said to be an annual. It is just coming into flower, though sown rather late this spring. The flower is a bright crimson, heads long, and cone shaped.

On the 18th, we commenced digging new potatoes for the table, (if it is not early don't mention it aloud, for I took some pains to have a samll patch of early potatoes, and the experiment has succeeded well, compared with the earliest of my neighbors.) If you have tasted, and investigated the claims of the "Wild Mexican Potato," we would regard your opinion.—Potatoes at $2 to $3 per bushel are not extensively eaten—it will do however, for us to receive the opinion of a man who is not particularly interested in high prices. Probably nineteen-twentieths of the last years crop has been planted this spring, and farmers have paid from $2 to $3 per bushel for their seed. It is confidently believed by those who know the qualities of these potatoes, that the entire crop of this season will be wanted for seed next spring, but not at such high prices. Wayne and Monroe counties will probably produce two thousand bushels, and all who are in for improvements will test their qualities this season, and look out for their seed without the fear of being humbugged.—I. W. B., *Macedon, Wayne Co., N. Y.*, June 20, 1853.



BOUGHTON'S THISTLE DIGGER AND SUBSOIL CULTIVATOR.

Boughton's Thistle Digger and Subsoil Cultivator, represented above, has been in use for some years, and is gaining favor in this section. Since its introduction, the inventor has made some valuable improvements in the shape of the blade; also by dispensing with the use of nuts under the blade, thereby obviating the liability to clog.—Judging from the testimony of those who have given it a trial, we presume Mr. B.'s machine to be well worthy the attention of cultivators. See advertisement.

### About that Fence.

In the Rural of July 2d, is a notice of an article of mine, on staking and capping common rail fence, by E. Buel, of Prairie Ronde, Mich., in which he attempts to level my favorite method, and build up his own, with "prairie breezes" and "unruly colts;" but, unless they have become more than *common levelers* by practicing on his style of fence, "staked and capped at the corners," where even prairie breezes shrink on approaching. I will engage they will stay put within a good fence secured in the way I proposed. And

> "Had I all knowledge, human and divine,
> That thought can reach, or science can define;
> And had I power to give, that knowledge birth,
> In all the speeches of the babbling earth—

I should scruple to use it when common sense failed. Fancy carries some beyond the point of utility. With such I have no desire to interfere, for prejudice is stronger than reason or common sense.

All I claim in mine, being preferable to any other observed style, is, saving in expense of materials, time and labor in building, repairing, and land. If all these are not offsets sufficient against peculiar fancies, or uncommon levelers, let others more nice, prescribe; and if Mr. Buel will propose a style, uniting fancy, economy and utility, surpassing mine in beauty, and permanency, in the eye of the prudent farmer, I will doff hat, and vote him a diploma. And although, where "breezes" are powerful enough to require an "improvement in my style of fence," a *forensic* effort might mistake "request" for *remark*, with impunity, yet it is not sufficient excuse in a written one, even by a capper of fence.—S. Graves, *Marcellus*, July, 1853.

### The Great Discoverer and his Secret.

"If this discovered law of Nature, and a law of God, in this boasted age of Printing and of Law, the perfection of reason, die with me, the Age, and the Patent, and the Copy-right laws are to blame, for not making it to my interest to publish it without reserve."

Eds. Rural:—The above is from Russell Comstock's Circular of June, 1852.—Now, I wish to know what can be understood by it, more than that he does not disclose all the secret, as he engages to do, to his classes, but keeps some part back; to protect himself against treachery—acts the dishonest part. Then, to assume the garb of truth, brands those who endeavor to obtain the knowledge in any other way than through him, as "penny wise and pound foolish, and none too honest." His impudence in that will not more than match his selfishness,—claiming, as he does, not only all the wisdom, worth and decency, but all the honesty.

But to the extract. Can there be any danger of any of Nature's or God's laws dying with the Professor, or any other *revelator* who refuses to reveal them? If so what becomes of their immortality? Can a knowledge of them die with him, if, as he pretends, he has revealed that knowledge to thousands? There is deception in either horn of the dilemma. Take your choice, Mr. Comstock; either one will take the rag off. G. S.

A Prolific Squash.—I have a variety of the winter squash, an excellent article for cooking—of a very rich gold color, and will keep into January. From one seed, last year, grew a vine *sixty-six* feet in length; producing 32 squashes, the largest 18 inches in length and 26 inches in circumference.

P. S. I would note, that the *main vine*, grew to the above length, exclusive of the collateral vines.—L. N., *Windsor, Ashtabula., Co., O.*, 1853.

## AGRICULTURAL INTELLIGENCE.

### Sale of Stock in England.

We learn from a circular forwarded us by Col. B. P. Johnson, that the Agricultural Stock of the late Earl Ducie is to be sold at auction, at Tortworth Court, Gloucestershire, on the 24th and 25th days of August ensuing. The sale will embrace the entire Short-horn Cattle belonging to his Lordship, consisting of upwards of 60 head of bulls, cows, and heifers—comprising the whole of his celebrated "Duchess" and "Oxford" tribes of Short-horns; and many promising young bulls and heifers, bred from the most celebrated herds in the kingdom. Also a splendid flock of 800 South-Down Sheep, bred from the renowned stocks of His Grace the Duke of Richmond, Col. Kingscote, and others—since which have been used the best Tups that could be obtained from Mr. Jonas Webb. Also, the stock of Pigs, descended from the most distinguished breeds in England.

Catalogues with the Pedigrees, &c., may be had on application to Mr. Strafford, 89 Guildford st., Russell-square, London.

### The Harvest, Crops, &c., in Seneca Co.

Dear Rural:—The farmers in this vicinity have commenced their harvest. Heavy sheaves and glowing, happy faces are visible in almost every field. The grain is ripening fast, and a bountiful harvest is anticipated. The weevil has been much less destructive in this section than for a few years past,—indeed there has been comparatively but little damage done to the wheat by that insect. Early sown wheat has almost entirely escaped. There is promise of a bountiful yield—a rich reward for the labors of the husbandman, and a reproof to his complainings, and his ingratitude.

As to spring, or summer crops, not so much can be said, though, as a general thing, we shall have a good yield. Barley looks fine. Corn and potatoes are coming on finely now. The dry weather we experienced in the early part of the season, has been unfavorable for grass and oats—the former is therefore thin, and the latter "short."

It is cheering again to behold the ripening—the golden harvest. We are again reminded that "seed time and harvest shall not cease." The earth produces her abundance, and man—ungreatful and rebelious, and all the teeming populations, feast upon the rich bounties of the golden year. Let us praise the Giver—bless God for the *Harvest.*—S. Furman, *Romulus Centre, N. Y.*, July 9th, 1853.

### Cattaraugus County Fair—Crops, &c.

The Cattaraugus County Fair is to be held at Randolph, Sept. 15th and 16th. It will present some new features in the way of fairs in this county, and we hope to awaken new interest in agriculture.

The season has been unusually fine, and crops are very fine indeed. From what I have seen and learned from other counties in the western part of the State, our corn, oats, and hay crops are unsurpassed. Potatoes were never better, and the quanity planted is much larger than heretofore.—Fruit of every kind is abundant and of superior quality.

Improvement is advancing with unexampled rapidity, in this county, and is not confined alone to the destruction of our forests, but we see it in the improved system of cultivation and farm management, in the dairy, in our stock, and improved farm implements.—S. S., *Randolph*, July 8th, 1853.

Improved Horses are in demand, this season, at high prices. Among other transactions, we learn that E. W. Cahill, Esq, of Dalton Wayne Co., O., has purchased of Col. Burnet, of Syracuse, one of Consternation's best stallion colts out of a Messongor mare. He will be three years old in Sept., and is represented as superior in many respects—promising to be fast, large and handsome. Price about $500.

—We understand that the celebrated race mare "Fashion"—recently purchased, with a foal at her foot out of "Mariner," for $1,550, by Col. L. G. Morris—will be bred to Mr. Burnet's imported horse "Consternation" the present season.

## THE AGRICULTURAL PRESS.

### How to make Manure.

The Massachusetts Agricultural Society's Report gives the following statement from a farmer of Hampshire Co., of that State:

Immediately after planting in the spring, and after I have used what manure I want, I commence my compost heap for the next season. Into a convenient place, which with me is a hollow in the angle of a bank-wall on the south end of my buildings, I deposit first a load of horse manure. Over this I usually spread the scrapings of my wood yard, especially in May, and all other substances that will make manure that I find about my buildings; such as the rakings of the yard, old leaves, &c., making in all another small load. Over this I add a load of loam; then over the whole I spread about a bushel of ashes. For the next three or four weeks this heap receives from the wash-room all the soap-suds and washing-water, and from the house all the slops and washings of the kitchen, sweepings, &c., being kept continually moist. In about four weeks after the first deposit, I add another load of horse manure, more loam, and sand from the washing of road drains spread over all a layer of wood ashes, occasionally adding more during the next four weeks. This heap, for the succeeding four weeks, receives as before, all the fertilizing substances that accumulate in the wash-room and kitchen. This process is continued during the summer and fall until snow covers the ground; then I call my heap finished, only as it continues to receive during the winter, washings, slops, &c.

I claim for this manure the following advantages:—First, it is cheap. Horse manure, *alone*, is a miserable fertilizer; and this excepting the wood-ashes, is the only substance of any value that enters into the composition. Combined in the way stated, it helps to form a valuable manure. Again, as a matter of cleanliness and convenience, this compost heap is of great advantage.—How often do we see about farm houses and farm yards, accumulations of substances, rendering the premises filthy and unsightly! The compost heap receives all these otherwise useless accumulations.

### Patent Bee Hives.

On the subject of patent bee hives we think the suggestions contained in the following statement of Lewis F. Allen, copied from a former volume of the transactions of the New York State Agricultural Society may be useful:

"I have seen, examined, and used several different plants of *Patent* Hives, of which there are probably 30 invented, and used, more or less. I have found *all* which I have seen satisfactorily, not carrying out in full the benefits claimed for them.

The bee works and lives, I believe, solely by *instinct*. I do not consider it an inventive, or *very* ingenious insect. To succeed well, its accomodations should be of the *simplest* and *securest* form. Therefore, instead of adopting the complicated plans of many of the patent hives, I have made and used a simple box, containing a cube of one foot square, *inside*—made of one and a quarter inch sound pine plank, well jointed and planed on all sides, and closely put together *perfectly tight* at the joints with white lead ground in oil, and the inside of the hive at the bottom champered off to three-eights of an inch thick, with a door for the bees in front of 4 inches long by three-eighths of an inch high. I do this that there may be a *thin* surface to come in contact with the shelf on which they rest, thus preventing a harbor for the bee moth. (I have never seen a patent hive, which would exclude the bee moth, nor any one, so well as this, having never been troubled with that scourge since I used this tight hive.) On the top of the hive, an inch or two from the front, is made a passage for the bees of an inch wide and six to eight inches long, to admit the bees into an upper hive for surplus honey, (which passage is covered when no vessel for that purpose is on the top.) For obtaining the honey I use a common 10 or 12 quart water pail, inverted, with the pail turned over, in which the bees deposit their surplus. The pail will hold 25 to 30 pounds of honey. This is simple, cheap, and expeditious; the pail costing only 20 to 25 cents, is taken off in a moment, the pail re-placed, and the honey ready for transportation, or market, and *always in place*. If there is time for more honey to be made, (my bees make 2 pails full in succession this year) another pail can be put on at once.

Such, gentlemen, in short, is my method. I have kept bees about 20 years. I succeed better with this plan than any other; it being cheap, simple, convenient, and expeditious."

### Draining vs. Rust in Wheat.

The following suggestions, which we copy from a letter of an eminent agriculturist in Western New York, whose soil is a strong, rich, clayey loam, opens a subject of much interest to wheat growers:

I have learned that wheat, in the light and gravelly districts of Western New York, suffers very little, if any, from rust or mildew; while with us, the two great causes of damage are rust and winter-killing. I have been thinking over the subject; and, as we know that underdraining is a cure for the latter, may it not also be a cure for the former? We have little if any land in this district of country which does or has not required underdraining. Now the point to which I wish to direct attention is whether the exemption from rust is not owing to the dryness of the soil and subsoil? If it should prove to be so, then we have an additional inducement to underdrain.

I had some underdrains, made in a piece of land that was originally a black ash swamp, and had a mucky soil—and from such, wheat is very liable to be ejected in winter. Yet over one of these drains I observed last spring that the wheat stood thick and undisturbed, while much at a short distance was severely injured.

There is a tract of gravelly land between Lockport and Batavia which I think is underlaid by plaster beds—a sort of oak openings—which is famous for producing wheat. It is worthy of inquiry whether rust is destructive there or not.

In those dry Asiatic or African countries, where there is not moisture enough to encourage the growth of rust or mildew, it might be difficult to determine how much the soil or subsiol has to do with the matter; but if it could be shown that, in our moist climate, underdraining is able to counteract its defects on so important a point as the growth of wheat, the discovery would act as a powerful stimulus on our farmers.

I may add, that under live trees, where roots keep the ground firm (by preventing much cultivation,) and comparatively dry, wheat is neither liable to be thrown out in winter nor injured by rust; and generally along our swales where there is the most moisture there is the most rust. When I removed to this country I had no idea that our land would ever need draining, but this was when the ground was full of roots.—Since these rotted out, there has been a settling down of the soil. An intelligent neighbor thinks it has settled four inches in the last ten years, though I have no means of telling how much; I only know that I have fields which I would not now think of sowing with wheat, but to which purpose I should have made no objection 10 years ago.

All I intend by these remarks is to excite observation and reflection, and not to build up an opinion or theory.—*Cultivator.*

### Flax Culture in Indiana.

Mr. R. T. Brown, of Crawfordsville, in a communication to Governor Wright, President of the Indiana State Board of Agriculture, says:

"I send you enclosed a few samples of 'Fax Cotton,' presented to me by the Hon. H. L. Ellsworth, of Lafayette. Mr. Ellsworth has secured the machinery necessary for the manufacture of the cotton, and will have it in operation early in the season. He has on hand the 'stem' grown on 120 acres last season, which, from experiments already made, will, he supposes yield about 300 pounds per acre, of 'cotton' similar to No. 2 of the enclosed specimens. The expense of reducing the fibres to this state, after the stem is produced, is about two cents per pound, which at the usual price of cotton, (10 cents,) will leave eight cents per pound, or $24 per acre, for the farmer who produces it. To this must be added the value of the seed, which will range from $6 to $8 per acre, giving a final result of $20 at least for each acre. This is Mr. Ellsworth's calculation; it may be too high; but if we allow for the magnifying effects of his zeal one-third, or even one half, still flax will be as profitable a crop, in proportion to the amount of labor required to produce it, as any of the staples of the country.

Mr. E.'s method of flax farming is to break his ground in the fall, and secure it from being trodden in the winter. Between the middle and last of April he harrows it well, sows his seed, harrows in, and passes the roller over it, leaving a level surface.—He harvests it with a horse power reaper, cutting about two inches from the ground. As soon as it is dry, the seed is threshed off, (for which operation we yet need an appropriate machine,) and the 'stem' baled for transportation to the factory. The amount of labor is about the same as that required for a wheat crop."

### Horses and Tobacco.

N. P. Willis, Esq., gives the following hint whereby trees may be saved from being gnawed by horses, from which they suffer so much in exposed situations, when used as hitching posts:

"Strangers *will* tie their horses to the trees from which I can least spare the bark they eat off, while their masters are rambling about; and I had just been washing the trunks of two or three evergreens with tobacco-juice, (said to be a six months' disguster for the worst kind of crib-biter,) when neighbor S——, with his white locks flowing over his shoulders and his calmly genial face beaming from under his broad brimmed hat, drove down the avenue—a moving picture among the beautiful cedars and hemlocks, that made them more beautiful than before. We tied his horse to one of the tobaccoed cedars, which the fine animal, a splendid bay, opened teeth upon, and immediately backed off to the length of his haltor, taking an attitude of repugnance in which we found him on our return."

Cob Meal.—Mr. Thomas Motley, Jr., of West Roxbury, says, in the Boston Cultivator:—I have fed out over five hundred bushels this winter to horses, working oxen, milch cows and pigs—in fact, I have used no other grain. My horses have never been in better condition than at present, and have worked hard all winter; they have been fed regular upon the following feed: 12 lbs. cut hay and 8 quarts cob meal to each horse per day. Horses, oxen and cows are all in good health and condition, and I should be happy to see any person interested in agricultural matters, and let them judge for themselves.

Plant a tree—train a vine—foster a shrub—deposit a flower-seed and nurture its blossom—paint the fence—"slick up" the yard—fix the sidewalk,—in short, give heed to the little things that constitute the grand aggregate of public beauty.

# Orchard and Garden.

## BUDDING OR INNOCULATION.

Budding and grafting are the two known modes of changing the products of trees and shrubs, to those of a kindred character—modes known and practiced by the ancients as well as ourselves. In each method the living shoot or bud of the one variety, is inserted and made to become a part of the other, and then produces the same fruit which it would have done in its original or native position, with, perhaps, some slight modification. Varieties of the same species unite most freely, the species of the same genus, and their genera of the same natural order, but the greater the affinity between the bud or graft, and the stock, the greater the success of the operation. This general rule, however, has exceptions: thus the wild and the cultivated cherry will not agree, though of the same species; and the pear and the quince, though more distantly related than the pear or the apple, much better agree with each other, perhaps from like firmness of wood, which is very important to success in grafting.

The operation of budding is simple and easily performed—much more so than grafting—but each has its advantages, varying with the character of the stock, and the object sought to be attained. Thrifty stocks alone admit of budding, while grafting best succeeds on those of slower growth. In the peach and nectarine it seldom fails, while grafting rarely succeeds. It is rapidly performed, and admits of repetition the same summer, as failure does the stock no injury. But grafting requires less care subsequently; so the nature of the tree and the convenience of the nurseryman should well be consulted. It may be added that in moist climates or seasons, grafting becomes most successful.

The requisites for success in budding are summed up by Thomas, in the Fruit Culturist, as—First, a thrifty, rapidly growing stock, so that the bark will peel very freely.

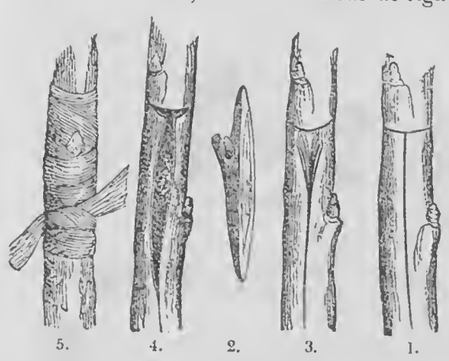
Secondly, a proper time; not too early, when there is little *cambium*, or mucilagenous cement between the bark and the wood for the adhesion of the bud,—nor too late when the bark will not peel freely, nor the subsequent growth sufficiently cement the bud to the stock.

Thirdly, buds sufficiently mature.

Fourthly, a keen flat knife, for shaving the bud, that it may lie close in contact upon the wood of the stock, and

Fifthly, the application of a ligature with moderate pressure, causing the bud to fit the stock closely.

The following directions for budding are condensed from the same authority. The operation consists in introducing the bud of one tree, with a portion of bark and a little adhering wood, beneath the bark of another, and upon the face of the newly forming wood, which should only be performed while the stock is in a state of vigorous growth. An incision is made lengthwise through the bark of the stock, and a small cut at right



5. 4. 2. 3. 1.

angles at the top, the whole somewhat resembling the letter T, (fig. 1.) A bud is then taken from a shoot of the present year's growth, by shaving off the bark an inch or an inch and a half in length, with a small part of wood directly beneath the bud, (fig. 2.) The edges of the bark at the incision in the stock are then raised a little, (fig. 3,) and the bud pushed downwards under the bark, (fig. 4.) A bandage of bass, corn-husk, or other substance, is wrapped round, covering all parts but the bud. (fig. 5.) The pressure should be just sufficient to keep the inserted portion closely to the stock, but not such as to bruise or crush the bark.

The shoots containing the buds should be cut when so mature as to be rather firm and hard in texture; they are usually in the best condition after the terminal bud has formed. The leaves must be immediately cut off, as they rapidly exhale the moisture from the shoot; about one quarter of an inch of the footstalks of the leaves should remain to serve as handles for the buds while inserting them, (fig. 6.) When by growth the bandage cuts into the stock, usually in ten days to three weeks, it must be removed. The bud remains dormant until the following spring, when the stock is cut off two inches or more above it. If cut closer, the end of the stock becomes too dry and the bud often perishes. All other buds must be then removed, and all the vigor of the stock or branch thrown into the remaining bud which immediately commences a rapid growth.

7. 6.

To secure a straight and erect growth, the new shoot, when a few inches long, is tied to the remaining stump of the stock, (fig. 7.) By another month, no further support will be needed, and the stump may be wholly cut away, and the wound allowed to heal by the rapid formation of new wood. Buds may be made to grow the same season, but it is found better to allow them to remain dormant. The various modifications, in the mode of cutting and inserting which have been proposed, are found not to succeed as well as the plan here described. Spring budding may be practiced as soon as the trees are in leaf, if buds have been kept dormant for that purpose in an ice house or cool cellar. They will make a good growth the same season.

## THE AILANTHUS TREE.

Simultaneously with the Chinese Rebellion, there has broken out a crusade against the only native of China that has ever been successfully naturalized and adopted in this country. It is about twelve years since the "Tree of Heaven" came over. Then it met with general favor. Its rapid growth, and hardy nature, its straight, handsome trunk and thick luxuriant foliage, made it just the thing for planting in city streets. It was said to combine the good qualities of the horse chestnut, maple, elm, poplar and linden, all in one. It was generally planted in Washington, Baltimore, New York and Philadelphia, and you can walk now under long shady avenues of it there, while the young forest trees, by the side of it, planted at the same time, are spindling and not half grown. Very few got as far north as this, though it would grow perfectly well here.

But in the course of a few years it was discovered that the flowers emitted a disagreeable odor for two or three weeks in June, pervading the streets and obliging people to shut their windows. Doctors have experimented with it, and pronounce it unwholesome. And of course the larger the trees grow, the worse the nuisance is.—Whereupon there arises a cry of "Down with the Ailanthus," and its curses come home to roost in its own branches. One or two Common Councils have passed resolutions at it, and all this month it has been an abomination in the nostrils of nurserymen and newspapers Even the Home Journal, whose editor wrote the famous verses to the "Woodman," &c., is unwilling to "spare *that* tree."

Fortunately, however, there is a remedy, short of total extermination. Only part of the trees bear the obnoxious blossoms.—The staminate and pistillate flowers are on different trees, and it is only the former that are objectionable. The pistillate trees never need be destroyed, and if suckers taken from them only are planted, we shall soon be rid of the trouble. We advise any man who thinks of cutting down an ailanthus to find out first whether it has actually borne the blossoms, before he does it. Otherwise he may needlessly destroy what in five years will be, if it is not now, the chief ornament of his premises.—*Alb. Eve. Journal.*

## TRANSPLANTING EVERGREENS.

A good article on this subject urges (what we have long since endeavored to enforce) "*that the roots while out of the ground, should be moist—that they should never for a moment even, become dry during the process of transplanting.*" Hence a rainy day is recommended in all cases, and especially where the roots are denuded. A few experiments are given. A long screen of Arbor-vitæ were set out in a stormy week, with the sod on. Six were set aside in a tub of water—four were left exposed to a drying wind. These four only died, out of two hundred and ten. The six, after three weeks neglect in the water, all survived. Again, fifty Norway Spruces were set out on a moist day. One, by mistake, was left, and received a few hours of sunshine—this only died. We have succeeded well with some sorts, brought long distances, by insisting on the instant immersion of the roots in water, as soon as up—packing in wet moss, kept soaked with water—the roots plunged in mud as soon as received, and *laid in*—and again mudded and the earth well settled with water, when transplanted. Removing plenty of earth on the roots—an infallible mode—besides preserving all small fibres, keeps the roots constantly moist.—*Ex.*

## FRUIT VS. DRUGS.

God made fruits, man makes pills. The first is a wholesome, delicious food, and in many instances an efficient medicine; the last, generally noisome, disgusting poison, occasionally curing some malady, but not unfrequently fastening another effectually in its place. We do not mean to be understood as asserting that the use of fruits will cure sudden, acute, or violent disease, but only, that if properly employed, may remove incipient illness, and keep off others to which the constitution or habit is liable.—Yes, we will take one important step in advance of this assertion, and say that where an abundance of wholesome, seasonable fruits are judiciously used, with a reasonable observance of other ordinary rules for the preservation of health, sickness will seldom or never occur. And how easy it is to provide a wholesome and adequate supply must certainly be obvious to the most superficial observer.—*Ex.*

To Cure Wounds in Fruit Trees.—The following directions were published by William Forsyth, King's Gardener, in England, many years ago, and have often been found valuable:

"Take one bushel of fresh cow dung, half a bushel of lime rubbish from old buildings, that from the ceiling of rooms is preferable, half a bushel of wood ashes, and two quarts of fine sand. The three last articles to be sifted fine, and then mixed with the first, working them together until the mixture is very smooth and soft, like plaster.

The tree is to be prepared by carefully removing all decayed or injured portions, down to the sound, fresh wood, leaving the surface smooth, and rounding off the edge of the bark very smooth. After this the above plaster is to be spread very carefully and smoothly over the cut surface and somewhat beyond. The plaster should be from an eighth to half an inch thick, and smoothly and thinly finished off at the edges. After the plaster has been spread, it should be dusted over with a mixture of four parts of dry ashes, to one part of fine sand once in twenty or thirty minutes, until the moisture is all absorbed, and there is a smooth, dry surface.

Planting.—Many shrubs, and even trees can be safely moved when in leaf: so says our correspondent, Mr. Miner, and so say we. It should be done in a cloudy day expeditiously, and with care, so that there be no wilting of the leaf. June roses would hardly survive this treatment unless in special circumstances, nor would any plant with few and straggling roots. On the other hand, full and fibrous rooted shrubs make no complaint.—*Prairie Farmer.*

# Domestic Economy.

Vinegar from Beets.—Grate the washed beets, express the juice in a cheese press, and put the liquor in an empty barrel; cover the bung-hole with gauze, and place it in the sun. In a few weeks the vinegar will be good. It is said one bushel of sugar beets will make five or six gallons of vinegar, which is probably nearly correct, as nine-tenths of the substance of the beet is liquid, and each bushel of roots contains about equal to six gallons in measure, omitting the interstices.

How to get rid of Mosquitoes.—The oil or essence of pennyroyal [the oil is the best,] sprinkled around the room, and over the bed clothes, before retiring to bed, has been found to answer admirably in correcting these rowdy insects of their *calithumpian* and *bill-sticking* propensities. It is a volatile article, and therefore can do no injury to the clothes, while the aromatic flavor is by no means disagreeable.

Vegetable Soup for the Sick.—Two potatoes, two onions, two turnips, one carrot, a little parsley chopped fine, salt to the taste. Cut the potatoes in quarters, slice the onions, cut the turnips in quarters, slice the carrot. Put all in a stew pan with three pints of water. Boil it down to one quart. About fifteen minutes before it is done add the parsley. Strain it and serve with light bread or toast. This is the recipe of a late eminent physician of Philadelphia.

To cover Preserves.—The covering for preserves used by the trade, instead of a bladder, is made by brushing over sheets of wet paper, of the thickness and length required, with linseed oil which has been previously boiled. The sheets should be hung on a string, and thoroughly dry before using. The material is also used for tulip shades, and as a substitute for glass in workshops. It is perfectly water proof.

To make Rose Water.—Take two pounds of rose-leaves, place them on a napkin tied round the edges of a basin filled with hot water, and put a dish of cold water upon the leaves; keep the bottom water hot, and change the water at top as soon as it begins to grow warm. By this kind of distillation, you will extract a great quantity of the essential oil of the roses by a process which cannot be expensive.

Burns.—For burns or scalds, apply *dry flour* at once, and keep it on the wound till it is healed. If it cannot be made to stick, grease or oil the part, so as to form a coat of it. We knew a child a short time since, to burn the back of its hand, so as to take off the skin entire. The flour relieved the pain instantly, and under its cover, the wound healed in a few days.

A new Seidlitz powder, in one paper, is now used, and found to be as useful as any. It is composed of one part of bicarbonate of soda and two parts of bitarate of soda; half a teaspoonful is dissolved in spring water.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending July 5, 1853.

Alanson Abbe, of Boston, Mass., for Improvement in Instruments for Correcting Lateral Deviations of the Spine.

J. Cross, of New London, Ohio, for Improvement in Brushes.

A. M. Day, of Bennington, Vt., for Improvement in Clavicle Adjusters.

Geo. Hazlewood, of Boston, Mass., for Improved Cradle and Tete-a-tete.

Chas. W. Lancaster, of New Bond street, England, for Improvement in the manufacture of Cannon and other Fire-arms. Patented in England, Jan. 16, 1851.

Thos. L. Mitchell, of Birkenhead, England, for Improvement in Propelling Vessels. Patented in England, Nov. 25, 1848.

John North, of Middletown, Conn., for Improvement in Trusses.

Wm. Porter and Edward A. Tuttle, of Williamsburg, N. Y., for Improvement in Lanterns.

Amzi C. Semple, of Cincinnati, Ohio, for Improvement in Paddles for Vessels.

Noah J. Tilghman, of Salisbury, Md., for Improvement in Crow Killers.

RE-ISSUE.

David P. Bonnell, of Tecumseh, Mich., for Improvement in the process of Flouring. Patented Aug 14, 1849. Re-issued July 5, 1853.

DESIGNS.

Nathaniel Waterman, of Boston, Mass., for Design for a Waffle Baker.

## VENTILATED RAILROAD CARS.

Every one who has traveled on Railroads knows the annoyance, and often times suffering, arising from the dust. Messrs. Atwood & Waterbury, of Watorbury, Conn., have, it is asserted, discovered an effectual preventative, so much so that when riding at the rate of thirty miles an hour, no more inconvenience is experienced from heat and dust, than while seated in the parlor at home. From the *Albany Journal* we clip the accompanying description of the invention, with the expression of an ardent desire that the improvement may be speedily introduced into general use:

The invention is extremely simple. The air-box is constructed on either side of the tender, with an apparatus facing the engine, to receive the air. The air thus received, rushes through this space into the baggage car, and from that into the passenger car—the whole train being thrown into one vast saloon. All the cars are enclosed at the point of coupling, by India rubber canvass, put together so as to be susceptible of very easy removal, if it is desired to separate the cars. There is a door on either side of the platform for the ingress and egress of passengers, which is only opened after the train has stopped — the windows remaining fastened all the time.

When in motion, the train becomes a perfect tube through which the air, which finds admission at the aperture on either side of the tender, rushes with a force corresponding with the motion of the train. When going at the rate of but fifteen miles an hour, the air moved with sufficient force through the car farthest removed from the tender, to float a heavy silk pocket handkerchief; and it rushed through the doors (being of the ordinary size) with force enough to blow one's hat off! And, best of all, in these refreshing breezes, not a particle of dust was perceptible. A ride, in a hot day, on a train thus equipped, is a luxury worth making a long journey to enjoy.

The only drawback to this invention, is the heat experienced when the train is stopped. It is somewhat oppressive, but not much more so than in other cars, while no dust is blended with the hot air, rendering every respiration but little better than the operation of a rasp upon the lungs.

## BALLOON TRAVELLING.

Mr. John Wise, of Lancaster, Pa., the hero of we know not how many balloon ascensions, is agitating the question of an air voyage to Europe. He has made an estimate of the cost of a transatlantic voyage, including balloon and outfit, which is as follows:

| | |
|---|---|
| A globular balloon 125 feet in diameter, will require 5,000 yards of silk at $2 per square yard. | $10,000 |
| 100 gallons prepared linseed oil | 200 |
| Net work, grapnel and cordage | 300 |
| Labor | 1,000 |
| Contingencies | 1,000 |
| Sea-worthy boat, with masts and sails stowed away (probably) | 5,000 |
| Provisions and water for eight men | 100 |
| Instruments | 500 |
| Coal gas, decarbonized 550,000 cubic ft, (probably) | 2,500 |
| Ballast | 100 |
| Total cost | $20,000 |

Mr. Wise estimates that the trip would require but forty-eight hours. After deducting the weight of materials, &c., of eight men and their provisions, and 2000 pounds for ascensive power to start with, he estimates there would be a reserve of 25,195 pounds left for mails and weight. He awaits the encouragement of the public, and says he does not ask or expect any assistance until he has demonstrated the principle and made at least one successful trip from some of the Western cities to the seaboard. Mr. Wise is a veteran aeronaut, and we hope he will be furnished with the means of carrying out his experiment—provided, of course, that he succeeds in demonstrating his principle. We should be slow to pronounce the idea of crossing the Atlantic by balloon an absurdity.—*N. E. Farmer.*

## GRAIN HARVESTERS.

A new Reaper has just been invented by a citizen of Brooklyn, N. Y., which can be worked by one horse, and it is said will cut twenty-five acres of grain in a day.—Four scythes with three cradle frames are fastened to the rim of a drum or cylinder, having a vertical or rotary motion. The drum for a medium size machine is to be six feet in diameter. The scythes are so arranged that every revolution of the cylinder simultaneously with the stroke, cuts and lodges the grain in a standing gavel inside the cylinder or drum, whence those who hold the machine can conveniently bend and dispose of the bundles of grain. This mode of gathering the grain wholly dispenses with raking. The grain is cut by the same kind of a stroke as is made with a hand-cradle. It is in fact the old mode of hand-cradling, worked by machinery and worked by horse. So says a contemporary, but we must have better proof before we can believe the statement.

J. Faber, of Farmers Hill, N. Y., has taken measures to secure a patent for an improvement in the above. The invention relates to a mode of hanging the cutter bar to a swing or balance frame hung loosely upon the axles of the two wheels, whereby the cutters may be elevated above the ground sufficiently to pass any obstruction which may interfere, or to pass inequalities of surface; two sets or series of cutters are employed upon two cutter bars, and the teeth being triangular or saw-shaped, operate like shears upon each other. The cutter bars are thrown in and out of gear with the driving wheel, and by a very simple arrangement placed on the top of the balance frame, which is under the control of the driver.

A new machine for harvesting grain has been invented by James N. Wilson, Isaiah Marsh, and George Kirk, of Waukegan, Ill. In the construction of this machine several important features have been observed by the inventors. Among them is a mode of preventing the teeth or cutters from becoming clogged by leaves of grass, &c.; this is effected by making the fingers, through which the sickle or cutter bar slides, open upon the top, and adding a set of small clamps to keep the cutter bars in their proper place. Several other alleged improvements are introduced, which cannot be properly described in this place. Measures have been taken to secure a patent.

## IMPROVED RAILROAD CAR SEAT.

John T. Hammitt, of Philadelphia, has invented a car seat so constructed that the person seated in it may, at pleasure, and without the slightest inconvenience, regulate its position, either for sitting upright or reclining in it. The particular improvement that has been patented in this instance, is the power of operating the leg-rest from the motion of the seat and back, by means of a lever and rod. The leg-rest is hinged to the front edge of the seat and connected by a link to a lever, the fulcrum of which is joined to the under side of the seat, and the lever operated by the standing frame of the chair. By moving the person backward or forward, the chair may be reclined or brought up, and by means of a simply arranged latch, can be readily locked or fastened, so as to remain in the position desired.

As designed for use in railroad cars, two of these chairs are placed side by side, but are yet kept so essentially independent of each other that either of two passengers, sitting in adjoining seats, may choose his position without interfering in the least with his neighbor. This is an important advantage, as one may be disposed to sleep or lie at length, when another may prefer to keep awake or sit up. The chairs are capable of being fitted in a car at the short distance of four feet apart, on a direct line, running the length of the car, and when extended horizontally, will lie a angle of about forty-five degrees. Each seat declines slightly from the front edge, so as to prevent one from slipping off with jolting motion of the trains, and the back is furnished with a sliding head-rest, which may be adjusted to suit the convenience of the occupant.—*Phila. U. S. Gazette.*

## A NEW PRINTING PRESS.

The Milwaukee Sentinel says that Mr. S. W. Carpenter, late of the Madison Democrat, has succeeded in inventing a new printing press which has some very great improvements. It is expected that one will be exhibited at the World's Fair. Three of its prominent features are these:—*First*, it feeds itself, and does it perfectly. *Second*, it works both sides of the sheet at once; the half cylinder rocking to and fro, printing one side of the sheet, as the bed plate moves forward, and the other side as it comes back. The registry, too, is as accurate as machinery can make it. *Third*, the Press registers its own work; a clock face, with hands on the side, showing at each moment the number of sheets, as well as the number of *tokens* worked off—being much less complicated than the Hoe Presses. Mr. Carpenter expects to furnish them at greatly reduced prices. In running them, too, he saves expense, as one man can tend the press and the engine at the same time.

Piano Forte Improvement.—A new attachment to piano fortes has been invented and patented by Mr. Driggs, of Detroit, which is called the Linguine Attachment.—It is on the same principle as the Æolian attachment, and combines with the regular piano the peculiar bell-like quality of the music box. It is supposed that the Linguine attachment will be of great benefit in accompanying voices.

The total loss of reason is less deplorable than the total deprivation of it.

# Educational.

Written for Moore's Rural New-Yorker.

## IMPROVEMENT IN COMMON SCHOOLS.

An article recently appeared in the Rural, entitled, "Details in Teaching Grammar," which I read with no little satisfaction and profit. It is deserving of attention, and should be adopted as *the* method of imparting correct views of Grammar to the young beginner.

Our Common Schools are not what they ought and might be, for many reasons, several of which I shall state as the most preminent.

It is a lamentable fact that, although no pains have been spared in a pecuniary point of view to endow our schools with appropriations, which afford all necessary external means of making them *infant colleges*, there is a great lack of interest, *philanthropic interest*, on the part of those upon whom their public interest, as well as private success depend.

Among the first great obstacles which tend to retard the progress of our schools, and withhold from them that vitality which is so essential to intellectual improvement, especially in the young, is an almost total want of real, energetic action on the part of parents themselves. We all talk largely —contribute freely — publicly discuss the principles of our Common School System—devise plans—recommend books—and make great public displays of a kind of momentary zeal; and here the matter rests. Now, a spacious school room, furnished with maps, globes, charts, blackboards, and all necessary apparatus, with a teacher competent to demonstrate all the principles that may be taught therefrom, are all merely *tools*, to perform or execute what the simple judgment and untutored minds of inexperienced boyhood actuate it to undertake.

Now if parents would have their children fully appreciate their advantages, they must do something more than to merely furnish the *tools* to work with: they must visit the school themselves, and that often too—thus manifesting heartfelt interest for their intellectual progress and future good. Speak encouraging words—congratulate them upon their success—have them know that your interest in their intellectual good, ceased not at the public polls, or in the political struggles of the day.

Parents, by thus visiting the school room, you stimulate your children to action—to close application to study: and while they are thus urged to baffle and overcome every obstacle, the teacher, by the same encouragements and congratulatory words, together with the enthusiastic ardor of his pupils, redoubles his vigor, and is more keenly sensible of his great responsibility—is *more active, more zealous*, and more dutiful.

If there could be appointed in each school district, a committee of eight, ten, twelve, or even twenty persons, consisting of males and females, for the purpose of visiting the school, *every week*, it would contribute in a superlative degree, to the good of that school. I would not, by any means, have the mother excluded from this committee. Think, fathers and mothers, how the eyes of your children would beam with delight, as they viewed their parents, as inspecters of their scholarship! What an inducement to study!—What attempts to excel!—and what rivalry!

Our Common Schools might be made Academies; and instead of looking to our higher institutions of learning, for leading politicians—for profund philosophers—for statesmen — for ministers and poets — we might rear in the humble school house our Websters, and Clays, and Franklins, and Newtons, and Beechers, and Bryants.

Our youth, instead of being *practically* educated, are, as a too general thing, instructed in theory alone. Teachers confine themselves to the text book, when in fact it should be dispensed with at every recitation. How often have I heard the schools recite from beginning to end, the rules of Grammar, and give promptly and correctly the definitions of different parts of speech, and their relations, and yet not be able to write one simple sentence correctly! How many will repeat all the rules of Arithmetic, *verbatim*, and yet not be able to compute *simple interest*, without access to the book!—How many can spell from morn till night—perhaps all the words in Webster's Dictionary—still not be capable of writing three sentences, the orthography of which shall be correct!

Now it is a very easy matter to account for this lack of genuine knowledge. Theory without practice is little better than total ignorance. When any branch of science is being pursued, it should be practically studied; we should then have more practical scholars, more practical men. "An ounce of practice is worth a pound of theory."—Let, for instance, the scholar write his spelling lesson upon the slate; he can then see how each word looks, when written right or wrong. Every scholar who is pursuing the study of Grammar, should write composition at every recital — thus practising what he is gaining in theory. Let the teacher, at each recitation in Arithmetic, give his pupils practical problems to solve, coming under rules with which they are familiar. Gather every book from the class, and have a practical investigation of the lesson. More would be accomplished by this mode of instruction, with the combined aid and interest of a whole district, *tenfold more* than is effected by the *formula recitals* which charcterize most of our schools.

Parents, wake up! — visit your *schools often!*—make them what they ought, and can be, by being co-workers with teacher and scholars.

S. K. Whiting.

North Greece, N. Y., June, 1853.

## A FAULT IN CONVERSATION.

It is extremely common in free conversation for one person to make a remark, and another to say he had thought of the very same thing himself. One will offer a suggestion of improvement, and another second it by saying that the same idea had been in his mind for some time. Often when persons are criticised, it is a chance if you can tell them anything that they were not aware of full well before. There is evidently a propensity in human nature to be too wise to be taught. Let any one watch his own tongue and see how it slips out before he knews it, that he finds himself none the wiser for what he hears from other's mouths. The ways are many and subtle in which this claim contrives to assert itself. But it is a great discord in conversation. Any one who loves the "flow of the soul" as well as the "feast of reason," in conversational interchange, will study to avoid it. The simple rule, "do unto others as you would they should do unto you," would correct this fault. If you mark an observation, and another says he had thought of that before, it amounts to an insinuation that it was needless for you to speak; which does not strike you very pleasantly.

But this habit is not only impolite; there is more or less insincerity in it. If you bring out a clear idea, well digested and practical, the elements of the same idea may be in another person's mind in a crude, unorganized state, and he may imagine that what you say is the reproduction of his own thoughts. But it is not so. He is just as much indebted to you for the *birth* of that idea, as though he had never had a shadow of it in his mind. His egotism deceives him. This represents the truth in thousands of instances, where persons say without any conscious hypocrisy, that what they hear agrees exactly with their own reflections and experience.—*Brooklyn Circular.*

## PRACTICAL ELOQUENCE.

The following very brief and decidedly pithy speech of Oliver Cromwell, will doubtless be new to many of our readers. It was delivered by the great Englishman, on dissolving the long Parliament. It is a perfect specimen of the rude, vigorous and hardy style of this singular character:

"It is high time for me to put an end to your sitting in this place, which ye have dishonored by your contempt of all virtue, and defiled by your practice of every vice. Ye are a factious crew, and enemies to all good government. Ye are a pack of mercenary wretches, and would, like Esau, sell your country for a mess of pottage, and like Judas, betray your God for a few pieces of silver. Is there a single virtue now remaining among you? You have no more religion than my horse. Gold is your God. Which of you has not bartered away your conscience for bribes?

Is there a man among you that has the least care for the good of the commonwealth? You sordid prostitutes! Have you not defiled the sacred place, and turned the Lord's temple into a den of thieves? By your immoral principles and wicked practices ye have grown intolerably odious to the whole nation. You who were deputed here by the people to get their grievances redressed, are yourselves become the greatest grievance. Your country, therefore, calls upon me to cleanse this augean stable, by putting a final period to your iniquitous proceedings in this house, and which, by God's help and the strength He has given me, I now intend to do. I command you, therefore, upon the peril of your lives, to depart immediately out of this place. Go! Get you out! Make haste! Ye venal slaves, be-gone! Take away that shining bauble there, the Speaker's mace, and lock up the doors!"

Enterprise and Tact.—"I don't see how it is," lolls out the merchant of the *slow* kind, "but I can't make both ends meet; and yet the profits on every article I sell are very great. I cannot under stand it."

Well, let us tell you, for you have yourself betrayed the secret. *Large profits* never yet paid in the end. Commence on a new tack, sir. Let your profits on each article be small, and, if your custom be sufficient to pay expenses for the first year, you are very fortunate. But continue your small profits principle, make yourself known to the public, and "quick and constant sales" will join your "small profits." Put the two together and you have the secret of success.

The forms and ceremonies of politeness may be dispensed with, in a measure, in the relations and intimacies of one's own fireside, but kind attentions never.

# Natural History.

## ODD FISHES.

Mr. Hancock mentions a fish, (the loricaria) which creeps upon all fours in the beds of rivers. This little finny quadruped has a very singular appearance, moving upon its four stilts, which are produced by a bony ray in front of its pectoral fins, and of the next pair to them. The callichthys, a Brazilian fish, walks in this way for miles in search of water, when, as often happens, the pool in which it lives is dried up. The climbing perch (Perca scandens) not only creeps along the shore, but ascends trees, in search of the crustaceans upon which it feeds. It must have some difficulty in ascending the fan-palms, if it were not provided with numerous little spines or thorns upon its fins, by means of which it suspends itself whilst climbing, using them like hands. In addition to these peculiarities, it has the power of folding up both dorsal and anal fins, when not using them—and thus it literally puts its hands in its pocket, for it deposits them in a cavity in its body, provided by nature on purpose to receive them when they are not needed for progression.

The perca scandens is not the only kind of fish which ascends trees in search of food; several species are found in the Polynesian Islands, climbing the cocoa palms. The most remarkable of them is a kind of lobster of gigantic size, and of strength sufficient to open the cocoa-nuts, upon which it chiefly subsists.

Nor are these the only instances of the inhabitants of the waters forsaking their native element. Several varieties of fish in the Indian ocean and in the Mediterranean are adapted for a short flight; and these peculiarities of habit and movement are highly interesting, even when devoid of grace, for they are examples of a contrivance which displays the goodness of the Creator in furnishing them with the means of providing for themselves amid the accidents and difficulties that may fall to their lot.

It has been asserted that fish are quite deaf; but though they have no external organ of hearing, they are by no means deficient in this sense; and their faculty of smelling is so wonderful that they are guided by it through storm and darkness, and directed to their prey, or warned to escape from their enemies, at an immense distance. Lacepede considers this so much the most acute of their senses, that he calls it their most valuable eye.

The olfactory membrane of a shark occupies several square feet. Fishes have the character of being remarkably stupid, and yet they are not wholly incapable of instruction. In many parts of Germany, the trout, carp and tench are summoned to their food by the sound of a bell; and in the gardens of Versailles some fish were kept for more than a century which would come when they were called by their names.

## SHORT LESSONS IN NATURAL HISTORY.

Ants have regular day laborers.

Ants in the East Indies are horticulturists —they make mushroons, upon which they feed their young.

The white ant maintains a regular army of soldiers.

Bees live under a monarchy.

Beavers are architects, builders and woodcutters—they cut down trees and erect dams and houses.

Bees are geometricians—their cells are so constructed as with the least quantity of material to have the largest spaces, and least possible loss of interstice.

Bears, Herons and Otters are fishermen.

Birds are musicians, whole tribes are musical.

Beavers in their communities present us with a model of republicanism.

Caterpillars are silk spinners.

Dogs, Wolves, Jackals, and many other animals are hunters.

Elephants exhibit an aristocracy of elders.

Indian Antelopes furnish an example of a patriarchial government.

The Ant-Lion is a geometrician—the trap he sets for insects is constructed on an exact mathematical principle.

The Marmot is a civil engineer. He builds houses and constructs drains to keep them dry.

The Mole is a metoorologist.

The Mine killer is an arithmetician, so also is the crow, the wild turkey, and some other birds.

The Monkey is a rope dancer. Man is not his equal in agility.

The Nautilus is a navigator—he raises and lowers his sails, and also casts anchor at pleasure.

The Electrical eel, the Ray and Torpede are electricians and shocking animals.

The Prima is a tailor bird—he sews leaves together to make his nest.

The Sole.—This well-known and delicious fish is remarkable for one extraordinary circumstance; they have been known to feed on shell-fish, although they are furnished with no apparatus whatever in their mouth for reducing them to a state calculated for digestion. The stomach, however, has a dissolvent power, which makes up for the want of masticating apparatus. But the most usual food for soles is the spawn and young of other fish.

The Halibut, which weighs from one hundred to three hundred pounds, is the most veracious of fishes, and has been known to swallow even the lead which seamen make use of for the purpose of sounding the depth. Its back is a dusky color; its belly pure white. The flesh is very coarse and indifferent food. It is the narrowest fish in proportion to its length of any of this genus except the sole.

# For the Young.

## HAVE WE CHILDREN AMONG US?

Are there any boys now-a-days? We have sometimes been inclined to doubt it. Real, child-like, fun-loving boys, we mean; such as some we used to know in our early days; eager questioners upon subjects of natural history, and upon the mysterious complicities of strange machines, and upon the wonders of the earth and the heavens? Boys whose very immaturity of thought struck one as beautiful! It seems to us there are very few such of late years. In times that we can remember, children *were* children, and were true to their childish instinets. Their genial frolicsome ways softened slowly into soberness; they grew grave gradually. The shadows of manhood stole over their young faces so imperceptibly that the spiritual still seemed to preponderate over the earthly. There is not half so much flying of kites, trundling of hoops and playing at marbles, as there used to be. Even "I spy," "prisoner's base," and "hide and seek," are fast falling into desuetude.—Whistling, the child's earliest attempt at musical expression, we seldom hear now, either in city or country. Instead of whooping, hallooing, and those shouts of merry laughter, which were wont to conjure up delicious reveries in aged bosoms, we have now an unchildlike thoughtfulness, or what is still worse, a chattering pertinacity. It is sorrowful to think that the accelerated progression of everything around us should have attached itself even to little children. The distance from long to short clothes, from jacket and pantaloons to coat and vest, has been so narrowed down that, while you still have a distinct remembrance of the teething coral with its silver bells, the child for whose use they had been purchased, nudges your arm and quietly suggests the propriety of his wearing, in future, a long-skirted coat with a velvet collar.

Boys have all the appearance of immature men, and are fond of imitating and even exaggerating man's worst vices. They stand at the street corners, or parade the public avenues, in gangs, with their hats cocked knowingly on one side, making bold and impudent remarks upon passers-by, and not unfrequently puffing whiffs of vile tobacco smoke into their faces. Boys scarcely higher than the back of an ordinary chair, make it their great ambition to chew and drink and swear, to a degree that their constitutions are perfectly shattered before they reach the age of maturity; while their swaggering and bravado, their bullying and fighting, is far more likely to lead them eventually to the house of refuge, than the house of prayer.

Any one who has lived long in a large city must have seen this "forcing process" going on, and many have, doubtless, wished to see the application of a remedy. That boys and girls of all social grades become immaturely mature, is beyond all question; but we fear the evil lies in the nature of our institutions, and in the rush and whirl about us, quite as much as it does in the relaxed system of parental discipline. We regret this "progressive" tendency, especially in children; and, since it is impossible to check it, our duty is to guide it in the right direction as much as possible. If the old endearing graces of the infantile state are to lose some of their attractiveness, if between boyhood and manhood is to be but one brief step, it becomes us to set a good example to those who mimic our ways so early, and to exhibit, in our own persons, an abhorrence of those evils which we wish our children to shun.—*Home Journal.*

## "COULDN'T! COS HE SUNG SO!"

Leaning idly over a fence a few days since, we noticed a little four year-old "lord of creation" amusing himself in the grass by watching the frolicsome flight of birds which were playing around him. At length a beautiful bobolink perched himself upon a drooping bough of an apple tree, which extended to within a few yards of the place where the urchin sat, and maintained his position, apparently unconscious of the proximity to one whom birds usually consider a dangerous neighbor.

The boy seemed astonished at his impudence, and after regarding him steadily for a minute or two, obeying the instinct of his baser part, he picked up a stone lying at his feet, and was preparing to throw it, steadying himself carefully for a good aim. The little arm was reached backward without alarming the bird, and Bob was within an ace of danger, when lo! his throat swelled and forth came Nature's plea: "A link—a link—a l-i-n-k, bob-o-link, bob-o-link! a-no-weet, a-no-weet! I know it—I know it! a-link—a-link—a-link! don't throw it!—throw it, throw it," &c.. &c.; and he didn't. Slowly the little arm subsided to its natural position, and the despised stone dropped.—The minstrel charmed the murderer! We heard the songster through, and watched his unharmed flight, as did the boy, with a sorrowful countenance. Anxious to hear an expression of the little fellow's feelings we approached him, and inquired:

"Why didn't you stone him, my boy? you might have killed him and carried him home?"

The poor little fellow looked up doubtingly, as though he suspected our meaning, and with an expression half shame and half sorrow, replied: "*Couldn't cos he sung so!*"

Who will say that our nature is *wholly* depraved, after that; or aver that music hath no charmes to sooth the savage breast?—Melody awakened Humanity, and Humanity—Mercy! The Angels who sung at the creation whispered to the child's heart.—The bird was saved, and God was glorified by the deed. Dear little boys! don't stone the birds.—*Clinton Courant.*

# Sunday Reading.

Written for Moore's Rural New-Yorker.

## DEEDS OF TO-DAY.

BY IDA FAIRFIELD.

Time is bringing eternity near,
And what hast thou done to-day,
To lend to this plodding life a charm,
To scatter its cloud away?

What gem of thought hast thou garnered up
To bear to that "better land?"
What deed performed to link with love,
Thy name, to the human band?

Hast thou stretched thine hand to the poor and old,
To lighten the burdens they bear—
Or kindly given a soothing word,
To the spirit oppressed with care?

Has the widow or orphan turned from thee,
By thy bounty clothed and fed?
Has the prayer of faith, a Heavenly calm
O'er the face of the dying shed?

Have thy fingers passed with a lightened touch
O'er the weary brow of pain,
Or a blossom borne, to the sick one's couch,
To brighten its gloom again?

Hast thou gladdened the heart of the little child,
Who in trouble turned to thee—
Unchecking the voice of laughter wild,
Or the song of sinless glee?

Hast thou lifted the mourners sorrowing gaze
To the sin-freed soul above—
Or warmed a heart which was cold and sad,
With the balm of *human love?*

If this thou hast done, and hast weekly striven,
To render thy pathway rife,
With that silent joy, which is born of smiles,
And which maketh the inner life,—

Though the trumpet of fame, thy humble deeds
To a Nations ear may not bear,
Yet the angel, who keepeth the records above,
Hath joyfully written them there.

For if "from one of these little ones"
Thou hast snatched the chalice of pain,
Or given of joy to a single heart,
Thou sure, hast not lived in vain.

Walton, N. Y., June, 1853.

## TWO IN HEAVEN.

"You have two children," said I.

"I have four," was the reply; "two on earth, two in heaven."

There spoke the mother! Still hers, only "gone before!" Still remembered, loved and cherished, by the hearth and at the board;—their places not yet filled; even though their successors draw life from the same faithful breast where their dying heads were pillowed.

"Two in heaven!"

Safely housed from storm and tempest, no sickness there, nor drooping head, nor fading eye, nor weary feet. By the green pastures, tended by the good Shepherd, linger the little lambs of the heavenly fold.

"Two in heaven!" Earth less attractive. Eternity nearer. Invisible cords, drawing the maternal soul upwards. "Still, small" voices, ever whispering, Come! to the world-weary spirit.

"Two in heaven!"

Mother of angels! Walk softly!—holy eyes watch thy footsteps!—cherub forms bend to listen! Keep thy spirit free from earth-taint; so shalt thou "go to them," though "they may not return to thee!"—*Fern Leaves.*

## WHAT HOPE DID.

It stole on its pioions of snow to the bed of disease; and the sufferer's frown became a smile—the emblem of peace and endurance.

It went to the house of mourning—and from the lips of sorrow there came sweet and cheerful songs.

It laid its head upon the arm of the poor man which stretched forth at the command of holy impulses, and saved him from disgrace and ruin.

It dwelt like a living thing in the bosom of the mother, whose son tarried long after the promised time of his coming; and has saved her from desolation, and "care that killoth."

It covered about the head of the youth who had become the Ishmael of society, and led him on to the work that even his enemies praisod him.

It snatched a maiden from the jaws of death, and went with an old man to heaven

No hope! my good brother. Have it.—Beckon it to your side. Wrestle with it that it may not depart. It may repay your pains. Life is hard enough at best—but hope shall lead you over its mountains and sustain thee amid billows. Part with all besides—but keep thy Hope.

## THE CHEAPNESS OF GOODNESS.

"Give me health of body, soundness of heart, as far as the heart of man can be sound, with the freshness of nature around me, and I may deem the pomp of an Emperor ridiculous." So saith an American thinker wisely and well. Cheap, too, is such glory and enjoyment, too cheap to be accepted by all—for with pleasures of the heart and mind, as well as these of another kind, the higher price is thought to confer the highest value. What says the poet Lowell?—

"Earth gets its price for what it gives us;
The beggar is taxed for a corner to die in;
We bargain for the graves we lie in.
For a cap and bells our lives we pay;
Bubbles we earn with the whole soul's tasking;
'Tis heaven alone that is given away:
'Tis only good may be had for the asking.
There is no price set on the lavish summer,
And June may be had by the poorest comer."

Trust God.—I could write down twenty cases, says a pious man, when I wished God had done otherwise than he did; but which I now see, had I my own will, would have led to extensive mischief.

# Miscellaneous.

## LIKE THE EVERGREEN.

Some liken their love to the beautiful rose,
And some to the violet sweet in the shade:
But the Flower Queen dies when the Summer day goes,
And the blue eye shuts when the Spring blossoms fade!
So we'll choose for our emblem a sturdier thing,
We will go to the mountain and worship its tree;
Then a health to the Cedar—the Evergreen King,
Like that Evergreen so shall our friendship be.

The perfume it carries is deeply concealed,
Not a breath of rich scent will its branches impart;
But how lasting and pure is the odor revealed
In the inmost and deepest recess of its heart;
It groweth in might and it liveth right long,
And the longer it liveth the nobler the tree;
Then a health to the Cedar—the true and the strong,
Like the Evergreen so shall our Friendship be!

It remaineth unscared in the deluge of light,
When the flood of the sun tide is pouring around;
And as firmly and bravely it meeteth the night,
With the storm torrent laden, and thunder cloud crowned;
And so shall all changes that Fortune can bring
Find our spirits unaltered and stanch as the tree;
Then a health to the Cedar, the Evergreen King,
Like that Evergreen so shall our Friendship be!

## STANZAS.

There are three lessons I would write,—
Three words—as with a burning pen,
In tracings of eternal light,
Upon the hearts of men.

*Have Hope!* Tho' clouds environ now,
And gladness hides her face with scorn,
Chase thou the shadows from thy brow,—
No night but hath its morn.

*Have Faith!* where'er thy bark is driven,—
The calm's disport—the tempest's mirth,—
Know this—God rules the hosts of heaven,
Th' inhabitants of earth.

*Have Love!* Not love alone for one,
But man as man, thy brother call,—
And scatter, like circling sun,
Thy charities on all.

Thus grave these lessons on thy soul—
Hope, Faith and Love—and thou shalt find,
Strength, when life's surges wildest roll,—
Light, when thou else wer't blind!

For the Rural New-Yorker.

## AN EXCUSE, AND A MORAL.

Once an English captain arrived in the harbor of Constantinople. Being fatigued from the long voyage, he wished to enjoy himself by riding through the winding streets of that city. Having often heard of the excellent horses of the Turks, and wishing to trot like a Turk, he ordered a fiery Arabian horse for the afternoon, and when he had dressed himself very splendidly in a red coat embroidered with gold, blackened his beard and whiskers, he mounted the horse. Hereupon, while riding through the gate, he appeared ridiculous to the Turks, who had never before seen a rider like the English captain. His knees drawn up, his back turned into a curve, and his head and neck bent down, gave him the appearance of a poor tailor at work. The captain, thinking the Turks were laughing in consequence of their amazement at his beautiful appearance, rode out, with satisfaction to himself, to the great square. Suddenly the horse runs with great leaps, and the captain seizing him by the mane, shouts into his ear in English; but the horse does not understand his rider, and, bounding high in the air, throws him into the sand. The Turks pity him very much, and even carry him to his ship. They command the captain's interpreter, that he should never allow his unskillful master to be seen on horseback in the streets of Constantinople.

As soon as the Turks left him the captain asked his interpreter what they had said.—The interpreter replied,—"They only think that you are a bad rider, and wish that you should not suffer yourself to be seen on an Arabian horse in their city." In consequence of this the captain was vexed and greatly ashamed, and replied thus: "Go into the city and tell them your master is generally a good rider, but to-day, alas, at dinner he drank a glass of wine too much, and fell from the horse in a state of intoxication."

The interpreter goes into the city and relates the whole matter to the Turks. But they listen to him with horror, and say:—"We believed him to be a good man, but thought he did not sit properly upon his horse, because his father had not taught him any better. But what do you say!—he fell from his horse intoxicated with wine!—Shame to that infidel!"

But an old Mussulman, who had seen and heard the whole affair, spoke as follows:

"Listen to me my people; do not believe that he was thrown from his horse because he had drunk too much. I know it would happen so as soon as I saw in what manner he was riding. But I will tell you why he would rather complain of the wine and represent himself to you as a drunkard than a bad rider. It is the vanity of man which caused this, and by which men are led to deceit and falsehood. Many a man prefers to be possessed of a vice if he only has other shining talents. Some, rather than betray an act which might cause some ridicule, will confess a sin. And thus this captain, being ashamed, prefers (and that too by lying) to be called a drunkard to passing for a bad rider." S. T.

## THEOLOGY OF THE CHINESE REBELS.

There is one curious and interesting fact developed so far, by that most extraordinary of all modern revolutions—the Chinese Rebellion—and that is the existence among the reputed heathen of that isolated quarter of the world of a far more correct and intelligible view of Christianity, and a decidedly more general knowledge of the Bible and the great truths it teaches, than we have hitherto been disposed to give them credit for. Thus, in one of the proclamations recently issued by the rebel chief, he by way of preface thus recites an outline of the theological opinions held by the insurrectionists.

"Yank, entitled the Eastern King, and general-in chief, with Seaou, entitled the Western King, also general-in chief of Thaeping, by Divine appointment Emperor of Theonkwo, the celestial dynasty, unitedly issue this proclamation, to announce that they have received the commands of Heaven to slaughter the imps and save the people. According to the Old Testament, the Great God (Shanhte) our Heavenly Father, in six days created the heavens and the earth, and the land and the sea, men and all things.—The Great God is spiritual Father, omniscient, omnipotent and omnipresent: all nations under heaven are acquainted with his great power. In tracing up the records of by-gone ages, we find that since the creation of the world the Great God has frequently manifested his displeasure, and how can it be that you people of the world are still ignorant of it? The Great God in the first instance displayed his anger, and sent down a great rain, during forty days and forty nights, by which means the flood was produced. On a second occasion the Great God manifested his displeasure, and came down to save Israel out of the land of Egypt. On a third occasion he displayed His awful majesty when the Savior of the world, the Lord Jesus, became incarnate in the land of Judea, and suffered for the redemption of mankind. In later ages He again manifested His indignation, and in the Ting-yew year (A. D. 1837) the Great God sent a celestial messenger, who was commissioned by the Lord of Heaven, when he ascended on high, to put to death the fiendish bands.—Again He has sent the celestial King to take the lead of the empire and save the people. From the Mo-shin to the Sin-hae year (A. D. 1848—51) the Great God has compassioned the calamities of the people, who have been entangled in the meshes of the Devil's knot: and on the third moon of the latter year, the exalted Lord and the Great Emperor appeared; and in the ninth moon, Jesus, the Savior of the world, manifested himself, exerting innumerable acts of power, and slaughtering a very large number of the impish fiends in several pitched battles;"

## ADVERTISING FOR A WIFE.

A New York youth furnishes the following statement of his personal experience, to the editor of the New York Weekly Messenger:

In February last I was in Boston. A friend of mine, for a joke, advertised for a wife worth one thousand dollars. A lady answered, requesting an interview, under the assumed name of "Adelaide Meek."—I replied to her note, apparently, in good earnest. She wrote again, naming a time and place to meet. I met her, and found her to be well accomplished, in the first society, with wealthy connections, &c. She had answered for a joke. We became interested in each other. She introduced me to her relations, whom I found to be of the ton. We were engaged. All her friends were in favor of the match, except her father. The 18th of June was appointed for our wedding. I returned to New York in April. She wrote me three times a week, asseverating that nothing but death should part us. She wrote to have me get the certificate from the city clerk where I lived, and hurry up my cakes. I have it. She then wrote to me that as we were so soon to be married, she would want a great many things and her father, although very wealthy, would not fit her out, because she would not marry the one he wished her to, and therefore she desired me to send her some money; I mailed her money in presence of the clerk of the post office, to the amount of $603, since when she will have nothing to do with me—not even to answer my letters, or giving a reason for cutting me. Now, what course should I take? Can I make it a case of false pretence, or would it be better to bring an action for breach of promise? If the latter, must I not tender her my humble self prior to the day appointed for our wedding? Have I a right to publish her letter? If so it will be a rich treat for uppertendom. I am bound to have my $600 worth in some way.

The editor of the Messenger gives the lad the following "advice gratis:"

We publish the unhappy experience of a victim in search of a wife, with a melancholy pleasure, for the benefit of mankind at large. He appears to have been "taken in and done for" completely. As to his $603, no complaint before any police justice, or dread magnate of the law, will ever bring back one farthing of it to his bleeding pocket, since, according to the familiar ruling in criminal charges of this nature, the prosecutor must at least have exercised ordinary prudence. The law will not punish one who merely makes a dupe of another. The question of the publication of the letters is another horn of the dilemma. She would probably frustrate his attempt by injunction. Between law and love, his hands and heart are pretty well bound. We advise him to make a note of his Boston courtship and turn over a new leaf.

A little wrong done to another is a great injury done to ourselves.

## WELCOME TO THE COUNTRY.

Avaunt, brick walls! Hence, glaring heat, reflected in dusky red on every house top. Welcome green fields, and orchards with your drowsy shadows. Welcome, hedges glittering with pearl-sprinkled blooms.—Welcome, grassy nooks, fragrant hiding-places of the modest strawberry. Welcome, lumbering wagons and heavy eyed oxen.

Welcome, village maids with your saucy bonnets shading the healthy lustre of cheek and eye. Welcome, uncouth cow-boy with broken hat hanging over thy honest brown face. Welcome, likewise, low-thatched cottages, and vine-bowered windows—welcome, unstudied grouping of fragrant garden-flowers—welcome, cool dark wells with your old fashioned sweeps, upon whose buckets the loving moss clings with damp and dainty touch.

Welcome, clean-sanded kitchen, over whose porch droop the pale roses of the sweet brier. Welcome, broad hearth, whose cheery flame shall never more polish the needle of that kind old mother, for she hath laid by her household cares, and sleepeth in an older home.

Welcome cool entries with strips of snowy matting. From here the purple of the hills, the blended blue of sky and river, the white wing of the breeze, and gentle stirring thro' the upland fields—delight the vision. Welcome, cool-dairy where stand fat cheese and pans of cream, golden with the promise of sweet butter. Welcome, all country sights, and sounds, even to the old cow-bell that dings unmusically along the meadows.

Welcome, the Sabbath, when the door of the little church turns meekly on its hinges to let in God's people. Welcome, quaint garden of the dead, where rosy children gather butter cups from ancient graves.—Welcome, thrice welcome God's handiwork! let man's "excellent wisdom" and cunning skill, stand afar off and worship.—*Olive Branch.*

## HEREDITARY FEATURES.

The author of the work entitled "Record of Creation," mentions, some curious facts under this branch of his subject. A peculiar thickness of the under lip has been hereditary to the Imperial House of Hapsburg, ever since the marriage, some centuries ago, with the Polish family of Jagelon, whence it came. In our own royal family, a certain fulness of the lower and lateral parts of the face is conspicuous in the portraits of the whole series of sovereigns, from George first to Victoria, and has been equally marked in other members of the family. The females of the Ducal House of Gordon have long been remarkable for a peculiar elegant conformation of the neck. The Clackmannashire Bruces, who are descended from a common stock with the famous Robert Bruce, of Scotland, are said to have that strongly-marked form of the chest bones and jaws which appears on the coins of that heroic monarch, as it did in his actual face when his bones were disinterred at Dumfermline, about thirty years ago. The prevalent tallness of the people of Potsdam, many of whom are descended from the gigantic guards of Frederick I; the Spanish features observable in the people of the county of Galway, in which, some centuries ago, some Spanish settlements were made; and the hereditary beauty of the women of Prague, are well-known facts which have attracted the attention of chronologists. The burgessos of Rome (the most invariable portion of every population) exhibit, at the present day, precisely the same type of face and form as their ancestors, whose busts may be seen carved in relief on the ancient sarchophagi; and the Jewish physiognomists, portrayed upon the sepulchral monument of Egypt, are identical with those which may be observed among modern Jews in the streets of any of our great cities.

## PROGRESS OF MANKIND.

The immense strides in progress which civilized men have made within the last two centuries, are really incredible until the subject is thoroughly considered. Yet we do not exaggerate when we say that a journeyman mechanic, in the present day, lives substantially better than a noble did four centuries ago. There still survives a household book, kept by one of the great Dukes of Northumberland, which leaves no doubt on this subject. From that volume we learn that his grace breakfasted on ale and herrings, dined usually on boiled beef, and was as ignorant, at supper, of the luxury of tea or coffee, as he was, in his household furniture, of carpets, sofas, or hair mattrasses.—In the Poston letters, written about the middle of the fifteenth century, we have further evidence of the almost incredible want of physical comforts among the upper classes. The Duke of Norfolk of that day, one of the greatest of English noblemen, was often in need of the smallest sums of money, while persons of less exalted rank had frequently to submit to the greatest privations for want of a few shillings. The richest men in the land dressed poorer, were lodged more rudely, and ate coarser food in those times than any industrious mechanic of our own. Even as late as Queen Elizabeth's reign, the royal floors were covered with rushes instead of carpet. When Philip the Second, consort of Mary, Elizabeth's sister, visited England, his courtiers wrote back to Spain that the people lived in huts of nettles and mud, and slept on logs for pillows.

The greatest pleasure of life is love; the greatest treasure is contentment; the greatest possession is health; the greatest ease is sleep; and the best medicine a true friend.

Whatever situation in life you wish or propose for yourself, acquire a clear, lucid idea of the inconveniences attending it.

# For the Ladies.

## TAKE ME HOME TO DIE.

This land is very bright, mother,
The flowers are very fair,
There is magic in the orange groves,
And fragrance in the air;
But take me to my good old home,
Where the brook goes bubbling by,
Let us go back again, mother,
Oh, take me home to die.

Let my father's hand but rest, mother,
In blessing on my head,
Let my brothers and my sisters dear
But throng around my bed;
Oh, let me feel that loved ones ne'er,
Receive my parting breath,
When I bid you all good night, mother,
And sleep the sleep of death,

Dear mother, I am weeping,
I cannot stop the tears,
They're swelling at the thought of home,
And of my early years.
But I am getting faint, mother,
Oh, take me to your breast,
And let me feel your lip mother,
Again my forehead press.

There's dimness on my sight, mother,
I cannot get my breath;
Is it your sobs I hear, mother?
Oh! tell me, is this death?
You'll tell my father how I yearned
Once more to see him near;
You'll kiss my brothers each for me—
They will forget, I fear.

You'll tell my sisters, mother dear,
I have gone up on high;
And if they are good children here,
They will see me when they die.
I feel I'm going now, mother—
One kiss, ere life is riven,
And now farewell, my own mother,
Until we meet in Heaven.

## THE GOOD WOMAN.

The good woman is one who, as a maiden, as a wife, as a mother, as a daughter, as a sister, as a member of social life, as a child of God and an object of the Savior's dying love, cultivates her affections and large sensibilities into an instinctive repugnance to the very thoughts of sin; whose disposition is tempered by a religious judgment that repels every inducement to anger and bitterness; who, though firm for her own rights and those of others, yet defends them without anger or unkindness, and can willingly yield, when yielding is best and for the best; who loves to perform acts of neighborly kindness, of compassion, and of benevolence; who, rejecting the promptings of a foolish pride founded on mere wealth and station, loves to do good as a common member of a common humanity; who is courteous in society, and strives to be happy in the happiness of others; whose unspotted purity of soul gives her an outward charm that is to her what fragrance is to the lily of the valley, and compels the sinful to hide the taint on their souls, when in her presence; who desires to expand her mind with substantial knowledge: and who strives to know what Christianity is, and to make it the standard of her faith, her hopes, her moral and spiritual wants, and her life; such a woman is *the good, the Christain woman.*

This side of the home of angels, there is no being so beautiful, so admirable. I speak not now of mere beauty of person; for however desirable that may be, it is no evidence of excellence of soul, since it oftentimes is connected with an unlovely character, with an ugly disposition. I speak of that beauty of moral and spiritual character, which is admirable and attractive alike in youth, in middle age, and in declining years makes death peaceful and radiant with joy, and leaves an influence that forms a memorial, like to that which the Savior attached to the woman, who in her gratitude and humility, anointed his head with fragrant ointment.—How much society and the world are indebted for their goodness and happiness, to woman, notwithstanding so many of her sex fail of reaching the height of excellence which they are all capable of attaining. M.

Lucy Stone in Pen and Ink.—Twenty-three years of age, a brunette of *petite* figure, with large but not unpleasant features, and a benevolent expression. Her eyes full and expressive—a prominent nose, with a slight inclination to turn up, a large full mouth and good teeth. She was dressed in a black silk polka jacket open in front, showing a fine cambric shirt down to the waist, with a shirt collar rolled over; black silk skirt half way down to the ankle and cut full; trowsers of black silk, fitting close to the leg, a good sized foot with gaiter boots. She wears her hair short and combed back. She looks like a precocious little girl on the platform.

Advice to a Bride.—I beg to remind my new daughter that the husband has a thousand elements of disturbance in his daily avocations to which his wife is an utter stranger; and it will be her privilege, and her title to the respect of all whose respect is worth having, to make his own fire-side the most attractive place in the universe for the calm repose of a weary body or excited mind. The minor comforts, which are the most valuable, because the most constantly in requisition, will depend more upon her looks, her manner, and the evidences of her forethought, than upon all the other occurrences of life.

## SCENE IN A RAILROAD CAR.

[Train just on the point of starting.—Enter hurriedly, a young married couple.]

*Young Husband.* "Make haste, Bessy; no time to be lost. Here's a seat."

*Young Wife* [anxiously glancing at a bundle in her arms.] "George, isn't there too much air comes in here? I am afraid baby will take cold."

*Young Husband* [good humoredly.] "Not a bit of it. He'll get along famously."

*Young Wife.* "But I am so uneasy, you know. I wonder if there's been any small-pox here, or measles, or whooping-cough? Do please ask the conductor."

*Young Husband.* "Nonsense; you musn't think about such things. Remember me to the old folks; and don't let them spoil the little fellow. Good-by! Time's up; I must be off."

*Young Wife* [detaining him.] "Stop a minute, George, they wont go just yet.—Mind and take good care of yourself; and be sure and write to me often. You'll find all your things put nicely away in the two lower drawers. There's a dozen shirts; seven pair of stockings; four pair of drawers; six——."

*Young Husband.* [turning to leave.] "I know, I know. Never mind about them now. I dare say I shall find them all right."

*Young Wife.* "And, George—one word more—only one word."

*Young Husband.* "Well what is it Bessy? Be quick."

*Young wife.* "The washerwoman.—Don't let her charge you more than half a dollar a dozen. She has got now of yours ——." [Bell rings.]

*Young Husband* [hastily moving away.] "Yes, yes; I'll see to it."

*Young Wife* [calling him back and speaking quickly.] "Count the pieces before you send them. These people are so careless. Who will sew your buttons on while I am gone I wonder?" [Husband gets fidgetty.] "Now don't be in such a hurry, that's a dear. I haven't half——"

*Young Husband* [looking out.] "Indeed Bessy, I can't stay any longer. Don't you see the cars are beginning to move?"

*Young Wife.* "So they are I declare.—But, George"—[he turns back abruptly]—"won't you kiss the baby before you go?"

[Young husband looks round, half shame-faced at the passengers. The anxious mother unwraps the mysterious bundle, and discloses a tiny face nestling in among a world of frills and embroidery. Young husband snatches a hurried kiss, and then hastens away, with a laugh, and a very red face, just as the train is beginning to gather speed. Young wife looks sorrowfully out at the window for a moment; but, presently, brightens up, and kisses her hand to young husband, standing on the platform. Train leaves the depot with a rush.]—*Arthur's Home Gazette.*

## A FEMALE ADVENTURER.

A correspondent of the New York Tribune, writing from Traverse Des Sioux, Minnesota, gives an account of the adventures of a young woman who sought employment in that new country. She could command, as a woman, about four dollars per month, while men where getting from twenty to forty. An expedition was fitting out for the pineries to cut logs to be rafted down the river in the Spring. She doffed her female apparel, cut her hair and donned the male habiliments, and proceeded to offer herself as cook for the gangs. This was after much thought about the danger of exposure to health and virtue; but she could get no means of living in her true character. She was hired as a young man, at thirty dollars a month, to cook. She proceeded to the pineries to cut her wood and cook for some fifteen hands. They had one huge bed in which they all slept, never taking off their clothes, and seldom changing their coarse flannel garments—all the better for her—and all but the cook engaged daily in cutting pine logs. She could do the cooking and the household duties, drawing water—everything but chopping wood—without danger of detection. The chopping she contrived to do after the men had left the cabin. The young cook became a general favorite, and each gang of hands wished they had that cook. One day one of the men saw the cook chopping wood, and immediately said "that's a woman." It began to be rumored about, which the cook hearing, she demanded her wages—six weeks, at thirty dollars a month—and returned to the settlement, having earned nearly as much in male attire, in six weeks, as she would have received in somebody's kitchen in St. Paul's for a whole year. Surely there is a virtue in pantaloons.

## MY LITTLE SUNBEAM.

Never saw my little sunbeam? Well, she was a little creature who passed my window each day, on her way to school, and who made my acquaintance, child-fashion, with a smile. Perhaps none but myself would have called her pretty; but her eyes were full of love, and her voice of music. Every day she laid a little bunch of violets on my window. You might have thought it a trifling gift, but it was much to me; for, after my little sunbeam had vanished, I closed my eyes, and the fragrance of those tiny flowers carried me back, O, whither?

They told of a fragrant, shadowy wood; of a rippling brook; of a bird's song; of whispered leaf-music, of a mossy seat; of dark, soul-lit eyes; of a voice sweet, and low, and thrilling; of a vow that was never broken till death chilled the lips that made it. God shield my little Sunbeam! May she find more roses than thorns in her earthly pathway.—*Fern Leaves.*

Want of care does us more damage than want of knowledge.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JULY 16, 1853.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

## Events of the Week.

THOUGH we have few notable events to record, several occurrences, at home and abroad, are worthy of more space than we can give them. We must therefore itemize or very briefly mention the more prominent.

Hereabouts we have fine weather—very favorable for business, and especially for farmers, who are now busily engaged in harvesting. Accounts of the yield of the hay and wheat crops, in this section, are generally favorable,—and both are being secured in good condition.

The Convention of Colored Men, held in this city last week, attracted no little attention from its novelty, and the ability displayed by several of its members. We were unable to attend its sessions regularly, but heard some eloquent and able addresses. Several States were represented, and the proceedings were generally dignified and interesting. Whatever may be the views of those of our citizens who attended the Convention, all concede to its members, intelligence, sincerity and gentlemanly department. The Rev. Dr. PENNINGTON, presided. Among the speakers were Dr. J. M'CUNE SMITH, REMOND, LANGSTON, DOUGLASS, GAINES, and several other notables. Some important measures for the benefit of the colored people were introduced, discussed and adopted.

The present is Commencement Week at the Rochester University and Theological Seminary. A large number of strangers are in attendance, among whom we observe several prominent scholars and divines. The exercises thus far have been highly interesting to all, and most gratifying to the friends and patrons of the University. The discourse before the Judson Society of Inquiry, on Sunday evening, by Rev. Mr. BURROWS, of Phila., was an able and eloquent effort. As the regular Commencement Exercises do not take place until Wednesday, we must notice them, if at all, in a future number.

Oswego has been visited by a most destructive conflagration, laying waste a considerable portion of the city. In addition to the check to business, and large amount of property destroyed, many families are left in a destitute condition—demanding the sympathy and assistance of the benevolent elsewhere. We are happy to learn that timely aid has been furnished from several cities and villages, and trust others will, if necessary, follow the example. Some account of the extent of the fire is given elsewhere. We regret to learn that the office of the Oswego Journal, with a large share of its materials, was destroyed.

The Crystal Palace is to be opened with appropriate exercises on Thursday of this week, in the presence of President PIERCE and other dignitaries, invited guests and exhibitors. Though started as a private, money-making enterprise, we trust the exhibition will redound to the credit and benefit of the people and country.

— The latest advices from Europe and California, and a variety of other news of the week, will be found in other columns.

## Phipps Union Seminary.

THE annual exanination and exhibition of this flourishing institution, located at Albion, Orleans C., N. Y., has recently taken place. Of the three hundred and fifty-nine pupils that have been in attendance during the year, seventeen have received diplomas, and to fifty-nine, prizes have been awarded. We know of no similar institution which possesses superior facilities for imparting to young ladies a thorough, practical, and useful education. Albion is one of the finest villages in the State, enjoying the advantages of a healthy location, ease of access, and excellent society, rendering it a most desirable place at which to send young ladies who desire the advantages of a good School, away from home. †

EDITORS' AND PUBLISHERS' CONVENTION.—There will be a Convention of Editors and Publishers of Western New York in this city, on Wednesday, the 27th day of July inst., for the purpose of transacting such business as shall be deemed important. A preliminary meeting will be held at the Eagle Hotel, at 11 o'clock A. M. when the place of holding the Convention in the city will be made known, and other preliminary arrangements will be made. All the Editors and Publishers of Western New York are invited to attend and take part in the proceedings.

STEAMER BURNED.—The steamer Queen of the West, which plied between Toronto and Hamilton, took fire at the wharf of MCPHERSON & CRANE, at the latter place, July 9th, about 6½ P. M., and was burned to the water's edge. The steamer Rochester arrived in time to tow her from the wharf, and save other property from destruction.

A FATAL ACCIDENT, occasioned by carelessness, occurred on the Philadelphia and Wilmington Railroad, the 8th inst. A freight train ran over the draw into Brandywine Creek. The engineer and fireman were drowned. The bridge tender fell asleep, and neglected his duty.

# Correspondence.

## Notes from the Capital.

ALBANY, July 11, 1853.

EDS. RURAL:—Another week has been frittered away by the Legislature of the Empire State, without accomplishing scarcely anything of sufficient utility to pay for the ink and paper consumed in recording it. It was generally supposed that the recess taken for the celebration of the 4th, was of sufficient length to accommodate *all;* but Wednesday noon came—and no quorum appeared. The Assembly contrived to drum up a bare majority in the afternoon, but the Senate adjourned to meet Thursday at 10 A. M.

The resolutions approving the course pursued by President PIERCE, past and present—appointments and all—were passed under the operation of the previous question, but very much to the discomfort of the Hunkers, some of whom boldly voted against them.

A curious farce has been played by the House, which may be of some amusement, though without any real interest or instruction. The Speaker happened to be tardy one afternoon, and a motion was made and carried appointing the Hon. RUSSELL SMITH, Speaker *pro tem.* Of course the regular presiding officer was much surprised to find his chair filled by another, and upon due deliberation, it was thought best by his friends to erase that *irregular* and jocose transaction from the Journal; but after much discussion, the House refused to do so, and this *joke*, as some call it, stands as the *good sense* (?) and *dignity* (?) of the Legislature.

A joint resolution has passed designating Wednesday, July 12, as the time for the final adjournment, and as the invitation from the Managers of the World's Fair, to be present at the opening of the Crystal Palace, on Thursday, has been accepted, the adjournment will probably take place as designated. If so, the time for the trial of the impeachment case, will probably be announced soon.

The protracted murder trial has finally closed. The jury brought in a verdict of GUILTY, and *Hendrickson* was sentenced to be hung on Friday, the 26th of August. The decision is in accordance with the opinion of nearly all who have carefully studied the testimony, and it shows this young man to be one of the most base and cold-hearted murderers ever put on trial. During the whole investigation of the case, he has manifested the utmost indifference, and even when the Court was pronouncing the sentence,—when Judge, jury, counsel and spectators were affected to tears,—he remained unmoved, evincing not the slightest emotion. One point is worthy of particular notice. His early education and habits were such as to make his case an exemplification of that well-known maxim,—"He who commences to tread the path of vice in early youth, is in danger of meeting speedy ignomy in prison, or on the gallows."

I turn with pleasure from such topics, to mention the examination and public exercises of the State Normal School. On Saturday forenoon the classes of the experimental department, under the charge of Mr. A. M. KELLOGG, were critically examined in the presence of a large and attentive audience. The exercises were conducted mostly by the members of the graduating class, and reflected credit equally on the pupils, the instructors and the principal. In the afternoon the closing exercises of the Literary Association took place, in the large Hall of the institution. They consisted of several essays, a poem, and a valedictory address, all of which were very creditable productions, and well spoken. We were also entertained by the performance of several beautiful pieces of music.

To-day the upper department have been under examination. Classes in Science of Government, Algebra, Chemistry, Philosophy and Arithmetic were called out, but I cannot take time to comment upon them. As this is a School supported by the State, and one in which all New-Yorkers are deeply interested, I shall spend as much time in attending the exercises, as can be spared from the Legislature and other places of interest, and speak more at length when they are concluded

*OWE.*

P. S. Too bad! The Senate have re-considered the resolution to adjourn on Wednesday. Let us try to keep cool, and see what will come next.

## Destructive Hail Storm.

THE hail storm on the 4th extended over a large district, and proved very destructive to buildings, crops, &c., in many sections. It was very severe in the vicinity of Auburn, and also in some parts of Pennsylvania, and Ohio. In some instances the growing crops were entirely destroyed. We have the following letter relative to its effects in one locality of Ontario county:

NAPLES, July 8th, 1853.

EDS. RURAL:—On Monday, the 4th inst., this place was visited by one of the severest hail storms we have had for many years. It was accompanied with a very strong wind, which prostrated a large number of apple trees, shade trees, &c.,—unroofed some barns, and tore down many chimney tops.

The grain crops, corn especially, have suffered considerably from the wind and hail; but the greatest havoc is among the grapes. The west sides of the trellises—where they run north and south—*are literally cut to pieces*—leaves, new wood, fruit and all. I estimate my loss on one acre of Isabellas at not less than 1,000 lbs., and shall be well satisfied if it does not exceed that.

Yours, &c., E. A. MCKAY.

COUNTERFEITS.—Fifty and ten dollar bills on the Buffalo City Bank, are, says the Courier, quite plenty. There are no genuine bills of these denominations.

## Destructive Fire in Oswego.

THE city of Oswego was visited with a most disastrous fire on the 5th inst. It originated in the mill of H. Fitzhugh, but whether it was caused by friction of the machinery, the burning of firecrackers, or the torch of the incendiary, has not been satisfactorily ascertained. The mill was situated on the east side of the river, and immediately upon the dock, in the midst of the business part of the city. A strong wind prevailing at the time, the fire soon communicated to the adjoining property, and continued to baffle the well directed efforts of the gallant firemen, until almost the entire business portion of the city upon the east side of the river, north of Bridge st., was a heap of smouldering ruins. Telegraph despatches were sent to the firemen of Fulton and Syracuse, who nobly responded to the call, repairing to the scene of the fire upon the Syracuse and Oswego Railroad. Their timely assistance helped to stay the progress of the flames, saving the immense yards of lumber, and the shipping in the harbor, from the ravages of the devouring element.

Several valuable mills, a machine shop and a foundry, an extensive forwarding house, containg many goods belonging to western merchants, as well as capacious stores and shops, and some *three hundred dwelling houses*, were among the property burned. The area burned is estimated to be equal to forty-five acres, and the loss in round numbers is set down at $1,500,000. We understand the amount of insurance is quite large, and it is believed all the companies involved are able to promptly pay their losses. The fire will prove a serious detriment to the progress of one of the most flourishing towns upon the South shore of Lake Ontario, though, from the well known character of her citizens for business and enterprise, we expect soon to see Oswego rise, Phœnix like, from the ruins, outstripping her former glory.

On the succeeding evening a fire occurred on the west side of the river, by which the hardware store of Kenyon, Collins & Co., together with the Odd Fellows Hall, in the same building, were destroyed. A considerable portion of the hardware was removed in a somewhat damaged state. The fire is supposed to be the work of an incendiary. All the occupants, we hear, were insured. †

A TERRIBLE STORM passed over Rockland county, on Saturday evening last, which proved very destructive to life and property. At Haverstraw, besides blowing off the steeple of the Frst Presbyterian church, blowing down several dwelling houses, a barn at the back of the church, and other minor buildings, it blew down a large frame house occupied by about 150 persons, killing five of the inmates, fatally wounding three more, and laiming a number of others.

THE FASTEST YET.—The steamer Arabia, of the Cunard Line, is reported to have made the shortest trip across the Atlantic on record, having made the run in *nine days, sixteen and a half hours.* The passage of the Arctic, made in mid-winter, occupied *nine days, seventeen and a half hours.* John Bull is ahead once, and Brother Jonathan will have to try again.

WALWORTH ACADEMY.—The Fall Term of this institution commences on the 10th of August.—With a superior board of instructors, and other advantages, we are glad to learn that this Academy is attaining an enviable reputation. See advertisement.

THE MATHER IMPEACHMENT.—This long pending affair has at last been got rid of in the Assembly. The debate on the articles of impeachment was closed on Friday, when they were sustained by a vote of 74 to 29. This is equivalent to an indictment, and amounts to nothing more. The trial is now to be had before the Senate and Court of Appeals. It is probable that the session of the Legislature will now be brought to a close in a few days, when the Court of Impeachment will be summoned by the Lieutenant Governor. There are fourteen articles of impeachment, occupying about three ordinary newspaper columns. —*Roch. Dem.*

AMERICAN SCIENCE.—The annual session of the American Association for the Advancement of Science will be opened at Cleveland, Ohio, on the 28th inst. This useful society has held no meeting since 1851, when it assembled at Albany.—The prevalence of cholera on various routes of travel, and the general apprehensions of that dreadful epidemic, caused the session of 1852 to be omitted. The meeting of this year will be the first held by the Society west of the Alleghanies. The members having to report the results of two years' scientific investigation, the proceedings will be doubly interesting.

THE RECENT HAIL STORM.—Judging from the accounts in the Pennsylvania papers, the recent hail storm in that State was the most severe of any ever experienced. Near Shoemakertown, the top of a carriage was completely perforated by the hail, the stones passing through into the carriage. The driver of one of the mail stages states that the hail stones came with such severity as to draw blood out of his horses. The destruction of window glass, and the damage to the growing crops was immense.

SENECA LAKE STEAMERS.—The Dundee Record says the steamers Richard Stevens and Canadesaga, are doing a good business, but the Ben Loder being too expensive to run is lying at Geneva pier, awaiting a "blow up" or a purchaser. Two propellers and a fast passenger boat are now building. We should suppose that the trade of Seneca Lake must be rapidly increasing, or it will soon be overdone.

PROMPT RELIEF.—Messrs. Dean Richmond, Joel Rathbone, Hamilton White, Horace White, Rufus H. King and J. B. Plumb, who were conversing together when the intelligence of the destructive fire at Oswego was received, immediately remitted $700 for the relief of the sufferers.—*Eve. Jour.*

FRUIT IN NIAGARA CO.—The Lockport Courier of the 7th inst., says:—"We have been over some parts of our County, and are sorry to say that the fruit crop is not as promising as we could wish. Many orchards will yield but little fruit."

# News Paragraphs.

☞ The Seneca Falls Courier of the 7th inst., says that "the wheat harvest has fairly commenced in that county, and that the quality of the grain is excellent. But little injury from the weevil, in comparison with former years, is heard of, although the insect made its appearance almost every where. The wheat was probably too far advanced to receive injury from it, as it has ripened about two weeks earlier than usual. Mr. Burtless, of Fayette, began to cut his wheat in the month of June—a rare occurrence."

☞ The Utica Baptist Register says that Rev. Dr. Beebe has resigned the pastorate of the Pearl street Baptist Church in Utica. He has become the proprietor of the New York Recorder, and with Rev. Dr. Sewall S. Cutting, will enter on the duties of that able journal in August next. Prof. Anderson, its present editor, we suppose, will now become the President of the Rochester University, as it has been for some time said that if he gave up the Recorder he would go to Rochester.

☞ Nealy every paper in the State of Vermont has within a few weeks, published a statement from the Burlington Courier, that the county jail at that place was entirely empty, and crediting the happy circumstance to the effect of the new Liquor Law. We find it stated that the Chelsea jail is empty; but what is to us far more unusual, the last term of the Court continued but little over *two days* for jury cases.

☞ Dates thirty days old from Rio Janeiro have been received at Philadelphia, and late dates from Buenos Ayres at Boston. While in Cuba the slave trade is pushed in violation of treaties, in Brazil the government is now strenuously exerting itself for its suppression. The sanitary condition of Rio had improved. In Buenos Ayres, things were, if possible, worse than ever.

☞ As an evidence that Rochester artisans stand fair in the estimation of people at a distance, we would mention that Mr. E. C. Williams is in the habit of supplying other States with tents, &c., for the use of their State Fairs, and that he has recently received an order for three spacious tents, for the Wisconsin State Fair, to be held in October next.—*Roch. Union.*

☞ The Louisville Courier publishes full returns from forty counties in reference to the number of hogs in Kentuckey, over six months old.—The total assessment, as furnished by the State Auditor, shows 415,963 hogs in the forty counties, which is a gain of 100,000 over the number in the same districts the previous year.

☞ The marble quarries of Vermont are gaining a reputation abroad as well as at home. Two blocks of Vermont marble, weighing one ton each, have been ordered from Rome, for the purpose of making a bust. This order is from an Italian artist, who prefers the West Rutland marble to that of his own country.

☞ The bill to authorise the Buffalo and New York City Railroad to construct a branch from Burns to Dansville has passed. Dansville has also been authorized to subscribe in its corporate capacity, $100,000 to the capital stock. The distance is nine miles—the whole cost estimated at $225,000.

☞ There is so great a demand for the gold dollar, that the Mint at Philadelphia fails to supply it. It is now chiefly engaged in striking off $20 pieces, because these require the least time and labor. This is rendered necessary by the large amount of gold deposited for coinage.

☞ The crops in this neighborhood have not given better promise for years. Everything looks well, and will yield abundantly. The hay crop will be very large, while the rye, oats, potatoes, corn, &c., &c., will return a handsome reward to the husbandman.—*Albany Journal.*

☞ The New Hampshire Legislature has adjourned. All the laws to regulate the sale of liquor and a great part of the bank bill has been postponed. A very stringent enactment concerning railroad accidents, and the management of trains on railroads, has passed.

☞ Nearly one thousand Indians of the Cheyenne and Snake tribes, in the neighborhood of Utah, have recently died with the small pox. In one place three hundred of the dead bodies were piled together into one hut, which was fired and burnt to the ground.

A dangerous counterfeit has lately been put in circulation in Boston. It purports to be a three dollar bill on the White River Bank, Bethel, Vermont. The vig. is a train of cars passing through a deep cut, with laborers in the foreground, one with a wheelbarrow.

☞ Mr. Wm. Cobb, Postmaster of Warwick, Mass., died on the 12th ult., at the age of 83. He was appointed Postmaster under Mr. Jefferson, in 1800, and held the office until his death; and for forty consecutive years was chosen treasurer of the town.

☞ The People's Line of steamboats on the North River, which from the year 1843 to 1852, has been under the same management, has during that period caried more than 5,000,000 of human beings without accident to life or limb in a single instance.

☞ Advices from St. John, Newfoundland, of June 21st, announce the departure from that port of the brig Advance, of the Grinnell Expedition, on her Arctic voyage. She was received at St. John with every mark of attention and kindness.

☞ The following are the officers of the New York Central Railroad:—E. Corning, President; D. Richmond, Vice President; J. V. L. Pruyn, Secretary and Treasurer. The present Superintendents will probably be continued in office.

☞ Maj. Lewis Cass, Jr., has declined the honor of a public dinner tendered to him by his Detroit fellow citizens. His conduct as the American Representative at Rome, has secured the warm approval of his countrymen of all parties.

☞ The Oswego papers estimate the loss by the fire on the 5th, at from $600,000 to 300,000. Nearly 2,000 persons were rendered houseless.—A meeting of citizens had been held to raise subscriptions for the relief of the destitute.

☞ Throughout the whole of Virginia, where internal improvements have penetrated, there has been a great advance in the price of lands. In many counties, particularly in the west, the advance has been from 50 to 100 per cent.

☞ A fire in Cleveland, 8th inst., totally destroyed Dewitt & Co's agricultural implement warehouse, Lamb's saleratus factory, Burrell's machine shop, and several other buildings and contents. Loss heavy.

☞ The order closing the United States Mint to visitors, having been found to cause a general feeling of dissatisfaction, has been rescinded—and the Institution was again opened to the public from the 1st of July.

# News Brevities.

—— Brock's Monument is to be rebuilt.

—— Three dollar gold pieces are being issued from the Mint.

——The Doctors of Orange county have "struck" for higher fees!

—— A naval college has been established in Quebec, Canada.

—— War between Peru and Bolivia is regarded as almost inevitable.

—— Ten lives were lost on the New Haven railroad week before last.

—— Iron churches are now made in England and sent out to Australia.

—— Three thousand men are employed in making cigars in New York.

—— There are in the United States twenty-two traveling circus companies.

—— President Pierce stops at the Astor House during his sojourn in New York.

—— Massachusetts had 469 Ships engaged in Whale Fishing in the year 1852.

—— Since the 1st of January, thirty-six steamboats have been built in Pittsburg.

—— Texas has, just now, eight Democratic candidates in the field for Governor.

——Col. Benton's Thirty Years in the Senate" is in press, and soon to be published.

—— It is stated that the President regularly keeps up family worship in his household.

—— A severe storm occurred at Cincinnati on the 4th, damaging property and the crops.

—— Two fatal, accidents happened on Friday, on the railroads in the streets of New York.

—— The Editors in the "Southern Tier" are taking steps to hold a Convention at Elmira.

—— An Albany man has leased a building at Saratoga, for the purpose of opening a theatre.

—— It is confidently believed that the Oswego Conflagration was occasioned by incendiaries.

—— President Pierce has accepted the invitation to attend the opening of the Crystal Palace.

—— The Collector's office at Oswego is a floating concern, being kept since the fire in the State Scow.

—— Mr. Copeland, of new York, has been appointed Chief Engineer of the Navy, in place of C. B. Stuart.

—— The boy Connor, sentenced to be hung at Baltimore for the murder of Capt. Hutchinson, has been reprieved.

—— Mrs. Day, of Stewartstown, N. H., gave birth to two sons and a daughter, on the 1st inst.; all doing well.

—— A new Bank has been organized at Auburn, under the name of the Auburn City Bank. Capital $200,000.

—— It is stated that the grave of James Madison, twice a President of this Republic, cannot now be recognized!

—— Patrick Heffern and John Griffin, were drowned while bathing in the Susquehannah at Owego on the 1st inst.

—— The New York Herald, in an article on the barbers of that city, says the whole number is estimated at 1500.

—— The cholera, which has been so fatal at Williamsport, Md., for the past week or two, has nearly disappeared.

—— Mr. Maurice O'Connell, M. P., eldest son of the late Daniel O'Connell, died suddenly in London on the 17th ult.

—— It seems quite certain that the rebellion in China has proved a failure. The old Tartar dynasty is not easily overturned.

—— Clark Mills, the sculptor, has been elected 1st Lieut. of "The President's Mounted Guard," a fine company in Washington.

—— The Post Office Department has notified Mr. Nesbitt that they will receive no more envelopes with his seal on the back.

—— The Georgia papers mention the acceptance by Hon. Charles J. Jenkins of the Union nomination for Governor of the state.

—— The train from Cleveland to Buffalo, a few days since, made the distance, 190 miles, in just six hours. There were eight cars.

—— His Excellency M. de Bille, the Danish Minister at the Court of St. James, also died unexpectedly in London on the 18th ult.

—— The Maine Temperance Convention, made no nomination for Governor, and adjourned without doing any business of consequence.

—— It is said the Psi Upsilon Society will hold a convention at Cambridge this year. When the Ky—i Society is to meet is not stated.

—— In the Amherst cliffs, opposite Lynchburg, Va., the workmen blasting rock have discovered a very valuable alum spring.

—— The municipal council of Kent County, Canada, have petitioned the parliament to take measures to prevent the influx of negroes.

—— The gospel is said to be preached from the pulpits of Chicago in seven different languages.—The population of the city is about 50,000.

—— The Pennsylvania State Agricultural Society will hold its next annual fair at Pittsburg, on the 27th, 28th, 29th and 30th of September.

—— A grand Provincial, Agricultural and Industrial Exhibition is to be held in Montreal on the 27th, 28th, 29th, and 30th, of September next.

—— Fifty dollars worth of silver to the ton is found mixed with the recent raising of copper at the Dollyhide copper mine in Frederick county, Md.

—— Mr. James Holmes died in Owego, on the 27th ult., in the 99th year of his age. He participated in the battles of Monmouth, Germantown and Brandywine.

—— C. J. Hill & Son received on Saturday last a small quantity of new wheat, from the farm of Mr. Deidrich, of Pittsford. It is the first white wheat of the season.

—— The New York Aldermen voted to spend $5,000 to receive President Pierce, but discovering that it was illegal under the new charter, the vote was reconsidered.

—— President Hale, of Geneva College, who had been some time in Europe, was welcomed home by an Illumination of the College, and by other pleasant demonstrations.

——The Georgia papers represent the corn crop in some parts of the State as entirely destroyed, owing to the great dronth which prevails. The young cotton is also more or less injured.

—— The Orleans Republican records the suicide of Mrs. Lake, of Albion, by cutting her throat, while partially deranged. She was highly respected, and a member of the Methodist Church.

—— The Auburn Advertiser states that forty miles of Lake Ontario, Auburn and New York Railroad will soon be graded. The Lake terminus will be at a place called Fairhaven on Little Sodus Bay.

# Foreign Intelligence.

## One Week Later From Europe.

### STATE OF THE MARKETS, &c.

NEW YORK, July 11th.

The steamship Atlantic, from Liverpool, 29th ult., about 10½ P. M., arrived here early Sunday morning, with 140 passengers.

GREAT BRITAIN.—News unimportant. The income tax bill has become a law. Long debates on Indian Government—very little said about Turkish affairs—a general belief in peace. Insurance to Danube has increased.

Henry Berkley is spoken of as Governor of Jamaica. The Australian Steamship Company, via. Panama, have received a charter. The strike among the operatives at Stockport and Blackburn continued.

Look out for iron coin electropated. They can be detected.

Ex-President Van Buren is at Birmingham.

Mrs. Stowe is visiting Wales.

The crops in Ireland are luxuriant. The weather in Britain is generally favorable. In Scotland rain is wanted.

LIVERPOOL MARKETS.—Breadstuffs — Reported injury to French crops, joined with speculative feeling, improved the market both for export and consumption.

Wheat advanced 2s. 3d.

Flour advanced 6d. A few circulars quote 9d. @1s.

Indian Corn —White advanced 1s. Yellow declined.

Provisions — Bacon dull. A decline of 2s. has induced buyers, and a better feeling is looked for soon. Shoulders wanted. Beef and Pork moved in retail. Lard quiet. Tallow steady.

SPAIN.—The frigate Constitution passed Gibralter on the 15th ult., to the westward. Two shocks of an earthquake were felt on the 27th and 28th of May, at Canares.

Crops in Spain indifferent. It is reported that the Spanish port will be open to the free import of wheat.

TURKEY.—No hostilities yet, and the general belief gains ground there will be none.

RUSSIA.—Continues to collect troops along the frontier, and the Turks do not cease warlike operations.

# California News,

## Arrival of the Illinois.

NEW YORK, July 11—3 P. M.

The steamer Illinois, from Aspinwall, arrived this forenoon, with California dates to June 16th, and $100,000 in specie.

The ship Carrier Pigeon, from Boston, for San Francisco, went ashore June 6th. About 30 lives were lost. Two steamers were sent to the wreck, and 1,200 packages of light merchandize were saved; the ship will be a total loss, and most of the cargo.

The steamer Sea Bird, which had been sent to the assistance of the Carrier Pigeon, was beached while taking out the cargo. At last accounts she was breaking.

A duel was fought June 11th, near the Mission-leeras, between Edward Toby, Clerk of the Assistant Aldermen of San Francisco, and Dr. Alfred Crane of Louisiana. Crane was the challenged party; distance, ten paces; weapons, navy pistols. At the second fire Crane was shot through the body, and died on Sunday morning.

On Friday, the 10th, a duel was fought near San Francisco, between Thos. Hayes, an Assistant Alderman, and John M. Megent, Editor of the Herald. The distance was 20 paces; weapons, pistols. At the 2d shot Megent was wounded and the affair was terminated. Megent's wound was considered critical.

The weather was very warm. The thermometer in the shade varied from 98 to 107.

Mining intelligence from all quarters was of the most cheering character.

The business at San Francisco was reviving and the trade in the interior had greatly improved.

The duel between Hon. W. M. Gwin and Hon. W. McCorkie was fought on the 1st of June.—Three inefficient shots were fired when the matter was settled.

The Pathfinder had arrived with dates from Hong Kong to the 27th of April.

MARKETS.—Money was somewhat easier.—Flour was better; Haxell $12@$12 50. Corn inactive. Corn Meal $5 50@$6. Buckwheat quiet at $4 75.

Provisions, inactive. Mess Pork $22@$23; Mess Beef $24@$25; Lard 15½c.; Bacon—sides 18@20c.; Hams 18@19c.; Cheese 22c. Lumber plentiful.

We have Panama papers to the 30th of June.

The Contractors commenced work on the Panama end of the Railroad on the 20th of June. It was expected to be done, and the road finished to Matuchies, seven miles further, in three months. This will make 30½ of the 49 miles of the whole road.

From California we learn that the harvest had commenced, and from every part of the State the report is that the grain product will vastly exceed that of 1852. Field crops are nearly as good.

From every section of the placers we hear of the most satisfactory results; indeed, mining has never been carried forward with such general success. Quartz mining has received a fresh impetus from an influx of capital, and will soon contribute largely to the gold products of California.

The Alta California has the following: When the stage left Marysville, yesterday A. M., the whole city was in excitement to witness an expected duel between Col. Rust, of the Express, and Stranger, of the Herald.

## Latest from China.

SHANGHAI, April 15th.—The capture of Nankin and subsequent defeat of the rebels is fully confirmed.

The Hong Kong Herald gives details of various cruelties perpetrated by the insurgents. They were making indiscriminate slaughter of the Buddhist priests as well as the Manuchos.

They enticed 100 Manuchos women into one building and then set it on fire, reducing the whole to ashes.

They also pressed every Chinese from 15 to 25 years of age into the army, killing the children as useless.

The exportation of rice has been prohibited in some districts.

A letter from Hong Kong, April 4th, states that Commodore Perry was about to proceed at once to Japan with the Mississippi and Saratoga.—This will cause some uneasiness among the foreigners, as it will leave them comparatively unprotected.

MAY WHEAT.—Mr. Daniel Blodgett, of this village, has laid upon our table a sample of May, wheat, grown upon his farm. This wheat is some two or three weeks earlier than the kinds usually grown in Wisconsin. Mr. B's crop was harvested last Tuesday. The seed was procured in Missouri, where this wheat is usually cut in the month of May, and hence its name. The heads of the sample shown us are rather short, but the berry is plump and full. Mr. Blodgett says this wheat is not liable to rust.—*Beloit (Wis.) Jour., July 7.*

A PILE OF WOOL.—We saw yesterday, in the ware-house of Haskin & Hadly, some 50,000 lbs. of Wisconsin wool, all bought within the past three weeks, and much of it ready bagged for shipping. The general quality of the wool is superior, and some of it very choice. We notice one clip of 1359 lbs. brought in yesterday by Mr. E. S. Sawyer, of Burlington, Racine Co., for which 50 cents per pound was paid, making an aggregate of $669,60.—*Milwaukee Sentinel.*

HOPS.—The market continues rather unsettled, and not many selling. The highest price paid has been about 20 cents. As to the new crop, it may be put down as an established fact, that it will be below the average—certainly inferior to the crops of the last two years. As a natural consequence, the high prices must be maintained. Growers will doubtless govern themselves accordingly in making contracts.—*Cooperstown Journal.*

THE CENTRAL RAILROAD.—The election of Directors and Offices by the new Company, completes all the necessary steps of railroad consolidation. Fare hereafter cannot exceed 2 cents per mile, whether for through or way tickets.

# Deaths.

AT Howiet Hill, Onondaga Co., N. Y., on the 25th ult., of quick consumption, AMOS G BINGHAM, Esq., aged 44 years. Mr. B. was an active and influential citizen and Christian. His unexpected decease, in the prime of life and usefulness, will be sincerely mourned by a large circle of relatives and friends.

IN Hyde Park, Pa., on the 26th ult., Miss MARY B. PIER, in the 30th year of her age.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, July 13, 1853.

As this is just the harvest season, farmers give but little heed to marketing, consequently sales are light.

GRAIN—There have been a few cargoes of wheat, mostly Western, in market, which found purchasers at $1,16.—The quality of the wheat was fair, but a large amount of foul seed and dirt depreciated the value. In other grains no change to notice.

The Wool market has become quiet with a tendency to a slight decline. Most of the clip is in second hands, who are not likely to sell below present figures. A fine sample of ninety fleeces brought in on the 12th, were left for sale rather than submit to lower prices.

## NEW YORK MARKET.

NEW YORK, July 11.

FLOUR—Market for State and Western is excited under the advices per the Atlantic—prices and 12½ cents better—demand good for export and home trade. Canadian held at $5. Sales western canal at $4.75@4.81 com. to straight State; $4,62½@4,87 mixed to fancy Michigan, Indiana and Wisconsin; $4,65@4 87 for common to good Ohio.

Rye flour and corn meal quiet.

Grain—Wheat active—market from 3 to 4 cents better—sales white Ohio $1,21@1,26; Canadian $1,20@1,22½; red Ohio $1,14; mixed do. $1,17; red Western, part in store, $1,08, part to arrive

Rye—dull and heavy.

Oats—firm—38@40c for State and Western.

Corn—better—prime scarce. Sales 58@60¼ for unsound—63@64½ for Southern mixed—66@67c for Western mixed—68@69c for Southern yellow.

PROVISIONS—Pork—demand limited and supply fair—$15.37@15,50 for mess—$13.62@13,87 for prime.

Beef steady—$8@10 for country mess—$11.75@12.75 for repacked Chicago and city mess—$5@6,25 for prime.

Cut Meats—Unchanged.

Lard buoyant—sales 300 bls. prime at 10½c.

Butter buoyant and in good request—16@20c new State—12@16c Ohio.

Cheese saleable at 6@8c.

## ALBANY MARKET.

ALBANY, July 11.—Business in flour and corn dull, and restricted by want of vessels.

Flour, &c.—A steady but very quiet market for both Western and State Flour. The transactions of the morning do not exceed 500 bls. We quote:—Sour $3,50@4; superfine, No. 2, 3,75@4; Illinois and Wisconsin, common to fair 4.37@4.50; ordinary to straight State 4.50@4,62; Ohio, Indiana and Michigan, common to good 4.50@4,75; favorite State 4,62@4,75; Indiana, Michigan and Ohio 4,62@4,81; fancy Genesee 4,75@4,94; extra Ohio, Indiana and Michigan 4,87@5,37; extra Genesee 5,25@6,12.

Corn Meal is steady at $1,25.

Grain—A quiet but firm market for prime wheat with a small supply. Genesee is held at $1,30@1,31, and prime white Ohio and Michigan at 1,19@1,20.

Corn is in better supply and the market is rather easier and more active. Sales at 58c for unsound, 62½@63c for good Western mixed and 63c for round yellow. The demand is mostly for shipping and in part speculative.

Oats are scarce and wanted; retail sales are making of good State and Western at 44@45c. Cargoes would not bring over 42@43c.

Wool—There is but little arriving in the street. Prices range from 35 to 50c. The great bulk of crop in this and the neighboring counties is either in the hands of dealers, speculators or manufacturers. No sales have yet transpired from second hands, and the stock in the hands of dealers in this city is quite small.

## BUFFALO MARKET.

BUFFALO, July 11.—The market is quiet this morning with only a moderate inquiry, buyers holding back for advices from the east, and holders a shade more firm under the Atlantic's news. Sales choice Michigan at $4,06½@4-12½; Ohio and Indiana at $4@4,06¼, and fancy to extra Ohio at $4,18¾@4.56.

Wheat in fair request, and market firmer. White is scarce and inquired for. Sales white Michigan at $1,05½ and to arrive at $1,05, mixed Ohio at 94c, and red Ohio at 92½c.

Corn in moderate demand, and market firm for prime which continues scarce. Sales at 52¾@52c, and damaged at 46c.

Oats dull and market easy and lower. Sales at 32c.

Canal freights easier, and boats more plenty. Flour shipped to New York at 56@57c, and to Albany and Troy at 49c.

## NEW YORK CATTLE MARKET.

NEW YORK, July 5.—At Washington Drove Yard—2,200 Beef Cattle, sales of good retailing qualities at from 9 to 10c per lb; 300 head would remain over unsold.

At Browning's—100 Cows and Calves, from $22,50 to $35@55—a higher price than the top of the market last week.

Sheep and Lambs—5,000 offered; Sheep brought from $2,25 to 4,50@6,50; Lambs, $1,75 to $3,75@5,50—all sold.

At Hudson River Bull's Head—350 Beef Cattle, 8@9¼c. 3,500 Sheep and Lambs; all sold at $2,25@3,25 to $5 for Sheep, and $2, 3,50 to $5 for Lambs.

## ALBANY CATTLE MARKET.

ALBANY, July 11.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—At market, 550. Prices—Extra, $7,50; 1st quality, $7, 6,50@6.

Cows and Calves—20 in market. Prices from $27@30 to 35@40.

Sheep and Lambs—1,085 in market. Prices—Sheep $2,-50 to $3@3,25; Lambs $2,25 to 2,50@2,75.

Remarks—The market is firm and steady.

## CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, July 6.—At market, 402 Cattle, about 300 Beeves, and 102 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $8 per cwt.; 1st. quality, $7,50; 2d do, $7,00@7,25; 3d do, $5,50; ordinary, $5,00@6,25.

Hides—$4,75@5 per cwt.

Tallow—$7@7,50 per cwt.

Pelts—75c@1,50.

Calf Skins 11c per lb, quick.

Barreling Cattle—None.

Veal Calves—$4, 6@9; 479 at market; quality superior; sales quick.

Stores—Working Oxen—No sales.

Cows and Calves—$27, 30, 34, 37, 40 to 67. At market 54.

Yearlings—$9, 11@13.

Two years old—$23, 27, 31, 34@37.

Three years old—$36, 39, 41, 44@56.

Sheep and Lambs—1,361 at market. Lambs quick.—Sheep slow of sales.

Extra, $5, 5½, 5¾@7.

By lot—$2, 2,75, 3, 3,75 to 4,50.

Swine—None.

## BRIGHTON CATTLE MARKET.

BRIGHTON, July 7.—At market 520 Beef Cattle, 20 pairs Working Oxen, 45 Cows and Calves, 2,360 Sheep and 350 Swine.

Prices—Beef Cattle—A short supply and prices advanced. Extra, $8,50; 1st quality $7,75@8,25; 2d do, $7@7,50; 3d do. $6@6,75.

Working Oxen—$90, 92, 100@135.

Cows and Calves—Sales $25, 29, 33, 38, 44, 50@55.

Sheep and Lambs—Sales of lots at $2,50, 2,88, 3, 3,50@3,75.

Swine—Lots to peddle, 6¾c for sows, 7¼c for barrows. Spring pigs 7, 8 and 9c. At retail, shoats 7½c and 8½c; pigs 9 and 10c.

## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, July 7.—The offerings at Washington Drove Yard during the past week comprised 1,200 head of Beef Cattle, 80 head of which were driven to New York; 500 Cows and Calves, 1,000 Hogs, and 1,000 Sheep and Lambs. Prices—

Beef Cattle—Dull at $8 to 9,50 ℔ 100 lbs.

Cows and Calves—The demand was not so active but prices were fully maintained; sales good milch cows at 18@35, springers $14@25, and dry cows at $7@10.

Hogs—The market is dull of sale; prices ranged from $6 to 6,50 ℔ 100 lbs.

Sheep and Lambs—Sold at $2 to 6 each, as in quality.

*LABOR SAVED!*

**MUMMA'S PATENT CORN SHELLER.**

THIS Sheller is pronounced by competent judges, to be superior to all others, as it is quite simple and durable in its construction, and shells the ear PERFECTLY CLEAN from end to end, with great rapidity and ease. It separates the cob from the corn, which is a very great advantage, and is adapted to either hand or horse power, and capable of shelling from 30 to 40 bushels per hour. It has shelled a bushel in a minute, by hand power. It runs as light, with one man to turn, as the common hand shellers. From the peculiar construction of the cylinder and springs, it will shell LARGE and SMALL ears perfectly clean at the same moment, of either new or old corn, an advantage not possessed by the multitude of shellers in general use.

This machine has met with the universal approbation of all classes of men wherever introduced. It was awarded the FIRST PREMIUM, a heavy SILVER MEDAL, at the great Fair of the Maryland Institute, held in Baltimore, October, 1850.

It also received the HIGHEST PREMIUM which was awarded at the great Agricultural State Fair of Pennsylvania, held at Harrisburg, October, 1851. Also, at the State Fair of Kentucky, in 1852.

From the great number of recommendations in its favor, we have room only for the following:

From the Hon. J. C. Dickey, Member of Congress, from Pennsylvania.

WASHINGTON CITY, March 3, 1851.

I take pleasure in certifying that I have on various occasions, seen in operation Mr. J. Mumma's Patent Corn Sheller, and that it appeared to me to shell much faster, and do the work CLEANER and better than any machine of which I have any knowledge. JESSE C. DICKEY.

From J. W. Davies, Corn Merchant.

BALTIMORE, November 5, 1850.

MR. E. ROBINSON—Sir: Having seen in operation Mr. J. Mumma's Patent Corn Sheller, I take pleasure in stating, that I consider it a superior sheller to any other now in use, as it leaves the corn *unbroken*, and consequently, more suitable for shipping or market. J. W. DAVIES.

From several Gentlemen, Practical Farmers of Pennsylvania, who have the machine in use.

We, the undersigned, after using Mumma's Patent Corn Sheller, can recommend it to the farming community as having been found equal in every respect to what it is represented to be. It is, indeed, a labor-saving invention, and therefore of incalculable benefit to those who may have use for such machines.

JOHN RUP, Dauphin County.
JOS. HUMMEL, " "
JOS. HERSHEY, " "
J. GARRET, Lebanon County.
G. MYERS, " "
BENJ. CHEW, Cumberland County.

From Messrs. Burk & Ovelman, Machinists.

GREENCASTLE, PA., June 1, 1853.

MR. E. ROBINSON—Sir: We take pleasure in informing you that we have been making Mumma's Patent Corn Sheller, and find them ready sale. The farmers are better pleased with them than any other in use, and as for our part, we consider them much better than any we have ever made, and we have made almost all kinds.

BURK & OVELMAN.

From J. H. Hills, Esq., Practical Miller.

VERNON VILLAGE, N. Y., June 21, 1853.

This may certify, that I have seen in operation and examined a Corn Sheller, patented June 12, 1849, by Jacob Mumma, and that I consider it much the best of any with which I am acquainted. J. H. HILLS,
Vernon, Oneida Co., N. Y.

From Messrs. Cowing & Co., Garden Engine and Pump Manufacturers.

Seneca Falls, N. Y., July 2, 1853.

TO WHOM IT MAY CONCERN—We have made a brief examination of Mumma's Patent Corn Sheller, and we consider it better adapted for farmer's use than any machine of the kind we have ever seen. COWING & CO.

The subscriber having purchased the Patent right of the above Sheller for all the United States and Territories, will sell Township, County or State rights, on reasonable terms. E. ROBINSON.
Greencastle, Franklin Co., Pa., June, 1853.

**WESTERN LAND.**

THE undersigned offers for sale a valuable Farm of 500 acres, located in Clear Lake township, Steuben Co., Indiana, bordering the Michigan line on the east.

The above farm has 100 acres improved, the remainder well timbered with oak, whitewood and black walnut. On the premises is a dwelling house, and a large, commodious barn; likewise an unfailing water power, with a favorable location for a mill. The tract is favorably situated for two or more farms; and the subscriber offers the whole, or a part, in exchange for land or other property in this section, at a great bargain. Address

HENRY O. BARNUM.
Walworth, Wayne Co., N. Y., 1853. 185-4teow

**ROSS'S IMPROVED GRAIN DRILL.**

THE Subscriber offers the Farmers of Monroe, Genesee, Orleans, and Niagara Counties, the above Drill, the best and most perfect by far of all in market. Its advantages are, one half the labor saved in getting in—half bushel saved in seed—and a yield of from 4 to 6 bushels per acre more than broad-cast sowing. It has taken every premium where exhibited, and is recommended by the highest testimonials. It will be delivered at any place upon canal, or at railroad depots in the above counties. All orders should be addressed to the subscriber, at Rochester, N. Y. [185-2t*] E. SPRAGUE.
J. RAPALJE & Co., Rochester, has them also for sale.

**PURE SUFFOLK PIGS FOR SALE.**

THE Subscriber has three pairs of pure Suffolk Pigs, six weeks old, from the stock of F. A. WIER, of Walpole, N. H. Price $16 per pair. Also two boar pigs at $8 each. Apply to or address
July 11, 1853. E. H. GILBERT,
185-2t* Nunda, Livingston Co., N. Y.

*Decidedly the best and Cheapest Poultry Book in the Union.*

NOW READY,

**MINER'S DOMESTIC POULTRY BOOK.**

ORDERS received for over Two Thousand copies of this book in advance of its publication, which is unprecedented in the sale of any work ever issued on this subject.

This is an entirely new work, and one of the most valuable books for PRACTICAL USES that has ever been published. In preparing it, the main object was to study the *actual wants* of the Fowl-breeder, more than their fancy notions, besides containing full directions for Breeding, Raising, and keeping the several kinds that come under consideration; when and how originated; a large number of cuts from life, of some of the best breeds in the country; prices at which they are selling in the market; together with such other matter as was thought necessary. The varieties at present are so great, that a book published five years ago, is now behind the age. This work contains a vast amount of new and useful matter, and in the number of its illustrations, great amount of practical matter, and its fine typographical execution, is ahead of any other work on Poultry ever published. The book contains

Over One Hundred and Thirty Fine Portraits!

of the most perfect specimens of newly imported and native breeds of fowls, and other cuts which have cost from $700 to $800.—being double the number found in any similar book, while the price is only one half as much.—The names of all the new and imported breeds are given, so that any person being at all interested in them, can here find their full description, origin, &c., &c. Recollect

ONLY FIFTY CENTS,

for the most complete book on Poultry ever published.

Dr. J. C. Bennett, of Fort des Moines, Iowa, formerly of Great Falls, N. H., author of "A Poultry Book," and one of the most extensive breeders of Poultry in this country, to whom the proof sheets were shown, writes:

"No book ever published will *compare* with yours, as to *splendid and life-like engravings*, and it will unquestionably be the best book published on the subject, and will sell in preference to any other work. *It will receive my untiring energy for its sale all over the United States*, and I have no doubt its sale will reach 50,000 copies the first year."

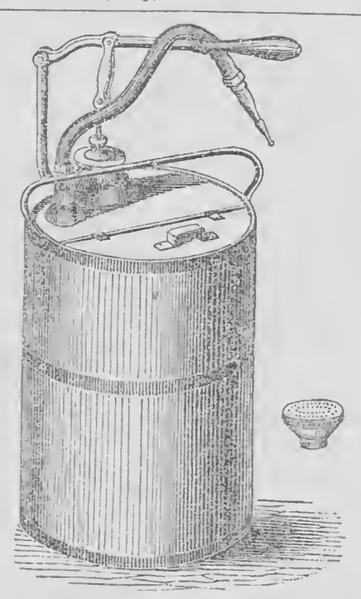
As it is expected this work will have a very extensive sale, it will be an object for book dealers, pedlers, agents, and others, to make early application.

The book is handsomely printed, on good paper, 12 mo. size, contains 256 pages, and sold at the low price of 50 cents paper, and 75 cents in full cloth binding. Those wanting books sent to their address will send in their orders early.

Books sent by mail, post-paid, to any part of the Union on receipt of the following:

For one copy, in paper, . . . . . 50 cts., cloth 75 cts.
" two copies do. . . . . $1,00, " $1,38
" three do. do. . . . . 1,25, " 2,00
" four do. do. . . . . 1,50, " 2,50

Books sold to pedlers, agents, and others, at reduced prices. Address, post-paid, GEO. W. FISHER,
Bookseller and Publisher.
Rochester, N. Y., July, 1853.



WE offer for sale, the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union WM. G. CREAMER & CO.,
Plumbers and Hydraulic Engineers, 64 State street, New Haven, Conn., and 4th Avenue cor. 9th St., New York. 185-3t.

**AUSTRALIAN WHEAT,**

*By Mail and Express to any part of the United States.*

I WILL send by mail on receipt of two or more Postage stamps, a sample of Australian Wheat, which will be an interesting curiosity to those who have never seen it before. Also, by Express or otherwise, as follows:—One peck for $1; two pecks for $1,75; one bushel for $3; three bushels (a barrel) or more, at $2,50 per bushel. All orders to be pre-paid, enclosing the cash, and directions for sending. All remittances will be entered, and attended to in the order they are received, and in case the demand should exceed the supply, the money of those sending in too late, will be promptly refunded.

Address D. D. TOOKER.
July, 1853. [185-2t*] Napoleon, Jackson Co., Mich.

**Walworth Academy.—Fall Term.**

THE next Term of this Institution will commence on WEDNESDAY, 10th of August next.

BOARD OF INSTRUCTION.

I. CHAMBERLAIN, A. M., Principal and Teacher of the Greek and Latin Languages and Higher Mathematics.

Miss CORNELIA COOK, Preceptress and Teacher of Botany, Drawing, and the French and German languages.

Mrs. I. CHAMBERLAIN, Teacher of the Piano Forte, Oil Painting, and Ornamental Needle-Work.

M. C. FINLAY, Mathematical Assistant in the Male Department.

YOUNG LADIES' DEPARTMENT.

Miss COOK, who takes charge of the Female Department, graduated at Troy Female Seminary in 1849, and has been teaching in Academic Institutions most of the time since, at first in this State, and more recently in Ohio. She is recommended to the undersigned by Prof. WOOLWORTH, Principal of the State Normal School, as a lady of rare accomplishments, a superior scholar, and a devoted and most successful teacher.

The other teachers have been for some time connected with the Institution.

EXPENSES.

ORDINARY TUITION.—Common English Branches, $4; Higher English, $5; Languages, $6; Contingent Expenses, 25 cts. EXTRA TUITION.—Music on Piano Forte, $10; Oil Painting, $8; Drawing, $2; Ornamental Needle-work, $2.

Board in good families from $1,50 to $1,75 per week.

I. CHAMBERLAIN, Principal.
Walworth, Wayne Co., July 11, 1853. 185-4t*

A WESTERN FARMERS' PAPER!

**Farmers' Companion & Horticultural Gazette.**

PUBLISHED Monthly, in Detroit, Mich., on 16 extra large octavo pages, with numerous superior *Engravings*,—edited by C. FOX and C. BETTS; J. C. HOLMES, Horticultural Editor; LINUS COSE, Corresponding Editor,—is peculiarly devoted to the interests of Western Agriculture and Gardening. The rising interests of STOCK RAISING and WOOL GROWING, will be particularly attended to.—As the Editors are all practical men, and old residents in the West, they believe they can afford much valuable *practical* information, and assist materially their brother farmers in their business; especially those who have lately immigrated, or intend to do so.

Price, only Fifty Cents a Year.

*** The celebrated Prof. J. F. W. JOHNSTON, F. R. S. L. & E., the great Agricultural Chemist of England, has promised to contribute during the year.

Specimen numbers sent on application. A liberal commission to agents. Advertisements are confined to the cover, so as not to interfere with the reading.

Direct to CHAS. BETTS, Detroit, Mich.

**SUPERPHOSPHATE OF LIME.**

THE undersigned continue sole agents for the sale of Deburgs Superphosphate of Lime, which has proven Superior to all other brands, now in the market. Having sold nearly Three Hundred Tons this spring, and heard from a majority who have used it, they pronounce it equal to Guano in its effects, and is more lasting in the soil. As, there are many substances called Superphosphate of Lime now offering in this market, which are of a different nature, to avoid impositions purchasers would do well by applying direct to the agency for their supply.

LONGETT & GRIFFING,
184-6w. No. 25 Cliff Street, New York.

**GARDEN OR FIRE ENGINE.**

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N. B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.
Seneca Falls, N. Y., June, 1853. 183w10

*HALLOCK'S*

**AG'L WAREHOUSE AND SEED STORE.**

*No. 24 Exchange St., Rochester, N. Y.*

THE subscriber, late from the Establishment of Emery & Co., Manufacturers at Albany, where he has been engaged for the past six years, has been appointed their SOLE AGENT in Rochester and Western New York, for the sale of

*Emery's Celebrated Railroad Horse Powers and Threshing Machines; Circular and Cross-cut Saw Mills, Feed Mills, Corn-stalk and Hay-Cutters, &c.,*

adapted to the Power, and now offers them at manufacturer's prices, with the transportation added, and subject to the warrantee, as follows:—"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded." The attention of Farmers is solicited, and a careful investigation into the construction of this Power, and its comparative merits, as well as price requested, before purchasing elsewhere. He is also agent for their

**Combined Reaper and Mower.**

and keeps constantly on hand, Plows, Hay Cutters, Corn Shellers, Seed Planters, &c., &c., comprising a complete and extensive stock of Agricultural and Horticultural Implements generally, together with a full assortment of Field and Garden Seeds, of the best Imported and Shaker growth.

He is also agent for the sale of Seymour and Morgan's New York Reaper, Pierpont Seymour's Grain Drills and Broad-cast Sowers, Wheel Cultivators, Gang Plows, Clover Hullers, Cider Mills, Clover Gatherers, Horse Rakes, Scythes and Snaths, Hand Rakes, Grind Stones, &c.

He will be prepared to furnish dealers with Dunn and Taylor's well-known Scythes; also Manure, Straw, and Hay Forks, Snaths, Rifles, and other haying tools at manufacturers' prices, wholesale and retail.

Particular attention is called to a NEW PLOW, which is believed to be the best cast iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any Plow heretofore sold in Rochester—while the price is less than any other equally well finished.

The "uniform one-price cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time, will allow.

Farmers and others are invited to call and examine the stock of Machines and Implements, and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

☞ Circulars and Catalogues furnished gratis on application personally or by mail. E. D. HALLOCK,
177tf No. 24 Exchange st., Rochester.

**PREPARED SUPER PHOSPHATE OF LIME,**

BY THE UNION CHEMICAL WORKS, L. I.

HOYT & CO., Agents,

*No. 234 Water Street, and 122 West St., corner of Dey St., NEW YORK.*

A FERTILIZER of the most approved quality, producing all the immediate effect of the best Peruvian Guano, with the advantage of being much more lasting in the soil.—Thoroughly tested, and found to more than realise the expectations of all those who have already tried it. The best evidence of this is the largely increased demand this season over the past year. Put up in bags of 160 lbs; barrels 250 lbs each. Buyers will please be particular to observe our brand upon each bag or barrel.

Also for sale, American and Foreign Field and Garden Seeds. English Ray Grass, Foul Meadow Grass, fine mixed Lawn Grass, White Clover, Osage Orange, &c.
178m3i.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

**GARDEN AND FIELD SEEDS**

*From the New Establishment of Van Zandt & Bowdish,*
No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. HALLOCK, No. 24 Exchange street, near the Clinton Hotel, Rochester, N. Y.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the EASTERN SHAKERS, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.
Rochester, N. Y., 1853. 170m6.

**DRAIN TILE MACHINE.**

THE Subscribers are manufacturing at their machine shop, at North Bloomfield, Ontario Co., N. Y. Machines of an improved pattern, and most durable construction, for the use of moulding drain tile, bats for crocks, &c.

Orders by mail or otherwise, punctually attended to.
FAIRCHILD & WOOD.
North Bloomfield, N. Y., April, 1853. 173-5toam

**REAPING MACHINES.—IMPORTANT INJUNCTION.**

JUDGE NELSON, of the Supreme Court of the U. S., granted at Cooperstown, on Friday, the 24th ult., an injunction against SEYMOUR & MORGAN, of Brockport, restraining them and their agents from disposing of their wheat Reapers as an infringment of my patent. Purchasers of machines make themselves liable to prosecution by using them. C. H. McCORMICK.

☞ Mr. McCORMICK has recently obtained a renewal of his patent, including the reel. Manny's Reaper is as decided an infringement of his patent—subjecting the manufacturer and purchaser of it to the same penalties.
June 29, 1853. 183tf.

**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a STEREOTYPE FOUNDRY in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to
J. W. BROWN,
April, 1852. [122-1am-tf] Rochester, N. Y.
N. B.—Old type taken in exchange for work.

**MARSHALL'S BOOK BINDERY,**

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

**GREAT PRIZE MEDAL.**

THE WORLD'S FAIR AT LONDON, awarded us a MAMMOTH SILVER MEDAL for the BEST HATS.—Gents wishing the Spring and Summer style, will call. We are prepared to serve you with a superior article, and of the most becoming style.

CLARK & GILMAN, 23 State St.,
[169-3m.] Rochester N. Y.

# Poetical.

Written for Moore's Rural New-Yorker.

## A SUMMER MORNING.

BY HORACE S. RUMSEY.

With magic art the rising sun
Now gilds the orient gates of day,
With iris tint on clouds of dun,
Changing the scene with each new ray.
The ancient hills and vales between,
Are robed anew with shade and light;
The lambkins gambol on the green,
The lark, on high, now takes her flight.

And timid flowers all pearled in dew,
Now sip the nectar of the skies,
While swelling buds unfold to view,
Fresh petals which from them arise.
The balmy zephyr from the hills,
With health and fragrance floats along,
And babbling brooks and murmuring rills,
In one sweet concert blend their song.

And twittering swallows through the air
In undulations rise and sink,
While mellow notes are heard afar
Of robin red and bobolink.
The ruddy youth unto the fields
Now hastens at the break of morn;
The model plow with skill he wields,
While sounds afar the shepherd's horn.

The rustic maiden, where the spray
Glistens like pearls, now wends her way,
Culling choice flowers whose language speaks
Each thought that vain for utterance seeks,
Through words which never can express
The heart's pure love, its tenderness;
No, never half its worth portray,—
Its deep and gushing sympathy.

Now sylvan songsters ope their throats,
Where tall trees, wide their branches fling,
And warble forth their joyous notes,
Making the leafy welkin ring.
They dip their beaks in sparkling dew,
Now thrilling flows their song again,
The varied diapason through,
In many a rich, enchanting strain.

O, Nature's scenes are wild and sweet!
And lessons sage they teach to me,
Of Him who clothes with garments meet,
The hills, and vales, and waving tree.
Then let the heart's pure incense rise,
While kneeling on the emerald sod,
From earth ascending to the skies,
"Through Nature up to Nature's God."

Elmira Water-Cure, N. Y., June, 1853.

## THE BRIDAL WINE-GLASS;

### OR, WOMAN'S FIRMNESS AND EXAMPLE.

BY MRS. M. A. DENISON.

"PLEDGE with wine — pledge with wine," cried the young and thoughtless Harvey Wood; "pledge with wine," ran through the brilliant crowd.

The beautiful bride grew pale — the decisive hour had come. She pressed her white hands together, and the leaves of the bridal wreath trembled on her pure brow; her breath came quicker, her heart beat wilder.

"Yes, Marion, lay aside your scruples for this once," said the Judge in a low tone, going towards his daughter, "the company expect it; do not seriously infringe upon the rules of etiquette; in your own home act as you please; but in mine, for this once, please *me*."

Every eye was turned towards the bridal pair. Marion's principles were well known. Henry had been a convivialist, but of late his friends noted the change in his manners, the difference in his habits — and to-night they watched him to see, as they sneeringly said, if he was tied down to a woman's opinion so soon.

Pouring a brimming beaker, they held it with tempting smiles toward Marion. She was still very pale, though more composed; and her hand shook not, as smiling back, she gracefully accepted the crystal temptor, and raised it to her lips. But scarcely had she done so, when every hand was arrested by her piercing exclamation of "oh! how terrible!"

"What is it?" cried one and all, thronging together; for she had slowly carried the glass at arms length, and was fixedly regarding it as though it were some hideous object.

"Wait," she answered, while an inspired light shone from her dark eyes, "wait, and I will tell you." "I see," she added, slowly, pointing one jewelled finger at the sparkling ruby liquid — "a sight that beggars all description; and yet listen — I will paint it for you, if I can. It is a lonely spot; tall mountains crowned with verdure rise in awful sublimity around; a river runs thro' and bright flowers grow to the water's edge. There is a thick, warm mist, that the sun seeks vainly to pierce. Trees, lofty and beautiful, wave to the airy motion of birds; but there—a group of Indians gather; they flit to and fro with something like sorrow upon their dark brows. And in their midst lies a manly form — but his cheek how deathly, his eye wild with the fitful fire of fever. One friend stands beside him—nay, I should say kneels; for see, he is pillowing that poor head upon his breast.

"Genius in ruins — oh! the high, holy-looking brow! why should death mark it, and he so young? Look how he throws back the damp curls! see him clasp his hands! hear his thrilling shrieks for life! mark how he clutches at the form of his companion, imploring to be saved. Oh! hear him call piteously his father's name—see him twine his fingers together as he shrieks for his sister — his only sister — the twin of his soul—weeping for him in his distant native land.

"Soo!" she exclaimed, while the bridal party shrank back, the untasted wine trembling in their faltering grasp, and the Judge fell overpowered, upon his seat—"see! his arms are lifted to heaven — he prays, how wildly, for mercy! hot fever rushes through his veins. The friend beside him is weeping; awe-stricken, the dark men move silently away, and leave the living and dying together."

There was a hush in that princely parlor, broken only by what seemed a smothered sob from some manly bosom. The bride stood yet upright, with quivering lip, and tears stealing to the outward edge of her lashes. Her beautiful arm had lost its tension, and the glass, with its little troubled red waves came slowly towards the range of her vision. She spoke again; every lip was mute. Her voice was low, faint, yet awfully distinct; she still fixed her sorrowful glance upon the wine-cup.

"It is evening now; the great white moon is coming up, and its beams lay gently on his forehead. He moves not; his eyes are set in their sockets; dim are their piercing glances; in vain his friend whispers the name of father and sister,— death is there. Death — and no soft hand, no gentle voice to bless and soothe him. His head sinks back! one convulsive shudder! he is dead!"

A groan ran through the assembly, so vivid was her description, so unearthly her look, so inspired her manner—that—what she described, seemed actually to have taken place then and there. They noticed also that the bridegroom hid his face in his hands and was weeping.

"Dead!" she repeated again, her lips quivering faster, and her voice more and more broken; "and there they scoop him a grave: and there, without a shroud, they lay him down in that damp, reeking earth. The only son of a proud father, the only, the idolized brother of a fond sister. And he sleeps to-day in that distant country, with no stone to mark the spot. There he lies—my *father's* son—my own *twin brother!* a victim to *this* deadly poison. "Father," she exclaimed, turning suddenly, while the tears rained down her beautiful cheeks, "father, shall I drink it now?"

The form of the old Judge was convulsed with agony. He raised not his head, but in a smothered voice he faltered — "No, no, my child, in God's name—no."

She lifted the glittering goblet, and letting it suddenly fall to the floor, it was dashed in a thousand pieces. Many a tearful eye watched her movement, and instantaneously every wine-glass was transferred to the marble table on which it had been prepared. Then as she looked at the fragments of crystal, she turned to the company, saying, "let no friend hereafter, who loves me, tempt me to peril my soul for wine. Not firmer are the everlasting hills than my resolve, God helping me, never to touch or taste that terrible poison. And he to whom I have given my hand — who watched over my brother's dying form in that last solemn hour, and buried the dear wanderer there by the river in that land of gold, will, I trust, sustain me in that resolve —will you not, my husband?"

His glistening eyes, his sad, sweet smile, was her answer. The Judge left the room, and when an hour after he returned, and with a more subdued manner took part in the entertainment of the bridal guests, no one could fail to read that he, too, had determined to banish the enemy at once, and forever from his princely home.

Those who were present at that wedding, can never forget the impressions so solemnly made,—many from that hour forswore the social glass.

## THE BROKEN FLOWER-POT.

### A Story for the Young.

[PISISTRATUS, the young hero in the following extract, pushed his mother's favorite flower-pot out of the window, in mischief, and told the truth about it.]

From that time I first date the hour when I felt that I loved my father, and knew that he loved me; from that time, too, he began to *converse* with me. He would no longer, if he met me in the garden, pass by with a smile and nod; he would stop, put his book in his pocket, and though his talk was often above my comprehension, still, somehow, I felt happier and better, and less of an infant, when I thought over it, and tried to puzzle out the meaning; for he had a way of suggesting, not teaching; putting things into my head, and then leaving them to work out their own problems. Not long after this, Mr. Squills made me a present far exceeding in value those usually bestowed on children; it was a beautiful, large domino-box in cut ivory, painted, and gilt. This domino-box was my delight. I was never weary of playing at dominoes with Mrs. Primmins, and I slept with the box under my pillow.

"Ah," said my father, one day, when he found me ranging the ivory parallelograms in the parlor, "ah, you like that better than all your playthings, eh?"

"Oh, yes, papa."

"You would be very sorry if your mamma was to throw that box out of the window and break it, for fun?"

I looked besoochingly at my father, and made no answer.

"But, perhaps you would be very glad," he resumed, "if, suddenly, one of those good fairies you read of, could change the domino-box into a beautiful geranium, in a beautiful blue and white flower-pot, and that you could have all the pleasure of putting it on your mamma's window-sill?"

"Indeed, I would!" said I, half crying.

"My dear boy, I believe you; but good wishes don't mend bad actions; good actions mend bad actions."

So saying, he shut the door and went out. I cannot tell you how puzzled I was to make out what my father meant by his aphorism; but I know that I played no more at dominoes that day. The next morning, my father found me seated by myself under a tree in the garden; he paused, and looked at me with his grave, bright eyes, very steadily.

"My boy," said he, "I am going to walk to ———, (a town about two miles off,) will you come? and, by-the-by, fetch your domino-box; I should like to show it to a person there."

I ran in for the box, and not a little proud of walking with my father upon the high-road, we set out.

"Papa," said I, by the way, "there are no fairies now."

"What then, my child?"

"Why, how then can my domino-box be changed into a geranium, and a blue and white flower-pot?"

"My dear," said my father, leaning his hand upon my shoulder, "everybody who is earnest to be good, carries two fairies about with him; one here," and he touched my heart, "and one here," and he touched my forehead.

"I don't understand, papa."

"I can wait till you do, Pisistratus. What a name!"

My father stopped at a nursery gardener's, and after looking over the flowers, paused before a large double geranium.

"Ah, this is finer than that which your mamma was so fond of. What is the cost, sir?"

"Only 7s. 6d.," said the gardener.

My father buttoned up his coat pocket. "I can't afford it to-day," said he, gently, and we walked out. On entering the town, we stopped again, at a china warehouse.

"Have you a flower-pot like that I bought some months ago? Ah, here is one mark-3s. 6d. Yes, that is the price. Well, when your mamma's birth-day comes again, we must buy her another. That is some months to wait. And we can wait, Master Sisty.— For truth, that blooms all the year round, is better than a poor geranium; and a word that is never broken is better than a piece of delf."

My head, which had dropped before, rose again, and the rush of joy at my heart almost stifled me.

"I have called to pay your little bill," said my father, entering the shop of one of those fancy stationers, common in country towns, and who sell all kinds of pretty toys and nicknacks; "and by the way," he added, as the smiling shopman looked over his book for the entry, "I think my little boy here, can show you a much handsomer specimen of French workmanship than that work box which you enticed Mrs. Caxton into raffling for, last winter. Show your domino-box, my dear."

I produced my treasure, and the shopman was liberal in his commendations.

"It is always well, my boy, to know what a thing is worth, in case one wishes to part with it. If my young gentleman gets tired of his plaything, what will you give him for it?"

"Why, sir," said the shopman, "I fear we could not afford to give more than eighteen shillings for it, unless the young gentleman took some of these pretty things in exchange."

"Eighteen shillings!" said my father.— "You would give *that?* Well, my boy, whenever you do grow tired of your box, you have my leave to sell it."

My father paid his bill, and went out. I lingered behind a few moments, and joined him at the end of the street.

"Papa! papa!" I cried, clapping my hands, "we can buy the geranium—we can buy the flower-pot," and I pulled a handful of silver from my pocket.

"Did I not say right?" said my father, passing his handkerchief over his eyes; "you have found the two fairies!"

Oh, how proud, how overjoyed I was, when after placing vase and flowers on the window-sill, I plucked my mother by the gown, and made her follow me to the spot!

"It is his doing and his money!" said my father; "good actions have mended the bad."

"What!" cried my mother, when she had learned all, "and your poor domino-box that you were so fond of! We will go back to-morrow, and buy it back, if it costs us double."

"Shall we buy it back, Pisistratus?" asked my father.

"Oh, no, no, no! it would spoil all!" I cried, burying my face on my father's breast.

"My wife," said my father, solemnly, "this is my first lesson to our child, the sanctity and the happiness of self-sacrifice; undo not what it should teach to his dying day."

And this is the history of the broken flower-pot.

## PENALTIES.

THE penalty of buying cheap clothes is the same as that of going to law—the certainty of losing your suit and having to pay for it.

The penalty of marrying, is a mother-in-law.

The penalty of remaining single, is having no one who "cares a button" for you, as is abundantly proved by the state of your shirts.

The penalty of thin shoes, is a cold.

The penalty of a pretty cook is an empty larder.

The penalty of tight boots, is corns.

The penalty of popularity, is envy.

The penalty of a baby, is sleepless nights.

The penalty of interfering between man and wife, is abuse, frequently accompanied with blows from both.

The penalty of kissing a baby, is half a crown, five shillings (if you are liberal) to the nurse.

The penalty of a public dinner, is bad wine.

The penalty of a legacy or a fortune, is the sudden discovery of a host of poor relations you never dreamed of; and a number of debts you had quite forgotten.

The penalty of lending, is—with a book or an umbrella, the certain loss of it; with your name to a bill, the certain payment of it; and with a horse, chance of ever seeing him back again sound.—*Punch.*

# Wit and Humor.

## WHAT I WOULD LIKE.

To make my happiness,
I'd kind o' like to have a cot
Fixed on some sunny slope—a spot,
Five acres, more or less,
With maples, cedars, cherry trees,
And poplars whitening in the breeze.

'Twould suit my taste, you see,
To have the porch with vines o'erhung,
With bells of pendent woodbine swung,
In every bell a bee;
And round my latticed window spread,
A clump of roses, white and red.

To solace my retreat,
I kind o' think I should desire
To hear around the lawn a choir
Of wood-birds singing sweet;
And in a dell I'd have a brook,
Whereby to sit and read my book.

Thus I'd live peacefully,
Far from the city's crowds and noise;
There would I rear the girls and boys,
(I have some two or three,)
And if kind heaven should bless my store
With competence for these and more,
How happy I would be!

## THE LEARNED ELEPHANT.

"THAT's a werry knowing hanimal of yours," said a cocknoy gentleman to the keeper of an elephant. "Very," was the cool rejoinder." "He performs strange tricks and hantics, does he?" inquired the cockney, eyeing the animal through his glass. "Surprisin'," retorted the keepor, "we've learned him to put money in that box you see up there. Try him with a dollar." The cockney handed the elephant a dollar, and sure enough he took it in his trunk and placed it in a box high up out of reach. "Well, that is very hextraordinary —hastonishing, truly!" said the green one opening his eyes. "Now let's see him take it out and 'and it back." "We never learns him that trick," retorted the keeper, with a roguish leer, and then turned away to stir up the monkeys and punch the hyenas.

GIRLS.—Holmes, in one of his poems, says in a parenthetical way—

—"My grandpapa
Loved girls when he was young."

No doubt of it; for Holmes is a sensible man, and must have had a sensible grandfather. All sensible men love girls when they are young, and when they are old too. (We apply the "old" to the men not the girls—mind you.) Girlhood is an institution—a "peculiar institution"—which as lovers of the "union" we feel bound to cherish, and as to the girls large and small, we hold that no gentleman's family "is complete without them." Of little girls an American poet says—

"With rosy cheeks, and merry dancing curls,
And eyes of tender light,
O very beautiful are little girls,
And goodly to the sight.

And as to large girls—"big, bouncing girls" —what a pity it is that they must soon be "women"—statoly, matronly, queenly women, who are only not angels because they are not—girls!—who, by the by, are not angels either, but vastly more charming than any members of the angelic host that we remember to have seen in the pictures or elsewhere! Indeed they are.—*Boston Post.*

THE easiest way to "make a clean breast of it," is to take an emetic. People with "something on their minds," will please note.

# Youth's Corner.

Answer to Charade—*Avarice.*

Answer to Question — Half way round, or opposite the place he started from.

### E. Boughton's Thistle Digger and Subsoil Cultivator!

THE Thistle Digger and Subsoil Cultivator is, owing to its peculiar construction, particularly adapted to pulverizing the soil and destroying all thistles, noxious weeds and grass. It will work in any soil, the harder the better. It is so arranged that the blade may be raised and lowered, and made to move the soil to any required depth, and by cutting up every thing in its way, has a decided advantage over the Wheel Cultivators whose use it is fast superceding.

The following gentlemen, who are all practical Farmers, have used the Thistle Digger and Subsoil Cultivator on their farms, and cheerfully concur in recommending it.

### GREAT STOCK SALE.

#### Short-horn and Durham Cattle, and Southdown Sheep.

ON Wednesday, the 7th day of September next, at one o'clock, P. M., I will sell, at my farm on Grand Island, six miles below Buffalo, about 30 full bred Short-horns, a few Devons, and about 30 high grade Short-horn and Devon Cattle, consisting of Cows, Heifers and Young Bulls.

The young Short-horns are chiefly the get of my imported bull Duke of Exeter (10,152)—a bull not exceeded, as a fine stock getter, by any other in the U. States.

The young Devons are the get of the bulls Candy and Quartley, both imported by Mr. STEVENS. The superior of these bulls in blood, style and breeding, is not to be found. Quartley is my present stock bull.

I will offer at the same time 50 pure bred South-Down Sheep-rams and ewes. Also a few Middlesex pigs—both sheep and pigs the direct get of imported sires, from dams descended from late importations.

Catalogues will be ready by the first of August, and will be sent on application to me, by mail.

TERMS:—All sums of $100, and less, cash. For larger sums, approved notes at four months, with interest, payable at Bank, will be received, if preferred.

A steamboat will carry all persons wishing to attend, across the ferry from Lower Black Rock to the farm, at 10 o'clock on the morning of the day of sale. The stock can be viewed at any time previous, by calling on me at my residence in this place. LEWIS F. ALLEN.

Black Rock, N. Y., June 15, 1853. 182-10t

### THE JUVENILE INSTRUCTOR,

BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 4 cts on each paper.

Price per year—single copies, 25c.; Five to one address, $1; Ten do, $1.70; Twenty do, $3; Thirty do, $4.20; Fifty do, $6,50; One hundred do, $12.

Address LUCIUS C. MATLACK,
183m3. Syracuse, N. Y.

### FERTILIZERS.

Super Phosphate of Lime,.....2½ cents per pound.
Bone Sawings, or Meal,.....$2.50 per barrel.
Turnings and Crushed,..... 2,25 " "
Pulverized Charcoal,..... 1,00 " "
Plaster, Ground,..... 1,12½ to 1,25 do.
Potash Scrapings,.....3½ to 4 cts. per lb.
Sulphuric Acid,.....2¼ to 2½c. "

For sale at the State Agricultural Warehouse.
LONGETT & GRIFFING,
178w8. No. 25 Cliff Street, New York.

### GENESEE PAPER MILLS.

CO-PARTNERSHIP NOTICE.—The subscribers having purchased the Genesee Paper Mills property, have this day formed a Co-partnership, under the name and firm of Adams, Huntington & Co., for the purpose of Manufacturing Printing Paper, and dealing at wholesale and retail in all kinds of Paper Stock. Office and Warehouse, No. 93 State street.

FRANCIS T. ADAMS, E. T. HUNTINGTON,
WILLIAM A. ADAMS, ALVAH STRONG,
ALBERT M. HASTINGS, D. D. T. MOORE.
Rochester, April 15, 1853.

### DAGUERREOTYPES.

THE Subscriber continues the business of Daguerreotyping, at his old stand in Chappell's Block, 82 State-st. Grateful for past favors, he will, as heretofore, adhere to the motto, that "whatever is worth doing at all, is worth doing well,"—trusting therein for a continuance of public patronage. Pictures copied, and all other work done in the highest style and finish known to the Art.

Rochester, Jan., 1853. [162-oam] S. B. SMITH.

### Erection of Lightning Rods.

L. P. BERTHRONG & Co., offer their services to the public for this work. They assure their patrons that the work shall be carefully and faithfully done. The patronage already received demands their gratitude, and shall be fully merited in future. They will put up rods both in city and country. Orders may be left at 55 South Fitzhugh St., or at J. B. Dewey's Store, 61 Buffalo St.

L. P. BERTHRONG & Co.
Rochester, July 13, 1852. 133-tf

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

## MOORE'S RURAL NEW-YORKER:

A WEEKLY HOME JOURNAL,

For both Country and Town Residents.

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

### THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

**Terms:**—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 30. ROCHESTER, N. Y.—SATURDAY, JULY 23, 1853. WHOLE NO. 186.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
**Agricultural, Literary and Family Newspaper.**

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

# Rural New-Yorker.

## Progress and Improvement.

### THE DAIRY.—CHEESE MAKING.

IT has been but a few years since the value of dairy products, especially Cheese, was of sufficient importance to claim more than a passing notice. A large number of the good housewives of the land made a few moderate sized cheese, each in her own way, principally for home consumption,—though occasionally they bartered a few with the nearest merchant for some of the necessaries or luxuries of life, not readily producable at home.

Finding it an easy matter to make a few more than at first intended, some of the more wealthy farmers in the grazing districts came gradually to make cheese with a view to its sale as a matter of profit. Thus from a small beginning has the cheese business been constantly increasing until the annual production of the United States amounts to some millions of pounds, and the annual sales bring to the pockets of the dairymen, in round numbers, some hundreds of thousand of dollars.

Under an impetus like this it becomes a matter of much moment to know how to render the cheese dairy most profitable,—how to make, from a given number of cows, the largest amount of cheese suitable for market, and still maintain the quality, so as to command the highest price. It is hardly practicable to give any specific directions which the cheese makers can follow that would ensure uniformity in their production, as there are so many causes that cannot be taken into the account almost certain to operate differently in so many diversified localities, and in the hands of such a multitude of persons.

At all times, however, the selection of good cows may be considered indispensable, as also the furnishing of an abundance of good fresh feed, pure water, salt, and good care, which all cows require. Clover has been used as food for dairy cows, though other grasses, such as June grass, red top, and timothy, are preferable. Soiling with corn fodder raised by sowing corn broadcast answers an excellent purpose during the dry summer months when the pasture food generally runs short.

A good dairy house, suitable utensils, and other conveniences facilitate operations very much, though a large amount of very good cheese is made where many things that could be used with profit are not included in the schedule of dairy utensils and fixtures. For the method of manufacture, in a dairy of moderate size, we cannot probably do better than give that furnished in the statement made by SAMUEL A. THURSTON and published in the Transactions of the Wisconsin State Agricultural Society for 1851.

"My usual mode is to take my evening's and morning's milk to make one cheese; the evening's milk is strained into a tub, and cooled to prevent souring. This is done by setting a tin vessel into the tub, filled with cold water; this I usually do when I commence milking. If the weather is very warm and sultry, the water will need to be changed once and sometimes twice in the course of the evening; for unless all the animal heat is extracted, the milk will be sure to sour before morning. I take off the cream that rises, and put evening's and morning's milk together. I put a quantity of new warm milk with the cream, stir it well together, and put it in the tub with the rest of my milk, the curdling heat of which should be about 90 degrees. I then put in a sufficient quantity of rennet to produce coagulation in from thirty to forty minutes; while the curd is forming, it should be let entirely alone. After the curd is completely formed, I cut it up with a cheese rake made for that purpose; I then let it stand twenty or thirty minutes for the whey to separate from the curd; I then proceed to break up the curd, and this must be done with the utmost care, and especially if the curd comes soft. After I have gone through with it, and thoroughly stirred it in every part, I then let it stand and settle; a strainer is thrown over the tub, and gently pressed down with the hand into the whey, a portion of which is dipped off, and placed over the fire to heat; while this is heating, I work the curd with my hands until it is as fine as wheat. After this process is gone through with, I commence the scalding process by pouring on hot whey; this should be carried to about one hundred degrees; the curd should be well stirred during the time of scalding. When the curd is sufficiently cooked so that it feels elastic, and will squeak when chewed between the front teeth, it is separated from the whey to receive the salt; this is done by dipping it into a strainer over a sink. This may be done without its adhering in lumps, by stirring it in a small portion of cold whey until cooled to ninety or ninety-five degrees. Here great care should be used, as much depends upon the curds being in a proper state to receive the salt. After the whey is sufficiently drained off I salt my curd, putting in a common teacupfull of salt to twenty pounds of cheese; after it is well strained together, I put it into the press.

My mode of pressing is to press light the first ten minutes; after that I turn the screw hard upon it. I press my cheese twenty-four hours, turning once in the time. My opinion is, that we cannot press too hard if the cheese is properly manufactured. After the cheese is taken from the press it is immediately colored, and left to stand until dry, and then thoroughly greased and bandaged. I am not in the habit of using much grease; after this a very little, occasionally, is sufficient. I find by turning my cheese every day, and rubbing them with the hand, they become smoother upon the surface than they do by using more grease. Oil is obtained, for greasing cheese, from the whey; after standing twenty-four hours, it is churned till separation takes place like butter, then melted over a slow fire until it turns to oil."

We shall hereafter give the statements of those who keep a large number of cows, and whose cheese has obtained great celebrity in the market. Small dairies are by no means to be underrated as we know many thrifty housewives whose small cheese has all the richness and flavor of the mammoth productions of the largest dairies. †

### THE PATENT OFFICE REPORT ON GUANO.

AMONG the various queries contained in the Agricultural circular of the Patent Office, issued in the Autumn of 1851, one related to the application of guano to the wheat crop, and the results,—the gain in bushels for one hundred pounds of this manure were particularly requested to be reported. Having an hour, recently with no other Agricultural Literature to occupy us, we looked over the portly volume to see how many, of over one hundred persons answering, would give the information desired. But few of the whole number was acquainted with its use, and only in Delaware, Maryland and Virginia had much attention been given to this fertilizer.

In the first named State, a Sussex Co., farmer, who had used it for several years, thought that on poor land, 300 lbs. per acre, plowed in six inches deep, would increase the crop about fifteen bushels. This he considered the most profitable quantity to apply, and also, the best mode of application, but thought it less profitable than lime course. Another farmer thought the cost was scarcely repaid, taking every expense into consideration. A Maryland farmer found much benefit from its use, and states that the increase in the crop corresponded with the amount of the guano, up to 400 lbs. above which point the straw only was increased. Two Virginia farmers made experiments, and found the increase to be about eight bushels per 100 lbs. on exhausted land. The comparation cost and profit is nowhere accurately stated.

The same Document contains an article copied from an agricultural paper detailing five valuable experiments made with this fertilizer in Rhode Island. In the first it was applied to rye, and $7 worth of guano produced an increase of $14,50, or a gain of 100 per cent on the expense. Their experiments were made on grass, nearly doubling the product of the same. The fifth experiment was made on corn, with a most favorable result.

All unite in stating that the genuineness of the guano and the moisture or drouth of the season have much to do with its effects. In very dry seasons but little benefit is found from its use.

### A THEORY, AND REASONS THEREFOR.

THE following Theory, with reasons for the same, I have adopted as a guide to practice in cultivation, and desire to have them made public, in order to ascertain whether there is any originality in them or not,—and for another reason, which is, if they possess any value, others may be benefited thereby. And if I find my claims admitted by silence or otherwise, I may apply to the National Government for compensation, proportionate to the value of the discovery, or if foiled in that, along with Prof. COMSTOCK, endeavor to make a fortune out of it some other way.

That kind of cultivation, only, is useful, which results in assisting Nature in her efforts at production; and *that* kind is not, which results in retarding—but is useless, if not injurious; consequently, some knowledge of her laws, and modes of operation, (is necessary to make farming anything more than hap-hazard guess-work, and running ninety-nine chances out of every hundred of making a failure,) which can be obtained only in her own book, in forest and field, at her labors, in her work-shop, among her productions, to enable the cultivator to know what and how to apply the necessary means to effect the desired end; otherwise, his efforts will be more liable to retard, than assist, because there are many ways to do things, and but one of the many right.

*First reason in Theory.*—Nature places all seeds on the surface, trusting to accident for that covering necessary to protect them from the deprodations of animals, and the direct rays of the sun, that kiln-drys and destroys germination.

*First item in Practice.*—Assistance can be rendered by applying that covering, which should be barely sufficient for the purpose—more than *that* is injurious, retards germination.

*Second Reason.*—After germination, nurses are sent out to forage for, and convey nourishment to the plant; spreading and extending as its wants increase, governed by instinctive laws and powers, in the plant, they proceed directly to where the requisite varieties can be obtained, some downwards for moisture, others horizontally near the surface, for nourishment, distilled from decaying vegetable matter, by the action of the elements, gases, ammonia, and atmospheric influences.

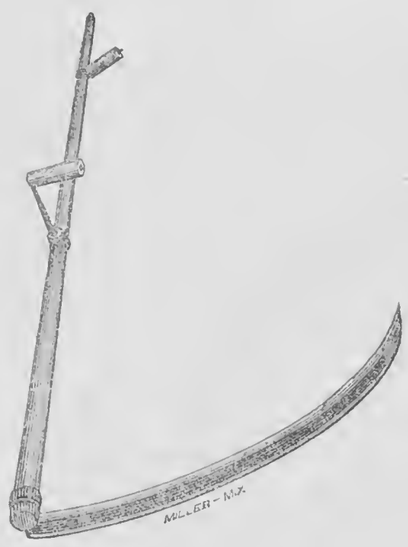
*Second item in Practice.*—Remove all obstructions to a free passage for the roots, all foreign vegetation, useless, sickly, feeble plants, to proper distances, and noxious weeds, that retard the growth of the cherished plant, by stealing its sustenance, and furnish, and preserve all requisite varieties of nourishment in proper quantities.

*Third Reason.*—In preparing the soil for the seed, I have not yet stuck the stake, or made a point for a certainty, where the maximum depth for loosening the earth should terminate, for profit; it may be one foot, or two, or twenty, or to the center of the earth. Writers or doctors disagree.—Who will decide? My reason and judgment say, between one and two foot, my experience is silent on the subject.

*Third item in Practice.*—Prepare a rich mellow soil, one foot deep, with no impervious hard-pan sufficiently near to retain superfluous moisture, which would afford a free passage for the roots to extend, and place themselves in their natural position, where they will be most servicable to the plant. In after surface culture, in loosening the soil, removing weeds, &c., caution and care must be used, not to *disturb* or *alter* the *position* of the roots in relation of the surface, by *adding* or *diminishing* the quantity of earth over them.

I would remark in relation to the third item, by way of explanation, (it being the only one claiming originality, at least with myself,) that I have thought much and reasoned long, and have come to the following conclusion:—That all plants possess the power to place their roots, if obstructed, in precisely the right position in the earth, where most useful in obtaining the various kinds of nourishment needful. That a root lying at a certain point from the surface, receives a certain amount of solar and other atmospheric influences, necessary to the plant, and by adding or diminishing the quantity of earth over it, its position in relation to the surface is changed, thereby changing the influences conferred upon the plant, through the root, retarding and injuring, by depraving it of the benefits obtained when in its natural position, without which it must exist, until new roots are sent out from the main top root or fibers from other roots, to regain the original position.

Marcellus, N. Y., July, 1853. S. G.



BOLEY'S PATENT SCYTHE SNATH.

AMONG the many inventions which have been sought out by ingenious mechanics, for the purpose of lightening the burdens of the toil-worn husbandman, the Snath invented by Mr. JOHN BOLEY, Van Buren Centre, Onondaga Co., N. Y., is one of the latest and most novel. We do not understand him as claiming patent upon the stick, which is perfectly straight, but upon the nib, which, as will be seen in the figure, differs from those in general use. It is contended that the peculiar crook and construction of the nib is an equivalent for all the crooks which are necessary in LAMSON'S or CLAPP'S Snaths, and others in general use. The arrangement of this Snath and nibs is such as to enable the laborer to stand much nearer his work, to strike much further into the grass, and to gather and discharge the clips with more accuracy and a less comparative labor, than can be done with any other Snath. Those who have given them a thorough trial, we understand, are loudest in their praise. A grain cradle is, we think, constructed upon the same principle, working satisfactorily as far as it has been tested. They are certainly worth a trial. †

### STOCK AND DAIRY HUSBANDRY.

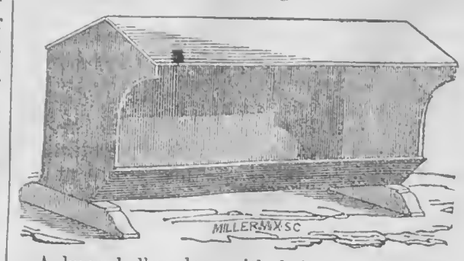
STOCK Husbandry, properly conducted, is now most profitable. The present prices of Live Stock,—(especially improved Horses, Cattle, Sheep, Swine, and Fowls,)—and Wool, Beef, Pork, Butter, Cheese, &c., render breeding, grazing, dairying, etc., highly remunerative in almost every section of the Union. And the prospect is that the business will continue permanently lucrative, though present rates should not be fully maintained. The consumption of animal food has of late greatly increased, and is very properly attracting attention to the science and profit of supplying the enhanced and increasing demand. Yet we do not apprehend the business will be overdone, at least not for some years. The demand and consumption are not confined to any one or a few localities, and the benefits of supplying the same will be participated in by stock and dairy farmers throughout the whole country. Our railroad and other facilities are now such that live stock, meats, and the products of the dairy, can be easily and cheaply transported to the great markets from almost every section of our widely extended country—rendering it certain that prices cannot long remain very high at one point and low at another. Hence, farmers remote from the great markets, located where land and living are cheap, can compete successfully with those who have heretofore been most highly favored from their proximity to the seaboard and its principal markets.

Those who compare present with former prices of agricultural products, will readily perceive that the rearing of good stock, grazing, and dairying, must prove, in all favorable localities, the most profitable branches of farm husbandry. And now is the time for those who *understand the business*, or who can enter into it judiciously, to reap a rich reward for their skill, industry and attention.—But, profitable as it may prove to all (perhaps we should say the few) who know and pursue the right course, it is not the business for the ignorant, careless or penny wise. To achieve success, the stock farmer must be well informed, skillful, attentive, and imbued with the spirit of improvement. He must know what he is doing, or wishes to do, and study the best means of its accomplishment. If, for instance, he is rearing horses, for sale or stock, he should study the laws of breeding, and ought to know on the start that, by proper foresight and a little extra expense, (for services of a superior sire,) an animal worth $150 or $200 can be raised about as cheaply as one which will sell for only half the sum first named. And the same is true, to a greater or less extent, in breeding cattle, sheep, and swine, &c. The man who manages most judiciously, who studies the business, and expends a few dollars whenever necessary to secure improvement, will not only make the most money, but do it in the most satisfactory manner to all concerned.

And there is room for skill, and a certainty of receiving proper reward for its exercise, in the Dairy business. Why is it that the Butter produced in certain Counties in this State commands from 6 to 10 cents more per pound than that made in others, where the cows and pastures are, or may be, equally good? The fault is not in the animals nor the soil, certainly. "It is in the reputation," you suggest. But pray how was that reputation acquired and sustained?—Simply and only by intelligent and well directed skill and industry, and wise management. The same result may be produced—similar reputation acquired, and prices obtained—by adopting like management in other equally favorable localities.

### SALTING SHEEP.

SALT, in my judgment, is indispensable to the health of sheep, particularly in the summer—and I know not a flock-master among the hundreds, nay, thousands with whom I am acquainted, who differs with me in this opinion. It is common to give it once a week while the sheep are at grass. It is still better to give them free access to salt at all times, by keeping it in a covered box, open on on one side, like the following:



A large hollow log, with holes cut along the side for the insertion of the heads of the sheep, will make a respectable substitute. A sheep having free access to salt at all times, will never eat too much, and it will take its supply when and in what quantities Nature demands, instead of eating voraciously at stated periods, as intermediate abstinence will stimulate it to do.—*Randall.*

## CONDENSED CORRESPONDENCE.

### The Weevil.—Inquiries.

Eds. Rural:—Can you, or some of your numerous correspondents, who are posted up in the matter, give us some information respecting the weevil, which seems about to destroy our wheat crop in this section? I for one would be glad to have the following queries answered, and I presume your readers hereabouts feel an equal interest in the subject:

*First.*—To what extent is the weevil a migratory insect, and how long does it remain in one locality? Will starving it drive it away sooner than it would otherwise leave? *Second*—Is there any particular variety of wheat more exempt from its ravages than another? *Third*—Does it work equally on high and low land, on gravelly and mucky soil?

My reasons for asking an answer to these queries, from some intelligent source, is the almost entire ignorance on this subject, that seems to prevail among our best farmers. A more thorough knowledge of the habits of this ravager, may affect the policy which will be pursued by our farmers for two or three years to come. We may have to discontinue our wheat crop entirely. If so, the sooner we are made acquainted with the facts the better.

I have noticed but few pieces of wheat in this town but what are more or less affected with the weevil. Some are almost entirely destroyed—others affected in the lower spots, where the wheat was later in maturing. The Meditorranean variety seems less affected than any other, probably owing to its early ripening, and yet I can go into any piece of Meditorranaen wheat I have yet seen, and select heads that are entirely destroyed. I have no doubt but such information as you have, will be gratefully received by your readers.—H. H. S., *Henrietta.*

Remarks.—We shall be glad to receive answers to the above, from those who are well posted on the subject. Farmers residing in localities where the weevil has proved destructive in former years, can perhaps respond definitely.

### Premium for Thorough-bred Poultry.

The undersigned proposes to be one of the number of five (or more,) to pay $20 each to make up a fund for a Premium to be awarded to any person of this State, who shall exhibit 5 pairs of the best chickins of the 5 varieties—Cochin Chinas, Chittagongs, Shanghaes, Brama Pootras, Malays or Dorkings—according to the following rules.

1st. The 5 pairs are to be bred by the exhibitor. 2d. They must be of one breed.—3d. They must be over 4 and under 8 months old. 4th. Adjudged of with reference to unimormity, figure, weight and beauty.

The exhibition shall take place on the last day of the State Fair and at the same place. The committee shall be selected as follows:—Each exhibitor may name two men, and their names be put in a hat; the first half drawn out are to be the adjudging committee to award the premium. Persons desiring to compete for this premium may address the subscriber.

As soon as the requisite number of names are received each competitor will be notified, that he may prepare for the exhibition. Each competitor must deposit $20 in the hands of the Treasurer of the State Agricultural Society on the first day of the State Fair.—M. Van Deusen *Phelps, Ontario Co., N. Y.*

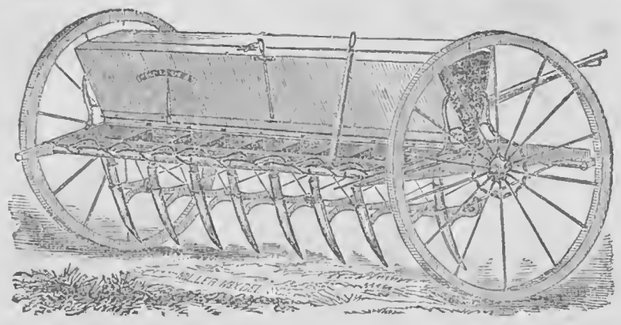
P. S. I propose to be one of five or more to pay $50, each, to show 10 pairs under the same rules and regulations as above, on the first Monday after the closing of the State Fair, in the city of New York. This proposition extends to any State in the Union.—M. V. D.

### Wool in St. Lawrence Co.

Eds. Rural:—Mr. Chester Dyke of Depuyster in this county sheared from his flock of 224 sheep, 908 pounds of wool. Of the flock twelve were bucks, forty-five wethers, fifty yearlings, and one hundred and seventeen ewes.

He selected twelve from which was sheared one hundred and eight pounds, an average of *nine* pounds to the head. From one yearling Merino ewe the clip was five pounds and two ounces, and the ewe after shearing weighed but thirty-nine pounds. The wool was all well washed and clean, and was sold to Mr. Minthorl of Jefferson Co., for fifty-one cents per pound. Ten of the twelve sheep which yielded the largest fleeces were wintered together and fed on hay only.

Your excellent publications the Rural, and Wool Grower and Stock Register, are awakening a spirit of enterpise and emulation among the farmers in this section, and seemto be just what we need. I think you will yet hear more from St. Lawrence.—A. Tuttle, *Depuyster*, July, 1853.

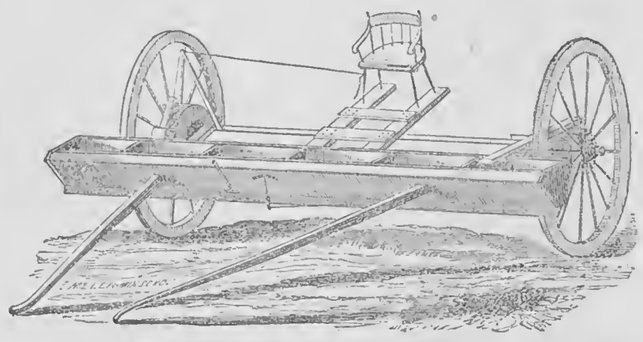


SEYMOUR'S PATENT GRAIN DRILL.

Now that harvest is nearly ended, farmers will soon make preparation for fall seeding. And as a good Drill is one of the great conveniences if not actual necessities, of the grain grower, many farmers will naturally be on the lookout for the right article. It is not our province to say whose patent is the best, and would not perhaps be even if we were more conversant with the construction and operation of the several machines now before the public. Farmers will of course examine and decide for themselves—taking price, adaptability, facilty, &c., into consideration. Without disparagement to other drills, however, we may safely mention the one above represented, which we believe to be one of the very best yet introduced. We have heretofore voluntarily commended Seymour's Drill to the attention of farmers, and can conscientiously repeat that it is a very complete and superior machine. Mr. Seymour was one of the first, if not the very first in Western New York, whose attention was given to the invention and manufacture of Sowing Machines and Drills, and his efforts have thus far redounded more to the benefit of the public than himself.

For particulars relative to peculiarities and advantages of this Drill, see advertisement in this paper.

Seymour's Broadcast Sowing Machine, is also worthy the attention of grain-growing farmers. It is a very simple and complete article—adapted to sowing the various seeds, grains, &c., from peas to grass seed; also, plaster, lime, and other fertilizers. The large size sows ten feet wide, we believe, but the manufacturer furnishes narrower machines when preferred.



SEYMOUR'S BROADCAST SOWING MACHINE.

## AGRICULTURAL INTELLIGENCE.

### State Fairs,—1853.

As the period for holding the Annual Exhibitions of the several State Agricultural Societies is approaching, we give below a list of the State and Provincial Fairs for the Autumn of 1853, so far as ascertained:

| | | |
|---|---|---|
| New York, at Saratoga | Sept. | 20, 21, 22, 23 |
| Ohio, Dayton | " | 20, 21, 22, 23 |
| Michigan, Detroit | " | 28, 29, 30 |
| Vermont, Montpelier | " | 13, 14, 15 |
| Pennsylvania, Pittsburgh | " | 27, 28, 29 |
| Kentucky, Lexington | " | 13, 14, 15, 16, 17 |
| New Hampshire | Oct. | 5, 6, 7, |
| Maryland | " | 25, 26, 27, 28 |
| Illinois, Springfield | " | 11, 12, 13, 14 |
| Indiana, Lafayette | " | 12, 13, 14 |
| Wisconsin, Watertown | " | 4, 5, 6, 7 |
| Virginia, Richmond | Nov. | 1, 2, 3, 4 |
| Lower Canada, Montreal | Sept. | 27, 28, 29, 30 |
| Upper Canada | Oct. | 5, 6, 7 |
| Southern Central Society, Augusta, Georgia | " | 17, 18, 19, 20 |

### The Hay Crop.

We observe complaint in many of the New England papers that the drouth has severely effected the hay crop. In Maine the drouth has been so protracted as to blast the prospect which was thought to exist of a fair crop of hay in that State. It is now believed the crop will not average half the usual amount. Other crops, especially spring grains, have suffered very much.—The Worcester (Mass.) Spy says:—"Up to early June the grass did finely, but a month of dry weather subsequently greatly injured the prospect—so much so that in this section the crop is hardly better than that of last year. There is the further disadvantage, that last year at this time there was very much more hay that had been winterd over than there now is."

In this State the crop will be better than last year, though not as heavy as many farmers had supposed, the cold wet weather having injured it very much. It is matter of surprise that farmers do not raise more carrots, beets and turnips as winter food for cattle, by which means they could be better wintered and less loss from high prices occur by the partial failure of the annual hay crop. See article an another column, entitled "Substitutes for Hay."

### Agriculture in Iowa.

Eds. Rural:—An Agricultural Society has been formed in Jones County, and we hope to have a fair in September. This county is making great improvements this year. A spirit of progression pervades the enterprising settlers in this western country. Though west of the Mississippi, we are not entirely destitute of the privileges and luxuries which the wise men of the east so much prize. Schools are organized, churches built, and every thing done to render a residence here desirable. Land is settling very fast, and proves to be of superior quality.

The season thus far has been very healthy. Labor of all kinds is well rewarded, and we are in need of artisans and mechanics. The weather is very fine, with just enough rain to bring forward the crops, which promise an abundant harvest. The Rural comes to hand regularly and is highly prized. It is just such reading as is most desired by the farmers of Iowa. As considerable attention is given to stock growing and to sheep, there will be some demand for the Wool Grower and Stock Register, which is estimated a most valuable publication. You may expect to hear from me more at length hereafter.—A. C. Bowen, *Bowen's Prairie, Iowa*, July, 1853.

### Trial of Reapers and Mowers.

A Trial of Reapers and Mowers, under the supervision of the Ohio State Board of Agriculture, took place at Wooster, on the 6th and 7th of this month. The official report of the Judges is to be announced at the next State Fair. The last number of the *Ohio Cultivator* contains an account of the Trial, the substance of which we annex:

The ground was surveyed in lots of one acre each, and drawn by the several competitors, who proceeded to their work in succession, under the inspection of the Judges. The following are the several machines, and their manufacturers, which were entered for competition:

REAPERS.

No. 1. Palmer & Williams', Self-Rake—Brockport, New York.

No. 2. Hussey's, Hand-Rake—Ball and Aultman, Canton, Ohio.

No. 3. J. H. Manny's, Hand-Rake—Ball & Parsons, Hoosick Falls, N. Y.

No. 4. Seymour & Morgan's, Hand-Rake—Warder & Brokaw, Springfield, O.

No. 5. Atkins', Self-Rake—J. S. Wright, Chicago, Ill.

MOWERS.

No. 1. Ketchum's—Howard & Co., Buffalo, N. Y.

No. 2 S. P. Castle's—Wilcox & Gryme, Urbana, Ohio.

No. 3. J. H. Manny's—Ball & Parsons, Hoosick Falls, N. Y.

No. 4. Atkins'—J. S. Wright, Chicago, Illinois.

No. 5. Hussey's—Minturn, Allen & Co., Urbana, Ohio.

The Reapers.—No. 1 was superintended by the Patentees; the team was driven by Mr. Palmer, in person. The machine is compact and well made; the platform is a quadrant, which is swept by a rake, operated by a pivot in the angle, delivering the gavel upon the right side. The cutting of this Reaper is excellent, and in straight grain the gavels are laid fair.

No. 2, sustained its reputation, of being a reliable Machine, going through with its acre without accident or delay; it is not liable to get out of order.

No. 3, was driven by Mr. Manny, and superintended by Mr. Ball. The cutting was fair, but owing to the bank or inclined plane upon the platform, the gavels are badly delivered. The Raker stands behind the platform facing the advance, and pitches off the straw to the right. The Machine was well made—the best we have ever seen of this patent.

No. 4, is the most compact of all the reel Machines; the Raker faces as in No. 3, but pitches to the left; with a tolerable stand of grain the gavels go off in good shape.

No. 5, is a new Machine, and a great curiosity to spectators. The cutting is not unlike that of the other Reapers, but an arm upon an upright on the side of the platform, is so operated by geer work, as to sweep round and make an intelligent looking *grab* at the straw upon the platform, and raking it against a sort of shovel-apron, the whole swings around like a crane, and opening again at just the right time, deposits the gavel alongside, in good order for binding.

The Mowers, on both days, were made to perform in very heavy grass, among which were occasional stones and stumps.

Ketchum's Machine, driven by Mr. Chapin, under the eye of Mr. Ketchum himself, led off, and cut its double swath, and all its other swaths without let or hindrance, save when it rooted up a boulder or run its fingers into a stump, then it had only to back off and start anew.

Castle's Mower cuts by two knives vibrating upon each other, with a clipping shear movement, and works admirably while it is in operation, but in the burden through which it was obliged to work its way, was subject to many delays. The machine seems to lack *appetite.*

Manny's Mower, is the Reaper without its platform, and in grass works admirably, the cutting is well done in all situations, and the only objection we should offer, is in the length of its coupling, which prevents getting about handily, especially among logs and stumps.

Atkins' Machine is not easily converted into a good Mower. It can possibly be made to do tolerable work, but not much is claimed for it in this department.

Hussey's Mower, from the shop of Minturn, Allen & Co., of Urbana, cut its allotment very satisfactorily. Mr. Allen put the Machine in order, and then it *was* in order, as any one might expect, who knows these thorough-going mechanics.

The great premium Reapers of former years did not seem disposed to risk their laurels in this trial: McCormick, the world famous; Densmore, who has the great Ohio Medal for last year; Burrall, the successful competitor at the Geneva trial, had no representatives in this. A large and interested concourse of spectators were in attendance, and there was much bargaining for favorite machines. Among the outsiders there was scarcely any division of opinion upon the relative merits of the Mowers. In regard to the Reapers there was more diversity, some good mechanics holding to the feasibility of Self-Rakers, others reading them out of the field as impracticable; while nearly all concurred in the opinion that there is yet great room for improvement in this particular.

[The *Ohio Farmer*, in closing an account of the above Trial, says:—"The premium of a beautiful gold medal, worth $50, was awarded to Seymour & Morgan's New York Reaper. The award was unanimous. No second premium was given, the committee being divided between Hussey's and Palmer & Williams' Reapers."]

## THE AGRICULTURAL PRESS.

### Substitutes for Hay.

We copy the following sensible and timely article from the last number of the *Boston Cultivator:*

Although this was a prominent topic with farmers a year ago, circumstances still render it expedient to keep it before the public. It is now certain that the present hay crop is deficient in many situations, and the question presented is, how can this deficiency be supplied? We believe if attention is immediately turned to the subject, substitutes can be produced to such an extent as to secure the farmer against loss.

At this late period of the season, the best articles to be grown for the support of stock, are turnips and Indian corn—the latter to be used as *fodder.* Either of these will make a fair crop if put in any time this month. Land from which rye or hay has been taken this season, if sufficiently moist to insure the germination of the seed, will answer the purpose. If it is not rich, a large yield cannot be obtained without the application of considerable manure, which should either be plowed in with a shallow furrow or spread after plowing and mixed thoroughly with the soil. Manure which is somewhat decomposed will act more immediately, and be likely to produce a better crop than that in a raw state.

For corn-fodder, sweet corn has advantages over any other kind. Animals are more fond of the stalks, and from its habit of tillering, or suckering, and producing abundance of leaves, it gives a large yield. The large southern corn, on very rich land, may produce a greater weight, but is more watery, altogether of a coarser nature, and not relished by stock. When animals have been fed on the stalks of sweet corn, they will refuse the other until pressed with sharp hunger.

The mode of planting fodder corn in drills is preferable to broadcast sowing, especially when it is desired to hasten the growth.—The seed can be put in with a drill or seed-planter, making the rows two and a half feet apart, to give room for killing the weeds with a cultivator, which, if used in time, will supersede the necessity of using the hoe. The corn will grow rapidly, and soon shade the soil so much that nothing will start between the rows. On this account, corn cultivated in this manner is one of the best of crops to clear the land.

The best use to which corn-fodder thus produced can be put, is to feed it green, or only wilted, in autumn. It may frequently save hay as much at this time as any other, for it is not unusual that the scarcity of grass is such that more or less hay is fed to stock at that season. If there is plenty of grass, however, the fodder may be dried for winter use. But the difficulty of curing it, except under continued dry weather, constitutes a drawback to its value for this purpose. The best mode is to cut it with a cradle when in blossom, let it dry a day or two in swath, then tie it in small bundles, (the band near the top,) and set them together in small shocks, which may stand till so much dried that they may be put in the barn without the liability of moulding.

The common English flat turnip will succeed in this section, if the seed is sown previous to the 10th of August. It grows with great rapidity, and its bulk is chiefly made after the extreme heat of summer is past, or during the month of September and fore part of October. From 500 to 1,000 bushels may be obtained to an acre, according to the state of the land, the season and the course of cultivation—the cost frequently not over four to six cents a bushel. It is not a long keeping root, but may be used with advantage up to the 1st of January.—A bushel of turnips a day, with cut straw, will keep cattle nearly as well as the usual quantity of good hay, and the same articles are proportionately as good (or better) for sheep. Bog-meadow hay, or salt hay, can be used instead of straw.

Common wood ashes, and pearl ashes, are good manure for turnips, particularly on light soils, which are best for this crop.—Superphosphate of lime, especially in the form of bones, has in many instances produced excellent results. We would recommend a trial of this article, and also of guano, by those who can conveniently obtain it—being sure, always, that the trial shall be such as to show as far as possible, the actual value of the manure.

### Pratt's Ditching Machine.

We find in the *Ontario County Times* some account of a ditching machine, invented by a Mr. Pratt, of Hopewell, in that county, which promises to be valuable to the farming interest. Steps have been taken to secure a patent. The Times says:

At a recent trial near Canandaigua, Mr. Pratt succeeded in digging twenty-five rods of ditch two feet deep, in two hours and a-half with a single team, and those present were entirely satisfied with its operation.—If it will work one half as fast as it is said to here, it will be an immense labor-saving machine. It is a difficult thing to describe, but we will attempt to give an idea of its appearance and mode of operation. The plow which digs the ditch, is attached to the bottom of a semi-circular tube of cast iron, resembling the box in which grain elevators load themselves. The elevators are of cast steel, twelve in number, and look like shovel plows; these elevators or spades are attached to a wheel, and when the machine is in motion the wheel revolves and they take up the earth as deep as the plow cuts it, carry it up through the cast iron tube, and when the dirt falls off it strikes upon an inclined plane and slides off on each side of the ditch. There are handles for guiding it, like plow handles, and the bar to which the team is attached has different holes for the clevis, so that it may be set to go deeper or more shallow, according to the nature of the ground in which it is to operate. Ditching is becoming an important item in the farmer's expense account, and any thing calculated to make it cheaper, will be received with favor. We trust that Mr. Pratt's ingenuity will be liberally rewarded.

Educated Wheat.—A singular discovery has been made, in France, by M. Fabre, an humble gardner of Aydo, but of some local note as a botanist. The herb *ægilops*, heretofore considered as worse than useless, grows abundantly on the shores of the Mediterranean. It produces a species of grain resembling wheat in form, but much smaller. In the year 1839, M. Fabre sowed a quantity of this grain, and he was struck by observing that the produce seemed to bear a close affinity to wheat. That produce he sowed the next year, and the yield was more like wheat. He went on sowing the yield year after year, and each year found a marked improvement in the produce, until at last he had the satisfaction of getting a fine crop of wheat, and of as good quality as could wish to be seen. At first he produced his crops in a garden, but his latter sowings were made broadcast in an open field. Thus, then, a wild and mischievous herb, which is particularly destructive to barley crops, can be educated into excellent wheat.—*Literary Gazette.*

Eggs for Hatching.—These should be as fresh as possible. Some suppose that they should not be over a fortnight old. It is difficult to fix upon the precise time when the vitality of the germinal vessicle is destroyed by age. This doubtless depends upon circumstances, such as the vigor of parents, the mode of preserving the egg, &c. A safe rule, however, is to secure fresh eggs; and if they are to be sent any distance, they should be carefully packed in dry sawdust, (not pine) or oats, and arranged so that they will not touch each other. And they should be shaken as little as possible, for fear of rupturing the ligaments and mixing the albumen with the yolk. A careful observance of these rules may save many from disappointment in rearing some of the choicest varieties of fowls.—*Ohio Farmer.*

Indiana State Fair.—This is to be held at Lafayette, on the 11th, 12th, and 13th days of October next. This point is accessable by canal and railroads. Among the premiums offered are six silver pitchers, valued at $33 each; thirty-five silver cups, valued at $15 each; seventy-five silver cups, valued at $10 each; thirty sets of tea-spoons, valued at $5 each; and a large number of premiums, consisting of cash, agricultural works, books, diplomas, &c. The competition for the silver pitchers will be among the cultivators of wheat and corn, and the owners of cattle, horses, jacks and hogs.

### PRODUCTIONS OF THE DIFFERENT STATES.

New York has the greatest number of acres of improved land, Virginia is second, Ohio third, and Pennsylvania fourth.

In the produce of Wheat, Pennsylvania stands first, Ohio second, Virginia third, and New York fourth.

Ohio produces the greatest amount of Indian Corn, Kentucky next, Illinois third, and Indiana fourth.

New York has the greatest amount of value in farming implements and machinery, Pennsylvania is second on the list, Ohio third, and Louisiana fourth.

In Live Stock, New York stands first, Ohio second, Pennsylvania third, and Virginia fourth.

Virginia produces the most Tobacco, Kentucky next, Maryland third, and Tennessee fourth.

Alabama produces the greatest amount of Cotton, 560,360 bales: Mississippi next, 494,774; Georgia third, 494,021; South Carolina fourth, 300,991.

In Wool Ohio stands first, New York second, Pennsylvania third, and Vermont fourth. In proportion to territory and population, Vermont is the greatest wool-growing State.

Ohio produces the most Wine, Pennsylvania next, Indiana third, and North Carolina fourth.

In Butter New York stands at the head of the list, Pennsylvania second, Ohio third, and Indiana fourth.

In the production of Cheese New York is the first, Ohio second, Massachusetts third, Vermont fourth.

In the amount of Hay produced New York stands first, Ohio second, Vermont third.

Kentucky is the great Hemp growing State. Missouri second, Virginia third, Illinois fourth.

In the quality of Flaxseed raised, Ohio produces by far the largest amount of any of the States, Virginia is the third, New York fourth.

New York produces the greatest amount of Maple-sugar, Vermont the next, Ohio third, Indiana fourth. In proportion to population and territory, Vermont may be considered the greatest Maple-sugar State.

Louisiana is the great Sugar-producing State, the next is Florida, Texas is third, and Georgia fourth.—*Ex.*

### RAISING GARDEN SEEDS.

A good lesson is contained in the following paragraph from an exchange:

Some years since, in pulling my English turnips, (raised from imported seed,) though a great yield, they ran too much to tops with dishing crowns. Finding one only, with a small top and small root, shaped like two saucers put together, I preserved it for seed, and the next year sowed what I got from it, among my potatoes, then beginning to be affected with disease. They mostly died; but I got 75 bushels of turnips "true to the seed." I saved and set out 8 bushels of the most beautiful I ever saw. This was in Springfield. All who saw them admired them, and spoke for some of the seed, which I circulated freely at $1 the pound. *Tops* barely enough to pull up the single root, not much bigger than a pipe-stem. They were good as handsome. All this goes to encourage me in selecting the best roots and employing the best *means* possible, for obtaining the very best seed, from which to secure the reward for the best care and culture of the orchard, field and garden.

Door Yards.—The following opinion of Hon. Josiah Quincy, Sen., upon the subject is worthy of attention:

In viewing the farm we stop at the door; far be it from me to enter, for where neatness and economy reign without, the husband seldom fails to be seconded by his companion within. But how is the path? Is it a pavement inlaid with broken crockery and abandoned utensils of household furniture? Do the thistle, the briar, and the wormwood contend for the mastery along the fence? Are the poultry roosting upon the window sills, the geese strutting at the front door, or the pig playing puppy in the entry? The proprietor of such an abode may call himself a farmer, but, practically speaking, he is ignorant of the a, b, c, of the art, for the first three letters of the farmer's alphabet are neatness, economy and order.

The French Government and Scottish Agriculture.—Some time ago the French Government appointed a deputation of seven scientific gentlemen to visit Scotland, and to examine and report upon the state of agriculture, and more especially to examine the system of high farming pursued in Scotland. The deputation have been located in Edinburg for some time back, and we understand they have made minute examination of the system pursued on the best farms in Mid-Lothian. They are now visiting Stirlingshire, on a similar errand, but their head-quarters will be in Edinburg until the examination is concluded. The report, when presented to the French Government, will be a very interesting document..—*Scotsman.*

Grains of Wheat in a Bushel.—A correspondent of an English paper, computes that in a bushel of wheat weighing 64 lbs., there are 448,000 grains. This is on the supposition that wheat is of the best quality—the average, it is supposed, will be 520,600 grains to the bushel. As there are 43,560 square feet to the acre, six pecks of seed will allow fifteen grains to the square foot.

Feeding Farm Horses.—Sir John Conroy, a large farmer near Reading, England, it is said feeds his farm horses as follows: 8 lbs. hay, 10 lbs. straw cut into chaff, 5 lbs. oats, 1 lb. bean meal, 1 lb. bruised flax-seed steeped 48 hours in 15 pints of cold water. This quantity constitutes the whole food for each horse for twenty-four hours.

# Orchard and Garden.

### GRAPE VINES—SUMMPR PRUNING—MILDEW.

Eds. Rural:—In compliance with a request made last winter by one of your number, I propose to send you occasionally a short paper on the treatment of our native grapes. And as the season for performing the operation of Summer Prnning of grape vines is just at hand, (it is usually done about the first of July, or when the grapes are about half grown,) I have concluded to say a few words on the subject to the readers of the Rural.

I do not propose to go deeply into "whys and wherefores" in what I am about to say, but shall leave the reasons to take care of themselves, or to be looked after by those who may be curious in such matters. I have always been quite disposed to admit in evidence, especially on doubtful or disputed points in culture, facts or actual experiment, even though they may seem to conflict somewhat with some plausible, perhaps beautiful theory; and when I have found after a fair trial, facts or actual experiment still opposed to mere theory, I have deemed it the safest course to let the fact decide or determine the course to be pursued.

I have been engaged in the culture of our hardy native grapes, especially the Isabella grape, more or less extensively for the last ten years, and have, to some extent, studied their habits, their wants and the treatment necessary to insure a reasonable degree of success in their culture. How far I have succeeded may be learned from those who have been acquainted with the fruit my vines have produced. I have tried every mode of culture, manuring, training, &c., ever, to my knowledge, recommended in books or horticultural papers, and have come to the conclusion that to follow any particular mode *implicitly*, irrespetive of accompanying circumstances, is not always safe. Success must, after all, depend much upon a judicious exercise of good, plain common sense, on the part of the cultivator.

But my design on the present occasion is simply to say a few words on the subject of summer pruning, and about mildew. I have tried every mode, from literally no pruning at all (in the summer) to the severest pruning ever recommended "in the books," and have come to the conclusion (and for the last three years have practiced accordingly,) that from about the middle of June to the last of August the vines should be divested of the lateral branches or suckers as often as once in two or three weeks.—Care must be taken, however, when this operation is commenced to leave the first joint of the sucker (together with the first or lower bud upon it) undisturbed,—for if the sucker is broken off below the first bud, it will cause the bud upon the main shoot at its base (which is a fruit bud for next year,) to "push" or grow, and even produce a second crop of fruit, too late of course to ripen, and thus destroy the crop for next year. Let one bud, in each successive pinching of the suckers, be left as a sort of safety valve for the escape of the surplus vigor of the vine, and no danger need be apprehended from the operation.

I also carefully tie in upon the trellis, all the fruit-bearing branches that I can find room for, and not have them too much crowded; and the remaining branches, I cut off one joint beyond the upper or last cluster, about the first of July, or when the berries are as large as good sized peas. I do this, not because I believe the fruit on their branches will be benefited by the operation, (for I believe it will be injured,) but from necessity—for I can find no better mode of getting them out of the way. In other words, I would do as little summer pruning as possible, beyond the removal of the suckers or lateral branches.

In regard to mildew I have only to say I have tried many of the remedies usually recommended, with various degrees of success,—and am of the opinion that there is nothing quite equal to sulphur, or rather sulphur and lime together, properly applied as a preventive of mildew upon the grape. The following preparation, applied faithfully two or three times a week for two or three weeks, commencing (when the berries are small,) with a garden syringe, completely drenching the fruit, new wood and foliage, is the most effectual application I have ever tried. I believe it will generally prove effectual, accompanied with good culture, which of course includes keeping the vineyard clear of weeds and grass through the growing season.

Place 3 lbs. of sulphur and 6 lbs. of good stone lime in a tub, holding say 10 gallons; pour a pail of boiling water upon it and stir it while slaking till all the sulphur is wet; then fill the tub with rain water,—let it stand till it settles clean—then pour off the clean liquid into a barrel, and fill it with rain or river water, and it is ready for use.

A direct application of sulphur is often effectual, but it is quite objectionable, as the fruit is often disfigured in this way.

E. A. McKay.

Naples, N. Y., June 28th, 1853.

Remarks.—The above article has been unintentionally deferred two or three weeks, but is not too late to prove valuable to many of our readers. Mr. McKay is one of the most celebrated and successful grape culturists in Western New York, and of course good authority on the subject discussed.—Eds.

### THE PARKS OF LONDON.

If you enter Hyde Park between seven and eight in the morning, when all the world of fashion is asleep, you will fancy, after you have left the gateways, that you had made a great mistake, and strolled out into the country unawares. Scarcely a person is to be seen at this time of day, unless it be some lonely foot passenger, who looks as if he had lost his wits or his way, at this early hour. But you see broad grass meadows, with scattered groups of trees, and your impression that you had got astray, and quite out of the reach of the metropolis, is confirmed by hearing the tinkling of sheep bells. But this is Hyde Park in *dishabille*. Go in again in the afternoon, any time during the London season, and the place will be so altered and animated by the *dramatis personæ*, that you hardly identify it as the *locale* of the solitary country ramble you took in the morning.

The Kensington Gardens are not only more spacious and grand than Hyde Park, but the trees are larger and more grove-like, and the broad glades of soft, green turf, are of a darker and richer green. The grand avenue of elms is some hundreds of years old, and is always majestic and venerable. No carriages or horses are permitted in Kensington Gardens; but its shadowy lawns are sacred to pedestrians, and are especially the gambol fields of thousands of lovely children. It is said that as many as two hundred thousands persons have been in Hyde Park and Kensington Gardens at once.

Regent's Park comprises about three hundred and thirty-six acres of land, ornamental plantations, drives, and carriage roads! It has a younger look than the others, and among its attractions are the Royal Botanic Garden, with its rich collection of plants, and the Zoological Garden, some twenty acres in extent, where may be seen thousands of living animals. But these luxuries of fresh air and green fields are not wholly confined to the west end of London. In almost all parts of the Great Metropolis are open places of eight or ten acres, filled with trees, shrubs, grass and fountains; and besides these, a new space called the Victoria Park, of two hundred and ninety acres, has been laid out lately in the eastern portion of London, especially for the recreation and amusement of the poorer classes who are confined to that part of the town.—*Downing.*

### UPLAND CRANBERRIES.

At length we have ocular proof of the fact, that cranberries in the greatest perfection, can be raised on upland, shady and gravelly soil. Mr. Joseph Orcutt has brought us for exhibition, a large root of cranberry-vine, placed in a box, which is made to contain a quantity of the soil from which it had been removed, the vine thickly hanging with ripe fruit. He made the experiment three years ago last May, planting forty bunches in a row two feet apart, without previous culture, merely by removing the sod, and planting the cranberries with no more trouble and attention than he would have taken with a cabbage-plant.

The soil is a sandy gravel, fit for peach trees, and of which five hundred and twenty-three are growing in an orchard so near as to shed their leaves on the cranberry vines.

The first year he picked about a pint of fruit, the second year, four quarts; the third, or present year, from seven to eight quarts of remarkably fine fruit. The vines have shot the present season, three feet six inches in length, are surprisingly strong and healthy, and the old wood is loaded thickly with the finest berries.

We now consider the question, "Can cranberries be cultivated with success on upland?" as decided in the affirmative.—*Boston Cultivator.*

Protection of Trees.—The Legislature of Michigan has passed an act in substance as follows:—That every person who wilfully, wantonly, and without cause, shall cut down or injure any fruit or ornamental trees, not his own, and the damage shall amount to the sum of $25, the said person shall be imprisoned in the State Penitentiary not exceeding five years, or in the country jail not exceeding one year, or by fine not exceeding $500, at the discretion of the Court. This act takes effect immediately. So we learn from the *Michigan Farmer.*

A Monster Cherry Tree.—There is in the town of Shawangunk, Ulster County, on the premises of John Bruyn, Esq., a cherry tree of such size, beauty and productiveness as cannot, perhaps, be excelled in our country. This tree measures thirteen feet in circumference around the trunk immediate under the limbs, and fifty feet across the extreme point of one limb to that of another immediately opposite. It cannot be less than forty-five feet in height. It is in full bearing and is estimated to produce a wagon load of fruit in one season.

# Mechanic Arts, &c.

### MANUFACTURES IN THE UNITED STATES.

We condense from the Patent Office Report for 1851-2, the following abstract of the manufacturing interests of the United States. The estimate is made up to include all establishments that produce over $500 at the date of the statement, June 1, 1850.

The whole amount of capital invested is stated at $530,000,000, the raw material is valued at $550,000,000, and the amount paid for labor $240,000,000. The number of persons employed is stated at 1,050,000, and the value of the manufactured goods amounts to $1,020,300,000.

The number of cotton establishments is stated at 1,094, having a capital of $74,501,031, using 641,240 bales of cotton, valued at $34,835,056, giving employment to 92,286 laborers, to whom are paid $1,357,192 per month, and giving as the value of the entire products $61,869,184.

The woolen mills number 1,559, with a capital of $28,118,650, working 70,862,829 pounds of wool, valued at $25,755,988, and giving employment to 39,252 laborers, to whom are paid $699,940 per month, and giving as the entire products the sum of $43,207,555.

The total number of furnaces for the manufacture of pig iron is reported at 337, with a capital of $17,346,425, using 1,579,309 tons of ore, which, with the fuel consumed, is valued at $7,005,286, employing 10,444 laborers, whose monthly pay roll amounts to $422,219, and giving as the value of the entire products $12,748,777.

For castings the number of furnaces is set down at 1,391, with a capital of $17,416,261, consuming, in raw material and fuel, $10,346,355 in value, giving employment to 23,589 hands, turning out 332,745 pounds of castings, valued at $25,108,155.

The number of establishments in operation for the manufacture of wrought iron is given at 423, with an investment of capital amounting to $14,495,220, using that many tons of pig metal, 33,344 tons blooms and 78,787 tons ore, valued at $8,698,109, employing 13,257 hands, and making 278,044 tons of wrought iron, valued at $16,747,074.

There is $8,334,254 invested in the manufacture of malt and spirituous liquors, consuming 17,055 bushels of grain, 526,840 bushels of apples, 61,675 hogsheads of molasses and 1,294 tons of hops. There is employed 5,487 laborers, producing 1,177,924 barrels of ale, &c., and 48,634,455 gallons of the different kinds of liquors,—the value of which is not estimated.

Of tanneries the number is stated at 6,263, with a capital of $18,900,557, using of hides and skins 8,782,835, valued at $19,613,237; to which is appended a statement that there are 6,000,000 sheep, goat and other skins tanned and dressed annually, and not included in the statement. The number of hands employed is stated 21,011, to whom $417,284 is paid annually. The number of skins and sides of leather produced is 14,911,805, valued at $22,861,796.

No other details are furnished, though there are branches of manufacture made up from the different materials named in the foregoing schedule, second in importance to no one of those given. The manufacture of boots and shoes, hardware, edge tools, furniture, and other branches, will present as large a footing as those given. Strictly speaking, ours is an Agricultural Nation, though in manufacturing we are slowly yet surely taking rank. It is certainly to be regretted that the census statement is not more full and specific. †

### WILSON'S IMPROVED SEWING MACHINE.

This celebrated machine, invented and patented by A. B. Wilson, of Watertown, Conn., appears to be the *ne plus ultra*—the very perfection of Sewing Machines. Mr. S. W. Dibble, of this city, has several of the machines on exhibition, and it is worth the time of the curious, and all interested, to call at his room in Smith's Block, and witness the perfection and rapidity of their operation. No one can fail to admire their ingenuity of construction and excellence of action. See Mr. D.'s advertisement.

The Scientific American of a recent date thus closes a lengthy article relative to this machine:

"This machine is exceedingly neat and portable; it performs the finest quality of stitching, such as collars and shirt bosoms. One girl can stitch with one machine, 35 dozen of shirt collars in one day. The work which these machines perform cannot be surpassed. They can sew straight and curved seams; the stitches do not rip out, and from 1,000 to 1,500 stitches can be made in one minute by a good operator. One machine all complete occupies no more room than a small work table, and it is as ornamental as useful. The time must soon come when every private family that has much sewing to do, will have one of these neat and perfect machines; indeed, many private families have them now. The price of one all complete is $125; every machine is made under the eye of the inventor at the Company's machine shop, Watertown, Conn., so that every one is warranted. As there has been much dispute about the originality and identity of sewing machines as related to Mr. Howe's original patent, no person who buys one of these machines is clogged with an impending prospective law suit, as there is an arrangement and perfect agreement between Mr. Howe and Messrs. Wheeler, Wilson, & Co.; so every customer will be perfectly protected. These machines are adapted to sew fine and coarse work; men's clothes or the finest collar stitching."

### A SIMPLE FIRE ANNIHILATOR.

A simple Fire Annihilator, for domestic use, is described in the Troy Budget, by an insurance Agent of that city:

Why will not people avail themselves of modern discoveries, to save their property from fire? A package of two or three pounds of sulphur, disposed of in such a manner as to be amongst the first things to burn—or at hand to be thrown into the fire soon after its commencement, before air rushes into the building—will arrest the fire as surely as water; and is better than water, when varnishes or resinous gums are burning.

Oxygen and sulphur have so strong an affinity, that in the combustion of sulphur, the oxygen of the atmosphere is converted into sulphurous acid gas, in which point fire is arrested.

I tested this principle and thereby saved my property some years since, an account of which I gave through your colums at that time. It is impossible to conceive how much human suffering might have been averted had this suggestion been attended to by boat and ship owners. I never read the accounts of the terrible loss of human life on board our ships and steamers, without thinking that they might have been saved by a package of brimstone in the fire room.

### NEW MOTIVE POWER.

A new motive power styled the "Cylindrical Pressure Engine" has been invented by Mr. A. R. Green, of Springwater, Liv. Co., in this State. The Saturday Budget thus describes a model of the machine which was shown him the editor:

This apparatus receives its power by an accumulation of pressure produced by an arrangement of Coiled Springs, so arranged on a horizontal shaft, as to be wound separately, yet so as to act conjointly in the movement of the machine, which the inventor claims can be made to move with as much velocity as steam. Should the principle work as well in a machine of large size as it does in model, we can safely say that the days of *steam* and *caloric* are numbered, and we can see no reason why it should not, for we saw it accomplish the distance of 1000 feet in one minute, and the balance wheel of 4 inches diameter, driven at the rate of 1500 revolutions in the same length of time.

# Domestic Economy.

### NOURISHMENT OF MEAT.

To preserve, in dressing, the full nourishment of meats, and their properties of digestiveness, forms a most important part of the art of cooking; for these ends, the object to be kept in mind, is to retain, as much as possible, the juices of the meat, whether roast or boiled. This, in the case of boiling meat, is best done by placing it at once in briskly boiling water. The albumen on the surface, and to some depth, is immediately coagulated, and thus forms a kind of covering which neither allows the water to get into the meat, nor the meat juice into the water. The water should then be kept just under boiling until the meat be thoroughly done, which will be when every part has been heated at about 165 degrees, the temperature at which the coloring matter of the blood coagulates or fixes. At 132 degrees, the albumen sets, but the blood does not, and therefore the meat is red and raw. The same rules apply to roasting; the meat should first be brought near enough a bright fire to brown the outside, and then should be allowed to roast slowly.

Currant Jelly.—Mash your fruit with a wooden spoon, and squeeze the juice through your jelly bag. To every pint of juice allow a pound of white sugar. When the sugar is dissolved, add a piece of isinglass dissolved in warm water to clarify the jelly. A quarter of an ounce of isinglass to five pints of juice will be sufficient. Boil and skim it till a jelly is formed: then take it off the fire and put it in glasses while warm. The next day put brandy paper over them and paste them.

Black currant jelly is made in the same way only it requires but three-quarters of a pound of sugar to a pint of juice.

Glazed Currants.—Select large ripe bunches of currants, wash them by dipping them in a bowl of cold water, and drain them dry: have ready the whites of two eggs, give them three or four beats, dip the bunches in the egg, place them on a sieve so as not to touch each other, sift powdered sugar over them, and place them in a warm place to dry. The whites of the eggs should only be broken, but not beaten till dry, or they will not adhere to the fruit.

Currant Marmalade or Jam.—This is made in the same manner as cherry marmalade, using currants alone, and adding to every pound of currant pulp and juice one pound of fine white sugar.

# Educational.

### WYOMING COUNTY TEACHERS ASSOCIATION.

The summer session of this Association was held at the Court House, in Warsaw, on the 1st inst. A. Holly, Esq., editor of the Mirror, occupied the chair. The attendance was large, and the proceedings spirited and interesting.

It was resolved to hold an Institute Oct. 10th, and a committee of three was appointed to make the necessary arrangements.

Miss L. Gordon, of Gainesville, read an Essay on Flowers,—F. D. C. McKay, one on Labor, and A. R. Simmons delivered an address upon Progression.

Prof. C. P. Jones, formerly a resident and teacher in that county, having recently died in Alabama, the Association very properly passed the following:

Resolved, That in the recent death of Prof. C. P. Jones, we experience the loss of a worthy, earnest, and successful teacher, and an accomplished scholar; and, as those who were his fellow laborers, we would present the consolations of our sympathy to his mourning friends.

Appointments were made of persons to read essays and deliver an address, at the next meeting, and various matters pertaining to the interest of schools, teachers, and pupils, were ably and appropriately discussed. The Association will hold another meeting during the session of the Institute, in October. The teachers and friends of education in Wyoming are alive to the importance of teaching the young ideas to shoot, and very properly aim high. May they meet with abundant success. †

### ANTIOCH COLLEGE.

We are indebted to Rev. W. H. Doherty, formerly of this city, for a pamphlet relative to Antioch College, located at Yellow Springs, Ohio. The institution will be opened for the reception of students in September ensuing.

The Faculty will consist of Horace Mann, President and Professor of Political Economy, Intellectual and Moral Philosophy, Constitutional Law and Natural Theology; Rev. W. H. Doherty, Professor of Logic and Belles Letters; Ira W. Allen, Professor of Mathematics, Astronomy, and Civil Engineering; Rev. Thomas Holmes, Professor of Greek Language and Literature; C. S. Pennell, Professor of Latin Language and Literature; Miss R. M. Pennell, Professor of Physical Geography, Drawing, Natural History, etc., and Rev. A. L. McKinsey, Principal of the First Preparatory Department.

Antioch College is under the control of a religious sect, who take upon themselves the simple name of "Christians;" it has received the above designation because "the Disciples were called Christians, first in Antioch."

In its recognition of the claims of the female sex to equal opportunities of education with the male, which opportunities it is designed to furnish, "Antioch" will differ from most of the educational institutions of the country.

Teachers' Periodicals.—A writer in the Wyoming Co. Mirror, is urging upon teachers the propriety and importance of providing themselves with reading that pertains to their profession, and very properly commends the *Massachusetts Teacher* and the *Ohio Journal of Education*. We would respectfully add to the list, and place it at the head too, the *N. Y. Teacher*. Every teacher in the State of any pretension should make it a paramount duty to become a subscriber and constant reader of this very valuable journal. It is not only the organ of the State Teachers' Association, but emphatically the exponent of the views of teachers generally throughout the State and Union. †

### EDUCATION IN EUROPE AND IN ENGLAND.

The people of Continental Europe are not, by their ignorance, so unfitted for Republican Institutions as is commonly supposed. Our ideas of their intelligence originated from a knowledge of the intellectual condition of the English, and from believing that, of transatlantic peoples, the British are the most enlightened as well as the most free, or, rather, as the least enslaved. Now, it can be demonstrated from the writings of English travelers and statisticians, that the present lower classes of England are—as in Goldsmith's days they were by him said to be—the most ignorant and degraded, both morally and socially of Western Europeans.

The following facts will prove the truth of the statements we have advanced. They are condensed from a very dry and cumbersome, but most study-worthy volume, on the *Social Condition and Education of the People in England and in Europe*, published by a celebrated bachelor of Cambridge College, in 1851, and dedicated to Lord John Russell:

In England and Wales there are eight millions of persons who can neither read nor write.

Of all the children in England and Wales between the ages of five and fourteen, the majority are not in attendance at any school. Even of the middle class farmers, great numbers are wholly uninstructed in the mysteries of A B C! There are not in England *one-half* as many school buildings as are requisite for the instruction of the rising generation. Many of these are so wretchedly managed as to do more ill than good. Many of the village school-masters can neither read nor write correctly, and are ignorant of the contents of the Sacred Volume. Many are kept by low-bred, unintelligent and cross old maids—in unventilated cellars and garrets—where, amid "noise and confusion" and foul air, the minds and morals of the children are depraved; in many of these, also, there are neither forms nor parallel desks, and the children are consequently *kept standing* all day! Very few of the town schools are properly supplied with maps, school apparatus and books; to the majority no playground is attached; scarcely any throughout the whole country have more than one class-room or one teacher. Great numbers of parishes and districts throughout England and Wales have *no* place of instruction!

In these districts many are too poor or too careless (or both,) to raise any money towards the erection of school buildings, and in none of these cases does the Committee of Council give any assistance.

In many other districts the inhabitants are so divided in religious opinions, that they find it impossible to act in concert in providing for the education of their children, and in these cases, also, the Committee of Council on Education gives no assistance.

In the majority of English schools, in order to provide a salary for the teacher, it is necessary to charge from two pence to four pence (four to eight cents) a week for each scholar. This charge effectually excludes the children of all paupers and of the poorer laborers, who cannot afford to pay so much out of their small earnings. (Throughout the greatest part of Western Europe the education afforded in primary schools is gratuitous.)

In England there is no Government provision for the proper payment of the teachers, who are thus placed in a position so humiliatingly dependent as, in many cases, virtually to prevent able and educated men from accepting the office. A great part of the village teachers in England are poor old persons of both sexes, who are unfit for any other employment! In proportion to the population, there are not one-fourth part as many colleges for the instruction of teachers in England as in any of the countries of Western Europe, and not one-fourth part as many as are necessary for the education of a sufficient number of teachers for the rising race of Britons. In nearly all of the very few colleges for teachers which have been established in England, the education is very limited and meagre in its character. As they depend upon voluntary aid, they cannot afford to give beyond 18 months' training. (Throughout Western Europe the teachers receive *three years'* instruction at the expense of the Government.) In the English colleges, also, there are not nearly so large a staff of teachers and professors as are to be found in almost all of those of Western Europe.

In the majority of English schools, the system of education pursued is admirably adapted—not to "teach the young idea how to shoot," but to disgust the pupils with their lessons. Great numbers of the school buildings in the more remote country districts are of the most wretched and miserable character. Very few of English children in the agricultural districts, who go to school at all, continue their attendance after the attainment of their eighth year. In Western Europe, on the contrary, *all* the children remain under instruction until the completion of their fourteenth year, very often until their sixteenth birthday.

Now, let us give a few facts illustrative of the condition of the people of the Continent.

In Prussia there is one primary school for every 653 inhabitants; one teacher for every 522; one normal college for every 377,360.

In Saxony there is one primary school for every 900 inhabitants; one teacher for every 588; one normal college for every 214,975.

In Bavaria, one primary school of 508 inhabitants; one teacher for every 603; one normal college for every 550,000.

In the Duchy of Baden, one primary school for every 700 inhabitants; one normal college for every 500,000.

In Switzerland there is one teacher for every 480 inhabitants; one normal college for every 176,923.

In France there is one primary school for every 568 inhabitants; one teacher for every 446; one normal college for every 356,564.—*N. Y. Times.*

### AUTHORSHIP OF THE BIBLE.

There are in all sixty-six books, which comprise the volume of Holy Writ, which are attributed to more than thirty different authors or writers of the whole.

Half of the New Testament was composed by St. Paul, and the next largest writer is the gentle and beloved St John. With the single exception of Paul, neither history nor tradition has testified that these powerful thinkers and writers ever enjoyed the benefits of education, or that they were trained to scholarship and learning; yet how ably have they written, what eminent characters have been chronicled by them, and what great events recorded—both for time and eternity!

Jeremiah is sorrowful; Isaiah sublime; David poetical; Daniel sagacious; Habakkuk and Hagai denunciatory; but they all seem to have exercised their natural wits, under the influence of Divine direction and inspiration. Moses, with his vast knowledge and profound intelligence—the legislator, the reformer, the deliverer—commenced the work; and John, with his depth of feeling and exquisite tenderness and simplicity, completed it.

### INFLUENCE.

That subtle, mysterious sympathy—that delicate affiation, or breathing of soul upon soul, of whose power not even the coldest, most unsusceptible is independent, is so persuasive in its action, so irresistable in its effects that there is not probably on the earth a person to whom each of us, were we intimately acquainted with him, might not feel some degree of spiritual relationship; and it is a beautiful provision that, despite the selfish, sordid tendencies of mortality, certain affinities bind together so indissolubly the whole human race, that neither the widest diversity of interests, nor the most marked peculiarities of disposition can entirely isolate any one from his species. But the enjoyment of this, as of all other earthly goods, is subject to limitations: leaving out of view the advantages supposed to be attendant on the possession of command over others, and considering only the passive side of the subject, we find there are two opposite dangers to be encountered, both of which it is perhaps impossible wholly to avoid,—for here, as elsewhere, the middle course is most difficult to be maintained; and whether one yield too much or affirm a little too stoutly his own individuality, the unity, the integrity of his life must be impaired, and he either become a feeble echo of those endowed with more native force than himself, or, on the other hand, present a constrained, unnatural appearance—the irregular, artificial, spasmodic growth of self-consciousness, rather than the quiet, steady, harmonious development of sober strength. The mass of mankind have, perhaps, most need to guard against the former of these dangers, inasmuch as they have evidently a stronger natural proclivity in that direction; but in shunning the evils of a slavish obsequiousness the greatest caution should be exercised, lest one committ the equally fatal mistake of making truth to himself consist in assuming an attitude of hostility toward the opinions of others, and ostentatiously presenting his own mental angularities to whoever approaches him. For a vast deal of what passes in the world under the name of independence, is only wilfulness or obstinacy; and of all kinds of sham independence, that which manifests itself in a studied, whimsical opposition to the sentiments and convictions of others, is the most ridiculous and offensive species—scarcely less despisable than that mean servility which, not daring to live out its own life, leads a sort of borrowed, second-hand existence, by inspiring only air which it is careful to ascertain has passed through approved lungs. To what extent conformity to established customs is compatible with the maintainance of a respectable individuality, might be a question of difficult solution; but perhaps no one will contend that there is any compromise of genuine independence in accepting the faith of another, when we are fairly convinced of the correctness of it, or in submitting to the popular judgment in matters involving no sacrifice of principle.

If any one is inclined to think that he possesses no influence—that his example, whether good or bad, goes for nothing, and that its want of effect absolves him from all responsibility to mankind for the character of that example—unless he believes others totally unlike himself, he has but to examine closely his relations with those about him, observe how the firmness of another has sometimes strengthened him, or the vascillation of those with whom he had intercourse inspired himself with doubt and indecision, to be convinced of his error; and he can scarcely fail to notice that such as are not disposed to act justly, feel wonderfully fortified if they can cite in extenuation of their own evil doings, similar transactions on the part of others, even if these latter do not stand very high in the world's estimation.

It were, perhaps, a not unprofitable subject for a few moments consideration, that of examining some of the more prominent characteristics of the individual who succeeds in attaining to high regard among mankind, and whom we see invested with the leadership of the multitude. Though the unwillingness or inability of the public mind to follow abstractions, may account for the fact that the masses show more devotion to the exponent of a principle than to the principle itself, still there are reasons why one advocate is exalted above another, perhaps able and not less zealous: one of which causes is, that the former generally has the advantage of the latter in a certain personal magnetism, which, supported by substantial qualities, is all-powerful to bind to its possessor those coming within the sphere of its influence.

Another cause of his superior advancement is, that himself, as well as those he leads, are unconscious of the power he wields; for so strongly possessed of the "imp of perversity" is the human mind, that it resolutely refuses to yield to any visible effort to sway it. I have now in my mind's eye a class of people who make a merit of regularly performing certain social observances for the avowed purpose of affording an example to their less scrupulous neighbors. My friends, methinks you are rather assuming in this. Not to question your competence to guide yourselves right, would it not be well to consider the propriety of allowing every one to be fully persuaded in his own mind? In thus confessing your object you betray yourselves soulless, mechanical doers of good works, and wish to make others like you; but it is to be earnestly hoped they will resist the attraction and not be drawn in this or that direction by a servile desire to imitate you. If your neighbors have penetration enough to see that you are better than themselves, and wish to become like you, they will very naturally be inclined to do as you do; but being led to do this and refrain from that, merely *because* you do, is not the thing: no generous, independent mind will either covet such influence over, or submit to it from another.

Scarcely second in importance to any other requisite is persistency of endeavor. As the most ardent wish of philanthrophy is utterly powerless toward accomplishing its own fulfilment, but must ever be allied to humble, persevering, earnest effort, or it is of no practical utility; so, fame comes not in answer to the dearest longing, but must be courted through many an hour of severest toil and anxious watching: nor can the most brilliant reputation when acquired, be retained without constant support; as, when a public man feels that he has achieved glory enough, and proposes to rest on his honors, he will soon find the "divinity" with which the multitude have "hedged him in" stealing from him, and himself sinking to a level with his fellows. It is not enough that he has said and done great things; he must continue to say and do them, or new aspirants for popular favor will attract the public gaze to themselves.

Finally, the colder, more reasoning portion of humanity, those less subject to enthusiastic transports, will especially demand that a candidate for permanent renown shall possess genius of the constructive order. The world has never lacked critics who could, or fancied they could, detect falsehood, and were strong to destroy existing organizations; the number of those who were able to present the transcendent truth, to replace the ruin with a temple of fair and noble proportions, has been comparatively few. Indeed, it seems to be much easier for most minds to prove the falsity of a system or theory which they reject, than to establish the truth of the one they accept; and herein is an explanation of the fact that our public teaching is much more generally of a negative than an affirmative character. At first blush it might appear that the eradication of error from the mind is a necessary preparation for the instillment of truth, but may we not rely on truth to displace error? If so, he whose chief labor is to help us unlearn falsehood is a superfluity; let him give place to the positive man.

After all, to the real lover of his kind the possession of great power will never be an object of intense desire. Recognizing the fact that to no two is granted the same mental organism, he will not be slow to perceive that what is true for him cannot be precisely so for another, and that the part of his life which is to him most replete with force, vitality, significance, may be to another cold, spiritless and mechanical. Tho' one may infuse into the surface appearance of his existence some portion of the inner life, sufficient perhaps to afford an index to the general character or current of it, still it can give only a very inadequate expression of the being within; for I am persuaded that the best part of our lives, like the truest poetry, does not admit of perfect utterance, either in speech or action—and that these mortal envelopments must ever constitute a barrier to a complete revelation of ourselves to others. A.

South Livonia, N. Y., 1853.

How to Manage Temptation.—Some years since, three Indians, in the neighborhood of Green Bay, became converts to temperance, although previously surpassingly fond of the "brain thief." Three white men formed the charitable resolution of trying to draw them back. Placing a canteen of whiskey in their path, they hid themselves in the bushes to observe the effect. The first Indian recognized his old acquaintance with an "Ugh!" and making a high step, passed on. The second laughed, saying, "Me know you!" The last one drew his tomahawk and dashed it in pieces, saying, "Ugh! you conquer me, now I conquer you."

### THE PRAYER OF FAITH.

The Apostle of the Lord Jesus Christ, writing under the inspiration of the Holy Spirit, assures us of the efficacy of prayer, in these memorable words. "Is any sick among you, let him call for the elders of the church," (i. e., for pious friends,) "and let them pray over him, anointing him with oil," (i. e., using appropriate means for his recovery,) "in the name of the Lord," (i. e., looking to God for his blessing on their use;) "and the prayer of faith shall save the sick, and God shall raise him up"—(i. e., the prayer of faith shall avail to his benefit.)—What an assurance! What a promise!—And who can doubt that God does hear and answer the prayers of his children? How often has the humble, confiding Christian witnessed the answer to prayer, though perhaps not in the precise time and manner desired, still clear and certain as the sun at noon day. "The prayer of faith!" What is this prayer of faith?

And first, then, what is Prayer? It is the supplication of blessings that we need, and the deprecation of evils that we feel or fear. We have a clear, full, and definite idea of prayer. But have we as distinct and definite an idea of faith—the prayer of faith? Let us see.

And what is Faith? It is belief, trust, confidence. Belief in what? Confidence in whom? My little child coming round to my seat, just as I was about to raise from the table, and looking up into my face, said: "Father, will you take me to ride this morning?" Yes, my son, I replied, I will, soon as your mother can put on your hat and cloak, and I can put on my overcoat, I *will* take you to ride. His eyes sparkled like brilliants! His countenance lightened up with joy! and he literally jumped up and down in delight! And why? Because he believed I should fulfill my promise. He believed I was able to do it. He believed I was willing to do it. And he believed I should be faithful to fulfill my promise to do it.—These things were as much realities to his mind as his own existence. This is faith! this is trust; this is confidence! Exercised towards the Lord Jesus Christ, in regard to his ability to help us, in regard to his willingness to help us—and in regard to his faithfulness to fulfill his promises to help us, it is faith in the Lord Jesus Christ. And prayer put up in the exercise of this confidence, is the prayer of faith.

Now I suppose our faith in the Lord Jesus Christ, (I am speaking to Christians,) I suppose our faith in the Lord Jesus Christ, in regard to his ability and willingness to help us, is entire and perfect:—as great as it can be in the present state of our minds. We believe, and are sure, that he is a Divine person; therefore, infinitely able to help us. We believe, and are sure, with an entire and perfect confidence, that he has died on the cross to make atonement for us; thus giving the highest conceivable evidence of his infinite willingness to help us. But have we the same trust, the same confidence in his faithfulness to fulfill his promises to help us? I am afraid not. If we fail any where, we shall fail here. Here, we want more faith—more faith. And how are we to obtain it? The promises of the Lord Jesus Christ are many, great, and precious. But who is there, that treasures up these promises in his mind? And if they are not present to our minds, how are we to realize them? And if we do not realize them, how can we ask their fulfillment? We must search the Scriptures. "In them ye think ye have eternal life, and these are they that testify of me." The Scriptures contain the record of His promises. We must study them,—must search them out, roll them over in our minds, and ponder them in our hearts. We must apply them to our own wants, and supplicate their fulfillment to us.

But the promises of the Lord Jesus Christ are made to us, subject to conditions. It is not enough that we pray to him in the confidence of his ability and willingness to help, and of his faithfulness to fulfill his promises to help. We must do something more.—If we would ask the fulfillment of the promise, therefore, we must fulfill the conditions on which the promise is made. We will name one promise, and the conditions annexed. "If ye love me, and my words abide in you, ye may ask what ye will, and it shall be done unto you." Great and wonderful promise! To put up therefore, the fervent prayer of the righteous man that availeth much, we must, in our hearts, be able to say; Lord Jesus, thou knowest all things, "thou knowest that I love thee."—Then we can put up the prayer of faith that shall be heard and answered. For if we love him and his words abide in us, we shall ask nothing contrary to his will; for it will be the paramount desire of our hearts, to be, to do, and to desire, just what he would wish us to be, and to desire. The language of our hearts will be, "nevertheless not my will, but thine, be done." And in asking for the life, even, of the dying man, or for any other blessing, however ardently it may be desired, the paramount object must not be, the good asked for only, but also, that the riches of God's grace and mercy in the Lord Jesus Christ, in bestowing this benefit upon the unworthy, may be illustrated and magnified. E. D.

## A RAP FOR THE RAPPERS.

BY DIANTHA.

The spirits a rapping, came forth one night,
And down to this earth came they;
O'er hill, vale, and woodland, coursing their flight,
To town, sure enough, their way.
There merry lights glancing,
And eyes quite entrancing,
Full flashed in the circle of social cheer;
"To set them a thinking,
Those merry eyes blinking,
We'll rap, rap, rap, as soon t'will appear."

A matron was sitting among a group,
Tick, tick, 'mong her car locks grey;
"What vipers that near me—O look! friends look!"
And down on the floor her cap lay.
An eloquent lawyer,
Unto his employer,
Was proving it plain, that what's black is'nt grey,
"Now sir but just listen,
To my proposition,
Grey black would be"—rap, rap, rap—"what do you say?"

Then on up the street by the moonlight pale,
Our spirits flit on their way;
Just pausing to list to a lover's tale,
Then onward and on far away.
"Ha! ha! here's a gath'ring,
'Mong all the good breth'ren,
We'll step in to hear what the good folks say;
And with a light tapping,
Tick' tick, and a rapping,
Respond as the breth'ren sing and pray."

An old man in dreams was passing the night,
A child on his mother's knee;
Rap, rap, rap, rap, rap—he roused in a fright,
Call out—"what is wanted of me?"
And lo! on the table,
But no! we're not able,
To follow the awful developments through;
Suffice it "your guardian,
Your angel your warden,
Is Mary, your mother, who's rapping to you."

A wide gaping circle, all gathered round,
In silent expectance sat;
With ears far distended, to catch a sound,
As the medium commenced to rap.
Our spirits were peering,
So then nothing fearing,
Quite boldly they come, and with magical power;
In Greek, French, and Latin,
They autographed hand in,
All wonders, which could not be told in an hour.

Oh! age of all ages, this age is best,
Oh! who could more favored be;
The sewers, the reapers, steam cars and press,
News telegraphed too, we see.
But strangest of wonders,
And saddest of blunders,
That spirits should deal out, the mysteries of Heaven;
Thus virtually making,
A telegraph station,
By spirit electrical influence driven.

Written for Moore's Rural New-Yorker.

## SLANDER.

The child was grieved. He had been present at an inquisition, the details of which filled his little, sensitive heart, with pain; and he hastened to lay the burthen of his sorrow before his worthy grand-sire, who was always the source of relief and comfort. The aged parent listened with eager attention to his pitiful story—the fair name of an esteemed friend had been assailed, and the tongue of slander, and lying, and evil, had been set against him. And the child sobbed aloud.

The old man spoke kindly and said:—"My noble boy, thou art too young to understand these things—I am older than thou, and have learned many excellent truths.—Come with me."

And so saying the venerable father arose and wended his way towards the orchard, leading the child. It was early autumn. At sight of the rich fruit that hung in clusters high amid the luxuriant foliage, joy leaped out from those little eyes, and the smile of gladness beamed through the large tear-drops which had gathered there as tokens of a wounded heart. The shadow that had fallen upon his soul was forgotten, and he was impatient to be away.

"But stay my child," said the old man, leaning upon his staff, "we came to learn a lesson. Seest thou those trees? Some are laden with choice fruits—others barren.—Some yield pears, some apples, some peaches, and some only leaves.

"Look again, my son. Seest thou those boys? They are stoning and beating some of the trees. But mark, now, my boy,—they stone and beat *those trees only which bear fruit.*"

The little boy grasped that trembling hand more warmly than ever before, and with a face radiant with joy and satisfaction exclaimed,—"*It's the fruit, then, they seek!*"

"Thou art wise to day, my son," slowly articulated the venerable patriarch. "Treasure up this in thine heart, and be comforted."

The serpent tongue of slander may oft be set against us. The ambitious may envy us our birthright, and essay to despoil us of our good name, and rob us of our character, by the circulation of falsehood. But it is all for the "fruit." Mankind work for pay. If we are obstacles in the way of ambitious schemers—barriers to the aggrandizement of others—we may expect abuse, and trials, and troubles. No one will beat an empty bush, or spend his force in casting stones at a barren tree. The fruit they covet may be hidden even from our own eyes, and discovered only by the ken of ambition—it may be yet green, and hanging high, or too long in ripening, and the integrity of *our own* character must be impeached to allow them to reach forth with rude hands to pluck it. The tree is shaken and beaten, and bruised. And when, as is too often the case, the "fruit" is thus obtained—the apples before the laws of nature, and the "emoluments," before circumstances have matured them, they prove no more indigestible and injurious to the boy who eats them, than the latter to the man who obtains them by the foul means of slander. S. Furman.

## UNION VILLAGE SHAKERS.

The Dayton Gazette has a very interesting article giving the history, manners, sentiments, &c., of the singular sect called Shakers. The following sketch of one of their flourishing settlements will be read with much interest:

The Society at Union Village, Warren county, Ohio, is worthy of particular note. It is one of the largest Shaker Societies in the world. It was founded in the year 1805. It now numbers near 600 persons and owns upwards of 4,000 acres of land, in one body. The soil is remarkably fertile, and the surface and scenery beautifully diversified, and the locality remarkably healthy. The Society here is divided into four different "families," located in different parts of their domain. The largest family numbers near 200 persons, and is called the Centre, it being the residence of their Elder and Eldress and where their church is located. The "dwelling" as it is called, where this family eats and sleeps, is an immense brick structure, four stories high; it fronts 88 feet, and is 108 feet deep; it is divided into dining, sleeping and kitchen rooms. In the large cellar underneath is kept the milk, and the butter and cheese apparatus. Their butter is churned and cheese made by horse power; their bread is also kneaded in the same way. Their bread is certainly the best we ever tasted. In fact, the dinner they generously prepared for our party, was one of the most palatable we ever enjoyed. The fine fruit and other seasonable delicacies with which our table was loaded, were such as princes might feed upon and be glad. They live upon plenty of the very best of everything that is good and healthy. They cultivate none but the best of fruits of which they sell large quantities.

They have the finest stock we ever saw. Their cattle are altogether incomparable.—Some of their cows give daily, from six to eight gallons of the richest milk. Such cows they readily sell at from $150 to $200. Calves, from two to four months old, they sell from $60 to $100. They have an animal that weighs nearly 3,000 pounds. They have a botanical garden of about twelve acres, in which they cultivate all the medicinal plants and herbs of this climate, which they gather and remove to the chemical and medical laboratory, where they are dried and prepared in the form of extracts, powders, &c., ready for market. Those medicines are the purest and best of the kind that can be had. The celebrated "Shaker Sarsaparilla" is manufactured here and affords the principal source of their revenue.—Their mechanical shops are kept in the neatest order and their work is done in the most systematic style.

They excel in the manufacture of carpets, wood-ware, leather, blankets, and various kinds of trinkets and fancy articles. We were shown some silk handkerchiefs which were made by them from silk of their own production, which were quite equal to the European silks.

Their seed garden is also note worthy.—They annually put up and sell about 1,400 boxes of garden seed, each box containing 200 packages of seeds.

They have now in their domain about 3,000 head of sheep, 500 cattle, 100 horses, countless numbers of poultry, but no hogs or dogs, the former being to them unclean, and the latter useless yelpers. All their buildings, shops, stables, &c., &c, are built of the best materials; and in fact every thing about them is done just as it should be done. A visit to their village will well repay a long ride. They are exceedingly hospitable and affable, and those who visit them will never regret the time or trouble.

## KEEP YOUNG.

There is no surer destroyer of youth, of youth's privileges and powers, and delights than yielding the spirit to the empire of ill-temper and selfishness. We should all be cautious, as we advance in life, of allowing occasional sorrowful experience to overshadow our perception of the preponderances of good.

Faith in good is at once its own rectitude and reward. To believe good, and to do good, truly and trustfully, is the healthiest of humanity's conditions. To take events cheerfully, and promote the happiness of others, is the way to ensure the enduring spring of existence. Content and kindliness are the soft vernal showers and fostering sunny warmth that keep a man's nature and being fresh and green. If we would leave a gracious memory behind us, there is no way better to secure it than by living graciously. A cheerful and benign temper, that buds forth pleasant blossoms, and bears sweet fruit for those who live within its influence, is sure to produce an undying growth of green remembrances that shall flourish immortally after the present stock is decayed and gone.

Flatterers only lift a man up, as it is said the eagle does the tortoise, to get something by his fall.

## ANECDOTE OF DANIEL WEBSTER.

Ebenezer Webster, the father of Daniel, was a farmer. The vegetables in his garden suffered considerably from the depredations of a woodchuck, whose hole and habitation were near the premises.

Daniel, some ten or twelve years old, and his brother, Ezekiel, had set a trap, and finally succeeded in capturing the trespasser. Ezekiel proposed to kill the animal, and end at once any further trouble from him; but Daniel looked with compassion upon his meek, dumb captive, and offered to let him again go free. The boys could not agree, and each appealed to their father to decide the case.

"Well, my boys," said the old gentleman, "I will be the judge. There is the prisoner," pointing to the woodchuck, "and you shall be the counsel, and plead the case for and against his life and liberty."

Ezekiel opened the case with a strong argument, urging the mischievous nature of the criminal, the great harm he had already done; said that much time and labor had been spent in his capture, and now, if he was suffered to live and go again at large, he would renew his depredations, and be cunning enough not to suffer himself to be caught again, and that he ought now to be put to death; that his skin was of some value, and that, to make the best of him they could, it would not half repay the damage he had done.

His argument was ready, practical, to the point, and of much greater length than our limits will allow us to occupy in relating the story.

The father looked with pride upon his son, who became a distinguished jurist in his manhood.

"Now, Daniel, it is your turn; I'll hear what you have to say."

'Twas the first case. Daniel saw the plea of his brother had sensibly affected his father, the Judge, and his large, brilliant black eyes looked upon the soft, timid expression of the animal; and as he saw it tremble with fear in its narrow prison house, his heart swelled with pity, and he appealed with eloquent words that the captive might go free.

God, he said, had made the woodchuck; he made him to live, to enjoy the bright sunlight, the pure air, the free fields and woods. God had not made him or anything in vain. The woodchuck had as much right to live as any other living thing; he was not a destructive animal as the wolf and fox were; he simply eat a few common vegetables, of which they had a plenty, and could well spare a part; he destroyed nothing but the little food he needed to sustain his humble life; and that little food was as sweet to him and as necessary to his existence, as was to him the food upon his mother's table. God furnished them their own food; he gave them all they possessed; and would they not spare a little dumb creature, who really had as much right to his share of God's bounty as they themselves had to their portion?—Yes, more, the animal had never violated the laws of his nature, or the laws of God, as man often did; but strictly followed the simple, harmless instincts he had received from the hand of the creator of all things. Created by God's hand, he had a right from God, to life, to food, to liberty; and they had no right to deprive him of either; he alluded to the mute but earnest pleadings of the animal for that life, as sweet, as dear to him as their own was to them; and the just judgment they might expect, if in selfish cruelty and cold heartedness they took the life they could not restore again, the life that God alone had given.

During this appeal the tears had started to the old man's eyes, and were fast running down his sun-burnt cheeks; every feeling of a father's heart was stirred within him; he saw the future greatness of his son before his eyes, he felt that God had blessed him in his children beyond the lot of other men; his pity and sympathy were awakened by his eloquent words of compassion, and the strong appeal for mercy; and forgetting the judge in the man and the father, he sprang from his chair (while Daniel was in the midst of his argument, without thinking he had already won his case) and turning to his eldest son, dashing the tears from his eyes, exclaimed—

"Zeke, Zeke, you let that woodchuck go!"—*Boston Traveler.*

## NAMES OF NEWSPAPERS.

The number of newspapers now printed in this country (not including monthly magazines) is according to a statement of the Philadelphia *Register*, about 3,500, and there is a remarkable sameness in their names. The Inquirers, Advertisers, Transcripts, Mirrors, Advocates Recorders, Chronicles Republicans, Whigs, Palladiums, Tribunes, Heralds, Patriots, Observers, Messengers, Journals, Couriers, Sentinels, Reporters, Registers, Mercurys, Flags and Banners, constitute about two thirds of the whole. Besides the above, there are 167 Democrats, and 129 Gazettes.

As an offset of this we may notice a few of the unique names, such as the Pleasure Boat, Life Boat, Yankee Blade, Rough Notes, Rough Hewer, Almighty Dollar, Old Oaken Bucket, Locomotive, Screw Driver, Busy Martha, Young America, Nonpareil, Straight Forward, Sun Beam, Rainbow, Fact, Acorn, Plaindealer, The Wonder, Home of Mirth, Cataract, Tempest, Old Settler, Uncle Tom's Cabin, All sorts, David's Sling, Circumstance, Una, Budget, Lantern, Pick, Castigator, Yankee Nation, Prairie Bird, Uncle Sam, Boston Notion, Gem of the Prairie Land, Ram's Horn, Bugle, Chronotype, Golden Rule, Old Colony, Pine Knot, Whip and Spur, Blue Hen's Chicken, Hornet's Nest, Live Giraffe, Beobachter, Anzeigor, Kladderadatsch, and some jaw-breaking Norwegian and German names which we do not remember, some of them among our most valuable papers.

# For the Ladies.

## SHE IS THINE.

She is thine—the word is spoken;
Hand to hand, and heart to heart!
Though all other ties are broken,
Time these bonds shall never part.

Thou hast taken her in gladness,
From the altar's holy shrine;
Oh, remember in her sadness,
She is thine, and only thine!

In so fair a temple never,
Aught of ill can hope to come;
Good will strive, and striving ever,
Make so pure a shrine its home.

Each the other's love possessing,
Say what care should cloud that brow,
She will be to thee a blessing,
And a shield to her be thou!

Written for the Rural New-Yorker.

## A MOTHER'S LOVE.

Who does not feel that there is no gift in this wide universe, so precious as a mother's love? Who has not treasured many a toy, which would itself be trifling and valueless, were it not linked with dreams of other days,—the pledge of affection, given in childhoods hour of joy and bliss? Who has not thought love's simple song that pleased our infancy, the sweetest ever heard?—and the prayer our watchful mother gave, and bade us lisp, was surely borne on angels wings to heaven. Even passing years tell us, that our cherished hopes, are mockery, and the gay smiling world, we deemed an opening paradise, is vile and treacherous.

When we have seen so much vanity, that we become as cold, and almost heartless as the throng we mingle with, then, even then, the song, the prayer, or but our mother's name, will waken deeply smothered tho'ts, and brings to consciousness feelings that had been cherished or hid so long we scarcely knew they yet lingered there. But when long days of tedious weariness have passed away, and again we hear a mother's well known voice welcome our coming footsteps, cheering our burthened hearts, as soothingly as when it hushed our childish grievances—when the same hand binds up our fevered brow, and by a thousand nameless acts of tenderness, tells of a love, by language undefined,—then we feel that, though all other things of earth are changeable, our Mother's Love will never change. R.

Maple Valley, 1853.

## HUSBANDS AND WIVES.

Mrs. Denison, in one of her capital editorials for the Boston Olive Branch, presents the following striking contrast between two homes and two husbands:

"I wish I could see a pleasant face when I come home. Tired! Yes! that's always the cry. I never get tired—oh, no? Customers to please—clerks to overhaul, accounts to cast up! Hush! I hate that child. Now, walk the floor and spoil him. Bill, hunt up my slippers. Mary, draw up my rocking chair. Other men have their things ready for them. There's Saunders, he takes comfort. His wife is as handsome as she was the day she was married. If there's anything I hate, it's a faded woman. Light the lamps, and give me my newspaper. If I can't read here in peace, I'll go over to Saunders."

"Mary, dear, how tired you look. Give me that great strapping boy. No wonder your arms ache. Oh! never mind me. I'm always O. K. at home, you know. Take the rocking chair *yourself*, and just be comfortable. Ain't I tired? Why yes, I am a little—but then I've feasted on fresh air and sunshine to-day, which you havn't. Besides, I don't have such a lump of perpetual motion as this to manage.

"Bless my soul—how do you live these hot days? Never mind the room! Every thing looks well enough—you included—except that you are looking a trifle better than well. How do you manage to keep so young and pretty, bonny wife?"

Well might the smiling answer be, "*the freshness and fullness of my husband's love keeps my heart green.*"

Marrying and Remarrying.—In 1849, Mr. James Austin was married to a young lady of this city. Subsequently he went to Europe on business, where he was detained longer than his wife thought necessary.—From the insidious misrepresentations of interested parties, she was induced to charge her husband with infidelity. A suit for divorce was instituted, and she and her infant child were allowed $5,000 alimony, the interest to be paid as it accrued, and the principal when she attained the age of 21.—Yesterday she came into Court asking that she be paid the $5,000, as she was now of age, which was granted, and here the Court of law dropped the case. But the misjudged husband, who had since returned from Europe, took the case in hand, and was again married, and made a happy husband and father.—*N. Y. Mirror.*

An honest man is believed without an oath, for his reputation swears for him.

Forget not that human virtue is a polished steel, which is rusted by a breath.

The sun produces life, or causes death, according as its rays fall.

It is happy to have so much merit, that our birth is the least thing respected in us.

## A CUSTOM WORTH IMITATING.

It is a custom, among certain tribes in Siberia, that, when a woman is married, she must prepare the wedding dinner with her own hands. To this feast all the relatives and friends, both of her own family and of that of the groom, are invited. If the viands are well cooked, her credit as a good housewife is established. But if the dishes are badly prepared she is disgraced in that capacity forever. The result is that a Siberian wife is generally a good housekeeper, whatever else she may be, and thus is competent, beyond her sex generally, for the practical duties of life.

We are accustomed to call the Siberians semi-barbarous, and incapable of furnishing an example, in anything, to a people as civilized as ourselves. But we might imitate their custom to considerable advantage. Since the days of our grandmothers, the education of American females, considered in a practical view, has greatly deteriorated. In their time girls were instructed to become good housewives. Now they are brought up to chatter French or study the fashions. Sixty years ago the aim of a young woman was to fit herself to be a good wife. At the present day young ladies think any how to catch a husband.

We are not opposed to cultivating the female intellect, or to adorning woman with accomplishments. We repudiate the idea that she is merely the slave of man. Her destiny is higher, nobler, more divine. She was designed, by the Great Author of all, to be to the *help mate* of man, in the full meaning of that good old Saxon term. It is her mission to share his sorrows, to participate in his joys, to cheer him in his moments of depression, to be his confidant, his counsellor, his best earthly friend. That she may be competent for all this, she should have a wise head as well as a loving heart. If her intellect is uncultivated, she may become a pretty play thing for a while, but nothing more; and when her youthful loveliness has departed, her influence is gone irrevocably. All the women of history, even the most beautiful, who have exercised power, have owed their success to the intellect. A handsome fool married to a man of ability, can scarcely escape being despised. But even an ordinary face, if united to sweetness, sense, and a cultivated mind, not only wins esteem, but retains it to the close of life. A wife, in a word, can never be truly the companion of a refined husband, unless her intellect is improved also. And if there were more such companions for men, there would be fewer brutes among the male sex.

But women should nevertheless remember, that a wife has many duties to fulfil, and that to cultivate the mind alone is not preparing for their future lot. As men must learn a trade, acquire a profession, or fit themselves to earn a livelihood in some other way, so should women render themselves competent for the position of a housewife, in case they should be called to fill it. And as it is no excuse for a husband, who neglects his business, or refuses to master its more unpleasant details, that he is a capital Greek scholar, a critic in the fine arts, or a capital amateur musician, so it is no palliation for a wife who is ignorant of household affairs, or scorns to supervise them, that she sing like a Sontag, dress herself to look like a princess, or even do as much good among the poor as a dozen lady Bountifuls.

But the majority of women cannot afford to delegate their household duties to servants. That so many do it, whose husbands are still comparatively poor, is one of the social evils of the age, especially in great cities. While, therefore, every female ought to cultivate her mind, and even learn as many accomplishments as possible, she should remember that a knowledge of housewifery should attend these acquisitions, if she expects to fulfill her duties in life.—The Siberian custom might be introduced here without injury.—*Phila. Ledger.*

## FEMALE SOCIETY.

No society is more profitable, because none more refining and provocative of virtue, than that of a refined and sensible woman. God enshrined peculiar goodness in the form of woman, that her beauty might win, her gentle voice invite, and the desire of her favor persuade men's souls to leave the path of sinful strife for the ways of pleasantness and peace. But when woman falls from her blessed eminence, and sinks the guardian and the cherisher of pure and rational enjoyments into the vain coquette and flattered idolator of fashion, she is unworthy of an honorable man's admiration. Beauty is then but at best.

——"A pretty plaything;
Dear deceit."

We honor the chivalrous deference which is paid in our land to woman. It proves that our men know how to respect virtue and pure affection, and that our women are worthy of such respect. Yet woman should be something more than mere woman to win us to their society. To be our companions they shoud be fitted to be our friends; to rule our hearts they should be deserving the appropation of our minds. There are many such, and that there are not more, is rather the fault of our own sex than their own; and despite all the unmanly scandals that have been thrown upon them, in prose and verse, they would rather share in the rational conversation of men of sense, than listen to the silly compliments of fools; and a man dishonors them as well as disgraces himself, when he seeks their circle for idle pastimes, and not the improvement of his mind and the elevation of his heart.

Good Manners.—Good manners is the art of making those people easy with whom we converse. Whoever makes the fewest persons uneasy, is the best bred in the company.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JULY 23, 1853.

PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

## Topics of the Week.

THE tour of President PIERCE, and the opening of the Crystal Palace, have been the all-absorbing topics of the Press for some days past. The eastern daily papers, especially those of New York, are crowded with speeches, and other proceedings, descriptions, &c., of the great events—embracing a vast deal of "Bunkum," and individual and national glorification. The Crystal Palace Exhibition is a God-send to the New York Press, and hugely appreciated. But notwithstanding all that has been said and published on the subject, the Exhibition is yet in a chaotic condition, and will not be arranged for some weeks. GREELEY says the general inside appearance is that of a gigantic fancy store or bazaar, in which some eccentric earthquake has knocked Christmas into May-day, and jumbled the two in inextricable confusion! People who design visiting the Exhibition are admonished to wait until August or September.

The Legislature is too slow a subject for rapid comment, but as there is some prospect of an adjournment, it may be worth a brief quotation. The Albany Journal of Saturday says:—"Several members whose business is suffering because of their protracted absence, have been compelled, by the apparent determination of the majority not to adjourn, to go home. A few others are absent from other causes;—among them Mr. PETERS, because of the illness of his wife. Others still threaten to leave on Monday, adjournment or no adjournment, believing that neither their duty to themselves nor to their constituents, requires them to be participants, on compulsion, to an apparent conspiracy against the treasury of the State."

The Commencement Exercises at the Rochester University, and the Theological Seminary, last week, were generally of a high order, and attended by very large audiences. We shall endeavor to give some interesting particulars in the Educational Department of our next number.

The Wheat Harvest is a topic of interest everywhere. It is progressing rapidly in this region, and we have favorable accounts from other sections—near and distant. The weather continues favorable, though the nights are unusually cool for the season.

Another fatal catastrophe on the Hudson, has furnished a fresh topic of news and comment. Though, fortunately, the first rumor was greatly exaggerated, the truth is bad enough. When will these murderous accidents cease?

## Opening of the Crystal Palace.

THE formal opening of the Crystal Palace took place as previously announced, on Thursday, July 14th, in a manner creditable to the managers and satisfactory to the public. The number present must of necessity have been large, as the city itself can furnish human beings enough to throng all the avenues leading to the palace.

President PIERCE, accompanied by Secretaries GUTHRIE and DAVIS, and Attorney Gen. CUSHING, were present. Gen. SCOTT, Gov. SEYMOUR, Gov. HOWELL COBB, of Georgia, and Gov. FAIRBANKS, of Vermont, with other official, clerical and distinguished guests from different States and Canadas, were conspicuous upon the platform. Sir CHARLES LYELL and lady, Lady ELLESMORE and daughter, Prof. WILSON and Mr. DILKE, his Sec'y, Mr. DUNCAN and others of the Royal Commissioners were upon the platform, in prominent positions. Several Home and Foreign Ministers and large numbers of invited guests also occupied the platform, which would seat about seven hundred.

The President entered the building at 2 o'clock. The band immediately played *Hail Columbia*, following it with *Yankee Doodle* and other popular airs. Right Rev. Bishop WAINWRIGHT read an appropriate prayer, after which the New York Sacred Harmonic Society, assisted by the National Guard Band, members of other Societies and the organ, sung to the tune of "Old Hundred," the following Anthem, composed for the occasion:

Here, where all climes their offerings send,
Here, where all arts their tribute lay,
Before thy presence, Lord, we bend,
And for thy smile and blessing pray.

For thou dost sway the tides of thought,
And hold the issues in thy hand,
Of all that human toil has wrought,
And all that human skill has plann'd.

Thou lead'st the restless Power of Mind
O'er destiny's untrodden field,
And guid'st him, wandering bold but blind,
To mighty ends not yet revealed.

At its conclusion, THEODORE SEDGWICK, President of the Association, delivered the opening speech, addressing it to the President of the United States. He assured the President, that amid the vast concourse of people assembled, eminent in every department of human skill and genius, surrounded by the trophies of intellect and beauty, the eye and the mind naturally, inevitably riveted themselves upon him. As presiding officer of the Association, he most cordially thanked him for the honor of his presence, as without the approbation and confidence of the Government it was from the first foreseen they had no sure prestige of success. He continued by making an appropriate allusion to the encouragement received from DANIEL WEBSTER, now no more, but whose monument, hewn from French stone by English hands, was standing there, most appropriately, as if to contemplate the work to which the great statesman had given the first impulse.

He further referred to the great object of the exhibition, to bring before his countrymen the choicest productions and skill of the Old World, and also to place before them, on a National scale, trophies of the inventive spirit of our countrymen—to collect a full representation of

"The arts for luxury, the arms for strife,
Inventions for delight of sight and sound"—

to bind together the two hemispheres, to extend the area of commerce and the fraternity of nations. The speaker also presented the thanks of the Association for the presence of so many distinguished individuals from all parts of Europe and all parts of this Continent. He remarked:

"The dwellers on the Eastern shores of the Atlantic are here mingled with the representatives of our own Empire on the coast of the Pacific, and there are, I believe, here, to-day, fifteen chief magistrates, of as many States of the confederacy—lights of the constellation of which you, Sir, are the central star. [Applause.] We are deeply sensible of this courtesy and kindness, while, Sir, we are not so blind, or so vain glorious as not fully to understand the honor is done not to us, but to you, [renewed applause,] and that the homage of their respect is above all paid to the growing power and majesty of the Republic. May that power and majesty—and I say it with the profoundest reverence—be ever united to and governed by that spirit of peace, and good will which is our direct command from on High, and to contribute to which in the great family of man, is the best and purest and wisest motive that can bring us together in this temple of industry—in this palace of labor. But, Sir, I detain my hearers from the pleasure that awaits them. Hereafter, I may take some more fitting occasion to state in detail, what we have done, and what we desire to do—the difficulties we have encountered and the obstacles we have surmounted. To-day, my voice is of little moment, except for the echo and the response which it is fortunately destined to awaken. Permit me here, sir, to ask you to let your voice be heard beneath our dome, and to request that you will by words, as well as by your presence, inaugurate this Exhibition of the Industry of all Nations."

To this address, of which we have given but a brief epitome, condensed from the New York Times, President PIERCE responded as follows:

"Sir, I return you, on behalf of those of my constitutional advisers who are with me, and on my own account, my warm and cordial thanks for the reception you have been pleased to extend to us. I have come, Sir, to testify the interest I feel in, and the respect I entertain for, this great industrial exhibition—designed and calculated to promote all that belongs to the interest of our country. You, Sir, and the gentlemen who have been and are associated with you, have imposed upon all of us a deep debt of gratitude for your energy and perseverance in this great enterprise. Whatever the short comings of which you have spoken may be, I can only remark that they do not appear here: and so far as I have been able to perceive, they are lost in your complete and transcendant success. [Loud and continued applause.] Everything around us reminds us that we live in an utilitarian age, where science, instead of being locked up for the admiration of the world, has become tributary to the arts, manufactures, agriculture, and all that goes to promote our domestic comforts and our universal prosperity. Sir, if you had achieved no other but that which you have, in bringing together in this metropolis, citizens from all parts of the Union, you would have fulfilled, perhaps, one of the most important of missions—that of strengthening and perpetuating that blessed Union. [Great applause.] But you have done more, and you have nobly alluded to it. Your Exhibition has been the means of bringing here, from all the civilized countries on the face of the globe, men most eminent in all the walks of life; and thus you have done more than could be done in almost any other manner to promote that great object dear to you, dear to me, and dear to my venerable friend near me, (Bishop Wainright,) peace and good will among men. [Applause.] I have not the voice at this time to address you at any greater length, and conclude by again returning you my thanks for your generous reception, and tendering my heart's best wishes for the success of your praiseworthy enterprise. [Applause.]

As the President concluded, the Organ again pealed forth the Hallelujah Chorus, from HANDEL'S Messiah,—followed by the Triumphal March, by FRED. RIES, and a Chorus from HADYN'S Creation, and the Exhibition at the Crystal Palace was formally opened.

We cannot now attempt any description of the interior of the building, or of the articles comprising the exhibition. A few weeks will suffice to fill up the different courts, and complete the arrangements. The classification and arrangements are similar to those adopted at London. The amount of space occupied for the exhibition, exclusive of the naves, is about 152,000 square feet,—of which 94,102 are on the ground-floor, and in the gallaries 59,000 feet. Foreign countries occupy 98,479 square feet, the United States 54,530 square feet, of which 19,955 feet are in the gallaries. The number of exhibitors from abroad is 2,605, and the whole number is 4,383, about *one-third* the number at the London Exhibition. The Exhibition will hereafter be open from 10 o'clock A. M. until 7 P. M. Season tickets $10; single admission fifty cents, and children half-price. We shall have occasion to speak of the Exhibition more in detal hereafter. †

## Steamboat Disaster, and Loss of Life.

The Steamer Empire of Troy, on her regular trip from that place to New York, on the night of the 16 ult., was run into by the Sloop Gen. Livingston, about six miles below Poughkeepsie, causing an explosion of the boiler, tearing away the side, and making a complete wreck of the boat amidships. The details correspond with those on similar occasions, and sums up a total result of *seven* known to be killed, *twenty* badly Scalded, and *seven* supposed to be missing as their baggage is unclaimed. Upon whom the blame rests we have been unable to learn from the confused statements given.

# Correspondence.

## Notes from the Capital.

ALBANY, July 18, 1853.

EDS. RURAL:—In accordance with a promise made in my last, I spent considerable time at the examination and closing exercises of the State Normal School. The public examination usually occupies three days, but the third day is given up once in two years to the old graduates, who have formed themselves into an association for the promotion of the Educational interests of the State. This being the year of their return, Wednesday was assigned as their jubilee day, but the limits of this communication will not allow me to give a sketch of their proceedings.

Thursday afternoon was the time appointed for the closing exercises, which are what Colleges, &c., call "Commencement." The large Hall was filled by a very intelligent audience, who listened to the somewhat lengthy exercises with marked attention. An Essay entitled "The Education of the Heart," by Miss JANE B. DAYTON, of of Suffolk, and a Poem entitled "Kader Iris," by Miss MARY T. HOWE, of Tompkins county, were read by Miss HANCE, the teacher of Reading. Orations were pronounced by Messrs. MERRILL, of Jefferson; COLE, of Putnam, and WRIGHT, of Onondaga. These productions, considering the length of time devoted to literary compositions at this School, were decidedly superior. Dr. POTTER then delivered the usual address to the pupils. His exordium consisted in an allusion to the wonderful contrivance by which we communicate our ideas to one another. He then discoursed upon the Teacher's profession with much ability, showing that teaching did not stop with the mechanical process of imparting instruction; but it is "to form his mind and his manners; to awaken in him the power of thought; to refine his taste; to fill his mind with noble principles and aspirations; to awaken in him a love of the beautiful in nature, in art, in thought and sentiment; to enlighten his judgment, and form it to habits of calm and comprehensive deliberation; to retrench from his manners and his speech whatever is gross and clownish; and as the child is father to the man, and the man is liable to be advanced to any station in the Republic, he is to strive to mould him to such simplicity and propriety of demeanor, to such dignity and amenity, as may fit him to appear with decency in any circle in the land."

From the obvious truth that a teacher cannot impart to others what he does not possesses himself, he urged the necessity of the teacher's thorough education. The teacher should be a pattern not only in knowledge from books, but of refined taste, correct deportment, and spotless character. His suggestions with regard to cultivation of taste and improvement in manners, were of the most instructive character.

The graduating class is unusually large, consisting of 42 members, and from the examination they bore, I am of the opinion that they will do great credit to the institution, and accomplish much good for the people.

The Legislature continues in session a part of the time. The Assembly adjourned over last Thursday, to attend the Inauguration of the Crystal Palace, but I believe they have not all returned yet. Friday and Saturday it was almost impossible to do any business, on account of thinness of the House. The Senate have been at work for about two weeks on the "Supply Bill," a bill that is generally rushed through "on the last day of the sessions, in the afternoon." The way they manage is to vote one day to strike out a claim, and the next to strike it in, and so on, thus finding themselves after a vigorous march of a week, just about "as you were." An honest member of Dutch descent, from one of the "rural districts," happened to be conversing one day on the tricks played by legislators in Albany, when he remarked that he "should never be contented no more when he got home; I used to think that all went right in the Legislature, but (shaking his head,) I never shall think so no more."

But there is a faint hope of an adjournment this week. The fact is, the more conscientious members are getting ashamed of themselves, and they bolt. Many have taken "French leave," and more will follow if an adjournment cannot be secured soon. I hope to present some items of the Supply bill in my next, for the consideration of the readers of the RURAL. *OWE.*

## Incidents of Travel Westward.—No. 8.

*Location and appearance of Newark—Railroads, and their influence on Real Estate—An objection to settling in the West—Proportion of foreigners in the West—Benefits derived from foreign emigration.*

NEWARK, Licking Co., O., July, 1853.

EDS. RURAL:—This is a thriving village, and the County seat of Licking Co. It is situated in a rich and productive valley, between the North and South forks of Licking River, near the junction. It is decidedly a pretty village. Its centre is a Public Square of four acres, in the midst of which is a splendid Court House, half screened from view by trees and shrubbery. Around this Square are erected stores and shops for business, together with Churches and public buildings. The river affords large hydraulic privileges. The village has over 3,000 inhabitants, with five large flouring mills, two saw mills, two foundries, five hotels, fifteen stores, nine churches, and contributes three weekly newspapers towards the 2,850 periodicals which are now printed in the United States. The Canal from Cleveland to Portsmouth passes through this place. Also a Railroad from Sandusky; and from this point a Railroad runs west through Columbus to Cincinnati. Two other roads, leaving this place, are under contract and partially completed; one running south to Portsmouth, on the Ohio, the other east to Steubenville, situated in the eastern part of the State, on the same noble river.

The Railways in Ohio will soon give it the appearance of a large checker-board, with this grand difference, instead of its being a theatre for games of chance, where only one party can win, it will mutually enhance the interests of all parties. While the stocks are a source of gain to their owners, they are doubly so to the patrons of the road. The farmer not only obtains larger prices for his products, but unconsciously finds his lands about him rising 20, 30 and 40 per cent. in value.

The mixed population of the Western States, is a serious drawback upon the value otherwise to be placed upon a home in the west. Of the inhabitants of the United States every fifth person is a foreigner, or his descendant. The western States have a larger proportion of this class than the eastern States. They are useful in subduing the wilderness, in raising corn, cattle, and wheat, building Railroads and Canals, but in building up the institutions of learning and piety they are of less account. But this "Celtic Exodus," as it has been aptly termed, is to all the parties immediately connected with it, one of the most important events of the day. Several things incline us to favor this movement. 1st. It benefits the mother country by reducing its surplus population, and creating better wages for those who remain. 2d. It extends the benefits to American labor, by lessening the competition which it has to sustain with the ill-paid labor of Europe, and 3d. It furnishes us with a supply of stout and efficient hands—the greatest want in a new country—which is that of labor—gives value to land, and facilitates the execution of every species of private enterprise and public works. The German emigration to this country from 1846 to 1851 was 16,671 annually, and the abstraction of capital from thence, caused by emigration was, during the same period, no less than $15,000,000 annually, which is a subject of apprehension on the part of the parent State. But whether they come rich or penniless, we say, let them come.

S. B. ROCKWELL.

ROSS' IMPROVED GRAIN DRILL.—In its appropriate place may be found an advertisement of this Drill. It appears well constructed, differing but slightly from those in general use. The scale by which the feed is graduated is of cast iron, obviating any swelling by getting wet. The bottom of the drill tooth is made with a flange which it is claimed, makes a broader bed for the grain; on the rear of the tooth a shoe has been placed, which controls the depth at which the grain is deposited. It also acts the part of a roller in covering the seed. Whether as a whole it is superior to many now in use, farmers will be able to decide after testing the same. †

PROFITABLE CLIPS.—Mr. W. A. COOK, of Lima, sheared 196 Spanish Merinos, averaging 6 lbs. 2 oz. per head of washed wool. It should be stated that these sheep were reserved as the best from a flock of some 400 Merinos—the others being sold last season. Mr. C. keeps, in all, 900 sheep—one of the largest flocks in Western New York. D. HILLMAN & SONS, of East Avon, sheared over 400 Spanish Merinos, the flock averaging over 5 lbs. of well washed wool per head. Both of the above lots of wool are contracted at 56 cts. per lb.

BISHOP IVES.—The Bishop Ives affair has taken a new and still more unhappy phase. A letter, written by a member of the Episcopal Church in North Carolina, to Bishop Green, states that "Mrs. Ives will return home with her brother, Dr. Hobart, he having received notice from the Pope that Doctor Ives would be ordained priest in the summer, and could no longer be considered her husband."

WELL SAID.—We have no objection to Bishop Ives becoming a Catholic, if he chooses. This is his business, and not ours. But we should be recreant to all manliness and Christianity, did we fail to express our disgust and indignation with the faithlessness which thus sets aside the wife of one's youth, the mother of one's children, the companion of one's life, and the vow long since registered in Heaven to cherish and protect her until death.—*Spring. Rep.*

A KNOWING HORSE!—The New Haven Republican says:—Two carriages, one double and the other single were near being destroyed with their passengers, yesterday afternoon on the New York Railroad. The drivers did not see the passing train until it was close upon them. The double carriage however, got over the track. The single horse had his fore feet almost upon the rail. He reared upon his hind legs, and stood thus like a statue till the train passed by! It came so near him that it struck the projecting shafts and broke them, but did no other injury. We understood our informant, a respectable gentleman, to say that he witnessed all this.

A CONVENT IN NEW JERSEY.—The late John Tonnelle, of Bergen, it is said, bequeathed to an eminent dignitary of the Roman Catholic Church a large and exceedingly valuable tract of land in New Jersey, on the brow of the Bergen Hill, near West Hoboken, with the reservation that it was to be devoted in some way to the benefit of that denomination. It is now in contemplation, it is said, to erect on this plot of ground a Convent for the Sisters of Mercy. The work will probably be commenced at an early day.

AN ARCHBISHOP FROM ROME.—Archbishop Bedini, specially commissioned by His Holiness, Pope Pius IX., to visit our government at Washington, has arrived at New York. The specific purpose of his visit is not public. Besides his mission to the seat of Government, Archbishop Bedini will visit the several dioceses in the United States, probably with a view of ascertaining the real condition and resources of the Roman Catholic Church in this country.

COST OF A PASSENGER CAR.—The cost of one of the long railway passenger cars is, on an average, about $2,000. There are in the United States upwards of eighty private car manufactories, exclusive of those railways which make and repair all for their own use; and it is calculated that a capital of $6,000,000 is invested in this branch of industry, producing about $17,000,000 annually, and employing about 6,000 men.

# News Brebities.

—— The Aztec children are now in London for exhibition.

—— The Nile is now lower than it has been for thirty years.

—— Neal Dow is lecturing on Temperance in the Canadian cities.

—— There are eight hundred and forty-nine streets, lanes, and places in Boston.

—— The amount received in aid of the Oswego sufferers by the late fire, is $1,905 25.

—— The Hon. Gerrit Smith has sent $1,000 for the relief of the sufferers at Oswego.

—— Beef and mutton are 30 per cent. higher in London than they were the last year.

—— A buck belonging to John Haverfield, of Cadiz, Ohio, yielded a fleece weighing 19½ lbs.

—— Emile Girardin has sold a one-thousandth part of his Journal, La Presse, for one thousand dollars.

——Hon. Friend Humphery, of Albany, is quite ill, and but slight hopes are entertained of his recovery.

—— Professor Faraday, of the British Royal Institution, has discovered and explained the Table-Moving mystery.

—— M. Maillefert is engaged, under the authority of Government, in removing the rocks in the harbor of New Haven.

—— A pure white robin has been found in a nest near Lewisburg, Va. A similar bird has been seen at Monroetown, Pa.

—— The Steuben County half-shire bill has passed the House. Having previously passed the Senate, it is now a law.

—— Over 1,000,000 lbs. of cheese and butter left the Herkimer station of the Utica railway during the month of June.

——The Freeman's Journal, the organ of Archbishop Hughes, is now issued Wednesday evenings and *Sunday* mornings.

——The difficulty between Secretary Marcy and Mr. Buchanan is adjusted, and the latter will depart for England at an early day.

—— Gov. Seymour and staff will review the troops at the Grand Encampment, to be held in Syracuse, on the 23d of August.

—— There are about 1,470 physicians in Kentucky. Twenty surgeons in the State have treated some 400 cases of lithotomy.

—— The entire cost of the St. Charles Hotel, New Orleans, including building, grounds, &c., since 1851, is stated at $598,320 73.

—— Jasper N. Ball, late of Union Theological Seminary, was ordained as missionary to Armenia, at Lyme, N. H., on the 30th ult.

——A project is on foot in Cincinnati to furnish the poor with wood the ensuing fall at nearly fifty per cent. below the present prices.

—— The authorities of New York are making a praiseworthy effort to break up the gambling saloons established near the Crystal Palace.

—— A cow, named Mrs. Franklin Pierce, in Johnsville, Pa., in seven days gave 375 quarts of milk, from which 14 lbs. of butter were made.

—— The Fourth of July was celebrated in Charleston, S. C., this year, in the most commendable spirit of devotion to our common country.

—— Upwards of $70,000 have been subscribed in Cincinnati, for the construction of a canal around the Falls of the Ohio, at Jeffersonville.

—— It is estimated that the iron blast furnaces, in Montgomery county, Pa., are now making $1,200 to $1,500 weekly, clear of all expenses.

—— The usual summer war against dogs has recommenced in New York. Fifty cents per head is offered for every live dog found running at large.

—— While a party of twelve ladies were in bathing at Newport the other day, the horse ran away with the wagon containing all their clothes.

—— A miscreant who has been in the habit of obstructing the Harlem Railroad, was caught in the act of rolling a log across the Track. He was committed.

—— The $100,000 which the Baptists proposed to raise for the endowment of their Theological Institution at Newton, Mass., has all been subscribed.

—— Mr. Aubry, the great Rocky Mountain traveler, made a trip, with a party, from Santa Fe to California the past winter, with a flock of 5,000 sheep.

—— An English paper says that there are at present building on the Clyde 93 iron vessels, 52 of which are screw steamers, 26 paddle-wheel, and 15 sailing vessels.

—— Dr. Forbes, who has written a book on Ireland lately, thinks that a very large proportion of Father Mathew's teetotal converts in that country have gone back to whiskey.

—— Mr. Brown, of Pickering, intends to exhibit at the Provincial Show, at Hamilton, a collection of Canadian wild animals, which he has made at considerable cost and trouble.

—— The Senate of Wisconsin, by a vote of 14 to 9, have passed the bill to abolish capital punishment in that State. The bill awaits the signature of the Governor to become a law.

—— Mr. George Weiss, of Brooklyn, offers a reward of $500 to any spirit-rapper who will move a *shingle*, as they say they move tables. He says they can't stir a shingle, any way they can fix it.

—— The farm known as Clay Spring, in Hanover county, Virginia, and upon which the orator and statesman Henry Clay was born, is offered for sale by the present owner, Mr. Wm. Dabney.

—— There are about 150,000 colored members of the Southern Methodist Church; 120,000 in the Baptist; 10,000 in Presbyterian, and in other churches about 20,000, making a total of 300,000.

—— Contractors on the First Division of the Illinois Central Railroad, north of Cario, are now offering $1 50 per day for laborers. This is the highest figure ever paid for such work in the State.

—— The Aldermen of New York have directed Comptroller Flagg to apply to the Legislature for the return of $855,000 paid by the city under the School Law of 1851, which was declared unconstitutional.

—— A superb breakfast, dinner and tea service has been manufactured in New York, to the order of President Pierce. The dining service numbers 450 pieces, and the glass 50 dozen. The whole cost is $1,500.

—— The War Department has very late advices from Gov. Lane, detailing the history of his recent efforts to introduce pastoral and agricultural pursuits among the Apaches. He meets with encouraging success.

—— Prof. Niedner is at present occupied upon a *Church History*, to be completed in six volumes, in which he intends to show the influence of Art, Science, and Philosophy on the Church, from the time of the Apostles to the present day.

### State Normal School.

The following table shows the vacancies in each county, at the close of the present term of the School; and the town superintendents are requested to fill them as soon as possible, after receiving this notification. The table also shows the amount of money which each student will receive per term, as mileage or traveling expenses.

| | Vacan's. | Am't. | | Vacan's. | Am't. |
|---|---|---|---|---|---|
| Albany | 3 | $0,00 | Oneida | 3 | $2,79 |
| Allegany | 4 | 7,68 | Onondaga | 2 | 4,38 |

| New York | 31 | 4,35 | Yates | 1 | 6,36 |
| Niagara | 4 | 9,00 | | | |

Editors are respectfully requested to notice vacancies in their Counties, that those who may desire to receive appointments for the next term, which will commence on the 19th of September, may make the necessary applications to the Superintendents of the towns in which they reside.

---

Colton's Maps.—Are the most popular and valuable before the public. Among the many recently introduced, Colton's "Map of the United States and British Provinces, Mexico and the West Indies"—showing the country from the Atlantic to the Pacific Ocean—is worthy of special notice and commendation. It is for sale by agents in this and other counties of Western New York, to whom we direct those wishing to obtain a correct delineation of the Western World. The map merits all that is said of it in the following recommendations:

Buffalo, June 7, 1853.

Messrs. Johnson & Mansfield: I have examined Colton's Map of the U. S., &c., which you left for my inspection last evening, with as much care as the limited time would permit, and take great pleasure in saying that it seems to me to be accurate and well executed, and that it is better calculated to show the relative position and size of the various civil divisions of the different portions of our whole territory and the adjacent countries, than any other map which has fallen under my observation.

Respectfully yours,
MILLARD FILLMORE.

I concur in opinion with Mr. Fillmore.
CHAS. E. WEST, Prin. B. F. Academy.

University of Rochester, June 13, 1853.

Colton's Map of the U. S. supplies a great desideratum, as it embraces in one view our whole country, and its adjacent countries. The man of business, the scholar, the professional man, and the whole people will rejoice in its appearance. The high testimonies of its accuracy from the President of the U. S., must be satisfactory.

C. DEWEY, Prof. Nat. Sci.

Rochester, June 14, 1853.

Having been favored with an opportunity of examining Colton's Map of the United States, I take pleasure in stating that I regard it as the most valuable and useful, of any that I have seen. I trust and believe it will have a wide circulation.

HENRY W LEE,
Rector of St. Luke's Church.

Mr. Colton's map, besides its well certified accuracy, must be welcomed both for the comprehensive view which it furnishes of the Western World, and the fresh delineation it furnishes of territorial division and lines of communication.

J. J. VAN INGEN.

Cambridge, Feb. 17, 1853.

I have examined Colton's new and large Map of the U. States, extending from the Atlantic to the Pacific Ocean, and I have no hesitation in saying that, in my opinion, it is superior to any other which I have seen, of the same country.

JAMES WALKER.

I concur with President Walker in the above opinion of Colton's new Map of the United States.

JARED SPARKS.

## News Paragraphs.

☞ The President has grown fat in his "fat office." He looks ten years younger than when we last saw him, bending with white lips over the mighty dead at Marshfield. His Crystal Palace speech, was respectable in matter, and correctly and gracefully delivered. The cheers given the President were cold and formal—entirely wanting in the enthusiasm with which the presence, or the names, of Jackson, Clay, and Webster were always greeted.—*N. Y. Mirror.*

☞ The railroad debts of certain cities give the following amount to each inhabitant; Philadelphia, $20; Pittsburgh, $31; Wheeling, $55; Baltimore, $13; St. Louis and county $30; Cincinnati, $7; Louisville, $25; New Orleans, $28; Covington, $17; Chillicothe, $7; Marietta, $20; Milwaukee, $20. This gives a pretty good idea of the extent to which subscriptions to railroads have been carried. There must be a day of settlement before long.

☞ A writer in the New York papers denies that the Arabia has beaten the Artic in the time made across the Atlantic, contending that the latter is ahead, notwithstanding she carries five or six times more freight than her competitor. There is no doubt about this last assertion—as all the American steamers are much more heavily laden than the English ones are.

☞ A steamer had arrived at London, July 1st, from Australia, with 83,500 oz. gold dust. The cost of provisions in Australia had reached a frightful height, with no present prospects of any abatement. The price of all kinds of goods was also extremely high.

☞ A letter in the London Times explains a process for extracting fifteen per cent. of valuable oil from the seed of the tobacco plant. The discovery was made in Russia, and is considered commercially very important.

☞ One locomotive on the Rochester, Lockport and Niagara Falls Railroad, on the 4th of July, passed through this place for the west, carrying 1,300 passengers in one train. The return train numbered 1,100 passengers.—*Lockport Cour.*

☞ The editor of the New Orleans Picayune has been shown a sample of salt taken from a salt lake near Corpus Christi, Texas. It was clear, clean, well crystalized, and of excellent taste. The supply is said to be inexhaustible.

### Fearful Accident at Niagara Falls!

While closing this number for press, we hear of a sad calamity at Niagara Falls. About 8 o'clock Monday evening, a small boat, containing three men (from Schlosser) was upset or swamped in the rapids,—and two of the men carried over the Falls! The other man saved himself by getting on a log projecting from the water, some 20 rods below Goat Island,—but up to Tuesday at 5 P. M. all attempts to rescue him from his perilous situation had proved abortive.

### Good News for the Farmers.

The following telegraphic dispatch from Baltimore, indicates a rise in Breadstuffs abroad. The Franklin's news has not been received—nor any other indication than this of her arrival:

Baltimore, July 19.—The favorable advices for breadstuffs by the Franklin has caused holders to advance 25 cents per bbl. on flour. Wheat has alone improved four cents per bushel, and corn is tending upward.

### Discomfort at the Crystal palace.

A New York correspondent of the Boston Transcript speaks thus of the Crystal Palace:

You will be surprised to know that the hottest place in New York is, perhaps, the Crystal Palace. Sheltered from any stray sea breeze by the huge reservoir which frowns over it and exposed on all sides to the direct rays of the sun, its extensive surface of iron and glass seems to attract and concentrate within it all the heat that the atmosphere contains. This is a result not unexpected, but very troublesome. Ventilators have been placed along the top and the bottom of the glass walls, but still the air within is hot and almost stifling.

When night comes, the heated air within is condensed upon the glass walls, and water runs down in copious streams; so that it has been found necessary, even on these sultry days, to build fires in some parts of the structure, in order to dry the moisture. How often the plans of scientific men are ruined by reason of their ignorance or carelessness in regard to a very common phenomenon of nature. How the directors will now manage to cool their Palace is the great question. The prospect is that the ice cream saloons and drinking saloons of all qualities, which line the Sixth avenue, facing the Palace, will invite the perspiring curiosity-seeker, as he puffs his way out of the hot glass-house, with as profitable results as the Crystal speculators themselves.

---

Fire at Little Falls.—A serious fire occurred at Little Falls on the 13th inst. It broke out in the paper mill of the Messrs. Richmond, between 11 and 12 o'clock A. M. The whole mill was destroyed—loss from 10,000 to 12,000 dollars, insured about one half. The machine shop known as the Rockton Foundry, was also burned—it was owned by Judge Loomis, whose loss is about $5,000. The flax mill of E. T. Hovey, was destroyed—covered by insurance. Stocking factory of Gray & Barber—loss $4,000, insured $2,800. Total loss about $20,000—insured about $10,000.

---

Army Bird.—The Sparta Journal, published in Sparta, Illinois, says:—North of us, the army bird has destroyed entire fields. These birds, like the army worm, travel in immense numbers, and destroy the wheat as they go. In our own neighborhood, we notice many acres which apparently would not pay the farmer for reaping. The corn and other crops are also suffering from the continued drought and excessive heat.

## Market Intelligence.

Rural New-Yorker Office,
Rochester, July 20, 1853.

The busy hum of the harvesters is heard on every side and as the farmer toils to secure the golden grain, which is to repay his year of toil, little he heeds market or market towns. As the well filled sheaf is safely deposited in the capacious barn, he must needs turn over the weekly paper to ascertain the prospects of obtaining a good price for his productions.

The prospect of a war on the eastern Continent has affected the market somewhat, and visions of higher prices haunt the market places. A war on the borders of the Mediterranean, would in a measure, cut off supplies from that quarter, and enhance the price of American wheat, corn, and flour. We have no desire for such a state of affairs, but suppose our farmers would willingly pocket the increased price consequent upon a rupture of peaceful relations between the Emperor of Russia and the Sublime Porte.

At present so little is offered that prices are merely nominal, though we observe no indications of a decline.—By another week there may be some indication of the price to be paid this fall for the coming crop. We omit quotations for the week except our usual list.

**Rochester Wholesale Prices.**

### NEW YORK MARKET.

NEW YORK, July 18.

Flour—There is increased firmness in low grades of State and Western—prices are a shade better—demand more active. Canadian firm—supply limited. Sales for the provinces at $5,12. Sales Western Canal $4,62@4.68 for sour; $4,87@5,12 for mixed to fancy Michigan, Wisconsin and Indiana—$5,12@5,15 for State—closing buoyant.

Grain—Wheat firm—demand good. Sales good prime white Ohio $1,29½@1,30 to arrive; red Ohio $1,17; prime white Canadian $1,27.

Rye—dull and nominal—83@85c.

Oats—better—in demand, 42@44c for State and Western.

Corn—firm—good demand for home and eastern trade. Sales 65@67 for unsound—67@68 for Southern mixed—68@68½c for do. white—68@70 for Western mixed—70@71 for Southern yellow.

Provisions—Pork buoyant—arrivals light and supply good—$15.62 for mess—$12,75@13 for prime. Beef—fair demand—$8@10 for country mess—$12@12,75 for city mess and repacked Chicago—$5@6.37 for country and city prime. Cut Meats fair at previous rates.

Lard buoyant—10½@11c.

Butter and cheese unchanged.

### ALBANY MARKET.

Albany, July 18.—Grain and Feed were limited and only a moderate business has been done.

Flour, &c.—The market for fresh ground State and extra brands is not active, but holders evince more firmness, and prices, if any thing, are rather better than at the close on Saturday. The low and medium grades of Western are offered freely at our last quotations; but the great bulk coming from Ohio and Wisconsin is found on arrival to have become soured, which tends to injure the sale of good lots on hand. Corn Meal is steady at $1.25.

Grain—A quiet market for wheat, with no white offering. A cargo of red was offered at at price that is not considered a fair market quotation, being far above the views of buyers. Corn is less freely offered and is again better. The receipts are small. Sales at 68½c for round yellow and good Western mixed. Oats are quiet but firm. Sales Canadian, to arrive, at 40c.

Feed—A dull market. Sales coarse Shorts at 15c.

### BUFFALO MARKET.

Buffalo, July 18.—Flour—Sales fresh ground Michigan at $4,37½; fresh ground Southern Ohio $4,37½; fancy Michigan and Indiana, warranted, $4,25; Ohio and Indiana $4@4,12½.

Wheat—In fair demand, and held high, and prime parcels scarce. Sales white Michigan, Milwaukee mixed, and Ohio mixed, on terms not made public.

Corn—In good demand and firm, with an upward tendency. Sales prime Illinois at 57@56½c; sound Toledo, at the same; do. to clean out a cargo, at 56c afloat; Illinois river, an indifferent sample at 55c; damaged at 52c.

Oats in better demand and market firmer for sound samples. Sales 34½c afloat; not in prime condition 32c.

Canal Freights easier; 56@57c on flour; 15½c. on wheat and 12½c on corn to New York. 50@51c. on flour to Albany and Troy.

Working Oxen—Sales $80, 85, 95, 110, 130@165.

Cows and Calves—Sales $23, 27, 33, 38, 40@60.

Sheep and Lambs—Sales of lots at $2,88, 3,33, 3,50, 4,-25 and $5.

Swine—Not in demand; shoats to peddle, 6¼c for sows, 7¼c for barrows. Spring pigs 8 and 9c. At retail, shoats from 7½ to 8½c; pigs 9 and 10c.

### PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, July 14.—The offerings at Washington Drove Yard during the past week comprised 1,500 head of Beef Cattle, 400 head of which were driven to New York, and the balance disposed of to city butchers at $7,-50 to 9,50 ₱ 100 lbs.

Cows and Calves—300 offered. Sales of good milch cows at $18@35, springers $14@25, and dry cows $7@10.

Hogs—The demand was limited, and prices were well maintained. Sales at $6,50@7 ₱ 100 lbs.

Sheep and Lambs—1,500 offered. Sales were made at $2 to $6 each, as in quality.

**SEYMOUR'S PATENT GRAIN DRILL.**

This is emphatically the Premium Drill of our country, having taken the first premium at every Fair of the New York State Agricultural Society, since its first introduction, in 1849, including the highest prize and diploma, at the great trial of Agricultural Implements, made by this Society, at Geneva, in July, 1852.

The following are among the advantages this Drill possesses over other Grain Drills, viz.:—It sows all grain and seeds, from peas and corn to grass seed, as well as any other Drill sows wheat, not failing thus to perform in sowing even beet or carrot seed; and it is difficult to clog it with any of the trash and foul stuff commonly found in grain, such as straw, chaff, stems of tare or other weeds, or even the heads of Canada thistles, too frequently found in the grain. It will also sow any grain soaked and rolled in lime, plaster, ashes, guano, pouderette, &c., &c. It also sows lime, plaster, ashes and all dry fertilizers which are fine enough to pass through the machine.

Whatever it will sow in drills it will just as readily sow broadcast by removing the drill tubes, which is very easily done. It is remarkably simple in its construction, and very durable. It is easily understood and kept in order by common laborers, or repaired by common mechanics, such as are at hand in nearly every neighborhood or town.

The price is but little in advance of any other approved grain drill, and quite below that charged for many which are far less adapted to the wants of the farmer or planter than this,—and, in view of its utility, simplicity, convenience and durability, it is believed to be by far the cheapest drill in the world. This drill is made small enough to be drawn by hand for garden purposes, when ordered.

All communications in relation to machines, or the right to manufacture, promptly attended to.

C. H. SEYMOUR, Manufacturer.

P. Seymour, Patentee.
East Bloomfield, Ont. Co., N. Y., July, 1853.

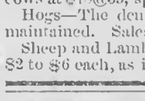
**AUCTION SALE OF**
**Durham Cattle and Blood Horses.**



THE Subscribers having disposed of the Hartford Farm, will offer at Auction, their entire herd of Blood Stock, on said premises, 1½ miles north of Avon, Livingston Co., N. Y., on Thursday, the 1st day of September next.

The above herd includes the noted bull "Defiance," who has proved himself one of the best stock getters in the State,—"Yonondeo," a very fine thorough-bred bull, sired by "Splendor," his dam the imported cow "Lady Morris;" 6 thorough-bred Cows, sired by "Splendor," "Oregon," "Currency," and "Defiance; 10 two year old Heifers, sired by "Racket" and "Splendor;" 17 yearling Heifers, all sired by "Racket" and "Yonondeo;" one fine red cow, sired by "Red Jacket" from an imported Devon cow; 6 Bull Calves, by "Defiance" and "Racket." Also the following blood Horses:—2 brood Mares and their colts; 2 fine three year old mares; 4 two year old colts, and one yearling—all bred from the best stock in this country.

For further information apply to or address the subscribers. DAVID BROOKS & SON.
July, 1853. 185-6tnlw* Avon, Liv. Co., N. Y.

**S. W. DIBBLE,**

*Dealer in Allen B. Wilson's Stitching Machine.*

Office, No. 8 Smith's Arcade, Rochester. This Machine works on an entire new principle, and is said by scientific judges to be THE BEST MACHINE EVER INVENTED FOR SEWING.

It is simple in its construction, not liable to get out of repair, and stitches the finest linen, cotton or woolen goods in a superior manner. Tailors, seamstresses, cap makers, dress makers, and shirt and collar manufacturers will find this to be the best Machine ever invented for their use. Single Machines or County and Town rights, for its exclusive use, for sale on such terms that the purchaser may be sure of a handsome return from the investment.
186-tf.

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred Suffolk Pigs for sale by the subscriber. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country.
Address C. J. HOLDEN,
June, 1853. [186m3] Walpole, N. H.

**AUSTRALIAN WHEAT,**

*By Mail and Express to any part of the United States.*

I WILL send by mail on receipt of two or more Postage stamps, a sample of Australian Wheat, which will be an interesting curiosity to those who have never seen it before. Also, by Express or otherwise, as follows:—One peck for $1; two pecks for $1,75; one bushel for $3; three bushels (a barrel) or more, at $2,50 per bushel. All orders to be pre-paid, enclosing the cash, and directions for sending. All remittances will be entered, and attended to in the order they are received, and in case the demand should exceed the supply, the money of those sending in too late, will be promptly refunded.

Address D. D. TOOKER,
July, 1853. [185-2t*] Napoleon, Jackson Co., Mich.

**WESTERN LAND.**

THE undersigned offers for sale a valuable Farm of 500 acres, located in Clear Lake township, Steuben Co., Indiana, bordering the Michigan line on the east.

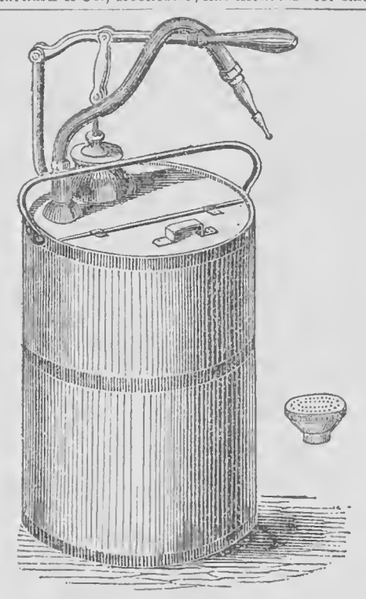
The above farm has 100 acres improved, the remainder well timbered with oak, whitewood and black walnut. On the premises is a dwelling house, and a large, commodious barn; likewise an unfailing water power, with a favorable location for a mill. The tract is favorably situated for two or more farms; and the subscriber offers the whole, or a part, in exchange for land or other property in this section, at a great bargain. Address

HENRY O. BARNUM.
Walworth, Wayne Co., N. Y., 1853. 185-4teow

**ROSS'S IMPROVED GRAIN DRILL.**

THE Subscriber offers the Farmers of Monroe, Genesee, Orleans, and Niagara Counties, the above Drill, the best and most perfect by far of all in market. Its advantages are, one half the labor saved in getting in—half bushel saved in seed—and a yield of from 4 to 6 bushels per acre more than broad-cast sowing. It has taken every premium where exhibited, and is recommended by the highest testimonials. It will be delivered at any place upon canal, or at railroad depots in the above counties. All orders should be addressed to the subscriber, at Rochester, N. Y. [185-2t*] E. SPRAGUE.

J. Rapalje & Co., Rochester, has them also for sale.



We offer for sale, the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union WM. G. CREAMER & CO.,
Plumbers and Hydraulic Engineers, 64 State street, New Haven, Conn., and 4th Avenue cor. 9th St., New York
185-8t.

**GARDEN OR FIRE ENGINE.**

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N. B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.
Seneca Falls, N. Y., June, 1853. 183w10

**SUPERPHOSPHATE OF LIME.**

THE undersigned continue sole agents for the sale of Deburgs Superphosphate of Lime, which has proven Superior to all other brands, now in the market. Having sold nearly Three Hundred Tons this spring, and heard from a majority who have used it, they pronounce it equal to Guano in its effects, and is more lasting in the soil. As there are many substances called Superphosphate of Lime now offering in this market, which are of a different nature, to avoid impositions purchasers would do well by applying direct to the agency for their supply.

LONGETT & GRIFFING,
184-8w. No. 25 Cliff Street, New York.

**E. Boughton's Thistle Digger and Subsoil Cultivator!**

THE Thistle Digger and Subsoil Cultivator is, owing to its peculiar construction, particularly adapted to pulverizing the soil and destroying all thistles, noxious weeds and grass. It will work in any soil, the harder the better. It is so arranged that the blade may be raised and lowered, and made to move the soil to any required depth, and by cutting up every thing in its way, has a decided advantage over the Wheel Cultivators whose use it is fast superceding.

The following gentlemen, who are all practical Farmers, have used the Thistle Digger and Subsoil Cultivator on their farms, and cheerfully concur in recommending it.

**GREAT STOCK SALE.**

**Short-horn and Durham Cattle, and South-down Sheep.**

ON Wednesday, the 7th day of September next, at one o'clock, P. M., I will sell, at my farm on Grand Island, six miles below Buffalo, about 30 full bred Short-horns, a few Devons, and about 30 high grade Short-horn and Devon Cattle, consisting of Cows, Heifers and Young Bulls.

The young Short-horns are chiefly the get of my imported bull Duke of Exeter (10,152)—a bull not exceeded, as a fine stock getter, by any other in the U. States.

The young Devons are the get of the bulls Candy and Quartley, both imported by Mr. Stevens. The superior of these bulls in blood, style and breeding, is not to be found. Quartley is my present stock bull.

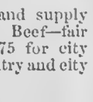
I will offer at the same time 50 pure bred South-Down Sheep-rams and ewes. Also a few Middlesex pigs—both sheep and pigs the direct get of imported sires, from dams descended from late importations.

Catalogues will be ready by the first of August, and will be sent on application to me, by mail.

Terms:—All sums of $100, and less, cash. For larger sums, approved notes at four months, with interest, payable at Bank, will be received, if preferred.

A steamboat will carry all persons wishing to attend, across the ferry from Lower Black Rock to the farm, at 10 o'clock on the morning of the day of sale. The stock can be viewed at any time previous, by calling on me at my residence in this place. LEWIS F. ALLEN.
Black Rock, N. Y., June 15, 1853. 182-10t

**PURE SUFFOLK PIGS FOR SALE.**



THE Subscriber has three pairs of pure Suffolk Pigs, six weeks old, from the stock of F. A. Wier, of Walpole, N. H. Price $16 per pair. Also two boar pigs at $8 each. Apply to or address
July 11, 1853. E. H. GILBERT,
185-2t* Nunda, Livingston Co., N. Y.

**DRAIN TILE MACHINE.**

THE Subscribers are manufacturing at their machine shop, at North Bloomfield, Ontario Co., N. Y. Machines of an improved pattern, and most durable construction, for the use of moulding drain tile, bats for crocks, &c. Orders by mail or otherwise, punctually attended to.

FAIRCHILD & WOOD.
North Bloomfield, N. Y., April, 1853. 173-5toau

*LABOR SAVED!*

**MUMMA'S PATENT CORN SHELLER.**

THIS Sheller is pronounced by competent judges, to be superior to all others, as it is quite simple and durable in its construction, and shells the ear PERFECTLY CLEAN from end to end, with great rapidity and ease. It separates the cob from the corn, which is a very great advantage, and is adapted to either hand or horse power, and capable of shelling from 30 to 40 bushels per hour. It has shelled a bushel in a minute, by hand power. It runs as light, with one man to turn, as the common hand shellers. From the peculiar construction of the cylinder and springs, it will shell LARGE and SMALL ears perfectly clean at the same moment, of either new or old corn, an advantage not possessed by the multitude of shellers in general use.

This machine has met with the universal approbation of all classes of men wherever introduced. It was awarded the First Premium, a heavy SILVER MEDAL, at the great Fair of the Maryland Institute, held in Baltimore, October, 1850.

It also received the HIGHEST PREMIUM which was awarded at the great Agricultural State Fair of Pennsylvania, held at Harrisburg, October, 1851. Also, at the State Fair of Kentucky, in 1852.

From the great number of recommendations in its favor, we have room only for the following:

From the Hon. J. C. Dickey, Member of Congress, from Pennsylvania.

Washington City, March 3, 1851.

I take pleasure in certifying that I have on various occasions, seen in operation Mr. J. Mumma's Patent Corn Sheller, and that it appeared to me to shell much faster, and do the work CLEANER and better than any machine of which I have any knowledge. JESSE C. DICKEY.

From J. W. Davies, Corn Merchant.

Baltimore, November 5, 1850.

Mr. E. Robinson—Sir: Having seen in operation Mr. J. Mumma's Patent Corn Sheller, I take pleasure in stating, that I consider it a superior sheller to any other now in use, as it leaves the corn *unbroken*, and consequently, more suitable for shipping or market. J. W. DAVIES.

From several Gentlemen, Practical Farmers of Pennsylvania, who have the machine in use.

We, the undersigned, after using Mumma's Patent Corn Sheller, can recommend it to the farming community as having been found equal in every respect to what it is represented to be. It is, indeed, a labor-saving invention, and therefore of incalculable benefit to those who may have use for such machines.

JOHN RUP, Dauphin County.
JOS. HUMMEL, " "
JOS. HERSHEY, " "
J. GARRET, Lebanon County.
G. MYERS, " "
BENJ. CHEW, Cumberland County.

From Messrs. Burk & Ovelman, Machinists.

Greencastle, Pa., June 1, 1853.

Mr. E. Robinson—Sir: We take pleasure in informing you that we have been making Mumma's Patent Corn Sheller, and find them ready sale. The farmers are better pleased with them than any other in use, and as for our part, we consider them much better than any we have ever made, and we have made almost all kinds.

BURK & OVELMAN.

From J. H. Hills, Esq., Practical Miller.

Vernon Village, N. Y., June 21, 1853.

This may certify, that I have seen in operation and examined a Corn Sheller, patented June 12, 1849, by Jacob Mumma, and that I consider it much the best of any with which I am acquainted. J. H. HILLS,
Vernon, Oneida Co., N. Y.

From Messrs. Cowing & Co., Garden Engine and Pump Manufacturers.

Seneca Falls, N. Y., July 2, 1853.

To whom it may Concern—We have made a brief examination of Mumma's Patent Corn Sheller, and we consider it better adapted for farmer's use than any machine of the kind we have ever seen. COWING & CO.

The subscriber having purchased the Patent right of the above Sheller for all the United States and Territories, will sell Township, County or State rights, on reasonable terms. E. ROBINSON.
Greencastle, Franklin Co., Pa., June, 1853.

**PREPARED SUPER PHOSPHATE OF LIME,**
**BY THE UNION CHEMICAL WORKS, L. I.**
**HOYT & CO., Agents,**
*No. 234 Water Street, and 122 West St., corner of Dey St., NEW YORK.*

A Fertilizer of the most approved quality, producing all the immediate effect of the best Peruvian Guano, with the advantage of being much more lasting in the soil.—Thoroughly tested, and found to more than realise the expectations of all those who have already tried it. The best evidence of this is the largely increased demand this season over the past year. Put up in bags of 160 lbs; barrels 250 lbs each. Buyers will please be particular to observe our brand upon each bag or barrel.

Also for sale, American and Foreign Field and Garden Seeds. English Ray Grass, Foul Meadow Grass, fine mixed Lawn Grass, White Clover, Osage Orange, &c.
178m3i.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

**GARDEN AND FIELD SEEDS**

*From the New Establishment of Van Zandt & Bowdish,*
No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. Hallock, No. 24 Exchange street, near the Clinton Hotel, Rochester, N. Y.

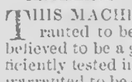
The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the Eastern Shakers, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.
Rochester, N. Y., 1853. 170m6.

**REAPING MACHINES.—IMPORTANT INJUNCTION.**

JUDGE NELSON, of the Supreme Court of the U. S., granted at Cooperstown, on Friday, the 24th ult., an injunction against Seymour & Morgan, of Brockport, restraining them and their agents from disposing of their wheat Reapers as an infringment of my patent. Purchasers of machines make themselves liable to prosecution by using them. C. H. McCORMICK.

☞ Mr. McCormick has recently obtained a renewal of his patent, including the reel. Manny's Reaper is as decided an infringement of his patent—subjecting the manufacturer and purchaser of it to the same penalties.
June 29, 1853. 183tf.

**MARSHALL'S BOOK BINDERY,**



BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

**GENESEE PAPER MILLS.**

CO-PARTNERSHIP NOTICE.—The subscribers having purchased the Genesee Paper Mills property, have this day formed a Co-partnership, under the name and firm of Adams, Huntington & Co., for the purpose of Manufacturing Printing Paper, and dealing at wholesale and retail in all kinds of Paper Stock. Office and Warehouse, No. 93 State street.

FRANCIS T. ADAMS, E. T. HUNTINGTON,

## THE FARMER'S SONG.

[Composed by J. G. Saxe, Esq., and arranged to music by Prof. T. Wood, and sung by "The Amphions" at the late Sheep Shearing Festival, in Sudbury, Vt.]

Have you ever heard of the farmers,
Who live among the hills,
Where every man's a sovereign,
And owns the lands he tills,
Where all the girls are beautiful!
And all the boys are strong!
Oh! 'tis my delight of a summer night,
To sing the Farmer's Song.

'Tis here the tall and manly
"Green Mountain boys" are seen,
(So called because the *Mountains*,
And not the *Boys, are green.*)
They'll always fight to win the right,
Or to resist the wrong.
Oh! 'tis my delight, &c.

And here the best and fairest
Of Yankee girls are caught,
With every grace of form and face
That ere a lover sought—
And every art to win his heart,
And hold it long and strong,
Oh! 'tis my delight, &c.

'Tis here the "Morgan" horses,
And "Black Hawk" steeds abound;
For grace and beauty, strength and speed,
Their equals can't be found—
They always "go it" fleetly,
They always "come it" strong!
Oh! 'tis my delight, &c.

And here the true Merinos,
Of pure imported stock,
Are often seen to range the green,
In many a noble flock—
Their forms are large and beautiful,
Their wool is fine and long.
Oh! 'tis my delight, &c.

You've often read of the wonders,
Of ancient Rome and Greece,
Of Jason's expedition,
To get the golden fleece—
*Alonzo's* got the fleece away,
And brought the sheep along!
Oh! 'tis my delight, &c.

Oh! here's success to Bingham!
And all true shepherd men—
May heaven keep himself and sheep,
Till shearing comes again—
And then may we be there to see,
And help the sport along.
Oh! 'tis my delight, &c.

And now a health to the shearers,
And many joyous years—
Whose hands with will and ready skill,
Propel the busy shears—
With hearts sincere and conscience clear,
Our voices loud and strong,
Oh! we'll take delight from morn to night,
To sing the shearers song.

# Rural Sketch Book.

## AND THEN?

The oracle of the beautiful sequestered little hamlet of Ambermead, was an old gentleman of unobtrusive and orderly habits, whose peculiar taciturnity had obtained for him the familiar cognomen of Two Words. Mr. Canute, *alias* Two Words, dwelt on the outskirts of the village, tended by an ancient housekeeper, almost as chary of speech as her worthy master. It was surmised that Mr. Canuto had seen better days; but though his means were strained, his heart was large, and his countenance expressed great benevolence. Notwithstanding the brief mode of speech which characterized him on all occasions, the advice of Mr. Canute was easily sought on every subject whereon it was presumed advice could be profitable; and the simple rusties of Ambermead perhaps valued it the more, because, though delivered without a particle of pomposity, the terseness and decision of the words expended, left an indelible impression, which long sermons often failed to convey. Mr. Canute lived on terms of intimacy with the family at the old Hall—an intimacy connected with early associations, for Mr. Harwell and Mr. Canute had been school-fellows, and when a painful and lingering illness attacked the squire, his ancient friend and crony felt deep anxiety as to the ultimate fate of Mr. Harwell's only child—the good and lovely Clara Harwell. The disease was an incurable one; though the suffering might be protracted, there was no hope of ultimate recovery, and an air of gloom reigned over the village of Ambermead, where once the sweet spring and summer tide brought only sport and gloo. Ambermead was noted for a profusion of rich red roses, exhaling delicious fragrance; and for the song of innumerable nightingales, whose harmonious concerts resounded amid the umbragoous groves, sheltering the hamlet on every side, and extending beyond the old Hall of Ambermead. But now, although the roses bloomed and the birds sang, serious faces looked from the cottage doors; and while the younger villagers forgot their usual pastimes, the elders conversed apart in whispers, always directing their glances towards the hall, as if the sufferer within those thick walls could be disturbed by their conversation. This sympathy was called forth not only by the circumstance of Mr. Harwell being their ancestral landlord, the last of an impoverished race, but from his always having lived among them as a friend and neighbor—respected as a superior, and beloved as an equal. Their knowledge also of the squire's decayed fortunes; and that on his death, the fine old place must become the property of a stranger, who rumor did not report favorably of—greatly enhanced the concern of these hereditary cultivators of the soil; and many bright eyes grew dim thinking of poor Miss Clara, who would so soon be fatherless, and almost penniless. The estate of Ambermead was strictly entailed in the male line, and the next heir was of distant kin to the Harwells. A combination of misfortunes, and no doubt of imprudence in years long-by-gone, had reduced the present proprietor to the verge of ruin, from which he was to find refuge only in the grave. The Harwell family had lived for centuries in Ambermead. They seemed so much to belong to their poor neighbors, who always sympathized most fully in all the joys and sorrows of the "Hall folks," that now, when there was a certain prospect of losing them forever as it seemed, the parting became more than a common one, between landlord and tenant,—between rich and poor,—it was the parting of endeared friends.

They watched and waited for Mr. Canute passing to and fro, as he did every day, and more than once a day; and on his two words they hung, as if life or death were involved in that short bulletin.

"How is the squire to-day?" said one.

"No better," replied Mr. Canute mildly, without stopping.

"And How's Miss Clara?" inquired another, with deep pity in his looks.

"Very patient," responded the old man, still moving slowly on with the aid of his stout staff.

"Patient!" repeated several voices, when he was out of hearing. "Yes, yes, patient enough; and Master Canute means a deal when *he* says patient. Bless her young sweet face! there's patience in *it* if ever there was in mortal's."

Mr. Canute's patience was sorely taxed by questioning at all hours; he was waylaid first by one, then by another, on his way from his own cottage to the Hall, but with unfailing good nature and promptitude, he invariably satisfied the affectionate solicitude of his humble neighbors—never wasting words, yet perfectly understood.

The summer-tide was waning into autumn, and the squire of Ambermead faded more gradually than autumn leaves, when late one evening a wayfarer stopped at Mr. Canute's cottage, which was on the roadside, and requested permission to rest, asking for a draught of water from the well before the porch.

"Most welcome," said Two Words, scanning the stranger, and pleased with his appearance, for youth and an agreeable countenance are sure passports; perhaps, too, Mr. Canute discerned gentle breeding in his guest, despite travel-soiled habiliments, and a dash of habitual recklessness in his air. At any rate, the welcome was heartily given, and as heartily responded to; and when Mr. Canuto left his dwelling, in order to pay his usual evening visit at the Hall, he merely said, addressing his young visiter, "Soon back;" and turning to Martha, the careful housekeeper, added, "Get supper;" while on stepping over the threshold, second thought urged him to return and say to the young man, "Don't go."

"No, that I won't," replied he frankly, "for I like my quarters too well. I'll wait till you come back, governor; and I hope you won't be long, for my mouth waters for that supper you spoke of."

Mr. Canute smiled, and walked away more briskly than usual; and after sitting for some time beside the sick man's bed, and bidding "good-night," and "bless you," to Clara Harwell, he retraced his steps homewards, and found supper ready, and the handsome stranger so obviously ready to do justice to the frugal fare, that Mr. Canute jocularly remarked, "Keen air;" to which the stranger replied in the same strain, "Fine scenery;" on which the host added, "An Artist?" when the youth, laughing outright, said, "An indifferent one, indeed." After a pause, and suffering his mirth to subside, he continued, "Are you always so economical in words, sir? Don't you sometimes find it difficult to carry on conversation in this strain?"

"*You* don't," replied Mr. Canute smiling, and imperturbably good-natured.

"Not I," cried the youth; "and I want to ask you a half a hundred questions. Will you answer me?"

"I'll try," replied Mr. Canuto.

"I've not long to stay, for I'm on a walking tour with a friend; but I diverged to Ambermead, as I was anxious to see it. I've had a curiosity to see it for a long while; but my friend is waiting for me at the market-town, eight miles off, I think, and I shall strike across the country when the moon is up, if you'll give me rest till then."

"Most welcome," said Mr. Canuto courteously.

"Ah, ah!" quoth the stranger, "if that's the way you pursue your discourse, I don't think I shall learn much from you. I hope, however, that I may get a wife who will follow your example—a woman of two words, in short she'll be a rare specimen of her sex!"

"Ah, ha!" ejaculated Mr. Canuto.

"But come, tell me, for time presses," said the young man, suddenly becoming grave—"tell me all about Ambermead, and the squire—how long he's likely to last. For, in fact, the friend I mentioned, who is with me during this walking tour, is vastly interested in all that concerns the place and the property."

"The heir?" whispered Mr. Canute mysteriously.

"Well, well, suppose we say he is: he's not altogether a bad fellow, though considered a bit reckless and wild. But he has heard of Clara Harwell's beauty and goodness from his cousin, Lady Ponsenby, (she's Clara's cousin, too, you know;) and he is really quite sorry to think that such a lovely creature should be turned out of the old Hall to make room for him. He wants to know what will become of her when old Harwell dies, for all the world knows he's ruined. It's a pretty place, this old Ambermead—a paradise, I should say. I know what I'd do, if I was ever lucky enough to call it mine." The youth rubbed his hands gleefully. "I should be a happy dog then!"

"And then?" said Mr. Canuto smiling.

"Why, then, I'd pull down the rickety old house up there, and build a palace fit for a prince; I'd keep nothing but the old wine; I'd have lots of prime fellows to stay with me; and I should sport the finest horses and dogs in the country." The speaker paused, out of breath.

"And then?" said Mr. Canute quietly.

"Why, then, I'd hunt, and shoot and ride, and drink, and smoke, and dance, and keep open house, and enjoy life to the full—feasting from year's end to year's end—the feast of reason and the flow of soul, you know, in old Ambermead!"

"And then?"

"Why, then, I suppose that in time I should grow old, like other people, and cease to care for all these things, so much as I did when strength and youth were mine."

"And then?" said Mr. Canute more slowly.

"Why, then"—and the stranger hesitated—"then, I suppose, like other people, in the course of nature, I should have to leave all the pleasures of this life, and like other people—die."

"And then?" said Mr. Canute, fixing his eyes, glittering like diamonds, on the young man's face, which flushed up, as he exclaimed with some irritation—

"Oh, hang your 'and thens!' But the moon is well up, I see, so I'm off. Good-night, and thank you." And, without further parley he started off on his walk over the hills; and Mr. Canute silently watched his guest's retreating figure, till in the deep shadows of the surrounding groves, he was lost to view. In the moonlight, in the darkness, in the valley, and on the hillside, these words haunted the wayfarer, and kept repeating to himself, "And then?" Thoughts took possession of his mind that never before had gained entrance there, or at least they arranged themselves in a sequence which gave them quite a new significance. His past life presented itself to him for the first time as a coherent chain of events, exemplifying cause and effect; and if his plans for the future did not at that moment receive any determinate change, he still kept repeating anxiously and inquiringly, as he wandered on in the moonlight, the two strangely-suggestive words, "And then?" It proved a long and a toilsome night's journey for that belated traveler; for he had left Mr. Canute's cottage so hastily, that he had omitted to ask for certain landmarks on the hills leading to the place whither he was bound. In consequence, the stars faded in the sky, and the rosy morn broke through the eastern mists, ere the weary man, from the summit of a high hill which he had tortuously ascended, beheld afar off, down in the valley, the shining river, the bridge, and the church-tower of the town where his friend, in some anxiety, awaited his reappearance.

During all his after-life, that young man never forgot the solitary night-walk when, he lost his way beneath a beautiful spangled summer sky; the stars seemed to form the letters, "And then?" the soft night-breeze seemed to whispered in his ear, "And then?"

It is true he had not gained the intelligence he sought respecting the inmates of Ambermead Hall; but he had laid bare his own folly for the inspection of Mr. Canute; and in return, he had listened to no reproof—no tiresome lecture vouchsafed from prosy age to ardent youth, but simply two words had penetrated his heart, and set him a thinking seriously. Mystic little words!—"And then?"

For nearly three years after Mr. Harwell's decease, the old Hall, contrary to general anticipation, remained untenanted, save by domesties left in charge. Miss Clara had found shelter with her relative, Lady Ponsonby, though her memory was still fresh and warmly cherished among the humble friends in her beautiful native village. Mr. Canute, if possible, more silent than ever, still remained the village oracle; perhaps more cherished than of yore, inasmuch as he was the only memento remaining of the beloved Harwell—the old familiar faces now seen no more. *He* would listen, and *they* would talk, of days gone by; he felt the loss even more than others, for he mourned a companion and friend in Mr. Harwell, and Clara had been to the good Two Words as an adopted daughter. At length it was rumoured that Mr. Selby, the new proprietor, was soon expected to take possession of his property in due form; moreover, that he was on the point of marriage, and that his young bride would accompany him. Ill reports fly quickly; and it had been circulated in former times that Mr. Selby was wild and extravagant, careless of others, selfish and profligate. Indeed, Mr. Canute had not contradicted such reports, so it was generally opined they were too true, and had a legal foundation. With heavy hearts, the inhabitants of Ambermead commenced their rural preparations for the reception of the squire and his bride; green arches were erected, and wreaths of flowers were hung on the spreading branches, beneath which the travelers' road lay. It was the season of roses and nightingales, when Ambermead was in its glory; and never had the rich red roses bloomed so profusely,—never had the chorus of the groves been more full and enchanting, than on the summer evening when the old and young of the hamlet, arrayed in their holiday attire, waited to greet the new comers.

Mr. Canuto stood at his cottage door; the bridge just beyond, over which the route conducted to the Hall through avenues of greenery, was festooned with roses; and a band of maidens in white lined the picturesque approach. The sun was setting, when a carriage drove quickly up, slackening its pace as it crossed the bridge, and stopping at Mr. Canuto's humble gate. Two Words himself, bareheaded, stepped forward on seeing a lady alight, who, in another moment, threw herself into his arms, exclaiming, "Our first greeting must be from you, dear, dear Mr. Canute! I need not introduce Mr. Selby—he is known to you already."

Speechless from astonishment and emotion, the old man could only say, "Miss Clara!"—as he gazed from one to another, recognising in the gentleman the wayfaring guest who had departed so abruptly on his walking expedition over the moonlight hills, more than three years previously. Seizing the hand which Mr. Canute silently extended, Mr. Selby said with deep feeling:

"It is to your instrumentality that I owe my present happiness."

"How so?" was Mr. Canute's reply, looking with pleased surprise into the open face which, on a former occasion, had won his confidence and admiration.

"*Two Words* spoken in season wrought a change in me, which all the preaching of friends and guardians had failed to effect," returned Mr. Selby, "and without which Clara never would have blessed me with her hand. These years of probation have proved my sincerity; and Lady Ponsonby (a severe and scrutinizing judge) pronounced my reformation complete ere she permitted me to address Clara. Those two little words, '*And then?*' enigmatical to the uninitiated, convey a deep and mystical meaning to *my* heart; and they are of such significant import, that by inserting them whenever I paint the future, I trust to become a wiser and a better man."

Clara gazed proudly and confidingly on her husband; and the news of her arrival having spread through the village, a crowd collected, whose joy and surprise found vent in tears and blessings, to say nothing of the numerous *asides*, purporting that Miss Clara never would have espoused a bad man; *ergo*, Mr. Selby must be a worthy successor of the ancient race!

The prognostication proved correct; and the pathway, strewn with bright summer roses, over which Clara trod in bridal pomp on her way to the ancestral home where she was born, was indeed emblematical of the flowery path which marked her future destiny.

The old Hall of Ambermead is still extant—a fine specimen of venerable decay, surrounded by ancestral groves, still famed for sheltering innumerable nightingales when the Ambermead roses exhale their delicious fragrance. In the old churchyard on the green hill-side, a white monument gleams in the sunshine, whereon may be traced the name of John Canute, specifying the date of his happy death, while below is engraven this inscription of two words—"*And then.*"

## AN INCONVENIET TITLE.

In our recent remarks on the unrepublican affectation for titles too commonly displayed in this country, we said we would abolish that tribute to vanity—"Esquire," as a bad foreign importation. It did not then occur to us that Esquire sometimes proves a very inconvenient title. In Italy, for instance, American travelers have sometimes roundly abused the Post Office, and suspected the honesty of the Post Masters, when "Esquire" was the cause of all the mischief. Post Masters take the "Esquire," or "Esq." to be the principal name of the gentleman to whom the letter is addressed, and plain John Jones is denied the letter which lies in the office for "John Jones, *Esq.*"

Disease of a Shanghai!—The editor of the Palmer Journal thus writes on the death of his favorite Shanghai rooster;—"His voice, when heard amidst the crowing of other roosters, was like the trombone in an orchestra of violins, or the bass of rumbling thunder amid the hum of a dozen spinning wheels:

"Farewell, faithful servant, a lasting farewell;
From thy fate let all roosters take warning—
No more will thy voice, in a long and loud swell,
Awake us, to get up and go to work, about half-past 5 o'clock in the morning."

Idleness wastes a man as insensibly as industry improves him.

## AGENTS WANTED!

The Casket is now fairly established, and the success of the enterprise beyond doubt, which enables the publishers to enter with renewed vigor into measures for extending its circulation. We feel very thankful for the many flattering compliments which we are daily receiving from private letters and the press, all of which agree in pronouncing the Casket the

**Cheapest Juvenile Magazine in the World.**

And that all our little friends, that every boy and girl may have the pleasure of perusing our magazine, we want *Ten Thousand Agents* to canvass for, and circulate the Casket, in every school-district, town and county, in the United States and Canadas, to whom a liberal percentage will be given. Specimen numbers furnished *gratis* on application. Send for one number and circulate it among the *little folks*, and you will confer a greater blessing than distributing gold and silver. Try it.

Address, *post-paid*, Beadle & Brother,
*Buffalo, N. Y.*

*HALLOCK'S*

**AG'L WAREHOUSE AND SEED STORE.**

*No. 24 Exchange St., Rochester, N. Y.*

The subscriber, late from the Establishment of Emery & Co., Manufacturers at Albany, where he has been engaged for the past six years, has been appointed their Sole Agent in Rochester and Western New York, for the sale of

*Emery's Celebrated Railroad Horse Powers and Threshing Machines: Circular and Cross-cut Saw Mills, Feed Mills, Corn-stalk and Hay-Cutters, &c.,*

adapted to the Power, and now offers them at manufacturer's prices, with the transportation added, and subject to the warrantee, as follows:—"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded." The attention of Farmers is solicited, and a careful investigation into the construction of this Power, and its comparative merits, as well as price requested, before purchasing elsewhere. He is also agent for their

**Combined Reaper and Mower.**

and keeps constantly on hand, Plows, Hay Cutters, Corn Shellers, Seed Planters, &c., &c., comprising a complete and extensive stock of Agricultural and Horticultural Implements generally, together with a full assortment of Field and Garden Seeds, of the best Imported and Shaker growth.

He is also agent for the sale of Seymour and Morgan's New York Reaper, Pierpont Seymour's Grain Drills and Broad-cast Sowers, Wheel Cultivators, Gang Plows, Clover Hullers, Cider Mills, Clover Gatherers, Horse Rakes, Scythes and Snaths, Hand Rakes, Grind Stones, &c.

He will be prepared to furnish dealers with Dunn and Taylor's well-known Scythes; also Manure, Straw, and Hay Forks, Snaths, Rifles, and other laying tools at manufacturers' prices, wholesale and retail.

Particular attention is called to a New Plow, which is believed to be the best cast iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any Plow heretofore sold in Rochester—while the price is less than any other equally well finished.

The "uniform one-price cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time, will allow.

Farmers and others are invited to call and examine the stock of Machines and Implements, and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

☞ Circulars and Catalogues furnished gratis on application personally or by mail. E. D. HALLOCK,
177tf No. 24 Exchange st., Rochester.

**GREAT PRIZE MEDAL.**

THE WORLD'S FAIR AT LONDON, awarded us a Mammoth Silver Medal for the Best Hats.—Gents wishing the Spring and Summer style, will call. We are prepared to serve you with a superior article, and of the most becoming style.

CLARK & GILMAN, 23 State St.,

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

**For both Country and Town Residents.**

PUBLICATION OFFICE,

Burns' Block, corner State and Buffalo Sts.,
Rochester, N. Y.

**TERMS, IN ADVANCE:**

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

**Terms of Advertising**

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

**THE WOOL GROWER AND STOCK REGISTER.**

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

### Progress and Improvement.

### THE CANADA THISTLE.

MANY experiments have been made, and not a little written upon the extirpation of this pest of the farm, and still it overruns many a field, defacing the beauty of the landscape, and seriously curtailing the profits of the husbandman. That the thistle can be eradicated, there is no question,—but it requires tact, judgment and an unconquerable perseverance. It is true also that experiments that have proved successful for their destruction in the hands of some, have, when attempted by others, failed of the desired result. This may be owing to various circumstances.

Although the agricultural press has for many years raised its voice against this foe of good husbandry, and though legislative enactments have been passed to stay its progress, yet stealthily has it gone forward and invaded new fields and new territory. Public sentiment is not sufficiently awakened to the magnitude of the evil, so that the slothfulness of the easy farmer undoes—so far as the general result is concerned—the diligence of the active. An article on the subject in the columns of the RURAL we have thought might prove beneficial, especially to those where the thistle has not yet appeared, or where it is just beginning its encroachments. Taken in the start a foothold is easily prevented, and the curse stayed from propagation.

In the Linnean system the thistle is found in the Syngenesious class—a natural order of plants very extensively diffused over the globe, and comprising one-ninth or more of all the flowering plants. As a plant the Canada Thistle (*Cirsium Arvense*) is possessed of considerable beauty, being more graceful in its figure than any of its sister species. It was introduced into this country from Canada—hence its name. Originally it came from Europe, having time out of memory been known in England and Scotland, under the name of Cursed Thistle—a very significant name. The stem reaches a height of two or three feet, quite branched, the lower ones when growing in open situations being merely leaf branches, but in dense patches the branches are all on the upper part, and support flowers. The leaves sit close on the stem, are frequently six inches in length, wavy on the margin, and crowned with sharp spines—often slightly wooly underneath. The flower heads are small, compared with other thistles, oval, the scales of which are close pressed and without prickles, and are therefore the only part of the flower that can be handled with impunity. The flowers are pale purple, sometimes whitish.

The root of the thistle is a great wanderer. In loose soil it will descend six feet perpendicularly, or even to a greater depth, sending off horizontal shoots at intervals of two to six inches, in every conceivable direction. Along these branch roots, at frequent intervals, are numerous eyes, that send up sheets to the surface, that soon become main stems, adding vigor to the plant and increasing its proclivity for spreading. The root is very tenacious of life, and hence it can be seen how readily it will extend its area, and how hard it is to destroy. Whenever one of these new joints is conveyed, by the plow or harrow, to any new portion of the field it springs into life, and becomes the nucleus of a new colony.

The Canada Thistle will thrive in almost any soil that is not saturated with water, though rich clay loams and alluvial intervals seem to be its most favorite soils. In such soils its growth and diffusion are almost wonderful. It also propagates by its seed, which like all the Syngenesious plants is covered by pappus or down. In the tribe this down is very prominent, and buoys the seed into the air, whence by winds it may be carried to great distances. The seed is well supplied with oil on the carbonaceous principle, which renders its anti-pretrescent powers very great. It is, therefore, capable of remaining an indefinite time in the soil uninjured, so that as soon as the genial elements act upon it, it springs readily into growth. This accounts for the appearance of the plant in newly cleared lands. The second year its horizontal roots have spread out, and new shoots are sent up, while the main plant produces flowers. It is now well located and spreads with much rapidity. After the dispersion of the seed the flower stems die, while the young plants, producing leaves only, hold their greenness till the severe autumn frosts kill them also.

The great difficulty in the eradication of the thistle, lies in the immense power of propagation by the roots, and its wonderful tenacity of life. No plant is more so, and all ordinary injury only serves to increase its growth and extension. An occasional severance only gives vigor, and serves to call into existence stalks from the latent eye buds of the root. So will an occasional plowing or hoeing serve more the purpose of propagation and cultivation, especially in rich or alluvial soils. The stem, if buried before the flower expands, and the soil be somewhat moist, will strike root and send up numerous shoots.

To effectually destroy the thistle, the operator must be unceasingly vigilant, active; nor must he grudge time, effort or expense if he wish to thoroughly rid his lands of the pest. The different kinds of soil may require different kinds of treatment. The great desideratum is to effectually exclude the plant from light and air. This done for a length of time, will insure the desired result. On loose soils this is more difficult, as the root strikes deeper and the air penetrates lower down, so that often the horizontal roots may send up shoots even below the reach of the plow. This accounts for the failure that some have met with from the use of the plow. In soils where the plow will go below the roots, repeated plowing will not fail to eradicate them, especially so in a dry season. But the plowing must be frequent and effectual, covering the plants, and excluding them from light, &c.

In light soils, where the plow will be ineffectual, and where a dense sod can be found, seeding heavily to grass will accomplish the desired result. It is not so rapid, but may, on bottom lands, be the only sure means. Burning the ground thoroughly by means of log heaps, will also kill them where the roots are not too deep to be reached by the fire. Cutting the thistles when in bloom will ensure the death of those in flower, especially if salt be added; but the leaf stems are not so easily killed. Cutting them with a hoe, if it be continued as often as any new shoots appear, will have the desired result in many locations. Salt is also beneficial, and has been found effectual.

Salt with sheep on stony or stumpy lands, with the scythe and hoe, are more effectual than the plow.

Where new lands are to be cleared, and it is apprehended the thistle may be abundant, a good plan is to remove the underbrush, small trees and rubbish, and immediately seed heavily to grass; afterward, when a good sod is formed, the remaining timber may be removed. The thistle will not grow readily in the shade, and if it does appear, attack it immediately, for in its first season it is quite easily destroyed.

When grass is grown make the land as rich as possible to induce a heavy growth, the better to smother the thistle. When the plow is used, use it often, and reduce the ground to as fine a tilth as possible, and plow only the ground occupied by the thistle. If the scythe be used, a lowry time is preferable. Judgment must be used, the nature of the plant considered, and the condition of the soil taken into account, and the course taken which seems best to insure success. No plan has been adopted but has in instances failed. Courage must be kept up, and the plant allowed no time to slumber and recruit its energies. The war must be one of determined extermination, and it must be "carried into Africa."

It is economical to eradicate the plant, and figures might be given to show how enormously it robs the legitimate crops of their sustenance, and consequently gives light returns to the granary. But it is not needed. We hope every reader of the RURAL will watch the foe with a sharp eye, and where the fields are yet free, guard them vigilantly. And where it has insidiously crept in, meet it with a hand-to-hand conflict. A judicious perseverance will surely crown you victor in the end. And don't let the strife be with the thistle only, but with every useless weed and plant that would suck out the sustenance of the soil, or in any manner injure the growing crop.

In the Transactions of the N. Y. State Agricultural Society for 1846, page 405, is a valuable Essay on the extirpation of the Canada Thistle, from which we have drawn somewhat in the preparation of this article.

### THE WEEVIL, OR WHEAT MIDGE.

MR. MOORE:—Your correspondent, H. H. S., makes some inquiries about the habits and effects of the "Weevil," which is a misnomer, for the insect he refers to as the creature long known as the Weevil, is a perfect insect of the Beetle family, with shell cases to its wings—a bug, and only depredates on the ripe kernel in the granary or stack; while the insect in question, in common parlance called Weevil, is the *larvæ* of a naked winged insect not unlike the musquito, only of about half the size, which lays its eggs at the period of blossoming, by inserting them in the tender bush of the berry, and is hatched out into a white maggot without legs, soon turning to a bright orange color, and commences to prey upon the kernel in its incipent stage of formation. Its proper name is the *Wheat Midge*, or Wheat Fly, and is supposed by naturalists to be identical with the *Cecidoma tritica* of Europe.

Its first ravages were noticed in 1828 in one of the frontier towns of Lower Canada, and it has since spread over all the Eastern, and is fast progressing over this and the Western States. It travels at a rate of from ten to fifteen miles a year, and will remain as long as the wheat plant is produced for its sustenance; unless the interposition of some casuality of nature arrests its multiplication in some of its stages of transformation—an interference not hitherto observed.

At the cessation of the production of its proper *nidus* and *pabulum*, the insect undoubtedly disappears, and ceases to exist from the want of its natural food and means to propagate its species. Such, at any rate, is the experience in these regions in which it has prevailed.

It is said that the Meditorranean wheat, a rather course and red skinned variety, when sown in proper time, is nearly proof against the ravages of this insect, solely on account of its early ripening. Elevation of location has no effect to deter its attacks, and the only controling and governing principle for escaping its powers of destruction, consists in an *early variety of seed, early sowing, and a forward crop.* Late wheat, whether from late sowing, or injury from wet or frost in low lands, or other casuality, is sure to be affected.

There is a chance, and a chance only in our opinion, for this great wheat growing territory to escape the fate of the eastern region in relation to this "plague, pestilence and famine" post of our great staple production—and that is the chance that the peculiarity of our soil in forwarding and developing the wheat plant, will place it so far in advance of the period of the insects ability to deposit its eggs, that its attempts are harmless and without effect; which, combined with a judicious putting in of an early variety of seed, may enable the Great West to escape this scourge—a presumption that another year will confirm or overthrow.

In this champaign country, sparsely watered, and unnatural to pasturage, the provalence of this insect and its fearful effects, would be an infliction of almost desolation to the owners of the soil—affecting the very foundations of our prosperity and social relations, and the well settled views of the political economist.

L. B. LANGWORTHY.

Greece, N. Y., 1853.

### A SUGGESTIVE ARTICLE ON MANURES.

MUCH has been done, but more said and written, within the past few years, in regard to saving and applying Manures. Could all that is grown on a farm, after it had undergone the various changes for which it was intended, be judiciously saved and returned to the soil, the land would be rapidly improved and enriched, to an indefinite extent. The ammonia and carbonic acid from the atmosphere would be deposited in the soil, while the phosphates, sulphates, and other inorganic substances, which had been brought from the subsoil by the long fibrous roots of the plants, would be incorporated with the surface soil, where they could easily be obtained by the growing crops.

But the farmer does not find it for his interest to retain and dispose of all the products of his farm, on his farm, although he might to a much greater extent than what is now generally practiced. Instead of selling his coarse grain to be converted into alcohol, he would find it more remunerating, at the present price of beef and pork, as well as beneficial to community, were he to feed it to his cattle and swine.

But after fattening his beef and pork, he needs but a small proportion of it for his own use, the surplus being driven off to be disposed of elsewhere, and thus the farm suffers a drain of just so much organic and inorganic substance as was contained in these cattle and hogs. Those who live in cities and villages derive their sustenance, which is no small proportion of the produce of the country, from the farmer, and for which drain he seldom gets any return, in the shape of manure applyed to his farm.

Within the past few years much has been done in cities towards saving the manure of domestic animals, while that which is far more valuable and powerful, is buried in vaults or suffered to wash into the streams, thickening and poisoning the water. While the manure of stables is eagerly sought after and bought up by farmers at high prices—while guano is brought thousands of miles at great expence, and loads on loads of bones are gathered up and ground for the use of the farmer—there still remains one of the most valuable manures, nearly equal to guano, buried in vaults and almost entirely neglected. But, although neglected, like all other organic compounds, it is not inactive. The noxious gases arising from its decomposition are continually disseminating through the atmosphere, poisoning the air we breathe; while the ground becomes saturated with the soluble parts, which often find their way to wells that are in proximity to such deposits, and render the water unwholesome.

Is it not time that this manure should be appropriated to its legitimate use as food for plants, rendering the land fertile, and the atmosphere healthy? Why should it not be more eagerly sought after by farmers, than that which is not one tenth its value, and which often contains, in abundance, the seeds of troublesome and tenacious weeds? R.

Skaneateles, N. Y., July, 1853.

### RIGHT EDUCATION OF HORSES.

THAT horses may be educated will not appear strange to those who have closely observed the intelligence often manifested by that noble animal. The present remarks are designed to give some information in relation to the rearing and treatment of young horses, not so much however with reference to their food and drink, as to their quietness and docility.

That there is a difference in the temper and disposition of different horses, is not denied; but at the same time it is averred that where a horse is so vicious or unmanageable as to render him unsafe in the harness, it is chargeable *in almost every instance* to the treatment he has formerly received.

The training of colts should commence when they are about three months old, so as to have them become familiar with the family before they are taken from the dam. Some colts are inclined to use their heels rather too freely; in such cases great care is necessary. They should be approached carefully, and caressed and curried, and they will soon submit to have their feet taken up and handled without resistance: and this will aid in quieting them while being shod, as the horse seldom forgets what he has once learned.

A common method of weaning colts is to take them to some back lot, and place a heavy yoke or "poke" on the neck, which they are compelled to wear for several weeks until their spirits are completely broken, and they become more or less "ewe necked," from which defect they rarely wholly recover. Another method, but little less objectionable, is to shut them in the stable; but this does not learn them to *respect a fence* in the least. Now the better way and the one that the writer has practiced with uniform success, is the following:—Prepare a yard, (if it contains an acre or more, so much the better,) having a strong, high fence, so high that the colt cannot possibly leap over it—from six to seven feet will be sufficient—and let the materials of which the fence is composed be the same as those enclosing the field where the colt is in future to be kept—either wall, boards, or rails, as the case may be—and place him there without attaching any artificial appendage whatever, and let him understand *that it is the fence alone that prevents his escape.* He should be generously fed, and also have a shed to which he can retire at pleasure. After he has been subdued in this way, he may be turned into any field *having a fence of the same kind,* and of ordinary height, and he will not attempt to break over.—Even the most spirited horse brought up in this way cannot be induced to leap a fence four and a half feet high.

The practical benefits of the above plan are great. In passing through the country one is pained to see so many noble looking horses shackled and hampered in every conceivable way that ingenuity can invent, much to their detriment in putting on flesh, to say nothing of the perplexity and trouble to the owner in adjusting the trappings every time the beast is turned out or taken up, and all for the want of a little care during the first year,—for it is eminently true in this case that an ounce of prevention is worth a pound of cure.

There are many horses not "true" or reliable, in the harness, having the habit to stop, or balk, especially at the foot of a hill; this is caused by having been at some time overloaded, and perhaps unmercifully beaten. Neighbor A. has a beautiful span of bays three years old, that he has been breaking in the past winter; he wishes to haul some rails from the farther side of the farm, and as the colts have become tolerably "handy," he puts on nearly a full load which they manage very well until they come to a "hard spot," and there they stop. The driver looks at the load, then looks at the horses: they are nearly as large as the old team,—he *knows* they *can* draw it, and is determined they *shall.* So he commences beating and pounding the poor animals until he is nearly worried out, when he throws off his load and goes home with loss of both time and temper, and the horses damaged to the amount of twenty-five dollars each.

Now it is quite probable that the horses had *strength* enough to draw the load in question, but they had not had sufficent *practice;* they did not know how to apply their strength, and did not work in concert. They should have been made to draw only light loads for a long time, and then, by increasing the weight gradually, as their strength and experience increases, they can be made to do all the work they are capable of doing, and will always work kindly, and may be depended on under all circumstanes. C.

FOR HOVEN or bloat caused by eating clover, give a teacup half full of saleratus dissolved in a pint of warm water, and turned down a cow from a junk bottle. Perhaps an ox might need a larger dose. A few spoonfulls of tar, put in the throat by the aid of a smooth stick, will also give relief. E. M.

## CONDENSED CORRESPONDENCE.

### Harvest Time.

We are just now in the midst of harvest—that season of all seasons which the farmer looks forward to with hope, mingled with fear. Hope, that has been cherished for a twelvemonth, fear, that has been felt for, perhaps, a few weeks only. With some (the majority we believe,) their hopes have been realized, while others have plowed, sowed, and gathered, in vain. We speak, of course, of the wheat harvest. From the best information we can obtain the wheat in this State, is, or will be, more than an average crop. The fly in some instances has destroyed whole fields, while in other sections, where this intruding foreigner did not deign to visit, the yield has been abundant.

We may well be called a Nation of Farmers, and this being the case, harvest time is looked forward to with much anxiety.—The improvements made in farming implements, and farm stock—the annual State and County Fairs, and the interest taken by the intelligent of all classes, in farming pursuits, shows that the people are beginning, or rather have begun, to feel the importance which is due the farmer.

"Man is the noblest work of God," and tilling the soil is the noblest work of man. It promotes the growth and strength of the body and mind. It makes the body vigorous, and the mind clear. We spoke before of the improvements made within a few years, in farming implements. But a few years since our wheat was cut with a sickle; threshed with a flail, or beaten out by oxen—making a winter's work of what is now accomplished in a few hours,—then conveyed to market in wagons, over miles of rough roads, and sold, in many sections, for little or nothing. Now we have (in some localities) machines that reap, thresh, and puts the grain into bags ready for market, at one operation. Then our rail are cars ready to take it hundreds of miles to market, at the rate of 30 to 50 miles per hour, so that grain that is bending before the breeze on the broad prairies of Illinois or Michigan, in the morning, may almost be said to be gathered, threshed, ground, and making the best of its way, in the shape of hot rolls, down the throats of some hungry dry goods merchant, or stock broker, in New York, in the evening.

Perhaps nothing has had a tendency to elevate the farmer more than agricultural books and newspapers. Through these they interchange their views, watch the markets, receive benefits that cannot be conferred in any other way—and they know it, as the increasing number and circulation of such works abundantly testify. They also promote a taste for reading which would be encouraged in no other way.

In all ages, and all nations, we find those who have dignified themselves by the cultivation of the soil. The father of our country took pride in being a farmer, and among our farming community we find many who are worthy of such a father. Then success to the farmer, and may he live long to enjoy many returns of a bounteous harvest!

### "Depth of Roots"—Correction.

Eds. Rural:—In your paper of the 16th, in an article on the depth of roots, &c., is observed an error, either of the compositor or copyist, as the original draft is found correct. The error lies in the following clause: "that the roots of corn and potatoes, at this time (25th June) extend horizontally, from one to three inches below the surface," &c., which might seem to imply that all the roots were within one, and three inches, of the surface. Now, nothing could be farther from the intention of the writer than such an idea, which is too manifestly absurb to pass unnoticed, even alone, but following as it does directly after Mr. Cone's on the same subject, its absurdity becomes more conspicuous, by the contrast. Instead of differing in opinion with Mr. C., on the depth of roots, the writer is rather inclined to the same opinion, or that roots, if possible, will penetrate downwards, until sufficient moisture is obtained for the use of the plant, or tree,—but the attention of the writer has been bestowed upon those roots that approach the nearest, or interfere with cultivation, more than upon those of a downward tendency. The original article reads thus:—"That corn and potatoes, at this time (25th June,) have their *horizontal* roots, from one to three inches below the surface," &c.—S. G., *Marcellus*, July 21, 1853.

### Another Premium on Poultry.

Mr. Van Deusen's proposition which appeared in the last No. of the Rural is somewhat enigmatical, and requires explanation. I have shown the article to several fowl fanciers, and they are all at a loss to comprehend Mr. V. D's. meaning. Are we to understand him to say that he will exhibit five pairs of Cochin Chinas, and also five pairs, each, of the other four varieties named, making fifty chickens? Or, does he wish

FRENCH MERINO BUCK, "MATCHLESS."

The Property of Mr. Geo. Campbell, West Westminster, Vt.

to be understood that he will exhibit of either variety named in his proposition, and that he will show five pairs of the same breed? I cannot see the propriety of having one breed of fowls exhibited in competition with another breed. Who can compare their respective merits?

And now allow me to make a proposition for Mr. Van Deusen. I will exhibit *ten* different breeds of fowls, which I now own, for *One Thousand Dollars*, one cock and two hens of each variety in a coop, (the usual manner of exhibiting fowls,) for the like number and breeds now owned by Mr. V. D., or my lot of Poultry against his for the above sum.—D. P. Newell, *Rochester*, N. Y., July, 1853.

### The Straight Scythe Snath.

Mr. Moore:—Being a subscriber for the Rural, and noticing a communication in the last number (July 23d,) in regard to Mr. John Boley's Patent Scythe Snath, (or the nib in particular,) as being one of the latest inventions, I consider it a privilege to give to community the knowledge I have of the same form as the figure in the Rural.

Fifty-three years ago, when I was a lad of ten years, these snaths were introduced into Windham county, Conn., and used by many Forty years next October, I settled in the town of Batavia, Genesee county, N. Y.—The country being now, and bent snaths or natural crooks difficult to obtain, I had a nib made of the same form as Mr. Boley's, which has been used yearly since that time. And further, Mr. John McCraken, formerly of Fort Ann, Washington county, N. Y., who became my nearest neighbor in 1817, brought with him one of the same description.—Phineas Ford, *Batavia*, July 1853.

## AGRICULTURAL INTELLIGENCE.

### Great Letting of South Down Rams.

The annual letting of Mr. Jonas Webb's celebrated South-Down Tups took place at Babraham, England, on Monday, July 11th. The highest price was paid by Francis M. Rotch, of Otsego county, in this State.—Mr. R. hired for 130 guineas, (about $666,) which is said to be the highest price ever paid for a single animal at Mr. Webb's lettings. The animal was one of the finest ever offered by Mr. Webb, and secured after a spirited competition,—and must prove a most valuable acquisition to this country.

The number of sheep let was 71, which netted £1,560—being an average of £22 4s, about $100 each. A reserved price was put upon each animal, and every one realized more than the up-set figure. The whole excess was £500 more than the reserve.

We glean the above facts from an article in the Albany Journal—which also gives some of the toasts and speeches at the dinner on the occasion, at which the Earl of Hardwick presided.

### Another Trial of Reapers and Mowers.

A Trial of Reaping and Mowing Machines took place at Greenbush, on the 13th inst., under the direction of the Rensselaer Co. Ag. Society. The editor of the *Boston Cultivator*, who was present, speaks of the trial as follows in his last number:

Only three machines appeared on the ground as mowers, and only two as reapers,—several others which had been entered, among which was Atkin's Automaton Reaper, from Chicago, Ill., not having arrived in season for the trial. Those tried as mowers were, Ketchum's, Buffalo, N. Y.; Manny's, made by Ball & Parsons, Hoosick, N. Y.; Emery's, Albany, N. Y.

The two former performed very well—either of them doing their work in a style equal or superior to that of the scythe. The ground where they were tried was a tolerably smooth meadow,—the grass generally timothy or herds-grass and large red-top, in some instances filled at the bottom with a close growth of blue-grass and white clover, and in some spots considerably lodged.

Ketchum's machine is constructed solely form owing. It is simple, strong, compact, and not liable to get out of order. It has been more extensively tried than any other, and since it has been brought to its present form has given almost universal satisfaction. Its work on this occasion seemed to be about perfect.

Manny's machine is designed as both a reaper and mower. It performed well yesterday in either capacity. It is not quite as simple in form as Ketchum's—being designed for a double purpose—but works easily and in a manner not to be complained of.

Emery's is comparatively an untried machine—had been used but little previous to this trial; its working parts are somewhat rough, and its draft at first heavy, and its action rather irregular. This is also designed as a convertible machine—that is, as a reaper and mower. Mr. Emery has certainly done himself great credit in the construction of this machine. It is compact and strong in all its parts—iron having been substituted for wood in the most essential features—it is neatly and substantially made, and enough has already been done with it to insure its ultimate success. Before it got through the trial yesterday, it cut some of its swaths in a perfectly satisfactory manner—going through lodged grass without a check, and shaving the ground handsomely, both on level and undulating surfaces.

The two machines tried as reapers, were Manny's, and Seymour & Morgan's, Brockport, N. Y.,—(entered by Emery & Co., Albany.) They were tried in rye, of rather light growth, and both worked well. The report of the Committee will probably spark in detail of their comparative merit.

Trial of Reapers and Mowers in N. J.—A trial of Reaping and Mowing Machines was had at Mount Holly, N. J., on the 2d instant, under the auspices of a committee of the Burlington County Agricultural Society. The general result was decidedly favorable to the employment of machinery for such purposes. Only McCormick's and Hussey's machines were entered for the reaping; McCormick's, Husseys, Ketchum's and Manny's for the mowing. The following premiums were awarded:

For the best machine for Mowing and Reaping combined, the premium of $15 to McCormick's Machine.

Second best "Mower and Reaper," the premium of $10 to Hussey's Machine.

For the best "Mower," the premium of $10 to Ketchum's Machine.

For the best "Reaper," the premium of $10 to Manny's Machine.—*Agricultor.*

### Prospects of the Hop Crop.

A large amount of hops are annually grown in Otsego, Herkimer, Oneida and Madison counties; consequently the annexed information, copied from the Cooperstown *Freeman's Journal*, may be looked upon as reliable:

We see it stated in several of the New York and Albany papers, that the recent rise in hops is owing to a speculative move. That is correct, if at all, only to a very limited extent. Several large dealers, principally in Madison county, having contracts to deliver hops at certain prices next fall, and becoming convinced that the crop will be a light one, have been obliged to go early in the market, and also to offer very high prices. We have heard of one or two sales of the new crop at 35 cents — and 30 cents cash is freely offered for old hops of a prime quality, though not many can now be bought even at that price.

The falling off in the crop in this section of the State, from that of last year, will be fully one-third. The accounts from England are somewhat contradictory—still it is conceded that the crop will be considerably short of that of last year. The duty last year was about £250,000—that for this year is now estimated at about £150,000. In 1850 the duty was less than £100,000. More definite information may be expected within a fortnight.

### State Fairs,—1853.

County Fairs.—We wish to publish, soon, a complete list of all the Agricultural Fairs to be held in this State the ensuing Autumn. The Secretaries of the Societies from which we have not received (as heretofore published) information in regard to time and place of holding their shows, will greatly oblige us by communicating the same at their earliest convenience.

L. C. Provincial Exhibition.—We have received from the Secretary, Wm Evans, Esq., the prize list of the Provincial Agricultural Association of Lower Canada. The exhibition is to take place at Montreal, Sept. 27, 28, 29, and 30. The list is very full, with liberal prizes which must call out a large show of the products, manufactures, and stock of the lower Province. As the route from here to Montreal, via, Lake Ontario, and the St. Lawrence River, is not excelled by any in the world, citizens of Western New York who visit the Fair will be amply rewarded, both on the water and at Montreal.

## THE AGRICULTURAL PRESS.

### Root Crops and Straw for Cattle.

Robert Baker, an eminent English Agriculturist, gives the following as a summary of his practice in feeding roots in connection with other food, and which he has found to be very successful. Our readers may derive some valuable hints from it.—The advantages of mixed food over feeding single substances to cattle are well known:

"The mangold wurzels, or Swede turneps, are plucked (not sliced) with a machine constructed by myself, of which many are now in use in this district, and consists of a revolving cylinder, into which hooks are inserted, acting against a row of knives to facilitate the operation, and which *plucks* the roots of Swede or other turneps, and mangold wurzel, into small pieces from the size of an egg downwards, thus avoiding the sharp edges produced by turnep slicers, and preventing the choking of the animals, as well as facilitating the readily mixing them with the cut chaff. The latter is cut into 1½ inch lengths, in the proportion of one part of hay to three parts of straw, and is moistened by an application of linseed meal that has been previously steeped forty-eight hours in cold water, in the proportion of 1½ lbs. to 2 lbs. for each bullock, to which is added 4 lbs. of barley-meal, sprinkled in the chaff. The morning meal is prepared the evening previous, by mixing one bushel of the plucked roots with about two bushels of cut chaff, prepared as above; and in the morning the evening meal is prepared in the same way. If it is found the bullock will eat more, it can be increased by adding chaff only, or with a further admixture of the roots. The advantages of this mode of feeding, will, upon experiment being made, become at once apparent. The bullocks will thrive faster, and will never be relaxed, as is too frequently the case when fed upon the roots by themselves, and the quantity of the latter per diem may be exactly apportioned. They will also eat the chaff cut from straw without hay, if found desirable. But when fed upon the roots alone, they will not rest satisfied until they have had their fill, and then will refuse chaff cut from straw altogether. The stomach of ruminating animals is larger than that of other animals, and requires to be filled before they will lie down to rest; and the large quantity of roots they will consume (if allowed to be fed without restriction) becomes absolutely injurious to them, while 50 per cent. more will be consumed with less benefit to the animals.

If oil cake is bruised and steeped in the same way, it will be found more beneficial than when given alone, and the whole of the nutritive properties will become extracted, as will be at once perceived by the difference of the manure; but the latter, of course, will at the same time not be so valuable.

With store stock one bushel of roots with cut chaff is sufficient, and one or more pounds of linseed meal per diem may, if required, be added; but if an attempt be made to keep them upon one bushel of roots, given separately, they will pine after more, and remain constantly restless and dissatisfied. The vegetable food may also be "marshalled to meet the jaws," and an exact calculation made of the extent of time they may be required to last."

### Agriculture in France.

A letter writer for the Republic says a trip of six hundred and fifty miles, from the northern to the southern extremity of France, justifies him in the expression of the opinion that God's sun does not elsewhere shed its rays on so fair a land, or one so thoroughly cultivated.

The whole country is literally a garden. Every square foot, from the mountain top to the lowest ravine, is made to produce something, if it be susceptible of it. Their mode of planting or sowing their crops whether on plain or hill side, produces the finest effect on the appearance of the landscape; the allotted space for each crop is laid out in squares or parallelograms with mathematical precision, and whether large or small, the best garden could not be divided with greater accuracy.

As there are no fences or hedges, and as the different crops are in various stages of maturity you can imagine the variety of hues that meet the eye, and the magnificence of the panorama that stretches out in every direction as far as the vision can penetrate. I am sorry to add in this connection that seven-eighths of the labor is performed by females, while two or three hundred thousand stalwart men are idling away their time in the barracks in the cities and villages.

In the absence of fences, cattle secured by ropes are driven about their pasturage by females, and sheep are confined within the required limits by boys, assisted by shepherd's dog. Speaking of cattle reminds me that notwithstanding fresh pork is abundant enough in market, both in England and France, I have not seen a live porker in either country.

### Winter Flax.

The Secretary of the New York State Agricultural Society, has received from a Russian gentleman by the name of Falkersaborf, a sample of the seed of a variety of winter flax. A larger quantity is promised, which is expected to arrive in the fall. The same gentleman also proposes to send some of "the seed whose weed furnishes the precise powders for killing insects of all kinds."

The advantages claimed for the winter flax, are set forth as follows:

*a.* Besides it has the advantage to be sown in the fall, not subject to be sown either too early or too late, as this is often the case with the spring seed, and has always a failure of the crop in its train.

*b.* That the winter seed shoots sooner, yet before the weeds come out, which latter are kept back by it; it is earlier ripe, and can be brought in before the hands are wanted for other agricultural operations.

*c.* In order to prevent the shooting in the fall, the seed must be worked in by the plouw, as late as possible, and then the seed is not damaged neither by 20 degrees of cold (Reaumur). In the spring, as soon as the field is dry, it must be lightly harrowed. It shoots with the first rays of the warm sun, and is already in flower when other spring seed is sown, and before the insects can do it any harm.

*d.* This winter seed is glossy, but dark and mixed with black grains, yet all shoot. It is a great deal more oily than the common seed.—*Boston Cult.*

### Wheat for the English Market.

An English paper has the following relative to where the grain is produced to supply that country:

It is proved by the returns of the foreign corn trade in the last few years, that a change is taking place in the principal sources of the supply of food. The United States and the Baltic are no longer by any means our largest producers. Their yearly surplus falls short of our yearly wants, and it is from the fertile districts and fine rivers of Eastern Europe that we now draw our greatest and inexhaustible supply. In 1841, when the total imports of wheat into this kingdom was 240,000 quarters, only 230,000 quarters or about one-tenth, came from Russia, Turkey, or the Mediterranean. In 1852, the total import of wheat (exclusive of flour) was about 3,200,000 quarters of which 1,700,000 quarters came from the ports of those countries and taking the whole import of corn at 6,750,000 quarters, the supply from the East was 8,350,000 quarters.

Effects of Deep Plowing.—The *Farmer and Mechanic*, published at Lewiston Falls, Maine, says:—"A gentleman in Canton took us out the other day on two acres of land which he had cultivated for a few years, and which he makes very productive. He told us that it was so wet when he commenced upon it that he could do but little with it; but some three or four years ago he put in a large plow, and turned it over to the depth of nearly one foot, following with the subsoil plow to the depth of nearly one foot more. Since then he has had no trouble with the wet or the drouth. Every thing he puts upon it flourishes finely.—This process will pay on much of our land, whether the undermining will or not."

A Quadruped Chicken.—The "Germantown (Pa.) Telegraph" publishes the following extract from a letter of a gentleman of Columbia to a citizen of Germantown:—"One of my Shanghai hens has a few chicks hatched a few days ago, and one of them—which toddles about and eats heartily, and seems to thrive—has four legs. For the first day, 'Quady,' (as we call him, from quadruped) did not know which to go upon. The hind pair made him rear up, and the front pair made him kick up. But after balancing the thing in his mind over night, he settled down next morning on his "all fours" boldly, and persists in that mode of locomotion."

The Way to Pull Turnips.—The Yankee grasps the root by the top and pulls it with his hand, and then cuts off the tops with a knife. The Englishman has a better way. He sharpens his hoe, and passing along, cuts, with a single stroke, the tops of the turnip; then with the same implement, strikes under it so as to cut off the roots, and brings it out of the earth. In cutting off the tops he guides his hoe so as to throw them into a sort of row, in one place, and in digging he guides it so as to throw the roots together in another row. He will dig the roots about four times as fast as one Yankee with his pulling and knife.

# Orchard and Garden.

## THE FRUIT CROP OF 1853, AND ITS ENEMIES.

The mild winter and the absence of late spring frosts, gave strong encouragement that the Fruit Culturist would this year reap a bountiful harvest—sufficient to compensate for all the disappointments of past seasons. There was an uncommon show of fruit buds, and all kinds of fruit trees blossomed profusely, and set well for fruit; but—that's the word over which our hopes so often tumble—the mild winter was also favorable for the preservation of insect life, and the fruit had barely set ere it was attacked by a swarm, ten times as numerous and rapacious as when our prospects had been blighted by frost and storm, and now there is scarce enough fruit of any kind left to, under like circumstances, save our trees from the threatened fate of the barren fig tree.

The crop of plums, cherries and apricots has been almost entirely ruined by that king of pests, the curculio, and even the peach has not escaped his ravages. That part of the crop which was not blasted by the "leaf curl" has shared the fate of the plums and cherries. Never before did the curculio make such havoc with the peach crop as this season, and not the twentieth part of a crop will be realized where not three weeks since a full crop was anticipated.

Another formidable depredator has also taken the field this season, and, as if to blast the last lingering hope, made nearly a clean sweep of the apple crop—not the tenth part of a crop will be realized, in this section at least. The insect alluded to is a small, brown leaf roller. Most persons have no doubt remarked their depredations and appearance for a few years past. They commence operations usually in the bud, and as soon as the leaf expands, draw its edges together by means of silken threads and form for themselves a secure retreat. Their presence is indicated by the death of such leaves as they attack—sometimes almost all the leaves of the tree will be curled up and dead. As they increase in size and the clusters of fruit and young shoots begin to form, they eat them off at the base, thus destroying the fruit, and injuring the growth of the tree at the same time. Their main field of operations seems to be in the apple tree, although the pear, plum and cherry are not exempt from their ravages. If they continue to increase as rapidly for a few years to come, as they have for a few years past, there is but little hope for the apple crop.

There seems to be no well defined cause for the curl of the peach leaf. Some varieties seem to be much more subject to it than others. In my garden, and in a small nursery near it, the Crawford's Early, Early York, Coolidge's Favorite, Jacques' Rareripe, Morris' White, and Early Tilletsen, have been almost entirely free from it,—while the Large Early York, Crawford's Late, Old Mixon Free, Haine's Early, Bergen's Yellow, Snow, and several seedling trees, are nearly ruined.

The pear crop is more promising than any other kind of fruit, and, if no new enemy takes the field, it will be fully an average one.

The use of peach stocks for the apricot, ought to be abandoned. The trees are short lived and do not hold their fruit nearly as well as when worked on the plum or hard-shelled almond. The latter, budded at standard height, makes one of the very best stocks for either the peach or apricot. It is hardy and of a very vigorous habit, and not liable to disease of any kind. Those having large almond trees may bud the lower limbs to the apricot, thus enabling them to be easily protected from the attacks of the curculio—and the upper limbs to the peach.—They will both produce abundantly the second year from the bud, and one peach or apricot is worth a dozen almonds.

Although there is so much to discourage fruit growing, yet the pleasure of cultivating fine trees, and the hope that they may be productive *next* year, should and does stimulate to renewed exertions, both to destroy depredaters and to promote a healthy and vigorous growth. R. B. W.

Alabama, N. Y., July, 1853.

## NEW SEEDLING GRAPE.

C. M. Hovey states in his Magazine of Horticulture, that a new seedling grape has been produced from a native vine, fully equal to the Isabella, and ripening at least a month earlier than that variety. He received specimens of the fruit as early as the middle of September, which were the very last of the crop. The berries were round, black, and covered with a dense bloom; bunch as large as those of the Isabella; skin thick; flesh tender, with scarcely any pulp, "exceedingly sweet and delicious." The vine is hardy, vigorous and productive. The name of the originator is not given, as it would, if known, subject him to a flood of orders. The vine will probably be secured in the hands of a few, and in due time be offered to the public, who of course make some allowance for the charms which novelty throws around every new horticultural production. Should this prove nearly so valuable as is hoped, and the same result be verified by Dr. Valk's new seedling, a newly discovered hardy foreigner, we shall soon have quite an addition to our list of valuable varieties.

Remarks.—The originator of the grapes mentioned above, presented us a liberal dish of the fruit, last autumn, and we found it scarcely inferior to the best Isabella. It ripens as stated, in the open air, and before the usual heavy frosts. We hope it will be extensively propagated, and afford a grape that may be depended upon in all parts of New England.—*N. E. Farmer.*

## THE GOOD OLD LILAC BUSH.

Hovey, in the July number of his magazine, quotes from the (English) Gardener's Journal, a paragraph respecting the lilac, which describes that familiar—we had almost said "household" bush, so naturally, that we must borrow some of it for our readers to peruse. It proves this favorite shrub, or tree, or bush, whichever you please to call it, to have the same habits in England that it has in Maine, and to be prized as much, and to fare about the same there as here.

"This old and favorite ornamental deciduous shrub," says the writer, "like the rose, obtains a place wherever trees and flowers will grow. It is especially popular with the poor, who have only a small patch of ground, and cannot afford time to give much attention to what they grow for pleasure. The lilac is one of the hardiest plants grown in England, so it is here; you may cut it down, but it won't be cut up.—The branches may be killed, but others will rise on the return of fine weather." Then again the lilac is one of the very first, to bud and blossom in the Spring; and it is green long before others. The writer after speaking thus highly of it, then begins to enumerate its faults:—With all its recommendations says he, its hardy constitution, its graceful habit, and its beautiful flowers, the lilac, it must be confessed has its faults, or rather fault, for it has but one—its tendency to push up shoots at the root, which under certain circumstances, make it a mere net for all sorts of passing litter or rubbish. If an old shoe is to be thrown out of sight, there is no place so fitting as the poor lilac bush. At the fall of the leaf, all the other trees, and bushes, seem as if they would make quite a "but" of our good natured acquaintance, and keep on "shying" their cast off clothes into its lap, at least so long as the game lasts.

So much for the Englishman's story.—Brock in his interesting "Book of Flowers," enumerates three varieties. The purple variety, he observes, is found in almost every garden, the white is more scarce.—Grown together they are very beautiful, and notwithstanding they are considered old fashioned, common, and vulgar, with some people, we esteem them as some of our most valuable, and ornamental shrubs of the season.

The "Persian Lilac" he considers far more delicate and pretty than the common lilacs, both in leaf and blossom. The bunches of flowers are nearly a foot long, and weigh down the tender, terminal, slender shoots, so as to give the plant a very graceful appearance. The Persian Lilac grows about four or five feet high.

He also observes that this was one of the first plants introduced by our forefathers, and is universally found—often in front of ancient houses, growing almost to the size of a small tree. To make a small tree of it, care must be taken to destroy the suckers and keep a clean stem.—*Maine Farmer.*

## PRESERVING FRUIT IN BOTTLES.

Strawberries raspberries, blackberries, currants, peaches, in fact any fruit, may be preserved in air-tight bottles, so as to retain its natural flavor, with but little labor or expense. The following is an excellent mode:

"Fill the bottles quite full with fruit not quite ripe; place them, with the corks put lightly into them, in a copper with cold water up to the necks, and gradually raise the temperature of the water to 160 degrees, and not exceeding 170 degrees Fahr. Keep them at this temperature half an hour; then take each out separately, and fill it up with boiling water from a kettle to within an inch of the cork; drive in the cork firmly tie it over, and dip it immediately into bottle wax, and lay the bottle down its side to keep the cork always damp. To prevent fermentation, turn each bottle half round twice or thrice a week for two or three weeks; after that they will need no further care. The corks should be soaked in water two or three days before being used."

Another mode is to tie the corks before putting the bottles in the water. The heat expels the air from the fruit. As soon as the bottles are cool enough apply the sealing wax. We have eaten peaches in winter which were cut up and bottled, and kept in this way, almost as good as when cut up for the table fresh from the tree. The secret consists in exhausting the air from the bottles, and making the corks air-tight.

In pruning large limbs, cut so close that the surface of the wound will be on a level with the bark above and below it. Such branches should be partly cut through both above and below, with a knife, before using the saw.

Horticulture is the great gift of God to man, which makes desert places into gardens, and so beautifies the abode of man as to resemble Paradise. Buildings without Horticulture, are but landmarks in a wilderness.

## A MODEL FRUIT GARDEN.

A correspondent of the Cincinnati Gazette thus describes a visit to the estate of Mr. Peabody, an eminent horticulturist near Columbus, Georgia:

"Mr. Peabody has a very healthy location on a hill in the pine woods—over 600 acres; and when they went on it, thirteen years ago, not a tree had been cut. He cleared a space for his house, and they moved in the next spring. He has proved the most successful cultivater of many kinds of fruits, berries and melons, in this country. I saw 1,000 hills of water-melons, on which will be ripe fruit by the 10th or 15th of June; he says he has frequently picked them weighing 50 pounds. His great peculiarity with strawberries, is the quantity of fruit, its size and flavor, and the *constant bearing* of the vines; always has plenty of fine berries for six months—frequently eight—and last season he had them every month in the year. Recollect this is in the open air—in his open fields. I saw eight acres of strawberries; the vines are very small, and covered (the ground literally looks red) with most delicious large Hovey berries. These vines have been in just as full bearing since the 10th of March, and he says will continue until the middle of September, and as much longer as frost keeps away, if he chooses to attend to them. Mr. P. sends to this market from 150 to 200 quarts per day, and he says he could pick double the quantity if the market was larger."

## GRAFTING GRAPE VINES.

Saw off the vine an inch or two below the surface of the ground; then with a large augur, just the size of the graft, bore one or more holes perpendicular, or parallel with the grain, about two inches deep in the top of the root, where sawn off, and into these insert the scions the full depth of the holes. Let the scions be of the last year's growth, well ripened, and about 6 inches in length, with a bud or eye at the top. They should be cut from the vine during winter, or early in spring, before the sap gets in motion, and the operation should be performed just before it is expected the sap will start, tho' it will usually succeed afterwards if the top of the stock is well waxed. After inserting the scions, cover the wound firmly with moist clay up to the eye of the scions, and place a board so as to protect from washing by rains, till the leaves appear. This method is surer than cleft grafting.—*Ohio Cult.*

# Domestic Economy.

## DOMESTIC LEGHORN.

Chloe thus writes to the Ohio Farmer:—"I can give you a substitute for Leghorn bonnets and hats which is worth one year's subscription to the Farmer, to any one who will use it. The material is called "June grass." Cut it off close to the ground with scythe or sickle, place it in a tub and pour on hot water, which let stand 20 minutes.—Then take it out and spread it in the sun to whiten. The top joint, which is 15 or 20 inches long, is used for braid. It makes a light, neat and durable bonnet or hat. It is less expensive than straw and far better. It grows in nearly all the fence corners of meadows. The braiding may be done at any season of the year. The grass however should be cut before July, or it will be hard and wiry.

Ladies try it and teach your little daughters how to braid their brothers a hat.

To Make a Barrel of Good Soap.—Dissolve 48 lbs. of common bar soap in 15 gallons of boiling water. Let it cool and get thick and cut it in slices. Then dissolve 12 lbs. sal soda in 15 gallons more of boiling water, then add 3 lbs. unslacked lime. Boil these articles together 20 minutes; when cold, turn off the fluid and mix it gradually with the soap, not disturbing the sediment; then add one quart of alcohol and half pint camphene—stir all together and it will be fit for use.

The above soap is used for washing clothes and will be found to save much labor. Some people prefer less lime, and others omit the camphene, and think it better.

Good Coffee is the rarest production of the kitchen. The Scientific American says, "the best way of making it is to put the ground coffee into a wide-mouthed bottle over night, and pour rather more than half a pint of water upon each ounce and a half, and then to cork the bottle; in the morning to loosen the cork, put the bottle into a pan of water, and bring the water to a boiling heat. The coffee is then to be poured off clear, and the latter portion strained; that which is not drank immediately is kept closely stopped, and heated as it is wanted."

Raspberry Marmalade or Jam.—Pass the raspberries through a fine sieve to extract their seeds, add to them their weight in fine white sugar, and boil them, and stir them over the fire until you can just see the bottom of the stew-pan; treat as Quince marmalade.

A lump of wet saleratus, applied to the sting of a wasp or bee, it is said, will stop the pain in one moment, and prevent it from swelling. Pin this fact up somewhere for this season's use, for those who are not fond of the sensation of a sting.

To Preserve Picture Frames from Flies.—Boil three or four young onions in a pint of water; then, with a gilding brush, wash over with the liquid. It will do no injury to the gilded frames.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending July 12, 1853.

E. H. Ashcroft, of Boston, Mass., for improvement in pressure gauges.

C. W. Camp, of Hartford, Conn., for improvement in shot chargers.

E. J. Dickey, of Hopewell Cottonworks, Pa., for improvement in butter workers.

G. M. Dimmik, of Springfield, Mass., for improvement in apparatus for illustrating the motion of a pendulum upon the earth's surface.

J. J. Fulton, of Alleghany city, Pa., for improvement in tanning.

Smith Groom, of Troy, N. Y., for improvement in hose coupling.

Richard Montgomery, of New York, N. Y., assignor to Elizabeth Montgomery, of same place, for improvement in sheet metal beams.

Myer Phincas, of New York, N. Y., for improvement in metallic pens.

H. G. Robinson, of Schuylkill Haven, Pa., for improvement in coin safe and detector.

S. T. Sanford, of Fall River, Mass., for improvement in boring machines.

E. B. Wells, of Uniontown, Pa., for improvement in adjusting dishing saws.

I. P. Smith, of Rochester, N. Y., and O. W. Seely, (assignor to O. W. Seely,) of Albany, N. Y., for improvement in straw cutters.

N. T. Coffin, of Knightstown, Ind., for improvement in forming teeth on mill saws.

Chas. F. Brown, of Warren, R. I., for improvement in adjustable screw propellers.

Linus Yale, Jr., of Newport, N. Y., for improvement in locks for banks.

C. P. Bailey, of Muskingum, Ohio, assignor to "Union Patent Sofa and Railroad Car Seat Manufacturing Company," of New York, N. Y., for improvement in railroad car seats.

DESIGN.

Samuel Pierce and J. J. Dudley, of Troy, N. Y., assignor to Johnson, Cox & Fuller, for a design for cook stoves.

## WATER THROUGH LEAD PIPES.

Eds. Rural:—I often see things printed that I can scarce believe, altho' my credulity is large. I see it stated in the Rural of July 9th, that an attempt has been made to keep trout in water supplied through lead pipe, and in three successive trials they had suddenly died.

Now, I cannot take it as positive proof that fish will not live in water conveyed through lead pipe, for I have two fish living in water of the kind, and doing well to all appearances. And it is quite amusing to see the little fellows come up to the surface of the water and catch flies and crumbs for their breakfast. They were caught and put in their present abode about three months ago, and have grown about an inch in length since their forced emigration from Deacon Cerbitt's mill-pond. They are in a reservoir which holds about two and a half barrels of water brought from a pure spring over thirty rods distant, through lead pipe three feet under ground.

Nor do I believe such water has a very deleterious effect upon the system, for we have used it four years and enjoy measurably good health. I am willing to admit, however, that it has an effect upon me; and the effect is to make me better natured, for I considered it not a very pleasant task, after a hard day's work, to take a couple of pails and go to the spring for water, or to tell the hired man to go—and the worst of all was to see the fairer part of the family occasionaly tugging down from the spring.

I had almost forgotten to mention that these little finny fellows which I have in captivity are a kind of fish we call bull-heads, and for aught I knew can stand poison better than trout. Since reading the article referred to I concluded to take the bull-heads out of the reservoir and put them in the barn-yard watering trough, which water also comes in through lead, and get trout, and report the result as soon as practicable.

D. K. Coon.

Oak Hill Farm, Steuben Co., July, 1853.

## IMPROVED WAGON.

Isaac Crandall, of Cherry Valley, N. Y., has made certain improvements in the construction of wagons, for which he has taken measures to secure a patent. His improvement will be understood by the following description:

The invention relates to a novel method of arranging many of the parts of the common double wagon, and of making its upper reach elastic, so as to yield when the front axle and tongue are moved out of a straight line with the direction in which the carriage is moving, so as to accommodate itself to the movement of the horse, and as soon as the horse is in motion on a line parallel with the lower reach, to throw the tongue and front axle, together with their attachment, in the proper position to be drawn in the direction of travel. This arrangement prevents the tongue from loosly playing from side to side, thus very frequently striking the horse while drawing the carriage; the extra reach may, with convenience, be used upon carriages already constructed, and the injurious lateral motion of the tongue while the horse is drawing, thus prevented.

## THE LATTING OBSERVATORY.

The sexton of Trinity Church may as well shut up his steeple. It has been a good steeple to him; but there is a rival in the field, and his long monopoly of the air is at an end. Nay, he is undone—outdone by a hundred feet of tower and several hundred feet of hill. Not to the ear of the Potentate of Trinity is Latting's name musical.

The Latting Observatory, be it known to our remote readers, is a wooden tower, which has climbed from a base seventy-five feet square, to a point three hundred feet above it, on the ground opposite the Forty-second Street entrance of the Crystal Palace. To tell the truth, we have been in the habit of regarding the building of this tower as a somewhat mad and Babel-like enterprize. But when, at the close of a hot day last week, we had panted up its innumerable winding stairs, and stood on the highest of its platforms, inhaling the most delicious of cooling breezes, and looked round at the varied and gorgeous panorama that lay spread out like an immeasurable carpet at our feet, we then blessed the name of our Latting, and extolled his tower as a wise, timely and benificent institution. The entire geography of this region lies there magnificently mapped. The rivers wind about, and stretch away in bread lines of silver.—Their banks are done in emerald and gold. The cities—New York, Brooklyn, and the rest—are painted with faultless accuracy.—The spectacle is interesting and splendid in the extreme, and richly repays the fatigue of going up such a multitude of steps. The tower, we believe, is now open to the public and our advice to all Crystal Palace visitors is, to make a point of ascending it.—*Home Journal.*

## NEW PLASTIC MATERIAL.

Five parts of good whiting are mixed with a solution of one part of glue. When the whiting is worked up into a paste with the glue, a proportionate amount of Venetian turpentine is added to it, by which the brittleness of the paste is destroyed. In order to prevent its clinging to the hands whilst the Venetian turpentine is being worked into the paste, a small quantity of linseed oil is added from time to time. The mass may also be colored by kneading in any color that may be desired. It may be pressed into shapes, and used for the production of bas-reliefs and other figures, such as animals, &c. It may also be worked by hand into models, during which operation the hands must be rubbed with linseed oil; the mass must be kept warm during the process.—When it cools and dries, which takes place in a few hours, it becomes as hard as stone, and may then be employed for the multiplication of these forms.—*Sci. American.*

Vitrified Earthen Water Pipes.—The Journal of Commerce calls attention to a new article of earthen water pipes, whose inner surface is vitrified, (covered with glass) to withstand the action of acids, on exhibition at the Crystal Palace. They are from England, and have attracted considerable attention there, as superior to lead and iron, which are easily corroded and destroyed.—Pipe tile for draining fields and low grounds have proved more durable and less liable to get out of order than any other; and these vitrified pipes are an improvement on the same. They are used for conveying water wherever lead pipe is employed for that purpose, and are as superior to the latter as a glass bottle is to a lead one. Pipes of a large calibre are made of this "vitrified iron stone," as the material is sometimes called, and they are used as sewers and pipes leading to them.

The Smallest Engine in the World.—Mr. Benjamin J. Warner, the London watch manufacturer, has sent to this country, for exhibition at the World's Fair, the working models for two steam engines. The smallest one, an oscillating cylinder engine, stands upon an English four-penny piece, (size of half a dime,) with room to spare. The cylinder is but one sixth of an inch in diameter, the length of stroke three-eighths, and diameter of the piston is that of an ordinary needle. The other is a beam engine, composed of more than two hundred pieces. The length of the stand is three and a quarter inches, length of beam two and a quarter inches, diameter of cylinder three eighths of an inch, and the length of stroke seven-eighths of an inch. Both of these engines are screwed together with the precision of the work of a watch.

Simple Stump Machine.—A simple contrivance for removing stumps is described in a late number of the Michigan Farmer, and which, the editor was informed, had taken out a hundred and forty stumps in half a day.

The contrivance is simply this:—A stiff, massive lever, about twenty feet long, is placed with its thick or stronger end at the side of the stump; a chain several feet long, with links made of inch, or inch and a quarter iron, and with a long ring at one end, is then attached to the end of the pole by means of the ring, and the rest of the chain passes round the stump, and is hooked into a root or in the body. A yoke of oxen now attached to the other or smaller end of the lever, exerts an enormous power, and unless the stump is quite large, will quickly twist it out.

New Life Preserver.—The last number of the Warsaw New Yorker, says:

Our ingenious neighbor, F. Nicholson, has in the benevolence of his heart, contrived a life preserver, which he thinks will facilitate the escape of passengers from a burning or wrecked vessel. It is an alternate succession of air cells and wooden slats, covered with canvas and netting and may be made of all dimensions; when not in use the preserver may be rolled together and will not occupy much room.

# Educational.

Written for the Rural New-Yorker.

## EDUCATION OF THE FARMER.

"He will do for a farmer," is a very common saying, in regard to a certain class whose education seems to have been neglected, or whose natural genius seems to lack that spirit and energy which some others exhibit. Who does not remember the old New England custom, of "educating one in a family?" All the rest must stay at home, and dig among the stones of the hills, while the favored one is sent to college.—Honor enough to have *one* in the family "educated." Honor enough to have *one*, who could teach, preach or "get a living without work," as they used to say. No one ever dreamed of educating the farmer. One mind must be enlarged, one intellect expanded by a timely and judicious training, but the rest may be left to grow by dint of their own native powers. They are to make nothing but farmers or mechanics, and why spend time and money upon their education?

Now there lies a grand mistake at the very commencement of this theory. In the first place every human mind, to whom God hath given its own characteristic powers, should be *educated*, should be trained.—The very fact that we have minds possessing such vast susceptibilities amply establishes this doctrine. The mind, the human mind, so magnificent in its character, was never intended to rust and become dark, through indifference and neglect. If it is essential for one to be educated and trained, why not for another? If it is carrying out the design, read upon its own character, in our case, surely it is defeating that design by neglecting it in another. Why should man be educated? Is it essential to his happiness? Can he be more happy and more useful? Can he not more readily comprehend the mysterious things connected with his existense? To the ignorant and unlearned, nature is a sealed book.—Her various pages appear perfect blanks, or filled with arbitary and inexplicable characters. But the educated mind delights to read upon every page, something new and useful. Shall this pleasure be afforded to one and denied to another? Nay, we cannot resist the truth, that every mind should be educated, the more thoroughly the better.

Of course I speak now without reference to any particular calling. We speak sometimes of a "thorough" or a "liberal education," and it is nothing less than this to which I refer. But a "thorough education" implies far more than many imagine. To be thoroughly educated, is to be precisely qualified to perform whatever we undertake. A person that can do only *one thing*, that can talk of but one thing, is but very partially educated. But how should the farmer be educated? It may be answered—"let him learn to read, write and cypher." This by many is thought to be all that can possibly be of any practical use to the farmer. "It will do for the farmer"—"nothing but a farmer." But why in the design of education, should not the farmer be educated as thoroughly as anybody?—And then when we come to consider the dignity of the husbandman's calling, we shall find many reasons to show that, if any one should be neglected, it should not be the farmer.

Truly, it does not seem to require a great deal of geometry or philosohpy to hold a plow, or to manage a pair of oxen or horses,—but this is but a small portion of the great science of Agriculture. Turn out none of your dull, stupid boys for farmers, unless you wish to injure the reputation of a science which lies at the foundation of all others.—They will do better in the law office, or among drugs and medicines, than in tilling the earth. The business of Agriculture affords ample scope for the contemplation of the most gigantic intellectual powers. It implies the solution of that common, yet wonderful problem—the transformation of the dark earth into the beautiful flowers and green foliage of summer.

Some suppose the hand that has been wont to touch the classics, the mind that can appreciate the beauties of refined literature, or perform feats of mathematical research should never dim its beauty or mar the lustre of its greatness by going to farming. False idea that agriculture can possibly mar the splendor of intellectual greatness! The greatest men that ever lived were practical farmers. The farmer is brought into immediate intercourse with the works of Nature. And it is always a mark of a great want of true intellectual greatness, when we shrink from communion with Nature. If we have a taste for the beautiful,—"Behold the lilies of the field—Solomon in all his glory was not arrayed like one of these." If we delight in the wonders of philosophy or chemistry, where can we find so ample a laboratory? And in the quiet of a farmer's life, there is a sweet and almost sacred influence thrown around the hours of contemplation and study. Let "*progress*" be our motto. More anon.

J. W. Barker.

Kendall Mills, N. Y., 1853.

## A SCHOOL INCIDENT.

In my early years, I attended the public school in Roxbury, Mass. Dr. Nathaniel Prentice was our respected teacher; but his patience, at times, would get nearly exhausted by the infractions of the school rules by the scholars. On one occasion, in rather a wrathy way, he threatened to punish with six blows of a heavy ferule, the first boy detected in whispering, and appointed some as detectors. Shortly after, one of these detectors shouted—"Master, John Zeigler is whispering." John was called up, and asked if it was a fact—(John, by the way, was a favorite, both of the teacher and his school-mates.) "Yes," answered John, "I was not aware what I was about. I was intent in working out a sum, and requested the one who sat next to reach me the arithmetic that contained the rule, which I wished to see." The Doctor regretted his hasty threat but told John he could not suffer him to escape the punishment, and continued, "I wish I could avoid it, but I cannot, without a forfeiture of my word, and the consequent loss of my authority. I will" continued he, "leave it to any three scholars you may choose, to say whether or not I omit the punishment." John said he was agreed to that, and immediately called out G. S., T. D., and D. P. D. The Doctor told them to return a verdict, which they soon did, (after consultation,) as follows:—"The master's word must be kept inviolate—John must receive the threatened punishment of six blows of the ferule; but it must be inflicted on volunteer proxies; and we, the arbitraters, will share the punishment by receiving two blows each."—John, who had listened to the verdict, stepped up to the Doctor, and with outstretched hand, exclaimed, "Master, here is my hand; they shan't be struck a blow; I will receive the punishment." The Doctor, under pretence of wiping his face, shielded his eyes, and telling the boys to go to their seats, said he would think of it. I believe he did think of it to his dying day, but the punishment was never inflicted.—*Cin. Times.*

## STICK TO IT, YOUNG MAN.

The very doctrine of all others, "*Stick to it.*" Who ever knew a mortal enrol himself under this banner, and come out the little end of the horn? Nobody, we'll be bound. Its principle, acted up to with rectitude, purpose, heart and soul, would keep any man above water and in blue sky.

"*Stick to it.*" It's the very history, all experience, the triumph of mind, art, literature, every great and noble work is its direct and appropriate illustration. He who would be, do, gain, make, save, achieve anything, in whatever department of life, trade, politics, religion, philanthrophy, or love, must make it his first and last object of solicitude—the Alpha and Omega of aspiration and action.

Tell us, young man, who ever did a thing worth a note, that did not "stick to it."—Look around among your acquaintances, and see who is, and who is not "*something.*" In him who is deservedly famous and honored, you will find the man who, years ago, in the strength, determination, energy, and light of an all-conquering resolution said, "*I'll stick to it,*" and who did, and has stuck to it ever since.

What has made great lawyers, statesmen, divines, artists? What has made a Webster, a Choate, a Brougham, a Kossuth?—Simply and solely, and truly, by choosing something real and vital, and "*sticking to it.*" And if you wish, or expect, or mean to do or be anything, you have got to do likewise. Then choose, and "*stick to it.*"—Armed with its principles and inspiration, you may rise to undreamed of heights—wanting it, you may sink to unthought of depths.—*Pettengill's Reporter.*

## YOUNG MEN ON THRONES.

Some of the most important empires on the globe, are now ruled by young men.—The Emperor of China, Hien Fung, is now in the twenty-second year of his age, and the third of his reign. It will be recollected that he is of the Tartar or Tutsing dynasty. Prince Chu-kisin, of the Ming dynasty, who aspires to the throne of China, is about nineteen years old. The Sultan, or Shah of Persia, Nasser-ad-din, is about twenty years of age. Abdul-Medjid-khan, the Sultan of Turkey, was born in April, 1823—of course he now is little over thirty years of age. The Emperor Francis Joseph, of Austria, is nearly twenty-three, having been born in August, 1830. He ascended the imperial throne in December, 1848. These empires embrace more than one-third of the population of the world.

The Use of Geological Knowledge.—In several counties of Ohio, where it was supposed coal existed to the extent of a few rods, or a hundred yards at most, the geologist informed them that they might consider their supply inexhnastible. The rise in real estate, in different counties, was variously estimated at from one hundred thousand dollars to five hundred thousand dollars, when it was known that manufacturing means were possessed in such unexpected abundance. Professor John Locke, to whom was assigned the south-western portion of the State, in a few moments demonstrated to the inhabitants of West Union that the rock under their feet was well suited for lime. They had previously been hauling lime a number of miles.

## TAXATION.

The legitimate object of Government is to promote the general good of community, or rather to protect each individual in his inalienable rights, namely, "Life, Liberty and the pursuit of Happiness,"—but it is certainly much to be regretted that too many Governments are made to benefit the Governors, at the expense of the Producers, who are fleeced to enrich the office-holders. Governments are termed free in proportion as they protect each and every one in the enjoyment of those natural rights. There are few Governments at the present day that do not protect by Law, the Lives, and Liberties of their subjects,—so that the principal difference between a despotic and free Government, is in their infringment on the rights of community in the pursuit of their various vocations, and in the amount that the Government takes from the governed. A despotic government taxes, and fleeces its subjects, to support the office-holders in luxury and extravagance, but in a free government the office-holders are the servants of the people, and receive a reasonable compensation for the services they render.

But, however free a government may be, or however economically it may be administered, it must have some of the earnings of community to defray the necessary expenses of the administration; and it is just and equitable that all should bear their portion of the burthen in proportion to their ability to do so. There are three distinct modes, (or ways,) of raising revenue, or of procuring from community the means to defray the expenses of Government,—First, a tax, or duty levied on the productions and products of foreign countries, that are imported; and when these duties are judiciously levied so as to encourage home production, it is the most just method of raising revenue. Second—a tax on luxuries, thus making the extravagant and wealthy bear their proportion of the expense of Government. Third—a tax on property, or what is called a property tax, but it is in reality a tax on the producers, to the exemption of a numerous portion of community, who generally receive more yearly income then the producers do, yet pay no tax on the capital from which they derive their income.

In this country there is no property tax paid to the General Government, and but little to the State,—but the town, county, and city taxes are enormous, and are increasing with double ratio, and if they continue thus to increase, the question may justly be asked, How long will we deserve the name of a Free Government? Property is the fruit of Industry; there is no other real wealth. Gold and silver are only the representatives of property, as a medium of exchange; if there were no producers, they would be valueless, and houses, and lands would avail very little, unless they were occupied and cultivated.

For the sake of distinction, I will divide property into three parts or classes, viz., Capital, Wealth, and Salary; and capital can again be divided into two classes, Property Capital, and Professional Capital.

Property Capital, is that which is necessary for the operators to have, to carry on their various vocations of every description, to enable them to be producers, and it is taxed as property. A woodsman's ax is his capital, without which he could not be a producer; the mechanic's shop and tools, are his capital; and to the cultivator of the soil, their farms, stock, and tools, are only their capital, to enable them to be producers. And it is the same with all operators of every description,—the amount of property necessary to carry on their business, is their capital, and that capital is taxed by a property tax. (Production is here intended to apply to all vocations of every description that creates, or increases value, or adds to the comfort, convenience, or prosperity of society, by personal services rendered.) And the real value of such capital, (or property as it is called,) is the amount that the operator realizes from his labor by using it, and not the cash value that it may be assessed at.

Professional capital, is the knowledge and skill of the professional man, in his vocation, and is his capital from which he receives his income, but on which he pays no tax. A professional man, who receives, say $800 per annum by his vocation, has a capital of equal value to him, as the capital (*or property*) of the mechanic or farmer who receives the same amount from their labor,—yet the latter are heavily taxed on their capital, and the other is exempt. Wealth is that class of property which the owner receives an income from, without his personal services,—such as houses, lands or money at interest, &c., &c. The wealthy generally pay little property tax, in proportion to their means. The tax on the houses and farms are commonly paid by the occupants, and money is easily kept out of sight.

The third class of Property is Salary.—To office-holders in every vocation, who receive salaries, the office is their capital, and is of the same value to them, in proportion to the amount that they receive, as the capital of the producers is to them, viz., the property of the mechanic or the farmer who receives the same amount from their labor,—yet the office-holders pay no tax on their capital.

A portion of the property taxed is generally equitable, viz., that assessed on dwelling houses, but that is very small in proportion to the amount that is levied on the producer's capital, and especially the farmers, for their capital is estimated as property at a much higher cash value than any other portion of community; but their income in proportion to their labor, is generally not so much as others. Yet they are by far the heaviest tax-payers. Those that are employed in what is called the honorary pursuits, are exempt from taxation on their capital, though they receive more yearly compensation than the practical producers do.

A property tax is an oppressive burthen levied on the producers; it is arbitrary in its collection, unequal in its burthen, and often unjust. It also takes a large amount from the producers capital, that ought to be employed in their business, which cripples their exertions and lessons their productions, and never ought to be resorted to but in cases of absolute necessity.

W. Garbutt.

Wheatland, N. Y., 1853.

Remarks.—It may be proper to state that the above article was written some time ago, and intended for publication while some of our dignitaries were gravely discussing the propriety of taxing the producers to pay for enlarging the canals. Thinking it hardly appropriate for the pages of the Rural, we at first doubted the propriety of its publication, and before deciding it was mislaid.—The article has just turned up, and we give it, without fully endorsing all its views, and of course leaving the matter open for proper discussion.—Eds.

True.—The more a man accomplishes, the more he may. An active tool never grows rusty. You always find the most enterprising the most busy. Men of industry start our railroads, our steamships, machine shops, and our factories. We go for activity—in body, in mind, in everything. Keep all things in motion. We would rather have death find us breasting a whirlpool than sneaking from a cloud.

## MISCELLANEOUS ENIGMA.

I am composed of 25 letters.
My 2, 24, 19, 25 is part of the human body.
My 3, 19, 22, 18 is not to be trusted.
My 8, 19, 21, 15, 19, 6, 22, 2 is one of the U. S.
My 12, 18, 6, 4, 10 is a musical instrument.
My 15, 7, 4, 3, 11, 15 is a great blessing.
My 8, 17, 3, 12, 23 is a delicious fruit.
My 21, 12, 18, 12, 23, 16, 5 is a county officer.
My 13, 19, 5, 9 is what we use but dread.
My 12, 25, 1, 13, 19, 24, 10, 14 is a kind of gas.
My 11, 20, 4 is a favorite beverage.
My whole is what multitudes are anxious to see accomplished. H. L. B.

Pittsford, N. N., July, 1853.

## CHARADE.

My first is the name of a young gentleman of our acquaintance.
My second is one of the class of beings that no longer exist.
My third is an operation engaged in by many, but none of the best.
My whole is the beginning of all things, contains all things, and yet is short and easy.

Hartwick Seminary, July, 1853. C. A. S.

☞ Answer next week.

## A PUZZLE.

Write 49 different numbers in a square form, so that the sum total of each line, each way from top to bottom, and from right to left,—also crossing the centre diagonally, both ways,—shall number a product of 175. C. F. C.

Fenner, N. Y., 1853.

☞ Answer next week.

Correction.—In the Question in the Rural of July 9, the word *East* should read *West.*

## ANSWER TO ENIGMA, &c., IN NO. 29.

Answer to Miscellaneous Enigma—*A Garden or Fire Engine.*

Answer to Charade—*Work-man-ship.*

[In order to receive attention, all Enigmas, &c., must be accompanied with correct answers.]

## WHAT IS FAITH?

BY CLARA.

Faith is a sweet assurance that beyond this world of toil and pain, is one where sorrow, sin and death can never enter,—a place where "the wicked cease from troubling and the weary are at rest." By faith are we made partakers of the sacrifice that was offered for a sinful world.

'Tis Faith that helps when troubles rise,
To lift our thoughts above the skies.

And when the soul with sin oppressed,
Would fain on Christ its burden cast,
Faith sweetly says, "Your sin's forgiven,"
And seals your passport into heaven.

'Tis Faith that dries the mourner's tear
And gently whispers, "Christ is near;
'Tis he that holds affliction's rod;
'Be still and know that he is God.'"

By Faith we know of worlds above,
Where naught is found save joy and love;
Where we, when sufferings all are o'er,
May sing His praise forever more.

O! may we while we sojourn here,
Oppressed with sorrow, sin and care,
E'er "walk by faith, and not by sight,"
And reach at length yon world of light.

And, knowing that without faith it is impossible to please God, let it (in the language of the disciples,) be our earnest, unceasing prayer, "Lord, increase our faith."

Written for Moore's Rural New-Yorker.

## A DAUGHTER IN HEAVEN.

Mother, your child is gone, to return no more on earth. No more will your home be bright with the sunshine of her face, ever wreathed with a smile of love; no more resound with the music of that voice gladdening your heart like the wild notes of a bird in early spring. You say she is dead, and go to weep upon her grave. If she had gone from your home, the bride of the best man on earth, one gifted with all to make her happy, you would weep at her departure, yet rejoicing because she may lean on the arm of one who will be strong to sustain her when you are bowed by the weight of years.

You were anxious that she might have a home, and a life companion beside whom she would not be overwhelmed by adverse fortune. She has a home, bright with the presence of the Eternal. Your child is the companion of Him who said, "When thou passest through the waters I will be with thee." She rests in the bosom of Him that said, "He that cometh to me I will in no wise cast out." Go, weep upon her grave, as our Saviour wept at that of Lazarus; but remember, hers is a bliss unknown to the happiest bride of earth.

Then open the chambers of thy heart to the living light of heaven, and rejoice, O! mother, in all they tribulation; for

"It is well with the child: it is well."

Suissac.

## MAN'S NOBLEST ACT.

I have said that *in works of benevolence* human exertion produces the *greatest* and the most *permanent effect.* History is filled with illustrations of the truth of this remark. The world has for nearly two thousand years been filled with the fame of Julius Cæser. He was the master spirit of his age; and strongly was that age agitated by the workings of his genius. But what traces hath he left upon the ages that have come after him? In what is the world now the better, or the worse, for his having lived? You and I would have been as wise and as happy, though his fame and achievements had never passed the limits of Brundusium. But it is not so with the labors of the apostle of the Gentiles. The effect of his life is seen in the revolution of a world from Paganism to Christianity. Everything we behold around us, which distinguishes us from the savage Britons, bears witness to the changes which, through the power of the Gospel, he has wrought in the destinies of man.

Of Charles V. I have read much, but I see nothing on the face of society that reminds me of his existence. But this solemn temple, the liberty to worship God within its consecrated walls, the civil freedom of our commonwealth, and of our country, and all that career of improvement on which the age has entered, all, all of it does homage to the name of Martin Luther. Such examples as these—and history is full of them—teach us, that in the work of benevolence, man may act worthily of his high destination. They teach us, moreover, that this is the cause, and the only cause, to the success of which the Omnipotence of God is pledged, and which therefore, though every other should fail, shall infallibly succeed. But we are not left to conjecture on this subject.—Jehovah himself hath promised that vice and misery shall yet be done away from our world, and that it shall be done away by human efforts; and planting on Calvary the cross of his well beloved Son, he hath left to the universe the all-sufficient guarantee, that the work shall yet be fully and triumphantly accomplished.—*Wayland.*

Some years ago, several young Scotchmen came in company to New York. On the following day, which was the Sabbath, it was proposed to go out and see the city, and its environs. All assented except one. He had been charged by his father, on leaving home, not to break the Sabbath. He would not disobey him. In a few years he was possessor of a large estate, and his companions were in the drunkard's grave. He was visited by a Mr. C.——, who asked him "How did you accumulate your wealth?" He answered, "*By strictly observing the Sabbath.*"

# Miscellaneous.

## THE WORLD AS IT IS.

The world is not so bad a world
As some would like to make it;
Though whether good, or whether bad,
Depends on how we take it.
For if we scold and fret all day,
From dewy morn till even,
This world will ne'er afford to man
A foretaste here of heaven.

This world's in truth, as good a world
As e'er was known to any
Who have not seen another yet—
And these are very many;
And if the men, and women, too,
Have plenty of employment,
Those surely must be hard to please
Who cannot find enjoyment.

This world is quite a clever world,
In rain or pleasant weather,
If people would but learn to live
In harmony together;
Nor seek to burst the kindly bond
By love and peace cemented,
And learn the best of lessons yet,
To always be contented.

Then were the world a pleasant world,
And pleasant folks were in it,
The day would pass most pleasantly
To those who thus begin it:
And all the nameless grievances,
Brought on by borrowed troubles,
Would prove, as certainly they are,
A mass of empty bubbles.

For the Rural New-Yorker.

## THE BEAUTIES OF RURAL LIFE.

Nothing can be more pleasant or beautiful than the rural home, surrounded by all the comforts and luxuries possessed by the residents of the country, and by the rich beauty so bountifully bestowed by Providence, on the human race. The gorgeous tapestry which everywhere ornaments the limit of our vision,—the rich carpets of luxuriant verdure, spread in every direction by the kind hand of Nature,— the meandering brook that winds its way through forest and meadow, sending forth a low, sweet murmur as it glides gently along, or as it dashes from some high rock, giving a deeper toned, more sublime music, its foaming billows sparkling in the sunlight with a dazling, silvery brightness as it moves swiftly on to its great destination,—the perfume of beautiful flowers, which o'erspread the landscape in rich profusion, and send their fragrance to refresh the weary laborer—the incessant warbling of the thousands of birds that throng the forests, sending forth their clear notes upon the balmy breeze of morning,—all tend to render a residence in the country, the most pleasant, agreeable and delightful that can be desired.

But not alone do these all constitute the beauty and agreeableness of country life.—Something more is requisite. The hand of man must display its magic power. The scenery, naturally so beautiful, must be improved. This can only be done by proper care and judgment with regard to the rural neatness and elegance of the architectural department. Every thing should be done with a proper regard to neatness and beauty, as well as profit. All should harmonize with the natural scenery, and not present universal discord. If every ruralist would give this branch of his occupation more attention, our country would soon present many more inducements than it now does —rendering Rural Life far more attractive and desirable. S.

Newport, N. Y., July, 1853.

## TOWN AND COUNTRY.

What eye can fail of being delighted, what heart fail of being inspired, by the beautiful face Summer-nature wears in the country, on every side. The dweller in the country enjoys the glories of the year. No matter how humble his rank and fortune among his fellows, he is as rich in the possession and enjoyment of the beautiful, spread above him in the skies and around him on the earth as though his acres were countless and his treasures untold. No covetuous, monopolist hand can veil the splendors of the universe from his gaze.—For him the sun shines, the showers fall, the dews gather and exhale, the buds expand into blossoms, the air murmurs, the waters glisten, and the birds sing. Fragrance and melody are round about him as a heavenly garment. God has provided that he may enjoy the visible and the soul of Nature, whether he be the tenant of a cabin or a palace.

In the country, away from the pent-up cities, and from the blighting spirit of fierce, selfish, and contentious trade, man can best see and know how bountifully God has provided for him, as for all; can best realize that the difference of men's estates do not arise from the disposition of Providence, but rather from the craft or covetuousness of man. The country, bearing all over its bosom waving grain-fields, orchards, "green pastures," spicy shrubs and odorous flowers, and flocks and herds, is eloquent with the plenty God has bestowed on man, if he would but sow and reap, and divide his store as beneficially as it is given to him. In the city and mart, art and artifice have despoiled all this beauty and glory—all these signs of impartial Providence, and written in place thereof:—Here is a man's world — the Town.

Who can doubt that the truest life is to live in the country? To live out amid the fields and flowers, where the air is always balmy and fresh; where Nature is never niggard of music and beauty: where valleys and hills, yielding to the hand of brave, happy toil, refuse no blessing the earth can give. Out in the country, where the seasons are not lost; where Spring, and Summer, and Autumn and Winter, have each a distinctive garb, and each brings its labors and its sports. Man may see fewer faces of men there; may find less feverish excitement and hypocrisy, and chicane; but where else can he see and find so much to feed the springs of sensitive, intelligent being, so much to purify, refine and exalt the brain and heart. What spot, bounded only by the horizon, so fair for the innocent years of childhood; so charming to the youth, so consoling in its repose for wearied manhood, or so beautiful for the gathering, like a ripe golden sheaf of old age!

The town is but a place of business. Its spirit is wearying and withering to all the generous instincts and emotions of man's heart and soul. Man is consumed and lost in its rushing currents. His cradle rocks there to a discordant jar; his youth is jostled and despoiled of its bloom; his manhood is overborne and palsied, and if at last he finds a grave there, careless feet perpetually tread on his ashes. The country, alone, has the spirit to preserve and culture whatever is most beautiful in man. Man in the country, occupied with honest peaceful pursuits and meditations is the happy man—the true man. He lives all his days in the very presence of his Maker, and of beauties and enjoyments which no human art can equal, no fortune nor excitement supplant.

## CHINESE PROVERBS.

Let every man sweep the snow from before his own doors, and not trouble himself about the frost on his neighbor's tiles.

By a long journey we know a horse's strength; so length of days shows a man's heart.

Do not love idleness and hate labor; do not be diligent in the beginning, and in the end lazy.

The generations of men follow each other, as the waves in a swollen river.

The spontaneous gifts of heaven are of high value; but the strength of perseverance gains the prize.

In the days of affluence, always think of poverty; do not let want come upon you, and make you remember with sorrow the time of plenty.

As the scream of the eagle is heard when she passes over, so a man's name remains after his death.

If there be a want of concord among the members of the same family, other men will take advantage of it to injure them.

He who can suppress a moment's anger, will prevent lasting sorrow.

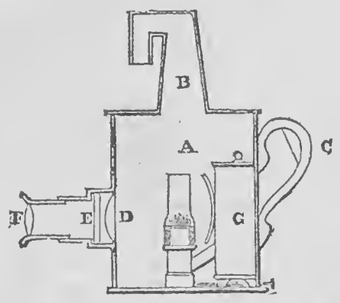
He whose virtues exceed his talents, is the great or good man; he whose talents exceed his virtue, is the mean or small man.

The man of worth is really great without being proud; the mean man is proud without being really great.

Do not anxiously hope for what is not yet come; and do not vainly regret what is already past.

## THE MAGIC LANTERN, ILLUSTRATED.

The Magic Lantern, one of the most amusing of optical instruments, was invented by Kircher, about the middle of the seventeenth century, and was of the greatest service to the magicians of those times, enabling them to work upon the credulity of the ignorant and superstitious, with the utmost facility. As a vehicle of amusement, it contributes, in no small degree, in the shape of a gallantee show, to the hilarity of a party of merry younkers in a long winter's night; and as a means by which lectures on astronomy can be elucidated, it arrests the attention of the wise and old.



The instrument, the construction of which demands our attention first, is represented above. A, is a box made of wood or tin, about eight inches square, having a bent funnel or chimney, B, at the top; a handle C., renders it a portable instrument; in the front of the box there is a tin tube furnished at the end near the light, with a plano-convex lens D,—which indeed is affixed to the lantern itself.—and at the other, a doubly convex lens F; this tin tube is fixed to the lantern by a square foot, the sides of which are open, as at E, to admit the sliders, and the end of the tube in which the doubly convex lens is fastened, is made to slide in and out for convenience, when adjusting the focus. The lamp, G, is a common argand burner, furnished with a concave tin reflector, to concentrate the intensity of the light.

The sliders are made of a piece of glass with a slight frame. Few hints can be given beyond naming the colors, as taste is the best guide, and practice the most impressive instructor in all matters relating to painting. The colors proper are only such as are transparent, and they are the following:—gamboge, scarlet lake, prussian blue, a green made of verdigris and a quarter of its weight of gamboge, burnt sienna, burnt umber and lamp black. The subjects intended for the sliders must be carefully drawn upon a piece of paper, which should be placed under the glass and then painted from; and too much attention cannot be paid to the drawing of them, for when they are thrown upon the wall, their defects, however minute, are enlarged to an astonishing extent.

Although any white surface will do very well to receive the objects from the magic lantern, yet a clean sheet stretched tightly upon the wall, is by far the best, as the chief point is to have the medium of perfect whiteness and quite flat.—*Youth's Casket.*

## TRUE HEROISM.

A hero is worthy of reverence. Let us bow down to him and listen to his words, and watch the look of his face. A woman-hero is worthy of something more than reverence. But what is a hero? What is a hero-man, or a hero-woman? Is it the man who makes himself famous by battle-fields, by literature, by what is called statesmanship? Is it the woman who by whatever means rises into the light of fame, and has name upon a million lips? These may be heroes after a certain sense, but it seems to me that the real hero—man or woman—is not so much known to fame as they are known to God. A man who devotes all the powers of mind and body to getting more bread for wife and children—who day after day, at bench or lapstone, spends all the force of his sinews and soul to buy bread, to pay rent, to keep the wolf from the door—this is a hero. History says little of such. But God knows their names, and their agonies are registered in the annals of eternity. And a true woman, sitting in the damp basement, (in one of the nooks of a large city) plying her needle to give bread and roof shelter to the aged mother or infant brother and sister—she is something more of a hero-woman than all those woman writers, woman-singers, whom the world has made famous.

True Heroism is self-crucifixion. What name, famous men, has undergone the self-crucifixion which ten thousand of the humble and unknown daily undergo? Crucifixion, not for fame, but for bread—not for a big name on the lips of all ages—but for foot-hold upon God's earth? How many thousands at this hour are toiling in the kennels of society, whose heroism is worth more in the eyes of God than all the illustrious names of history, from Adam down to the last President? And when the light of the World breaks upon us, how many great names will be forgotten, while millions of unknown names will hear the word, "*Come up higher!*"

Franklin.—George Brancroft, in a lecture before the New York Historical Society, pays an eloquent tribute to the philosopher:—"Not half of Franklin's merits have been told. He was the true father of the American Union. It was he who went forth to lay the foundation of that great design at Albany, and in New York he lifted up his voice. Here among us he appeared as the apostle of the Union. It was Franklin who suggested the Congress of 1774; and but for his wisdom, and the confidence that wisdom inspired, it is a matter of doubt whether that Congress would have taken effect. It was Franklin who suggested the bond of the Union, which binds these States, from Florida to Maine. Franklin was the greatest diplomatist of the eighteenth century. He never spoke a word too soon; he never spoke a word too much; he never failed to speak the right word at the right season."

Paper money was first made in Massachusetts, in 1690, emitted by Rhode Island, 1694; by Pennsylvania, 1775; first issued by Congress, May 15th, 1775; made a legal tender, 1777, ceased to circulate after a gradual depreciation, 1781. The introduction of paper money caused much misery and distress during the Revolution.

## CAPITAL PUNISHMENT.

A short time ago we gave some statistics relating to the operation of the non-capital punishment law in Michigan, and stated it as our impression that previous to the passage of this law, there were no convictions for murder, and consequently no executions. In this we were mistaken. In conversation yesterday with Jonas H. Titus, Esq., who was several years Agent of the State Prison, we learned that there were four convictions for murder in the State previous to the passage of the law. Of the persons who were convicted, two were executed, and the sentences of the other two were commuted to imprisonment in the State Prison.

Thus, in ten years, from 1836 till 1846, there were four convictions for murder, under the capital punishment law, while in seven years, from 1846 to 1853, there were nine convictions under the present law. If we compare the relative population of the several years during the two periods, it will be found that there was an excess of murder committed during the former period over the latter. In other words, there was a greater per centage of convictions for murder when the penalty was hanging than when it was solitary confinement at hard labor for life.

There is an interesting fact connected with this subject which we will state. The two persons spoken of above, whose sentences were commuted to imprisonment for life, have since proved innocent, been pardoned, and are now leading a respectable life, engaged in the pursuit of an honest calling for a livelihood. One of them was a white and the other a colored man. Had the penalty of hanging in these cases been enforced two innocent men would have suffered death. Facts like these will do more to make anti-capital punishment men than all the reasoning that can be advanced. It is better that ninety and nine guilty men escape than that one innocent man should suffer, is the legal maxim; and if it be axiom, it will be long before Michigan should have recourse to the "bloody code."

We allude to this subject, not only because it is desirable to know the results of so important a change as that which this State has been the first to adopt, but for the reason that in other States movements are in progress to test a law which is called for by a very considerable portion of the public voice. Our experience, so far as it goes, is valuable, and proves, at least, that there has been no danger in making the experiment of pulling down the gallows. In other States, where the death penalty is still retained, murder has increased to an alarming extent, and, if we can judge by results, the gibbet has no greater terrors than solitary confinement for life.

It cannot be disguised that a great change has taken place in the public mind upon this question; and not only upon this question, but upon the broad subject of punishment generally. It is only within the space of a few years that the use of means to reform the criminal has been regarded as any part of the duty of the State. The tendency has ever been to still further degrade the guilty rather than seek to elevate and reclaim. The benevolent exertions of a few philanthropists—and among these we may probably mention the persevering Miss Dix—have done much to change the current of public opinion. Not only religious and moral instructors are furnished, but most of the State Prisons in this country are furnished with libraries and all proper means are used to send the unfortunate criminal out upon the world a wiser and better man. He is taught to believe there is yet hope—that he is not utterly lost. The benefit of this improvement in discipline is felt in the Prisons both in securing better order among the convicts, and in that cheerfulness which naturally flows from the diffusion of moral principles. The salutary consequences to the thousands of discharged convicts cannot be estimated.—*Detroit Free Press.*

## SOCIAL LIFE IN AUSTRALIA.

Australia seems not to have escaped from the general infliction that from a sort of necessity seems rightfully to belong to every gold-producing land. On the first mining discoveries in California being made public, many were drawn thither who would improve the character of a place more by leaving it, than entering within its limits. Many crimes were committed, and these were not unfrequently alluded to by the English press as indicating the lawless disposition of the American people. But it seems the English people in like circumstances, are no more peacefully inclined than their Yankee brethren, nor do they, under like temptations, rule their lives by any stricter principles. A late writer from Melbourne says, that "the moral condition of the colony is sufficiently gloomy, notwithstanding the extensive body of police and military, and the self-congratulations of the Executive upon our peaceable state. The criminal calendar for the present month shows a list of one hundred and forty prisoners for trial in Melbourne, although a separate Court has been established at Mt. Alexander. The principal crime is robbery, generally with violence; but murders of peculiar atrocity are shockingly frequent. At the Ovens the other day, a constable accidentally shot a man; the populace supposed the act was intentional; they gathered in great numbers, and were very nearly lynching some of the constables." Until it can be shown that the English representatives in Australia are not responsible for these offences against laws and morals, we may justly conclude that human nature is about the same everywhere. It differs very little in England and America, in California and Australia.

The only thing which any and every one can do, and need do, is his duty.

# For the Ladies.

Written for Moore's Rural New-Yorker.

## WHERE IS THE POET'S FATHER-LAND?

BY FLORA.

Where is the poet's Father-land?
Oh! who can tell me where,
Where he may stretch his magic wand,
Untouched by time or care:
Ye bright and happy ones, oh tell,
Where is the poets native dell?

Where is the poet's Father-land?
Is it where, towering high,
Huge mountains rear their giant heads
Towards the bending sky!
Oh no, 'tis not where the craggy steep,
In luna's soft refulgence sleep.

Where is the poet's Father-land?
Is it where old Ocean's roar
Is echoed along the silent stand,
As it dashes the rock-bound shore?
Oh no, 'tis not where the surging waves
Sweep o'er the nymph's in there coral caves.

Where is the poet's Father-land?
Is it 'neath Italian skies,
Where the air is soft and the breeze is bland,
'Mid the gardens sunset dyes?
Oh no, though all is bright and grand,
'Tis not the poet's Father-land.

The poet's Father-land is known
Where earth's sad sons find rest,
Around Jehovah glorious throne,
Where dwells the bright and blest:
There, mingling with an immortal band,
Shall be his *own*, his Father-land.

## THE LILY AND THE ROSE.

Tell me, ye lovely daughters of the rough black earth, who gave you beautiful forms —for surely you were fashioned by exquisite fingers? What tiny spirits rose from your calyxes? and what pleasures did you feel, when goddesses rocked themselves on your leaves? Tell me, peaceful flowers, how did they distribute themselves in their joyous task, and beckon to one another as they so variously spun their fine weft, and so variously adorned and embroidered it? But ye are silent, graceful children, and enjoy your existence. Well, the instructive fable shall relate to me what your silence refuses to reveal.

As once the earth stood a naked rock, lo! a host of friendly nymphs carried the virgin soil upon it, and obliging spirits were ready to embellish the naked rock with flowers. They distribute the task variously among them. Modest humility began even under the snow, and in the cold, tiny grass and wove the retiring violet. Hope stepped closely behind her, and filled the little calyxes of the refreshing hyacinth with coiling odors. Now came, since these succeeded so well, a proud dazzling train of many colored beauties. The tulip elevated her head; the narcissus glanced around with her languishing eyes.

Many other goddesses and nymphs busied themselves in various ways, and adorned the earth, rejoicing in their beautiful work.

And lo, when a great part of their work, with its glory and their delight in it, had faded away, Venus accosted her Graces thus: "Why do ye delay, sisters of gracefulness? Arise! and weave also from your charms a mortal visible blossom." They descended to the earth and Agla, in the grace of innocence, fashioned the lily; Thalia and Euphrosine wove, with sisterly bond, the flower of joy and love, the virgin rose.

Many flowers of the field and garden envied one another; the lily and rose envied none, and were envied by all. Sisterly they bloom together in the fields of Hora, and adorn each other, for sister Graces wove them conjointly.

## BEAUTIFUL ALLEGORY.

The following beautiful allegory is translated from the German:

Sophronius, a wise teacher, would not suffer even his grown-up sons and daughters to associate with those whose conduct was not pure and upright.

"Dear father," said the gentle Eulalia to him, one day, when he forbade her, in company with her brother, to visit the gentle Lucinda, "dear father, you must think us very childish if you imagine that we should be exposed to danger by it."

The father took in silence a dead coal from the hearth, and reached it to his daughter. "It will not burn you, my child, take it."

Eulalia did so, and beheld her beautiful white hand was soiled and blackened, and as it chanced, her white dress also.

"We cannot be too careful in handling coals," said Eulalia, in vexation.

"Yes, truly," said her father, "you see, my child, that coals, even if they do not burn, blacken; so it is with the company of the vicious."

Japanese Marriages.—A very singular custom at the marriage of the Japanese is that the teeth of the bride are made black by some corrosive liquid. The teeth remain black ever after, and serve to show that the woman is married or a widow.—Another circumstance is, at the birth of every child, to plant a tree in the garden or court yard, which attains its full growth in as many years as a man requires to be matured for the duties of marriage. When he marries the tree is cut down, and the wood is made into chests and boxes to contain the clothes and other things which are made for the new married couple. The Japanese may marry as often as they please; marriages with sisters are prohibited; but they can marry any other relative.

Affection, like spring flowers, breaks through the most frozen ground at last; and the heart that seeks but for another heart to make it happy, will never seek in vain.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JULY 30, 1853.

**PUBLISHER'S NOTICES.**

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

CORRECTION.—By a provokiug "mistake of the printer," the Whole No. of a portion of this week's edition is printed 181, instead of 187. The number of the volume is correct.

### To Readers and Correspondents.

THOUGH the present is a very busy season with readers and correspondeuts, we are under obligations for the continued favors of those who furnish articles ou practical and interesting subjects. Such favors, especially from regular eoutributors and correspondents, are the more acceptable from the fact that we are, and may be for some time to come, short of help in the sanctum — our principal assistant, who usually devotes his entire time to the paper, having (necessarily and unexpectedly) been absent for several weeks. If any of our readers discover sins of omissiou, they will please attribute to the same cause — lack of sufficient assistauce. It is no easy matter, under the most favorable circumstances, to properly fill the RURAL, *every week*— furnishing the usual variety, and attending to the details of each of its several departments,— and when the principal labor falls upon one who has an abundance of other business which requires more or less time and attention, the task becomes still more formidable. Such being our position, we are coustrained to ask the iudulgence of our readers generally,— and that those friends who are accustomed to writing upon practical subjects, will contiuue their favors.

— It is proper to add, here, that we have a large number of miscellaneous articles awaiting examiuation, and many on file for publication. New beginners, and those who write on unseasonable or comparatively unimportant topics, must bear in mind that we bestow the most attention upon practical subjects, and matters of every day conceru; and hence that, as now situated, we are unable even to read, much more correct or re-write, many of the fugitive and incomplete effusions received. We do not strive to fill the RURAL with *original* articles, believing that we can make a more acceptable and valuable paper by interspersing its pages with judicious selections — though, with the mass of material generally on hand, the former course might prove the least laborious. Hence, literary contributions of merit may often be deferred or neglected, while many articles by inexperienced and careless writers, will necessarily be rejected.

"HONOR TO WHOM HONOR."—Through inadvertance, or procrastination, we have omitted to mention that L. WETHERELL, A. M.,—late of this city, and favorably known to our readers as a member of the Editorial Corps of the RURAL during the first three years of its publicatiou,— has become sole editor of the *Amherst* (Mass.,) *Express*. Mr. W. entered upon his duties several weeks ago, since which the *Express* has exhibited decided marks of internal "progress and improvement." Its pages furnish evidence of ability, industry and tact, and we congratulate all interested upon the result. Friend WETHERELL is not only a gentleman, but a scholar of superior attainments, and will prove a valuable accession to the editorial fraternity of New England. We wish him, what we believe he will richly merit, eminent success and prosperity.

FIRE AT WATERTOWN.—The flourishiug village of Watertown has again been visited by fire. On Saturday evening, 23d inst., the extensive car manufactory, foundry and machine shop, &c., of H. W. Woodroff were burned to the ground. In less than two hours the whole property covering two acres was destroyed, involving a loss of $100,000, of which only $20,400 is covered by insurance. From 70 to 80 hands are thus thrown out of employment, and many valuable working tools, four freight cars finished, and about twenty others nearly done, were burned. The fire is supposed to have been ignited by the heat of the furnace.

FURTHER FIRES.—In our city on the 21st inst., the dwelling house of Mr. Whitney, the celebrated daguerrian artist, was burned with nearly all its contents, the inmates barely escaping in their night clothes.

In Cincinnati the same day a fire broke out in a tool factory which was subdued with difficulty, and not until it had destroyed a large number of buildings, mostly frame. The loss is estimated at upwards of $75,000 with little insurance.

EDITORIAL EXCURSION.—The editorial fraternity of Ohio, Indiana, Kentucky and Pennsylvania, were out on a grand excursion, to Niagara Falls last week. The party embraced over one hundred members of the corps editorial,—ten different railroads in Ohio and the west, in conjunction with the proprietors of the steamers Crecent City and Queen of the West, having as we understand it treated them to the jaunt. It must have been a season long to be remembered, and we doubt not the whole phalanx will return to their posts refreshed in body, invigorated in mind and fully prepared for a better discharge of their arduous duties.

### Arrest of Counterfeiters.

SEVERAL of the Deputy U. S. Marshals have been actively engaged in ferreting out a gang of counterfeiters whom they had good reason to suspect were located in or near this city. On the 19th instant, they made a descent upon a building at the junction of Mount Hope Avenue and South St. Paul street, where they arrested four persons, WM. WESCOTT, C. H. JENNER, GEORGE A. REED and JAS. B. GILBERT. The two first named were engaged in making three cent pieces at the time, and with them were secured the press, die, metal and coin; also chemicals necessary to be used in galvanizing the spurious issue. Reed and Gilbert are not as strongly implicated, though it is believed they have been instrumental in paying out much of the coin. The prisoners were examined before U. S. Commissioner FARRAR, and held to bail for future trial.

About the same time, GEO. A. HOAG, and a person named WHITE, were arrested at Canandaigua, charged with making quarter eagles. On the same day that Hoag was arrested, Deputy Marshal Jas. M. Palmer, of Canandaigua, went to Penn Yan, Yates Co., and searched the dwelling house of Hoag, and found there one press for coining, one press for printing paper money, stamps for impressing Spanish quarters, and other coin; several punches, and various tools for making all kinds of counterfeit money; impressions in wax for keys for common safes, bank safes, &c., and some keys manufactured and in process of manufacture.

The public have noticed that there has been a large amount of bank notes in circulation of the larger denominiatioas, altered from ones. Among these are bills on the Eagle Bank, Brighton, the Newark Bank, Newark, Wayne co.; the Wyoming County Bank, the Springfield Bank, Springfield, Mass., the Union Bank of Swanton Falls, Vt.— Altered bills on all these Banks, are now understood to have been made and circulated by Westcott and Jenner. There was also a spurious emission from their fount, of ones of the National Bank, Washiugtou, D. C. We have thought proper to mention these facts for the information of the public, and not to prejudice their cases. There were also threes of the Bank of Salina, altered from broken western bank notes.

There have been three presses for coining, in all, and one for printing paper money, taken, with all necessary implements for every description of coining and bank note counterfeiting. On examination Hoag was held to bail, and White discharged. The officers have good reason to suppose others have been engaged with those arrested in the same crime, though no more arrests have been made.

— Subsequently officers Pierce and Toles, of Buffalo, arrested in that city Geo. W. Southworth, a man about 45. He was accompanied by a woman apparently 22 or 24 years old, who was represented as his son's wife. A search of their baggage disclosed a large amount of spurious coin, counterfeit bills, and as complete an assortment of tools for counterfeiting as could be desired, embracing *forty-two* dies and plates, chemical preparations for erasing signatures, instruments for replacing figures by those of larger denominations, and many other things necessary to the successful prosecution of the trade. †

THE CATASTROPHE AT NIAGARA FALLS—Briefly alluded to in our last number, resulted in the loss of three lives. Two of the men, as before stated, were carried over the falls on Monday evening, (July 18.) The other man, named AVERY, was discovered on Tuesday morning, clinging to a log in the river.

The discovery created intense excitement on shore, but unfortunately, there were no means of rescue at hand. A life boat was sent for from Buffalo, to rescue the poor sufferer, and in the meantime a box of provisions was floated to him. The life-boat came, but sad to say it swamped. The man began to droop and it was evident he could hold out but a short time. It was already past noon and whatever was done must be quickly. A raft was hastily constructed and floated to him upon which he got at about six o'clock, p. m., having maintained himself amidst the roaring flood for about twenty hours. Another life boat was floated to him, and as he was getting ready to jump into it, the boat struck the raft and swept him off into the rapids. He attempted to swim to a small island but failed to reach it. He raised himself up to his full height, gave a shriek, waved his arms wildly, and disappeared!

SUPERIOR FAT CATTLE.—Under the head of "Beautiful Cattle" the Albany Express has the following notice of our friend SHEFFER'S spayed Devon heifers. Unless we are greatly mistaken these animals will not be excelled by any on exhibition in the precincts of the Crystal Palace:

"There are three most beautiful Devonshire heifers now on exhibition at Woolford's, *en route* for the World's Fair. They are in charge of Mr. George Ayrault, and were bred and fatted by George Sheffer, of Scottsville, Monroe county. They are six years old, estimated as averaging 2,200 pounds in weight, and look as though there was not room for an inch more of fat upon them, while their symmetry is faultlessly retained. Take the three together, and in their uniform beauty, we have never seen their equals. All who take pleasure in seeing fat cattle would be repaid by visiting them."

FINE LEICESTER SHEEP.—Some days since we saw two very fine bucks of the Leicester breed which had been brought from Canada. One of them was the largest sheep that ever came under our observation. His weight was upwards of 400 pounds, notwithstanding he was sheared the first of May. The wool taken off is said to have measured *thirteen* inches in length. The sheep were the property of R. A. WILBER, of Wayne Co., who designed adding them to the increasing stock of large animals and other novelties which crowd the vicinity of the New York Crystal Palace. †

☞ Hezekiah C. Seymour, late State engineer and surveyor, died at his residence at Piermont, on Sunday evening.

### Notes from the Capital.

ALBANY, July 25, 1853.

EDS. RURAL:—The long agony *is* over. The N. Y. Legislature *did*, on Thursday, July 21, 1853, —6 o'clock P. M.,—*adjourn*. The last few days of the session were days of activity and excitement. The Democratic members met on Tuesday evening in caucus, to agree on plans for retaining their ascendancy at the next election. As might have been expected, the meeting was not *quite* harmonious — yet an address will probably be prepared and circulated for the instruction and guidance of the people. The Whigs and Hunkers were seen frequently with heads in close proximity, as if to generate the force of attraction by which the "twain may become one flesh." Then there has been rather more than the usual amount of gas evolved, and a plentiful supply of *Buncombe* speeches made for the edification (?) of all.

The much-talked-of Supply bill was finally agreed upon by a committee of conference, and passed into a law. It cuts off all *extra* clerk hire in the different departments, reduces the appropriation to the U. S. Volunteers to $10,000, rejects the claims of all the Orphan Asylums and other charitable institutions, and votes the money thus saved (?) into the pockets of members, to pay them for their severe labors in visiting Niagara, the World's Fair, and for the *long* recess taken at the close of the regular session. "Oh! consistency! thou art a jewel!"

It is very apparent that a change in the system of appropriatiug the money of the State is called for, and it is claimed that this bill is an improvement, from the fact that it refuses to allow the clerks of the different bureaus to come and "smouch" a few hundred dollars each, as they have usually done. As to the charitable institutions, it was urged with some propriety that they were *local*, and should be supported by their respective counties, and not become a charge upon the whole State. It is true that some portions of the State have received large sums of money for the support of the poor, while others have never received a cent; and although I would not applaud pennriousness in regard to the charities of the State, I would have a joint and equal distribution of all the money raised by a general tax. The withholding of these appropriations may serve to awaken the public mind as to the influences usually brought to bear, to secure or defeat appropriations from the Treasury.

But I am free to denounce the act of abstracting funds from the public purse to pay the members for their long recess. It is to be hoped that the majority will refuse to accept it. I am assured that very many will not become parties to this base transaction. Still, the impression that it is *right* to cheat the Government has been so long entertained, I fear that many will yield to the temptation thus placed before them. But how are these enormous expenses to be paid? By a tax on the people, of course. A law was passed the last day of the session, increasing the State tax for the ensuing year to *one mill on a dollar*, and for the year following *three-fourths of a mill*. This, under the present system of valuation, is no light burthen on the industry of the commonwealth.

The closing scene in the Assembly was one of the most disgraceful transactions that ever occurred in a legislative body. The usual complimentary resolution to the presiding officer was introduced, and the Speaker left the chair to allow the House to consider it. This resolution was stoutly opposed, and a member from Orleans county (Gen. BURROUGHS,) was proceeding to comment on the partiality, &c., of the Chair, during both sessions. His remarks were very pointed and disrespectful to the Chair and to the majority of the House. During his speech, the Speaker resumed his place, and called the gentleman to order. Gen. B. very reluctantly took his seat, and on an appeal to the House, he was *not* allowed to proceed. At this point, a member moved the *previous question*, which was the resolution of thanks to the Speaker. Another moved to lay the previous question on the table, and on this the *ayes* and *noes* were called, which consumed the time till 6 o'clock, the hour for adjournment. So the vote of thanks was withheld, and the Speaker proceeded to deliver his parting address, in which he thanked them for their *intended* compliment, and also retorted in a very severe and caustic manner on those who had attacked him. At the conclusion of the address, he declared the Assembly adjourned *sine die*.

Thus ended this remarkable "Extra Session" of the Legislature. In reviewing the matter, there is reason to congratulate them on some good done. The canals are to be enlarged, and the whole subject of internal improvement placed above party considerations. The examination into the official conduct of certain officers, will probably stimulate to a more faithful discharge of duty in the future. They have passed an immense number of bills, and although most of these are of a local character, many are of great utility. The Temperance bill failed by a very small majority. The *ayes* and *noes* are published for the reference of the various constituencies. Bills were passed incorporating companies to build a Railroad to the Pacific, and a Ship Canal at Niagara, corresponding to the Welland Canal on the Canada side. An attempt was made to incorporate companies for Canal navigation, but it failed. Joint resolutions have also been passed proposing an amendment to the Constitutiou, for promoting the purity of elections. This is a much-needed change. Still, while I would say thus much in their praise, I cannot say that all could not have been accomplished at the regular session, if the desire to promote the public good, had taken the place of private malice and party strife.

The Court for the trial of the case of impeachment, has been summoned to meet Wednesday, July 27. It is to be conducted on the part of the Assembly by the following committee of managers:—Messrs. LOOMIS, CHAPLIN, NOBLE, MCBURNEY, HASTINGS and WOOD. DANIEL S. DICKINSON and CHARLES O'CONNOR are said to be the counsel for the defendant. How long it will take to complete the trial, or what will be its result, is to be determined by future circumstances.

And now, for a brief period, I bid farewell to this political arena, and hie me away to my rural retreat, there to quaff the refreshing breezes of heaven, to roam over forest and field — to regale my senses with Nature's perfections, and thus restore my relaxed energies. But I shall not forget the RURAL. No! I love its pages too well,—and my regard for its many readers will prompt me to attempt now and then a sketch of current events and reflections for their perusal.

*OWE.*

### The Wool Market.

WE are often questioned in regard to the wool market, and some persons have gone so far as to modestly insinuate that the RURAL, being in the interest of farmers and producers, rather than manufacturers and consumers, has given prominence to the idea that wool would command a good price, and that high prices would be well maintained. To our constant readers it can hardly be necessary to say that, while we have for some months past maintained that wool would command a good price, we have advised farmers to sell as soon as a remunerating price could be obtained, and not themselves become holders in the hope of realizing very high prices. They will also bear us witness that we predicted a falling off in prices after the first and important purchases had been made, but that ultimately the highest prices paid in the spring would be fully sustained. We do not claim to speak by authority, or have better sources of information than others whose attention has been given to the subject.

It is a peculiarity of the American dealer, to engage in the purchase of any commodity which promises to pay well,— consequently many individuals of small means have purchased wool from farmers, expecting to sell it at an advance. They are unable to hold it longer than the time when their notes mature, upon which the funds for its purchase were obtained, and are forced to sell whether at a profit or loss. Large operators having means understand this, and operate, if at all, to keep prices down, or are not anxious to buy until the amount of wool thus forced upon the market, is offered for sale at a figure that suits their notions. After these sales have been made, and the wool reached the hands of men of capital, we look for an advance. To show that these transfers are now going on, we need only refer to the following information, which we cut from the Cleveland Daily Herald of the 22d inst:

"Since our last quotation wool has evidently declined from two to three cents per lb. Most of the large operators have supplied themselves with the amount they wished to purchase at the high rates, consequently there are a large number of lots held by country merchants who are anxious to realize on the same, and would sell at 40c for common to ¼ blood; ¼ to ½ do. 42@45c; ½ to ¾ do. 45@52. Some extra lots are held at 53c. The largest porportion of the wool has gone forward, and is now freely arriving. We have been shown a number of letters from merchants in the interior, soliciting offers for their wool now on hand, from 10 to 15,000 lbs., stating that they are desirous of realizing, and asking for best offers, giving a description of the wool and amount held by them, and from these circumstances we are of the opinion that there is a large amount of wool yet in the hands of farmers and country dealers, which is yet to come into market. Freight on wool has continued steady at 58@60 to Albany, and 68@70 to New York, and we have noticed a large amount of wool passing through our city designed for Utica market and manufacturers."

THE WOMEN IN ARMS.—In Jamestown, Chatauque county, N. Y., recently, the wife of an intemperate man went to the groggery where her husband procured liquor, and commenced an onslaught on the decanters, glasses, &c., demolishing a large amount of property. She was ably seconded by a female friend, one Miss Gertrude Salisbury, who was subsequently arrested by the groggery keeper, and discharged by a jury.

RUSSIA AND TURKEY.—The New York Tribune says:—"We learn that the Democratic leaders in Europe, Kossuth and Mazzini, do not expect any immediate pursuance of hostilities. They regard war as ultimately certain, or at least as highly probable, but not as likely to begin before next spring. In forming this opinion they have access to good sources of information, and we shall soon now be able to judge positively of its correctness"

GREAT FIRE IN AUBURN.—On Sunday night a fire broke out in a machine shop of the N. Y. C. Railroad. Before the alarm was given the building was in a mass of flames. Before the engines arrived, several buildings were on fire. The large machine shop, together with the round engine house and a blacksmith shop, were burned to the ground. Supposed to be the work of an incendiary.

CATTLE FOR THE EAST.—The receipts of cattle at this port have recently been very large. On Wednesday night the freight train on the Central Road consisted of thirty-one cars laden with cattle. On Thursday twenty-two cars, and on Friday twenty-six cars went down similarly freighted A large number have also passed during the same time over the Buffalo and New York City Road. —*Buffalo Advertiser*, 16th.

WHEAT IN RICHMOND, VA.—The millers are giving $1,10 to $1,15 cash, and $1,20@$1,25 at four months, we hear, for some of the crops. Many farmers fear to sell at these prices, hoping that foreign advices may bring news of an advance; while the millers conceive that they are quite as high as the existing demand will justify.—*Richmond Whig*.

OHIO.—Hon. Wm. Medill was inaugurated as Governor of Ohio, on the 13th instant. He was elected to the office of Lieutenant Governor, and is now Governor under the Constitution, Governor Wood having resigned to take an office abroad conferred by the President. Mr. Medill is the Democratic candidate for Governor for the fall election.

## News Brebities.

—— Vergennes, the only city in Vermont, has but 1,500 inhabitants.

——The yellow fever is raging at New Orleans, many deaths occurring daily.

—— The ladies at Saratoga "wear their shoulders bare to the lower edge of decorum."

—— It is said J. W. Forney is to be the editor of a new democratic paper in Washington.

——A second trial to elect a Mayor in Newport, R. I., on Wednesday, resulted in no choice.

—— Levi Wyman, of Landgrove, Vt., recently died from the effects of having a tooth extracted.

——Archibald Campbell, Esq., for some twenty years Deputy Secretary of State, has resigned that office.

—— The "Lantern," the American rival of "Punch," after flaring through a short existence, has died out.

—— Commodore Shubrick, who is to command the fishing squadron, arrived at Portsmouth on the 18th inst.

—— The estimated expense of completing and stocking the Pittsburg and Steubenbille railroad is $1,500,000.

—— A new flouring mill, with fifteen run of stone, has just been completed within fifty miles of San Francisco.

—— There are 700 working tailors' associations in England, the members of which are partners in labors and in profits.

—— The Kaffirs at the Cape of Good Hope are much pleased with Colt's revolvers. They call them "God's pistols!"

—— Mr. Wm. C. Ruttan, of Hamilton, C. W., has invented a rifle, which is expected to carry one mile and hit the mark.

—— John Butterfield, Esq., of Utica, has been appointed President of the New York and Buffalo Telegraph Company.

—— The yellow fever continues to prevail to a considerable extent in New Orleans, the deaths for two days reaching sixty.

—— The anniversary of the West India emancipation, the first day of August, is to be celebrated at Springborough, Ohio.

—— Mrs. Robinson, who is in jail in Troy for poisoning two persons, undertook to poison herself the other day, but failed.

—— Cholera is said to be raging very fatally among the boatmen on the Chesapeake and Ohio Canal, above Harper's Ferry.

—— The "Potter's Field" of Naples is a large pit, into which the naked bodies of the friendless poor are indiscriminately tumbled.

——A writer in the Medical Examiner for July, states that choloform has been used in several cases of tetanus with perfect success.

——The total valuation of property at Portland, Me., is estimated at $17,658,612—an increase of $1,287,913 over last year.

——The St. Augustine (Fla.) Ancient City says beef is sold at that market, at 3 cents per pound, and 4 cents for choice pieces.

—— Between sixty and seventy thousand acres of land have been entered at the Sault St. Marie Land Office within eight weeks past.

—— Hon. Phillip Allen, Governor of Rhode Island, has resigned, having been elected Senator in the Congress of the United States.

——A Dr. Miller and Mrs. Jones murdered the husband of the latter at Montgomery, Ala., on the 15th, and the Doctor has since fled.

——A physician at Allentown, Pa., administered chloroform to a rattlesnake with thirteen rattles, and then extracted three of his teeth.

—— The Portland Advertiser says that another slight shock of an earthquake was felt in that city between 4 and 5 o'clock on Wednesday afternoon.

—— The great Iron Railroad bridge across the Monongahela river, about one mile above Fairmont, Va., was completed last week. It is stated that it cost $496,000.

—— The great hail storm which passed over a portion of Seneca county, last week, proved very severe as far east as Madison county, and did great damage to crops.

—— The Oswego Palladium understands that Hon. Gerrit Smith has just made a donation of $25,000 to the city of Oswego, for the purpose of establishing a public library.

—— The Boston and Worcester Railroad Company, advertise that hereafter no passengers will be taken by the Sunday night train. The train will consist of a mail car only.

—— The total value of India rubber goods manufactured in the United States is estimated at ten millions annually, and nearly the whole trade has sprung up since 1844.

—— Richard Taylor, second chief of the Cherokee Nation, died in Arkansas on the 19th ult. He was captain of a company of Cherokees under Gen. Jackson, in the Creek war.

—— The Governor and Legislature of Massachusetts have unanimously given one day's pay, amounting to nearly $500, towards the completion of the Washington Monument.

—— The amount received for duties on Thursday last, at the New York Custom House, was $348,000—which is said to be larger than was ever before received in one day at that port.

—— Something like 40 bills of indictment have been found by the Grand Jury of the U. S. Circuit Court in Michigan, against parties engaged in depredating upon the Government timber lands.

—— An insane woman, Mrs. Kerby, some time ago, threw herself from a window in the Pennsylvania Hospital, Pittsburg, and the shock of the fall has had the effect of restoring her reason.

—— The Warsaw New Yorker says Mrs. Alvah Baker, of Wethersfield, in a supposed fit of insanity, killed her child, two weeks old, by cutting its head nearly off, and then killed herself in the same manner.

—— The people of Erie are determined that the guage of the railroad track thro' that city and county shall not be changed. If it is attempted, the proper officer has been ordered to remove the rails forthwith.

—— It is proposed in New York to open the Crystal Palace, Sundays, so as to draw in the crowds that fill the groggeries surrounding the structure. Would it not do as well to shut up the groggeries first?

—— Mr. D. D. Page, of St. Louis, proposes to pay for a mile of the Pacific Railroad, yet to be graded and built, if any fifteen hundred persons will each pay for another mile. We are fearful that the others will be lacking.

—— Mr. Beebe, of the Baptist Register, announces the "name of Prof. Andrew Ten Brocck, as an equal proprietor with himself in the New York Baptist Register, and an equal participant in its editorial labors and responsibilities."

# Foreign Intelligence.

## Arrival of the Arctic.

### HIGHLY IMPORTANT FROM EUROPE.

The Arctic from Liverpool at 1 o'clock P. M. Wednesday, 13th, arrived at New York at 6½ P. M. on Saturday last.

The Asia arrived out at Liverpool at 5 A. M. on the 10th.

Cotton.—Business at Liverpool unchanged; sales on an average scale. The sales for three days reach 30,000; 2,000 on speculation, 4,000 for export.

Breadstuffs.—The improved prospects of the French harvest and the more quiet tone of the London and inland markets have depressed Liverpool transaction and the market is quiet, with a further decline of 6d als in flour and 1da2d in wheat. Some sales of Indian corn at previous rates; yellow rather dearer.

McMacon quotes western canal flour at 26 6da27s; wheat, red and mixed 7s4da7s9d, white 7s7da8s.

Provisions.—McHenry quotes bacon moving freely without improvement; shoulders quiet; beef and pork show no amendment. Cheese saleable; lard steady at the recent advance.

Money.—English funds without alteration.—Consuls closed on the 12th for money and account at 97 7/8 98.

The news is full of interest.

The Arctic brings 149 passengers, among them Gen. Herrera, late Minister from Peru to Rome, T. F. Meagher, Jacob Abbot, Gov. Johnson, &c.

The latest from the London Times is of the 13th.

The French Minister of War is asserted to have addressed the Chamber of Commerce at Nantes, on the Turkish question in the following strain: We are not bent on making war, but if the Emperor, to whom the honor of his government is dearer than all, should think that the national honor exacts a war, he will certainly not recoil from the necessity.

The Paris Bourse was dull on Tuesday.

Vienna, July 11.—The troops are about to be concentrated near Petenbardeen, for the prosecution of the frontier.

It is said that the Porte will publish a proclamation in reply to the Emperor of Russia, setting forth the injustice suffered from Russia for above a century by the Danubian Principalities.

The Divan of Moldavia met at Jassy on the 21st of June. The first act was to vote an address of devotion to the Czar. An army of 80,000 Russians is to occupy the Principalities.—Contracts for rations have been concluded for nine months.

Advices from Smyrna, of the 29th, state that the Captain of an American frigate has laid his vessel close to the Austrian brig, on board of which the Hungarian Colonel Costa is imprisoned. The American Captain has declared that he will oppose the removal of the prisoner to Trieste.

The U. S. Minister claims Costa on a plea that he is an American citizen.

Count Messelrode has issued a new circular, more impudent than the last, claiming that Russia occupies the Principalities because the French and English fleets occupy Turkish waters, and hints not clearly that Russia will refuse conciliation until the fleets are withdrawn, expressing, however, Russia's willingness to vacate the Principalities when her demands are fully granted.—This note had partially opened the eyes of the European public, who see the necessity of bringing the matter to a settlement in one way or another.

Russia's object being merely to gain time and render her position impregnable, scarcely admitting the possibility of war.

Public opinion begins to press for something decided, and the public are continually amused by despatches of a pacific tendency: the last implying that France and England had last week forwarded to St. Petersburgh a moderate note of concessions on both sides, to end the matter, and an answer was expected about a week from July 11. Until received, this is mere conjecture, and the Bourse keeps pretty firm, which is a good sign.

The plot against Napoleon's life, at the Opera, is more serious than first supposed. The conspiracy had been unravelled, and the prisoners were on trial.

The report of the silk crop in parts of France was received with anxiety, but it was not yet suffering. Other crops again promise well.

The public is warned by advertisements against spurious Spanish bonds. The Grand Duke of Weimer is dead. Father Brecks, a Belgian, has been elected a General of the Jesuits.

The following is highly important, if authentic: Mr. Breck, the Austrian Envoy, instead of a conciliatory mission to Constantinople, has made an imperative demand on Turkey for the concession previously refused to Leinengen's mission.

In the riot at Smyrna, resulting from the arrest of M. Costa, Kossuth's emissary, the Capt. of the U. S. Frigate St. Louis, behaved gallantly. He demanded to have the prisoner delivered up to the United States, and would have taken possession of Costa by force, had he established any claim to the U. S. protection.

In consequence of the row, Austria demanded and received from Turkey satisfaction for the insult, and the Governor of Smyrna was discharged.

The American Commander's conduct excites admiration.

# California News,

## Arrival of the Northern Light.

New York, July 25—3 P. M.

The steamer Northern Light, from San Juan, arrived at 5 o'clock this morning. She brings 500 passengers and $389,000 in dust brought down by the Siera Nevada.

The Siera Nevada left San Juan July 1st. The Northern Light was struck by lightning July 19th, near Cape Antouio, which split the main masts, but injured no one. Among her passengers are Frederic O'Donohue, the Irish exile, recently escaped from Van Dieman's Land, and Judge Ralston, from Sacramento.

At midnight, July 19, off Acapulco, Dr. Carroll, a passenger on the Siera Nevada, fell overboard and was drowned.

The steamer Oregon left San Francisco for Oregon, July 1, with $1,650,000 in dust.

The town of Rough and Ready was nearly destroyed by fire. Only fifteen buildings were left standing. All the stroes except one, are consumed.

Reports from the mining districts from all directions, represent a state of unequalled prosperity.

Shasta City was destroyed by fire on the 16th of June. Everything remaining from the former fire is swept away. Loss $500,000.

Col. Colier, formerly Collector of San Francisco, has been indicted before the U. S. Court for feloniously using the Government funds.

The crops over the State still promise well.

We notice the death of John McCann, aged 45 years, from Cape Vincent, Jefferson county.

A duel was fought at Marysville, between Col. Rusk, editor of the Examiner, and Judge Stedger, of the Herald. The latter was slightly wounded.

Gold has been found on the Santian river.

The steamer J. L. Stevens arrived at San Francisco on the 18th ult., and the Panama the 29th.

U. S. Transport Fredonia, Lieut Chatard, arrived on the 19th from New York, with two companies of artillery.

San Francisco, June 30th.—There has been a moderate business with a slight improvement in goods. In consequence of a large number of arrivals from the Eastern States, the demand is mainly from day to day, and chiefly confined to leading articles for consumption. The dullest of the week's sales on flour to jobbers is $11,25@11,50 for city packed.

Sales of 1,000 bbls. Haxwell to arrive per Witchcraft, was made at $14.50. Large speculation sales of China rice at 4½ cents, are reported.

Mortality among Fish.—Yesterday the basin along Light-street was swarmed with millions of small dead fish, known as minnows, and the number was being constantly increased by the incoming tide. The effluvia arising from them was anything but pleasant. Various reasons are assigned for the mortality among them, some contending that it was caused by the lightning on Friday evening, while others allege that it is the the effect of the excessive heat of the weather.—*Baltimore Sun.*

# Market Intelligence.

Rural New-Yorker Office,
Rochester, July 27, 1853.

Farmers are still busy finishing up the harvest. Very little wheat has been threshed, consequently the offerings at market are light with little animation among buyers.

Grain—Very little wheat is offered. Small parcels are taken at $1,12@1.13. Dealers are waiting to observe the indications from abroad. In other grains no change.

Hay—New hay comes in to meet the demand and sells at $8 to $10.

Potatoes—We observe new and small potatoes selling at six to seven shillings per bushel.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, July 25.

Flour—Scarce—fair demand for Western and State—demand fair for export—prices are 6¼c easier for the lower grades. Canadian quiet at $5.06@5.12. Sales Western Canal at $5 for fresh ground State—$5,87@5,12 for mixed to fancy Michigan, Indiana and Wisconsin.

Grain—Wheat supply exceeds demand—prices 2 cents lower—rather unsteady at the close. Sales good to prime white Canadian at $1,20@1,21—good Genesee at $1,33—do. Ohio at $1,27—we note a sample of new Genesee—the first of the season—quality is superior.

Rye quiet at 77@78c.

Oats firm at 44@46c for Western and State.

Corn hardly so firm—mixed and Western more plenty. Sales at 67@68c for unsound—69@70c for round yellow—71@72c for Southern yellow—latter is scarce and nominal.

Provisions—Pork firm and demand fair—sales of mess, $15,81—prime quiet at $12.87@13. Beef—fair demand—$9@10 for country mess—$12@12,75 for city mess and repacked Chicago. Cut meats unchanged.

Lard firm at 10¾@11½c.

Butter and cheese unchanged.

## ALBANY MARKET.

Albany, July 25.—Trade moderate but steady. The receipts of Grain limited, and of Flour quite moderate.

Flour, &c.—A dull and quiet market for Western and State Flour. The home trade are buying quite sparingly, and only for the supply of immediate wants. For the east and the river towns there is little doing. Fancy Genesee $5,25@5,50; extra Ohio, Indiana and Michigan $5,25@5.50: extra Genesee $5,75@6,25.

Grain—The demand for wheat is fair for the east and for city milling, with very light receipts. A sale of very handsome, new, white Genesee (Onondaga county,) at $1,32. Corn is without material change in value, and is not plenty. The demand is fair, at 69½c. for Western mixed and 70c. for round yellow. Oats are in active request, and the market is steady with an increased supply. Sales good State, to arrive soon, at 47½c.; fair do., on the spot, at 47c.

Feed—A firm market. Sales at 15c. for 19 and 16c. for 20 lbs. Feed.

## BUFFALO MARKET.

Buffalo, July 25.—The market is dull and quiet this morning for flour and wheat. The sales of flour are made in small lots and at prices which do not vary from last week's quotations—Ohio sold at $4,62½, and small parcels of extra at $4,75. In wheat we here of no transactions except in mixed Ohio at $1,00½c.

Corn is in fair demand and held above buyers views.—Sales at 61½c.

Oats in demand and firm. Sales at 35c, not a prime sample, and sound at 37c.

Canal freights easy at former rates, and boats plenty.

## NEW YORK CATTLE MARKET.

NEW YORK, July 18.—At Washington Drove Yard—The ceremonies incident to the inauguration of the Crystal Palace, had the effect to slacken business towards the end of the week. The whole number of Cattle offered was 2,500, of which some 200 head were left unsold.—Prices firm at from 8@9½c per lb; market closes dull.—A lot of 13 were taken to the Brighton market.

At Browning's—Offered 80 Cows and Calves. All sold at from $22,50 to $38@55.

Sheep and Lambs—Plenty.—7,800 in market. Prices of Sheep, $2,25@5,50. Lambs—from $1,75 to 3,50@4.50.—500 left over. A few extra sheep brought from $7@10.—Market closed dull.

At Chamberlain's—Offered 200 Beef Cattle; prices ranging from 7@9c.

60 Cows and Calves, and sales at $25@35 to 50.

Also 4,200 Sheep and Lambs offered; all sold at $2,25@3,50 to $5; for Sheep extra $6,25; and $3@3,25 to $4,50 for Lambs.

## ALBANY CATTLE MARKET.

ALBANY, July 25.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—600 at market. Prices—Extra, $7,50; 1st quality, $7@6.50; 3d do, $6.

Cows and Calves—22 in market. Prices from $30@35 to 37@40.

Sheep and Lambs—1,850 in market. Prices—Lambs ranged at $2,50, 2,75, 3, 3,25@3,50; Sheep ranged at $2,50, 2,75, 3, 3,50@4.

## CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, July 20.—At market, 1,030 Cattle, about 800 Beeves, and 230 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7,50 per cwt.; 1st quality, $7,25; 2d do, $6,75@7,00; 3d do, $6,50; ordinary, $5,00@6,25.

Hides—$5,75@6 per cwt.

Tallow—$7@7,50 per cwt.

Pelts—75c@1,00.

Calf Skins 11c per lb, quick.

Barreling Cattle—None.

Veal Calves—270 at market, quality good, and sales quick at $5, 8@12.

Stores—Working Oxen—$96, 104, 112, 127, 140 to 162.

Cows and Calves—$22, 27, 31, 34, 39, 41 to 58.

Yearlings—$10, 11@12,50.

Two years old—$24, 27, 30, 32, 35@39.

Three years old—$39, 40, 45, 48@67.

Sheep and Lambs—3,504 at market.

Extra, $4, 4½, 5@7.

By lot—$2,50, 2, 3 to 3,50.

Swine—None.

## BRIGHTON CATTLE MARKET.

BRIGHTON, July 21.—At market 1,050 Beef Cattle, 30 pairs Working Oxen, 60 Cows and Calves, 4,850 Sheep and 750 Swine.

Prices—Beef Cattle—More than a supply was offered, and prices have declined. We quote extra. $7.50; 1st quality $6,50@6,75: 2d do. $6@6.50; 3d do. $5@5,75.

Working Oxen—Sales $75, 88, 92, 110, 125@130.

Cows and Calves—Sales $24, 27, 31, 33, 37, 40@45.

Sheep and Lambs—Sales of small lots at $2,75, 3, 3,25, 3,50, 4 and $5.

Swine—Still hogs 6 1-16; shoats 7@8; spring pigs 8½. At retail, from 7½ to 9½c.

## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, July 21.—The offerings at Washington Drove Yard during the past week comprised 1,960 head of Beef Cattle, 500 head of which were driven to New York: 350 Cows and Calves; 800 Hogs, and 1,500 Sheep and Lambs.

Prices—The sales of Beef Cattle were larger this week than they have been for some time past, all having been disposed of at $8 to 9,50 ₱ 100 lbs.

Cows and Calves—Sales of good milch cows at $18@35: springers $14@25, and dry cows $7@13.

Hogs were in good demand. Sales at $6½@7c ₱ lbs.

Sheep and Lambs—There is no change to notice. Sales at $2 to $6 each, as in quality.

# Marriages.

In Trinity Church, Plattsburgh, on the 16th inst., by the Rev. J. H. Colt, ARTHUR C. NELSON, Esq., Editor of the Northern Gazette, and Miss JANE E., eldest daughter of Col A. G. Tarleton, of Plattsburgh.

## ROCHESTER NEWSPAPERS.

THE ROCHESTER DAILY DEMOCRAT.

TRI-WEEKLY DEMOCRAT.

THE MONROE DEMOCRAT.

It affords us pleasure to say to our friends that the generous patronage bestowed upon our Journal by the Whigs of Western New York, and business men generally, has been constantly increasing, and within four years the circulation of the Democrat has been more than doubled.—Of all the movements of the day, political, moral and social, we shall keep our readers duly advised. Our facilities for publishing a newspaper of the first class are much superior to those which we have heretofore possessed, and no labor on the part of publishers or editors will be spared to render the Democrat worthy the extended patronage which has made it the leading Journal as regards circulation in this section of the State.

The Daily Democrat will at all times present reliable extracts of the news of the day, and always keep its readers fully up to the news of the latest moment. The Daily is one of the largest newspapers west of New York city.—It is furnished at $8 per annum to city subscribers, and will be sent by mail for $6, *invariably in advance*, or $8 if payment is delayed to the close of the year.

The Tri-Weekly Democrat is issued three times each week, and contains all the matter published in the inner pages of the Daily edition, and will be afforded at $4 per year, *in advance*.

The Monroe Democrat, one of the best weekly newspapers in Western New York, and among the largest in State or Union, is printed on good paper and fair type, and sent by mail to any part of the country for $2 per year, payable in advance. A large reduction made to those who take in clubs.

## FOR SALE.

A VALUABLE FARM OF 163 ACRES, four miles north-west of Weedsport, (a good market on the Erie Canal,) and 3½ from the Rochester and Syracuse Railroad. Said farm has 130 acres improved and in a good state of cultivation, and is well situated for two farms if desirable, as there is 2 houses, 2 barns, 2 orchards of a good variety of fruit; and a fine timbered lot on each end of the farm. Fifty acres seeded to clover and timothy, and thirty intended for wheat this fall.

Price $60 per acre. For further particulars address or apply to the subscriber on the premises.

JACOB EAKER.
Conquest, Cayuga Co., N. Y., July, 1853. 187-2t*

SUFFOLK AND ESSEX PIGS.

Pure breed, for sale by EBEN WIGHT,
Boston, Mass.,
187-2t or B. F. KEYES, Dedham, Mass.

TO BOOKBINDERS.—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,

F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

**Hickok's Patent Improved Cider Mill and Press.**

WE have been appointed sole agents for the sale of this Mill and Press in the city of New York. This is the most approved mill now in use. Catalogues, with description and drawing will be forwarded by addressing us post-paid. Price $40. LONGETT & GRIFFING,
187-3t 25 Cliff St., New York

SPRING CHICKENS, HATCHED LAST March, of the following choice and valuable breeds: Brahma Pootras, Buff, Black and Grey Shanghais; Royal Cochin Chinas, Malays, and Great Javas. The subscriber has a fine lot of each of the above for sale at very reasonable prices, warranted to be purely bred, and as large and fine as, for their age, any in America. Address, J. W. Platt, Box 128 post-office, Rhinebeck, N. Y. 187-1t*

## AUCTION SALE OF Durham Cattle and Blood Horses.

THE Subscribers having disposed of the Hartford Farm, will offer at Auction, their entire herd of Blood Stock, on said premises, 1½ miles north of Avon, Livingston Co., N. Y., on Thursday, the 1st day of September next.

The above herd includes the noted bull "Defiance," who has proved himself one of the best stock getters in the State,—"Yoonondeo," a very fine thorough-bred bull, sired by "Splendor," his dam the imported cow "Lady Morris;" 6 thorough-bred Cows, sired by "Splendor," "Oregon," "Currency," and "Defiance; 10 two year old Heifers, sired by "Racket" and "Splendor;" 17 yearling Heifers, all sired by "Racket" and "Yoonondeo;" one fine red cow, sired by "Red Jacket" from an imported Devon cow; 6 Bull Calves, by "Defiance" and "Racket." Also the following blood Horses:—2 brood Mares and their colts; 2 fine three year old mares; 4 two year old colts, and one yearling—all bred from the best stock in this country.

For further information apply to or address the subscribers. DAVID BROOKS & SON.
July, 1853. 185-6tn1w* Avon, Liv. Co., N. Y.

*Decidedly the best and Cheapest Poultry Book in the Union.*

NOW READY,

## MINER'S DOMESTIC POULTRY BOOK.

ORDERS received for over Two Thousand copies of this book in advance of its publication, which is unprecedented in the sale of any work ever issued on this subject.

This is an entirely new work, and one of the most valuable books for practical uses that has ever been published. In preparing it, the main object was to study the *actual wants* of the Fowl-breeder, more than their fancy notions, besides containing full directions for Breeding, Raising, and keeping the several kinds that come under consideration; when and how originated; a large number of cuts from life, of some of the best breeds in the country; prices at which they are selling in the market; together with such other matter as was thought necessary. The varieties at present are so great, that a book published five years ago, is now behind the age. This work contains a vast amount of new and useful matter, and in the number of its illustrations, great amount of practical matter, and its fine typographical execution, is ahead of any other work on Poultry ever published. The book contains

Over One Hundred and Thirty Fine Portraits!

of the most perfect specimens of newly imported and native breeds of fowls, and other cuts which have cost from $700 to $800,—being double the number found in any similar book, while the price is only one half as much.—The names of all the new and imported breeds are given, so that any person being at all interested in them, can here find their full description, origin, &c., &c. Recollect

ONLY FIFTY CENTS,

for the most complete book on Poultry ever published.

Dr. J. C. Bennett, of Fort des Moines, Iowa, formerly of Great Falls, N. H., author of "A Poultry Book," and one of the most extensive breeders of Poultry in this country, to whom the proof sheets were shown, writes:

"No book ever published will *compare* with yours, as to *splendid and life-like engravings*, and it will unquestionably be the best book published on the subject, and will sell in preference to any other work. *It will receive my untiring energy for its sale all over the United States*, and I have no doubt its sale will reach 50,000 copies the first year."

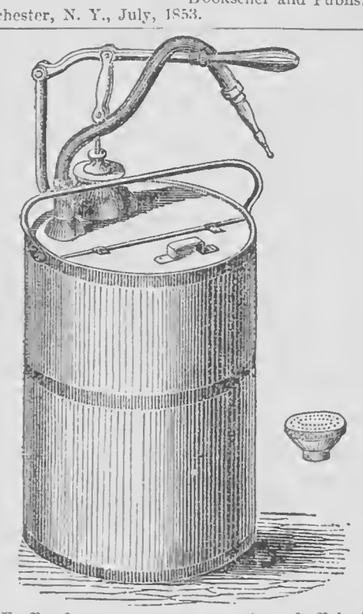
As it is expected this work will have a very extensive sale, it will be an object for book dealers, pedlers, agents, and others, to make early application.

The book is handsomely printed, on good paper, 12 mo. size, contains 256 pages, and sold at the low price of 50 cents paper, and 75 cents in full cloth binding. Those wanting books sent to their address will send in their orders early.

Books sent by mail to any part of the Union on receipt of the following:

For one copy, in paper, ..... 50 cts., cloth 75 cts.
" two copies do. ..... $1.00, " $1,38
" three do. do. ..... 1,25, " 2,00
" four do. do. ..... 1,50, " 2,50

Books sold to pedlers, agents, and others, at reduced prices. Address, post-paid, GEO. W. FISHER,
Bookseller and Publisher.
Rochester, N. Y., July, 1853.



WE offer for sale the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union. WM. G. CREAMER & CO.,
Plumbers and Hydraulic Engineers, 64 State street, New Haven, Conn., and 4th Avenue cor. 9th St., New York. 185-8t.

## SUPERPHOSPHATE OF LIME.

THE undersigned continue sole agents for the sale of Deburgs Superphosphate of Lime, which has proven superior to all other brands, now in the market. Having sold nearly Three Hundred Tons this spring, and heard from a majority who have used it, they pronounce it equal to Guano in its effects, and is more lasting in the soil. As there are many substances called Superphosphate of Lime now offering in this market, which are of a different nature, to avoid impositions purchasers would do well by applying direct to the agency for their supply.

LONGETT & GRIFFING,
184-8w. No. 25 Cliff Street, New York.

## GREAT STOCK SALE.

### Short-horn and Durham Cattle, and South-down Sheep.

ON Wednesday, the 7th day of September next, at one o'clock, P. M., I will sell, at my farm on Grand Island, six miles below Buffalo, about 30 full bred Short-horns, a few Devons, and about 30 high grade Short-horn and Devon Cattle, consisting of Cows, Heifers and Young Bulls.

The young Short-horns are chiefly the get of my imported bull Duke of Exeter (10,152)—a bull not exceeded, as a fine stock getter, by any other in the U. States.

The young Devons are the get of the bulls Candy and Quartley, both imported by Mr. Stevens. The superior of these bulls in blood, style and breeding, is not to be found. Quartley is my present stock bull.

I will offer at the same time 50 pure bred South-Down Sheep-rams and ewes. Also a few Middlesex pigs—both sheep and pigs the direct get of imported sires, from dams descended from late importations.

Catalogues will be ready by the first of August, and will be sent on application to me, by mail.

Terms:—All sums of $100, and less, cash. For larger sums, approved notes at four months, with interest, payable at Bank, will be received, if preferred.

A steamboat will carry all persons wishing to attend, across the ferry from Lower Black Rock to the farm, at 10 o'clock on the morning of the day of sale. The stock can be viewed at any time previous, by calling on me at my residence in this place. LEWIS F. ALLEN.
Black Rock, N. Y., June 15, 1853. 182-10t

## GARDEN OR FIRE ENGINE.

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N. B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soap-suds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.
Seneca Falls, N. Y., June, 1853. 183w10

## S. W. DIBBLE,

*Dealer in Allen B. Wilson's Stitching Machine.*

OFFICE, No. 8 Smith's Arcade, Rochester. This Machine works on an entire new priciple, and is said by scientific judges to be THE BEST MACHINE EVER INVENTED FOR SEWING.

It is simple in its construction, not liable to get out of repair, and stitches the finest linen, cotton or woolen goods in a superior manner. Tailors, seampstresses, cap makers, dress makers, and shirt and collar manufacturers will find this to be the best Machine ever invented for their use. Single Machines or County and Town rights, for its exclusive use, for sale on such terms that the purchaser may be sure of a handsome return from the investment. 186-tf.

## SUFFOLK PIGS FOR SALE.

TWENTY PAIRS of pure bred Suffolk Pigs for sale by the subscriber. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country.

Address C. J. HOLDEN,
June, 1853. [186m3] Walpole, N. H.

*LABOR SAVED!*

## MUMMA'S PATENT CORN SHELLER.

THIS Sheller is pronounced by competent judges, to be superior to all others, as it is quite simple and durable in its construction, and shells the ear perfectly clean from end to end, with great rapidity and ease. It separates the cob from the corn, which is a very great advantage, and is adapted to either hand or horse power, and capable of shelling from 30 to 40 bushels per hour. It has shelled a bushel in a minute, by hand power. It runs as light, with one man to turn, as the common hand shellers. From the peculiar construction of the cylinder and springs, it will shell large and small ears perfectly clean at the same moment, of either new or old corn, an advantage not possessed by the multitude of shellers in general use.

This machine has met with the universal approbation of all classes of men wherever introduced. It was awarded the First Premium, a heavy SILVER MEDAL, at the great Fair of the Maryland Institute, held in Baltimore, October, 1850.

It also received the highest premium which was awarded at the great Agricultural State Fair of Pennsylvania, held at Harrisburg, October, 1851. Also, at the State Fair of Kentucky, in 1852.

From the great number of recommendations in its favor, we have room only for the following:

From the Hon. J. C. Dickey, Member of Congress, from Pennsylvania.

Washington City, March 3, 1851.

I take pleasure in certifying that I have on various occasions, seen in operation Mr. J. Mumma's Patent Corn Sheller, and that it appeared to me to shell much faster, and do the work cleaner and better than any machine of which I have any knowledge. JESSE C. DICKEY.

From J. W. Davies, Corn Merchant.

Baltimore, November 5, 1850.

Mr. E. Robinson—Sir: Having seen in operation Mr. J. Mumma's Patent Corn Sheller, I take pleasure in stating, that I consider it a superior sheller to any other now in use, as it leaves the corn *unbroken*, and consequently, more suitable for shipping or market. J. W. DAVIES.

From several Gentlemen, Practical Farmers of Pennsylvania, who have the machine in use.

We, the undersigned, after using Mumma's Patent Corn Sheller, can recommend it to the farming community as having been found equal in every respect to what it is represented to be. It is, indeed, a labor-saving invention, and therefore of incalculable benefit to those who may have use for such machines.

JOHN RUP, Dauphin County.
JOS. HUMMEL, " "
JOS. HERSHEY, " "
J. GARRET, Lebanon County.
G. MYERS, " "
BENJ. CHEW, Cumberland County.

From Messrs. Burk & Ovelman, Machinists.

Greencastle, Pa., June 1, 1853.

Mr. E. Robinson—Sir: We take pleasure in informing you that we have been making Mumma's Patent Corn Sheller, and find them ready sale. The farmers are better pleased with them than any other in use, and as for our part, we consider them much better than any we have ever made, and we have made almost all kinds.

BURK & OVELMAN.

From J. H. Hills, Esq., Practical Miller.

Vernon Village, N. Y., June 21, 1853.

This may certify, that I have seen in operation and examined a Corn Sheller, patented June 12, 1849, by Jacob Mumma, and that I consider it much the best of any with which I am acquainted. J. H. HILLS,
Vernon, Oneida Co., N. Y.

From Messrs. Cowing & Co., Garden Engine and Pump Manufacturers.

Seneca Falls, N. Y., July 2, 1853.

To whom it may Concern—We have made a brief examination of Mumma's Patent Corn Sheller, and we consider it better adapted for farmer's use than any machine of the kind we have ever seen. COWING & CO.

The subscriber having purchased the Patent right of the above Sheller for all the United States and Territories, will sell Township, County or State rights, on reasonable terms. E. ROBINSON.
Greencastle, Franklin Co., Pa., June, 1853.

## PREPARED SUPER PHOSPHATE OF LIME,

BY THE UNION CHEMICAL WORKS, L. I.

HOYT & CO., Agents,

*No. 234 Water Street, and 122 West St., corner of Dey St., NEW YORK.*

A Fertilizer of the most approved quality, producing all the immediate effect of the best Peruvian Guano, with the advantage of being much more lasting in the soil.—Thoroughly tested, and found to more than realise the expectations of all those who have already tried it. The best evidence of this is the largely increased demand this season over the past year. Put up in bags of 160 lbs; barrels 250 lbs each. Buyers will please be particular to observe our brand upon each bag or barrel.

Also for sale, American and Foreign Field and Garden Seeds. English Ray Grass, Foul Meadow Grass, fine mixed Lawn Grass, White Clover, Osage Orange, &c.
178m3i.

## ATKINS' SELF-RAKING REAPER.

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

## GARDEN AND FIELD SEEDS

*From the New Establishment of Van Zandt & Bowdish,*
No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. Hallock, No. 24 Exchange street, near the Clinton Hotel, Rochester, N. Y.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the Eastern Shakers, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.
Rochester, N. Y., 1853. 170m6.

## REAPING MACHINES.—IMPORTANT INJUNCTION.

JUDGE NELSON, of the Supreme Court of the U. S., granted at Cooperstown, on Friday, the 24th ult., an injunction against Seymour & Morgan, of Brockport, restraining them and their agents from disposing of their wheat Reapers as an infringment of my patent. Purchasers of machines make themselves liable to prosecution by using them. C. H. McCORMICK.

☞ Mr. McCormick has recently obtained a renewal of his patent, including the reel. Manny's Reaper is as decided an infringement of his patent—subjecting the manufacturer and purchaser of it to the same penalties.
June 29, 1853. 183tf.

## MARSHALL'S BOOK BINDERY,

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.
April, 1852. [122tf] F. H. MARSHALL.

## GENESEE PAPER MILLS.

CO-PARTNERSHIP NOTICE.—The subscribers having purchased the Genesee Paper Mills property, have this day formed a Co-partnership, under the name and firm of Adams, Huntington & Co., for the purpose of Manufacturing Printing Paper, and dealing at wholesale and retail in all kinds of Paper Stock. Office and Warehouse, No. 93 State street.

FRANCIS T. ADAMS, E. T. HUNTINGTON,
WILLIAM A. ADAMS, ALVAH STRONG,
ALBERT M. HASTINGS, D. D. T. MOORE.
Rochester, April 15, 1853.

## GREAT PRIZE MEDAL.

THE WORLD'S FAIR AT LONDON, awarded us a Mammoth Silver Medal for the Best Hats.—Gents wishing the Spring and Summer style, will call. We are prepared to serve you with a superior article, and of the most becoming style.

CLARK & GILMAN, 23 State St.,
[169-3m.] Rochester N. Y.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

# Poetical.

## WAIT AWHILE.

Cast a seed into the earth—
Wait awhile;
Cheer the little flow'ret's birth
With a smile;
Shelter it from wind and storm
Sweeping by;
No rude hand let it deform,
Lest it die.
In the summer it shall bloom,
Fragrant with a rich perfume,
All your care repaying.

Store with truth an infant's mind,
Wait awhile;
Greet the first fruits that you find
With a smile.
Bid it, with truth's flag unfurl'd,
Move apace;
In its battles with the world
Teach it grace;
Then, when youthful years have flown,
See the child to manhood grown,
God's whole law obeying.

## SONNET TO SUMMER.

BY J. G. SAXE.

O, balmy, breezy, beauteous, bounteous summer!
To men and women, little girls and boys,
To birds and beasts, thou bringest many joys;
And art indeed a truly welcome comer!
Now stroll in pastures green, fat sheep and cows,
Now vernal blades prepare for autumn sheaves,
And woods, (though stationary,) take their leaves,
And all politely make their prettiest boughs!
Now the blithe farmer in the early morn
With sturdy steps strides o'er the fallow field,
And plants, in hope that, though a while concealed,
The grateful Harvest may "confess the corn,"
And so return him from the fruitful mould,
His gift augmented by a hundred fold!

# Rural Sketch Book.

Written for Moore's Rural New-Yorker.

## JANE HARVEY'S INTRODUCTION.

BY MRS. S. WEBSTER LLOYD.

"William," said old Mr. Harvey to his favorite son one day as they sat on the stoop after dinner, "William can this nice lady-love of yours go into the kitchen and cook a hungry man a dinner? I am afraid she 'aint fit for a farmer's wife, boy. The girls now-a-days aint good for much to help a poor man live. Your mother and I are getting old, and we want to give up the farm to you,—but when you bring a wife here, don't expect she can sit in the parlor and play the piano, and have your old mother attend to the cooking and make the butter and cheese. I am sadly afraid the lady you have been talking about won't do for us plain folks. We have worked hard and want a good home in our old age, and very little comfort there will be if every thing about the house is left at sixes and sevens, while your lady wife sings and works muslin and does nothing else. I have been thinking that perhaps Thomas and Hannah had better come home again, and you and Jane go on the new farm. I did hope you would make up your mind to marry Phebe Smith."

"Phebe Smith," replied William; "why, father, she is the coarsest girl in all the town—a voice like a speaking trumpet, and an arm like a blacksmith."

"So your lady is handsome, too, is she, and accomplished. I wish she was rich as well, then you would not be dependent upon your old father's farm."

"Neither am I dependent now. I can get a living. I can teach a year or two, and with the means thus acquired together with the little I have now can find a home in a new country where homes are cheap. Jane expects I am poor; I have never told her I was to live at home, or even that I had a home, and she will not hesitate to share my log cabin, fine lady as you imagine her to be."

"Well, well, I wish I could see her. May be she could learn to manage the house work if she has a disposition to be useful, but I am afraid of these fancy articles. No, no, William, you mus'nt think of it; I know she went do. Thomas and Hannah will have to come home."

"But, father, Thomas' wife will never make your home pleasant and comfortable. She has a frotful, unhappy temper. God help you and mother if you are to spend the evening of your life with her."

"And Jane Harvey is all sweetness and sunshine, as young mens sweethearts usully are before marriage. A few years experience may tell you a different story as to her temper."

"A girl who has worked for three years to support a blind mother, cannot have an unkind heart, even though the work be music and embroidery. Perhaps she may not now be a skillful cook. I have no fears but that under mother's direction she will soon become an accomplished house-wife, a household slave I never intend her to be. I do not care so much for myself, well as I love the old home, but your and mothers old age ought to be quiet and peaceable, but with Thomas' wife for a mistress here that could never be the case."

The old gentleman thought for a few moments. He could not accuse William of unfairness, for four years before, Thomas, the eldest son, had brought a bride into his father's family, a bustling, scheming, hard-working woman, so intent upon adding to the very respectable sum of money which she brought her husband, as to care for little else. No matter how much comfort was sacrificed, so that money was laid up. No matter how much the body was worn, and the mind worried, if so be that all the odds and ends were saved. She was ambitious to be a good manager, but she thought very little whether she was a good wife, and after struggling on together for three years, the old gentleman had purchased another farm, to which Thomas had removed. To make sure of a good wife for William, old Mr. Turner had selected one himself, Phebe Smith. Very plain she was indeed, and very little like the beautiful, sweet-tempered Jane Harvey, whom William had selected for himself, while pedagoguing the preceding winter in a village some fifteen miles from home.

"William," said his father, raising his head suddenly, "you bring her here on trial."

"Bring her here on trial," exclaimed the now indignant son, "no indeed. I have not plead to be taken home on Jane's account, or my own; 'tis your and mother's happiness for which I fear, and you must decide for yourself. I shall come to make a permanent home here, or with the little means I can command, I shall go west in the spring, but I shall never take Thomas' farm and live within hearing distance of all the misery that would result from his coming home again."

"I wish I could only once see Jane Harvey," said the old gentleman.

"But you are not willing to take her on trust."

"I have suffered once from so doing."

"True, you have father, and I can scarcely blame you for your want of faith in my judgment."

"The best judgments err, when a handsome face is in the question. If you could only love Phebe Smith."

"But I don't love Phebe Smith, and I *do* love Jane Harvey, and so would you father, if you would throw aside your prejudices and consent to receive her as your daughter."

"Which I am afraid to do. I had rather trust Hannah, for an evil you know is less to be dreaded than one you know not; and William, a girl who gets her living by teaching music, may be kind hearted and amiable, but she will never learn to work,—so don't think any more of bringing your fine lady to be mistress here."

"Very well," said William, and the conference ended.

It will be proper now to proceed with the explanation that old Mr. Turner's abrupt proposal to come home on trial interrupted. Hannah Turner had not been pleased when she and her husband were expelled from the homestead. Scheming and calculating as she was, she had determined to be reinstated there, and the first step thereunto had been to set forth the virtues of her near neighbors daughter, Phebe, in such a light that the old gentleman had set his heart on having his youngest son marry her, which Hannah knew well William never would do, for beside his predilection for Miss Harvey, William was a young man of refinement and cultivation, and more than all, a connoisseur in female beauty. Hannah knew the tenacity with which the father clung to any project, and she rightly calculated that his failing to bring William to his views with regard to Miss Smith, would result in William's leaving home and Thomas' recall.—Beside, she did not fail to let her father know the occupation of William's intended bride, although she did not tell him what she had learned herself, that Jane Harvey's filial love had led her to toil in a farmers kitchen, that she might acquire the means to perfect herself in the science of music.

"She is a rare girl," said the clergyman, of whom Hannah inquired; "I know her before her father died. She always possessed superior musical talents, which she had just begun to cultivate when she and her mother were left penniless to battle with the world as best they might. Jane was only fourteen then; her mother was always feeble, and could barely support herself by doing plain sewing in families; but young as she then was, Jane Harvey resolved to complete by her own energy and exertion what her father began, and entering the well regulated farmer's kitchen of Esquire Fields, she labored for two years, laying up her earnings for future use, and obtaining a knowledge of household affairs that will make her a capital wife. Then she unfolded her plans to me. I had but a small salary, and could assist her only by making known her circumstances to Mason & Webb, of Boston, who consented to receive her for a year, which was extended to two, and resulted in her becoming an accomplished music teacher at the age of eighteen. Her mother about that time lost her sight, and Jane's success in teaching has enabled her to maintain them both comfortably and respectably."

Hannah winced under all this array of good qualities, and resolved to bring forward more assiduously the sterling virtues of Phebe Smith, all of which the old gentleman readily admitted,—but William somehow could never associate the neatness and order of the Smith tenement with the careless dress and general appearance of Phebe, nor separate the beautiful white bread and nice yellow butter his father praised so much, from Phebe's active, stirring mother. Besides, he had often been applied to by Phebe for books, and whenever he had furnished her a trashy, worthless love story the light in her chamber was observed to remain burning half the night. Then the yard that, according to Hannah, was under the especial charge of Phebe, had never assumed its tasteful appearance until Hugh McDonald, who was the son of a gentleman's gardener in the old country, had come to live with Mr. Smith,—and somehow William could not but suspect that Phebe openly or by implication appropriated the labors and virtues of her mother and Hugh.

William was disappointed in the result of his interview with his father, for the death of Mrs Harvey had left Jane alone in the world, and had hoped to introduce her immediately into his father's family; but he consoled himself by building airy castles for the future, though he could not forget they must have a foundation far away from the comfortable farm house of his father. In speaking of his failure to Jane he said,—"I am sadly disappointed and low spirited to-night, both on your account and my own, for I think of you in your loneliness and affliction, and long to make up to you the society of the dear mother you have lost. I had hoped to make arrangements for having you immediately with me, but having failed in this, must still look afar off to the coming fall, or even perhaps to spring, ere I can be blessed with your society."

In reply Jane answered, "I can hardly say I am sorry you have failed in your contemplated arrangements, for I am ill prepared to become house-keeper at present, though whenever you are ready for me, William, I shall be only too happy to share your home. Six months, or a year, will scarcely be too long for what I have to do, and I look forward to our new country home with the sweetest assurance of happiness. I am lonely, oh! how lonely, deprived of my dear mother's society; and as I find myself almost unfitted for business, and feeling that I need a little rest, I have accepted an invitation from Mary Carver to spend the month of July with her, and shall go out in the stage next week."

The next week found William keeping "bachelor's hall." The family consisting only of his parents and himself, he often spent a week or even longer alone, going to the house of the farm tenant for any necessary cooking he might want. It was Saturday afternoon, and he was expecting his parents in the evening, so he had come in to tidy up his bachelor establishment, when the noise of wheels rattling down the steep hill close by, caused him to run to the door just in time to see the upsetting of the stage on the top of an almost perpendicular bank or gully, at the bottom of which the recent rains had made a quagmire of the mucky soil. William hastened to the spot, and the first object that met his eye was Jane Harvey, bonnetless, shoeless, with her dress soiled and torn, and altogether in a much more unpoetical plight than young gentlemen usually find their sweethearts. In jumping from the stage she had cleared the barrier of logs at the side of the road, and fairly landed at the bottom of the gully in the quagmire, where her satchel and sundry articles of dress still lay. The other passengers, some five or six in number, were standing in a huddle near the upset coach. "Is any one hurt?" asked William as he came up.

"No one of any consequence, except this lady, who has a sprained ancle; can we take her to your house, Mr. Turner?" answerd the coachman.

"Certainly, but some female had better accompany her as the family are not at home. I see an old acquaintance here, and can, I think, prevail upon her to remain a day or two with the injured lady"—and he advanced and gave his hand to Jane, who had stood blushing and confused where he had first seen her.

"I am scarcely in plight to go on," said Jane, glancing at her dress and holding up her soiled and ruined bonnet. In spite of her doleful looks the gentlemen could not suppress a smile at her comical appearance, and poor Jane sat down and burst into tears.

"Help the lady to the house," said William "I will be there soon;" and while some proceeded to do so, one took a horse and went for the village physician, and others assisted to right the coach. William sat down by Jane and taking her hand from her face inquired if she was hurt.

"Not in the least; only vexed and mortified."

"Well, never mind, dear Jane; this accident will introduce you to my father, and will, I trust, be of more service to us than it can possibly be annoyance to you."

"But I am such a ridiculous figure, and your father is prejudiced against me already.

"Father is not at home. I have been keeping bachelor's hall the whole week, and sadly need some one; so you must be my good angel and help me make my guests comfortable."

"I must make myself presentable, and how I can hardly tell; there is my satchel," and she pointed to the place where it lay half buried in mud and entirely covered with water. William laughed and again the blue eyes of Jane filled with tears.

"Never mind, never mind Jane; 'tis the best thing that could happen, I am sure—something good will come out of it; but we must go home, the lady will need something. Oh I am almost obliged to any accident that has brought you to my home."

William laughed outright as the satchel came out with a "chug," as if loth to leave its soft resting place, and even Jane smiled.

"I have been wondering what I shall do," said Jane as they walked towards the house, which the others had nearly reached.

"Have you no clothing with you? I suppose you are on your way to Mr. Carvers."

"None but what are in my satchel. Mary took my trunk when she went last week."

"Then you will have to don some of mother's."

"Well, as I may just as well laugh as cry, I will do the former."

"After having cried to your heart's content; but I am glad to see you cheer up.—You may go into mother's room, and I give you free choice among her things," said William, opening a door from the front stoop into a nice convenient room, evidently the sleeping room of the parents.

Jane had no choice but to act upon William's suggestion and array herself in some of his mother's clothes. Her sunny face looked scarcely less lovable above the quaint old fashioned dress and checked apron of the old lady.

The physician who was summoned found Mrs. Gay very little injured, only nervous and excited, and said a day's rest at the farm would set her right. The coach was repaired and proceeded on its way within two hours—leaving only Mrs. Gay and Jane, who was scarcely in a condition to go on, as her bonnet was entirely ruined and her dress unwearable; besides, the one in the satchel was wet and muddied, though happily of a material that would bear washing. The Doctor's anodyne soon put Mrs. Gay asleep. Jane having tidied up the rooms, cleaned the mud from her satchel, and washed the clothing it contained, sat down to confer with William upon the state of affairs.

"My parents will be home to-night," he said. "I wish they were here now, for indeed I am troubled about our appetites, unless you are mistress of the culinary art, for I have nothing eatable left and you must have a good appetite."

"Cooking is not my profession, but I will try and get a meal if you will furnish the material."

"Can you cook a chicken?"

"Yes."

"And dress it?"

"Yes, if need be."

Chanticleer was soon headless, nicely picked, dressed and boiling in the pot. Oh how exultingly had William watched her movements as she proceeded unhesitatingly with the meal, as though confident of her ability.

"I would like a slice of pork; and, as you are entirely destitute of eatables, I suppose some biscuit must be made,—besides I want a crust for my fricassee."

William had never listened to her sweetest notes with more delight than he now felt. The dairy-house was visited for fresh buttermilk, the garden for the material for the pie and sauce, the coffee was nicely roasted and prepared for steeping, and all things were progressing finely. Jane's pretty hands were thick with the biscuit dough, when a wagon drew up at the door, and a minute after old Mr. and Mrs. Turner entered the house.—They had met Dr. Harris and heard of the accident as they came along.

"Come, Jane," said William, turning her round with the dough sticking to her hands. "Father and Mother, this is Miss Jane Harvey, of whom I have so often spoken. She was detained by the upsetting of the coach and has kindly undertaken to prepare supper."

Jane felt that she would gladly hide her face a second time and cry, but the state of her hands forbade; so she blushed and said,

"I have invaded your pantry, Mrs. Turner, for we were very hungry."

"You have done right, just right—God bless you for a good girl," said old Mr. Turner, and shaking William heartily by the hand added, "She shall never invade it again, for she has conquered, and the premises shall be ceded to her whenever she will take possession."

The meal was soon ready, the pies nicely baked and the fricassee done to a turn. In after years the old gentleman recounted Jane's droll introduction and declared that supper was the best he ever tasted; when she would say he was tired and hungry, and William would add slily, *she was on trial.*

"I must go over and assist Mrs. Price today," said Jane one morning at the breakfast table, when she had been Mrs. Turner for two years, and when Phebe Smith, now Mrs. Price, lived in the tenant house.—"She gets along so badly with houshkeeping that I promised to go over and give her a lesson in cooking."

"Why, she was the most notable housewife in all the town," said old Mr. Turner. "I thought she would be a prize for any young man; such bread as you always found there."

"Which her mother made, as I always suspected," said William.

"Well she really feels desirous to learn now, and wishes her mother had given her the *knowledge* instead of the *reputation* of housekeeping."

"You have never told me, Jane, how it happened that you who got your living by teaching music understood house work so well."

"Why, father, I worked in the best regulated farmer's kitchen two years, and would have continued there only the remuneration was so small,—and I believe many and many a girl who sews or teaches would prefer housework could she earn as much.—People are to blame in a measure for the poor help they have, as the wages they offer drives every one capable of doing housework well into doing something else that will pay better. I could not work for ten shillings a week, when, by teaching, I could earn ten dollars."

"To be sure not; but I never thought of that before, and supposed girls who taught felt above doing housework."

"Some no doubt do, but they have a very wrong idea. There is no more slavish life than that of a teacher, and in my estimation if we offered a fair remunoration, girls capable of doing housework well would qualify themselves for that labor, and we should no longer suffer as we now do from employing ignorant, inefficient help.

Jane Turner has long been a blessing to her husband and his father's family. A neat, systematic and prudent housekeeper, who does not feel it right to make a slave of herself in order to save the expense of necessary help, but who can readily turn a helping hand whenever the want of one appears. There is no better butter and cheese than comes from Mrs. Turner's dairy-house. Than hers there are no healthier or happier children. And finally there is no more skilful nurse, no kinder neighbor, no more affectionate daughter, and no more devoted wife than Mrs. William Turner.—Her husband and his parents have long blessed the day of Jane Harvey's Introduction.

---

Here is Fanny Fern's idea of "female friendship:"—Two women joining the mutual admiration society; emptying their budget of love affairs; comparing bait to attract victims; sighing over the same rose leaf; patronizing the same milliner and *exchanging female kisses.* Betty, hand me my fan!

MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
Burns' Block, corner State and Buffalo Sts.,
Rochester, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 32. ROCHESTER, N. Y.—SATURDAY, AUGUST 6, 1853. WHOLE NO. 188.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### THE WHEAT CROP OF 1853.

Now that the harvest is ended, and grain secured, the yield of the crop, and probable price of wheat the ensuing year, are questions of absorbing interest in all the grain-growing districts of this country. As a majority of our agricultural readers are directly interested, a few facts and suggestions on the subject are offered for their consideration.

In regard to the yield of the Wheat crop, throughout the country, the reports received up to this date are generally favorable—the instances of partial or total failure being comparatively rare, and confined to limited districts. The crop of our own State, and especially in this region, is better than was anticipated; and has generally been secured in excellent condition—the weather having been highly favorable. The injury to the crop from the Weevil, or Wheat Midge, which prevailed to some extent in certain localities, has not thus far proved as extensive as many feared; indeed we believe the loss very trifling, compared with what was confidently expected a few weeks ago. Still, as but comparatively little grain has yet been threshed, the extent of damage cannot be safely estimated.

From other and distant wheat-growing regions—particularly in the West and Southwest—the reports generally represent the crop as good. It is true that we occasionally meet with contradictory statements, but the general testimony, and that from the more reliable sources, is mostly favorable to a fair yield throughout the grain-growing regions. Hence, we consider the crop, as a whole, fully up to the average of former years, and in many districts more abundant. Yet we think the breadth of land occupied by wheat the past year—in proportion to the population of the country, and consequent consumption of breadstuffs—much less than heretofore; and that, as a consequence, some improvement in price may reasonably be anticipated.

And this brings us to the prospective demand for wheat and flour, and the probable prices. On these points there are, very naturally, various opinions, predicated upon different views and information. Though we possess no knowledge on the subject to which others, similarly situated, are not accessible, we conceive there are reasons for an advance in prices—aside from any considerations relative to foreign demand, a matter too frequently overrated by both producers and speculators. And we predicate this opinion, or conclusion, upon the following among other facts:—That the low price of wheat, compared with the very remunerating prices of other farm products, has caused many farmers, in various sections of the Union, to change their system,—inducing them to grow less wheat, and in not a few instances none at all, and to devote much more land and attention than heretofore to other branches. The high prices of Live Stock, Beef, Pork, Butter, Cheese, &c., have no doubt induced many wheat growers, especially in the West, to engage in the stock and dairy business,—while the growing of Wool, now so profitable in favorable (or most) localities, has naturally diverted attention from the wheat crop. The remunerative prices of corn, barley, and other coarse grains, must also have tended to influence many farmers to adopt a different system. And, moreover, the entire or partial failure of the wheat crop for several years past, in some districts of the West, discouraged hundreds from sowing the past season, and induced them to enter into other and more certain and profitable branches of culture and husbandry.

These causes, combined, if existing to the extent we have been led to believe, must influence prices—but whether they are of sufficient weight to induce growers to hold their wheat in expectation of a material advance, becomes a question of considerable importance to producers. Though it is not our province to advise such a course, we cannot resist the conviction that it would not only be entirely safe, but perhaps highly advantageous, for those who can to wait for an advance before contracting or marketing their wheat. This, however, is a question for each to decide for himself—depending, to a great extent, upon his individual judgment, information, location and circumstances. In this, as in other mundane affairs, "those who run may read," and it behooves cultivators to keep themselves properly posted in regard to the annual yield, demand for and prices of the staples they produce. For the past year or two wheat and flour have ruled lower than other farm products,—but for the reasons above enumerated, (as well as the prosperous condition of the country, the flourishing state of most kinds of business, and the prevailing high prices of labor and the necessaries of life,) we believe the Rubicon is nearly passed, and that the prices of these articles will soon correspond nearer to those of other staple commodities. Time will determine.

—In conclusion, a word relative to the prospective foreign demand for breadstuffs. We have said above, that this matter is too often overrated, yet there are indications of a state of affairs which would at once create an unusual demand and material advance in prices. Should existing difficulties between Russia, Turkey, and other Powers, result in war, as is now predicted and confidently anticipated by many, the European market will immediately assume unusual importance, and largely benefit the grain growers and holders of America.

### NEW AND POWERFUL FERTILIZER.

THE discovery of Guano, or rather its application to restore the fecundity of the ancient soil of Europe, may be considered as an important era in the history of Agriculture. It is true that fertilizers of a powerful nature existed previously to the introduction of guano, but these had become so scarce that the supply was not equal to the demand. Amongst the most important of these manures may be reckoned bone-dust, which was highly esteemed as a powerful fertilizer for turnips; a renovator of waste soils, and also an excellent article for the top dressing of grasses. So great, at one time, was the demand for this article, that battle fields were laid under contribution for the bones of men and animals, which they contained; nay, even the very charnel-houses and other depositories of the dead were sacrilegiously plundered and their human remains applied to the soil, in order to raise food for the living! This horrid traffic soon terminated by the introduction of guano from Africa, and the islands of the Pacific Ocean. So great was the demand for this new and wonderful fertilizer that whole islands were speedily cleared of their valuable deposits; accordingly the possession of such property, although hitherto valueless, soon became a matter of diplomatic controversy, and the territorial rights of sovereignty disputed with as much tenacity as if they had been the gold regions of Australia or of California.

In 1833, the government of Peru issued a decree prohibiting all foregin vessels from fishing, killing seals, or frequenting the coasts of the guano islands without a license from the State; and in 1841, they established a monopoly in the export of guano found on its own territories, and protected the places of deposit by armed steamers. The heavy import thus exacted by the Peruvian Government, taken in connection with the depressed state of Agriculture in Europe, must militate greatly to the disadvantage of the Old Country farmer. In our own country, too, although differently situated, the effects of this monopoly cannot fail to be injurious.

Although guano has hitherto borne the palm as a fertilizer, yet owing to the monopolizing policy of the Government of Peru, whence the best and chief supplies were obtained, the export of the article was taxed to a degree that deprived the agricultural community of the full benefit of its application to the extent to which it would be available, if it could have been procured on more reasonable terms. But, although no tax had been imposed to limit the consumption, it is doubtful, from surveys made by order of the Peruvian Government in 1847, whether the guano deposits in Peru, nay, even throughout the whole world, would long be able to supply the extensive and increasing demand.

It is gratifying, under these circumstances, to know that scientific discovery and practical experiment have ascertained the great fact in Agricultural Chemistry that "Nitrogen is the element mainly required as manure on the ordinary soils by our cereal crops." Although the qualities of nitre as a fertilizer appears to have been known for hundreds of years in modern agriculture, yet it has hitherto proved unsuccessful owing to its being applied in too large quantities. It is now found that nitrate, which if excessively administered will injure, if not destroy the crop, will, if applied in small or moderate quantities, prove one of the most powerful aids to an excellent vegetation.—This has been recently proved most satisfactorily in England.

From a paper just contributed to the Journal of the Royal Agricultural Society in England, by Mr. PUSEY, it is proved most conclusively that the simple application of Nitrate of Soda, at the rate of forty-two pounds to an acre, along with double the quantity (or eighty-four pounds to an acre) of common salt, the latter not used as a manure, but to correct the luxurious vegetation caused by the nitrate, produced a gain of seven bushels per acre. The value of such increase was 26 shillings English ($6,-25)—leaving, after deducting 6 shillings English ($1,50) for the nitrate, and 4 pence (8 cents) for the salt, a profit of 19 shillings and 8 pence (about $4,75,) or three hundred per cent. Cubic nitre is still richer in fertilizing properties, and it is satisfactory that vast beds of it are to be found on the coast of Peru. Mr. PUSEY states in his report, that in the Pampa of Tamarugh, a great plain at the foot of the Andes, and 3,000 ft above the level of the sea, lie almost inexhaustible deposits of this rich mineral substance, sufficient for the consumption of Europe for ages, not capable of being monopolized, like the Guano Island, by any Government of Peru, or if that Government should attempt to interpose impediments, a rival source of nitrate exists in the contiguous deserts of Atacama, within the territory of Bolivia. It has also been met with in the Andes and on the Eastern Plains. The refined salt costs in England about £16 or £17 per ton, and even at that price is remunerative, but the rough salt would be almost equally useful for agricultural purposes; and as it can be dug like gravel, within a few miles from the shore, not near the Peruvian port of Iquique only, but along a wide range of coast, it could be freighted to England for £6 instead of £16 per ton, as the price of the pure nitrate existing in this unrefined state. There is thus placed in the hands of the agricultural community, both at home and abroad, a remedy for abating the exhorbitant charge for guano, by diminishing its use until that charge is lessened.

Can these vast reservoirs of nitrogen, the main desideratum for worn out and exhausted lands, continue to lie undisturbed?—and will American Farmers remain indifferent to their best interests? Will not the zeal of their European brethren, provoke very many to go and do likewise?

N. DAVIDSON REDPATH.
Allegan county, Mich., July, 1853.

### DEEP TILLAGE, MANURING, &c.

EDS. RURAL:—Of late I have noticed several interesting articles connected with the above subject, and especially one from Mr. CONE, of Michigan, published in the RURAL of July 16, in which that gentleman, among other things, says:—"To satisfy my own mind and convince the unbelieving, the spade has often been called into requisition, and the result of every examination was that the roots of grass, grain, vegetables, fruit and forest trees have invariably occupied all the soil, no matter what was the depth of the same." Now as the soil on some bottom lands extends to the depth of 70 or 80 feet it seems that, should the roots of wheat "occupy all the soil" to that depth, they would bear rather an undue proportion to the part of the plant above ground.

What he would have us understand by "deep cultivation," and what by "tickling the surface," does not fully appear; but if "tickling the surface" means plowing ten inches deep and manuring sufficiently, it has often been tickled to some purpose.—For example,—a part of the farm occupied by me is a gravelly loam, underlaid at the depth of two and a half feet by hardpan,—harder in fact than many kinds of rock,—into which it is impossible for any thing in the shape of roots to penetrate; yet on this soil I have frequently raised eighty and sometimes one hundred bushels of corn per acre, and timothy four to four and a half feet high, yeilding over three tons to the acre, and other crops in proportion—thus demonstrating that a soil six or eight feet deep is not necessary to the perfecting of the ordinary farm crops.

I am aware that I shall be referred to the many instances of subsoil plowing, where we have the testimony of unimpeachable witnesses, that such process has greatly increased the product. Now, we are all liable unwittingly to ascribe results to causes other than the true ones; and is it not quite as probable that the increase above alluded to, was caused by the fact that the subsoiling modified the injury arising from surplus moisture, as that it was caused by a greater downward extension of the roots?—And whether subsoiling is the most efficient, or in the long run the most economical method to get rid of surplus water in the soil, I leave others to judge.

Again.—In feeding (manuring) plants, is it not the object to place the food near their mouths, (roots,) and would any one, were it practicable, place the food 18 or 20 inches below the surface?

To sum up the above hints, we would say—in the spring, spread the manure made the previous winter, at the rate of 20 or 25 loads to the acre, and turn it immediately under with a good plow, by which is meant one that will work 8 or 10 inches deep, make angular furrows, and pulverize as it goes along. This will leave the manure not all at the bottom of the furrow, but between the furrows, some near the surface and so down along. Then sow broadcast and harrow the first time lengthwise the furrows, which will bring most of the grain into drills and directly over the manure. It is true, that in a soil abounding in all the elements of fertility, good crops may be obtained by almost any mode of cultivation, but with the majority of farmers, the question how shall we apply manures the best to advantage, is one of vast importance.

Nature does not guide us to the best results. Witness the grape, the potato, and a thousand other things that cultivation has rendered ten-fold more productive than they ever were in a state of nature. Neither is it safe to follow an untried theory. Experience, an enlightened experience, is the only safe guide; hence the value of agricultural publications, that we may avail ourselves of the experience of others. C.
Otsego County, N. Y., 1853.

### A CHAPTER ON WEEDS.

ACCORDING to philosophers, nature, thro' all her works, abhors a vacuum. Water, air and grass fill up various interstices which otherwise would be an aching void; even the surface of the earth, if not otherwise pre-occupied, is covered with vegetation, and what to a superficial observer of nature appears a curse, is, in reality, a blessing although to many it may have the appearance of a blessing in disguise. The luxuriant grasses which cover our prairies are not less essential to the future production of the soil than to the present sustenance of the vast herds of animals which roam over them in unrestrained freedom. Trees, shrubs, grass, nay even the noxious weeds themselves, act as conservators of the soil, preserving it from the destructive effects of the winter frosts on the one hand, and the injurious influences of the solar rays of summer, on the other. The fertility of the American continent is owing to the immense forests which cover its soil, and this fertility is not so much owing to the rich vegetable deposit arising from decomposed matter as from the shading effect briefly alluded to.—These are Nature's palladium, and wherever found wanting we find naught but barren deserts or waste, sandy valleys.

That the earth is given to man to possess it, as well as to subdue and cultivate it, is a doctrine alike consonant to reason as it is to Scripture. Wherever and whenever man takes possession of the soil for the purpose of cultivation, he must set his face as a flint to extirpate the thorns, the trees, and the thistles of Nature. The farm becomes a kind of battle field between indigenous and exotic productions. The moment the farmer relaxes in his efforts, Nature struggles to regain her ancient domination. Neither has the industrious cultivator to contend only with the present race of weeds, but, perchance, every time he overturns his soil he exposes the vivifying influence of heat and moisture, seeds, perhaps buried for centuries, which start into life and energy, and prove a fretful source of annoyance and expense. But the greatest annoyance to which the careful husbandman can be exposed is to be situated in the immediate vicinity of a man (we don't call him a farmer) each of whose fields resembles the "SLUGGARD'S GARDEN"—a kind of vegetable dispensary, whence seeds are supplied *gratis* to all around.

In some counties, farmers who fail to extirpate these weeds are subjected to fine for negligence. Some centuries ago this was the law of Scotland. All public roads and thoroughfares ought to be kept free from weeds at the public expense. It is vain to endeavor to keep fields clean when the highways are foul. There are upwards of fifty different kinds of weeds that infest arable lands. Remember the common maxims, "A farmer should let nothing grow but his crops." The farms in the United States are, happily, *title free*, yet, according to Sir JOHN SINCLAIR, it is of more importance that all lands should be *weed free!* The farmer who allows weeds to grow, robs himself and injures his neighbor. Every weed is a vegetable pestilence. N. D. R.

### THE WHITE DAISY.

OF all the pests that afflict the farmer, none I deal with better deserves the appellation, *intolerable*, than the White Daisy. The seed is long, slender, brown, and the rapidity with which it spreads demands of the farmer, the most untiring diligence in its extermination. The moving of hay in winter, has seeded the road-sides of this town, and they now present, for miles, a bordering of daisies. From a few seed sown when laying land down to grass, we have whole acres now thickly in blossom.

The rapidity with which the daisy increases' may be seen from the following. I to-day pulled in my meadow a stool probably three years old, from which had grown 26 stalks, bearing fifty-one blossoms. I counted 300 seeds in one blossom. Another stool had sixty stalks, and at above rate over one hundred blossoms. Putting the number of seeds per blossom at 200, we have for the last stool 20,000 seeds; and for the first 10,200. From a little plot of ground, about four feet by five, I pulled 650 stalks, giving at above rates, 1,000 blossoms, 200,000 seeds.

Need more convincing proofs be added, to prove to the most negligent farmer the necessity of being wide awake in the work of eradicating these pests?—and yet we see farmers resting in quiet ease, year after year, while they are gaining a foothold, and increasing in a ratio of unexampled rapidity. G.

July, 1853.

## ILLINOIS SOIL, CLIMATE, &C.

*The Prairie—Soil—Fruit and Grain—Settlements—Mud—Healthfulness—Farms—Hedges, &c.*

The soil on the Prairies, so far as I have observed, consists of a black clay-loam overlying a lighter colored clayey subsoil, generally somewhat intermixed with gravel and in some places is almost wholly gravel and pebbles, at the depth of a few feet. The soil is exceedingly rich, and, of course, better adapted to some kinds of grain and fruit, than to others. Among the former, oats and corn take the lead, though wheat, (generally spring wheat,) is also raised to considerable extent. Of fruits, apples appear to flourish best, except the red plum, a native of this place, and a native cherry, though other fruits have not been very thoroughly tried. The peach does not do well, not producing a good crop oftener than once in five or six years, or more. This year, however, the prospect is unusually good, the trees being now full of young fruit. It is probable that cherries, pears and plums may also be found to do well.

From the nature of the country the settlements are necessarily scattering, being located chiefly along the borders of the prairies, in the vicinity of streams and woodlands, here generally called groves, and gradually extending back into the open prairie. Of course life here often carries with it the idea of loneliness. Even this, however, may be greatly relieved by a practice now coming somewhat into use, (would it were more so,) that of planting trees, especially the locust, in groves, in the vicinity of dwellings. This has a fine effect. The tree flourishes well in this soil, and may, in time, be made to supply in a great measure the want of a native growth of timber.

The country is subject to one great temporary inconvenience resulting from the nature of the soil and its surface. With a tenacious, adhesive soil, and a surface often so level that the water seems to *run both ways* at the same time, one can often find "no rest for the sole of his foot." Mud, *mud*, MUD, is the only thing to be met with in wet times and seasons, around the house, or the barn, in the street, and in the field; and happy is he who can find a comfortable shelter.

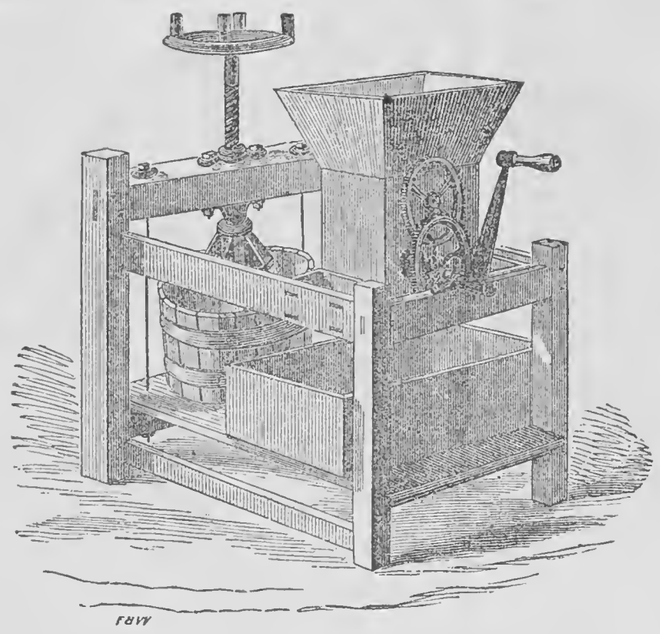
The healthfulness of this western country is often called in question. That some portions of it, as the marshy districts and contiguous portions, or low, wet bottom lands along the rivers, are unhealthful, there is no doubt; but it is not necessarily true that a level country must of course be unhealthful. Indeed, the reverse is rather true; for where there are no hills and consequently no valleys, or where all is hill, or all valley, the winds sweep over the country without interruption, and leave no place or opportunity for unwholesome or noxious vapers to settle or accumulate. The atmosphere is kept pure by almost constant winds, which vary from a gentle breeze to a gale.

The want of timber for fencing renders it necessary for farmers to enclose all that portion of their land designed for meadow, or tillage, in one field, leaving the rest as "commons," on which all the domestic animals of the neighborhood run at large. For cross fences, where these have been wanted, ditches and sod fences have been tried; but these, except in favorable situations, are not very satisfactory; and hence many are cultivating hedges. For this purpose the Osage Orange, or thorn, is generally used. This, on a suitable soil, and with proper management, is found to produce a good, substantial fence in about three to four years. Last week I assisted in planting 70 or 80 rods of this kind of fence. It was done in less than a day. The plan is this: Let the ground be prepared as for a crop of grain. Then plow a straight, deep furrow, in which set the plants at the proper distance, (six to eight inches,) leaning a little against the "*land-side*" of the furrow, and so low in the furrow that when covered they shall be a little deeper in the ground than they originally grow. Having set a handfull of them, with one foot scrape down a portion of the furrow upon the roots, to keep the plants in their place, and with the other tread it down a little as you pass along. Proceed in this manner till all are set. Then with the plow turn the earth back again, but not too deep, nor so close as to cover the plants; after which pass along and arrange the plants a little if necessary, and the work for the present is done. The plants are taken after having grown one year in the nursery. The ground on both sides of the hedge should be tilled for one or two years after the plants are set.

We have here a little bird which busies itself with catching small snakes, (five to eight inches long,) small frogs, mice, bugs, &c., and sticking them on the thorns of the locust tree, where he leaves them to their fate. I have sometimes counted more than half a dozen hanging on the branches of the locust, within the distance of a few rods. He seems to have no motive but to gratify his destructive propensity.

I have mentioned the richness of the soil. It is found, however, that long-continued culture diminishes its fertility, more especially if rotation in crops is neglected; and that the labor of manuring is by no means lost. Indeed, many farmers are quite saving of their manures. H.

Out West, May, 1853.



HICKOK'S IMPROVED PORTABLE CIDER MILL.

The above figure represents a complete and effective machine—contained entire in a frame 2½ by 3 feet, and 4 feet high, the whole weighing 300 lbs. This mill, when attended by two men, and properly worked according to directions, will make 6 to 12 barrels of cider a day. The peculiar arrangement of the cylinders is such that no description of apple will clog it up, but it will at all times work free and fast—qualities that are indispensable, and it is believed no other machine possesses.

The press is provided with a heavy wrought-iron screw, and the pressing-box or tub is so arranged that as soon as the pressing is accomplished it can be opened in an instant, the pomace taken out, and it closed as quickly and another charge put under the screw. No straw or bag is needed, and the cider comes out fast and clear. Any boy 14 years of age can press as readily as a man. While it possesses all the advantages of the old style press, it has none of its objections. One quart or one barrel can be made any time the owner chooses to use it, and he can work up the apples of each tree to suit his convenience. The mill is worked either by hand or horse power, and goes very easily.

Manufactured by W. O. HICKOK, Harrisburg, Pa. For price, and list of agents, see advertisement in this paper.

## PREMIUM ON FOWLS,—AGAIN.

[Advertisement.]

Mr. NEWELL, of Rochester, *feigns to believe* that my proposition to award a premium (as published in the RURAL of July 23d,) was somewhat onigmatical. I said 5 pairs of any of the 5 varieties. Why does Mr. N. flutter like a shot bird? I did not propose to exhibit any myself, neither did I say I was breeding any fowls—neither was I so unreasonable as to ask any person to give me $1,000 to exhibit my fowls.

But allow me now to say I am breeding fowls that very much resemble each other. I have no pair that I can breed ten different kinds from. My fowls are pure and bred from a pair that was imported in 1849; they are unlike any of those of Mr. N. I did not see any impropriety in exhibiting one breed against another. I for one, desire to know which is the best kind (as well as best of their kind.)

Mr. N. says he has ten different kinds; (I presume he means colors.) I have but one kind, consequently he has a great per centage over me. He may select 5 pairs from his whole flock; I will take 5 pairs from mine, and we will show according to the rules in my proposition,—or, if he chooses, we (two) will equally deposit the $250 to be awarded to the 5 best pairs. This last proposition is for Mr. N.'s benefit and will not interfere with the premium I offered for others. If this proposition is *enigmatical* to Mr. N., he may call on Mr. JOSEPH HALL, of Rochester, who is authorized to deposit the half of the premium, ($250,) if Mr N. chooses to do the same.

M. VAN DEUSEN.

Phelps, Ontario Co., N. Y. August, 1853.

## HARVEST AND CROPS IN ORLEANS COUNTY.

"THE HARVEST IS ENDED." To those of us who are tillers of the soil, the past four weeks have been a scene of unmitigated toil; and to many, of anxious solicitude. The heavy rains which fell in this region during the month of May, so retarded us in our spring work that June found most farmers but just commencing their preparations for planting; and many were the prognostics that we should get no corn,—that hoeing, haying and harvest, would all be mingled together,—and many were disposed to find fault with Providence for the discouraging prospects before them. There was but little help to be obtained, and some resorted to the questionable policy of offering exorbitant wages in order to get the start of their neighbors in securing assistance.

On the first of July the broad fields of our fertile county were covered with waving masses of grass and grain. Now, wherever I turn my eyes I behold the fields shorn of their golden treasures. The hay and wheat are gathered into the garner, or heaped in well-formed ricks around the well filled barns. Providence has given us fine weather for haying and harvest. The people have harnessed into the work with a right good will, and I think that, notwithstanding the scarcity of help, the hay and wheat of Orleans county was never secured with more dispatch or put in the barn in a better condition. The hay crop was good, but I think not quite equal to that of last year. As far as my observation has extended, wheat has not been a better crop for many years. We shall have a light crop of oats. Corn and potatoes have been retarded by dry weather but we have encouragement for a fair crop of these valuable products, H. D. B.

Barre, N. Y., July 30, 1853.

## PROSPECT OF THE HOG CROP.

To most of our readers the prospect of the crop of hogs at the West is a matter of much interest, as upon that may depend the number fattened by small farmers in New York, and in other grain growing and stock raising States. In a recent issue of the Cincinnati price current, we find the following information with regard to the prospect at and near St. Louis, which is supposed to be reliable:

"The farmers are prepared for low prices for hogs this coming season. The crop will be larger than was ever known through Illinois, Iowa, and Missouri. I have heard of no contracts having been made as yet.—Packers are of opinion the market will open here at less than $4. The corn crop is good, and I am told by parties from different sections that hogs will be much cheaper than last year."

DURATION OF POSTS.—The result of forty years experience and observation, with me, is that common fence posts set in the ground *green*, and butt end downwards will last, in a sandy loam, about ten years. The same set in a like situation, inverted, will last fifteen or eighteen years. The same timber, (and soil the same,) well *seasoned* before setting will last eight or ten years longer. I speak of good white chestnut or white oak. Timber cut in the old of the moon in February, will not be eaten by worms, will not snap in burning, and will last much longer made into posts than when cut at any other time. I have chestnut and white oak posts standing well that were set twenty-eight years ago.—O. BRIGHAM, *in N. E. Farmer.*

## WHEAT FOR SEED.

As the season for sowing is near at hand the suggestions offered in an article contributed to the Patent Office Report for 1850, by E. WESTON, of Bloomfield, Maine, may be of much value to the readers of the RURAL. It is published as found, and remarked upon, in the *Farmer's Companion:*

"It has been suspected for a long time that our seed was in fault, at least for a part of the deplorable deficiency in the wheat crop. I could not see why a flour mill cleanser should not be the best thing to prepare wheat for sowing till an experienced miller told me it would kill one half of it. Reflecting on this fact, I was led to see what effect the common throshing-mill would have, when many kernels are broken in the operation. These suggestions have been experimented upon, and it is found, on repeated trials of samples sown in common saucers and broadcast in the ground, that one-fourth or more of the largest kernels are killed, and never germinate, and some will produce a shoot and no root—the root sprout being killed by the machine. This accounts, in some measure, for our wheat coming up thick enough, but shortly becoming thin. Many kernels, from native strength, shoot up, but having no roots, die.

In our flour-mill may be seen the caps of the root sprout, blown out by the blower or fan, under the hopper, by quarts at a time, beside that which is blown out above. One farmer told me he had tried the experiment by accidentally having a barrel of wheat throshed by hand, and sown with another barrel threshed with a machine, and the difference was at least one-quarter. Thus it is seen that one-quarter of the seed is killed by the machine for threshing; and then the whole is run through an ordinary fanning mill, all together, and sown from the mass. We raise our wheat, year after year, from about three-fourths of the seed sown, and that of the poorest quality; the best and fullest being killed. Now, to my mind, this is enough to account for the diminution of the wheat crop from 20 to 30 down to from 5 to 12 bushels. No seed on earth could stand such a test. Formerly, the wheat was threshed with a flail, and winnowed in the North-west wind, and then the seed taken carefully from the North-west corner of the pile, so that very little was sown except the first order of kernels.—Some went so far as to select heads of the largest and best growth by pulling them from the sheaves. A gentleman, who tried the last experiment, had a quart of wheat which was sown on a corner of the field; and he assures me that he could see the difference in the grain, 40 or 50 rods, the plants being a darker, broader leaf, and taller growth."

If this is so, it is high time that it was attended to. Which of our intelligent readers will experiment upon it this fall, trying wheat selected by hand, threshed by flail, and by machine, equal quantities of each sown side by side, and report to us the result? In 1850, over 500,000 bushels of wheat were probably sown in Michigan. We have not at hand the statistics of the other Western States, yet if this statement is correct, not only were more than 100,000 bushels of wheat thrown away in one State, but the next crop was much diminished.

There is said to be a strange disease among the fall wheat in Wisconsin. However well and thick it may look in the fall, it dies and dries up in the spring, leaving the fields bare. May not this alleged fact, in part, account for what is otherwise so difficult to explain?

## WHAT THE FARMER MOST NEEDS.

IT is not a college endowed by the State, says a cotemporary; it is primary schools, to prepare farmers' sons and daughters for the higher walks in science as applied to agriculture. They need organization. They want farmers' clubs and neighborhood libraries of agricultural books. They need discussion. They need more intercourse, not only in their own town and county, but throughout the State and country, to see and learn what other farmers are doing, and adopt them. This is the greatest need of farmers. They need to become satisfied with their vocation; to get rid of the prevailing notion that farming is, necessarily, an unmental employment; that is, that the farmer has no occasion to think; has no occasion for education, and never can become wealthy or what the world would call respectable, while engaged in the culture of the earth, and therefore he seeks the first opportunity to escape from an avocation placed under ban not only by all others, but his own class also. The great need of the farmer is, that he shall declare himself independent of all other classes; at least more so than they are of him, and of course he is entitled to engage in any other calling whatever; and if he is a man of toil, that is no reason why he should not be a man of intellect. The great need of the farmer is organization, and this must be accomplished by a few self-sacrificing men, who will undertake the labor of establishing and maintaining farmers' clubs, in every neighborhood. Farmers need to drop politics and take up agriculture. They must talk, read and think, and they will be sure to act or their children will act for them.

BONE WENS.—I noticed an inquiry for a cure of bone wens; I have a recipe which I have used, and has effected a cure. Take equal parts of indigo dissolved in wine, and soft soap; apply it quite warm, with a swab, twice or three times a day. This I have tried on a calf six months old, and on a two year old, and effected a cure.—*N. E. Farmer.*

THE ADDRESS at the New York State Fair is to be delivered by Hon. W. C. Rives, of Virginia—that at the Indiana State Fair, by Horace Greeley—and that at the American Institute, by Hon. Wm. H. Seward.

## AGRICULTURAL FAIRS.

### Exhibition of the Vermont State Agricultural Society.

THE annual exhibition of the Vermont State Agricultural Society will be held at Montpelier, on Tuesday, Wednesday and Thursday, the 13th, 14th, and 15th, of September, 1853.

An area of forty acres will be enclosed for the exhibition; and within the enclosure suitable structures will be erected, and arrangements made for the accommodation of all who wish to exhibit either animals or articles. Fresh water, forage consisting of hay, grass, green oats and corn-stalks for cattle, horses and sheep, straw for littering and oats for feeding horses, and grain for swine and poultry, will be supplied, free of charge, to such exhibitors as choose to keep their animals on the ground enclosure; and exhibitors of valuable horses, desiring barn accommodations for the same, may procure them in the village at a reasonable expense.

Exhibitors must become members of the Society; and must have what they intend to exhibit entered on the Secretary's books on or before Tuesday, the 13th of September. It is quite desirable, however, that the entries should be made at least as early as Monday, the 12th.

Persons residing out of the State, may compete for premiums on foreign stock, plowing, agricultural implements and machines, the various manufactures named in the premium list of the Society, under the discretionary premiums; and may make entry of animals or articles of any class, for exhibition merely, which will be admitted within the enclosure for that purpose, if deemed worthy by the Executive Board.

Arrangements have been effected with all the railroad companies in Vermont, to carry all animals and articles of exhibition, to and from the Fair free of charge, and without change of cars; and visitors each way at half fare.

Gentlemen from the States and from the Canadas, are cordially invited to participate in the exhibition.

Communications may be addressed to J. A. Beckwith, Corresponding Secretary of the Vermont State Agricultural Society, Middlebury, Vt., or to his agent, E. P. Walton, Montpelier, Vt.

FREDERICK HOLBROOK, Pres't.
J. A. BECKWITH, Sec'y.

### State Fairs,—1853.

### New York County and Town Fairs, 1853.

BELOW we give the time and place of holding County and Town Fairs in this State, so far as ascertained. We hope to complete the list in two or three weeks:

| | |
|---|---|
| Albany | at Bethlehem, October 4, 5, 6. |
| Cattaraugus | Randolph, September 15, 16. |
| Cortland | Homer, September 13, 14, 15. |
| Dutchess | Washington Hollow, October 4, 5. |
| Greene | Coxsackie, September 27, 28. |
| Herkimer | Ilion, September 27, 28. |
| Jefferson | Watertown, September 13, 14. |
| Lewis | Martinsburg. |
| Monroe | (West Dist.) Brockport, Sept. 27. |
| " | (East Dist.) East Rush, Sept. 29. |
| " | Domestic and Hort., Roch. Oct. 1. |
| Oneida | Utica, September 13, 14, 15. |
| Onondaga | Syracuse, September 14, 15, 16. |
| Orleans | September 29, 30. |
| Seneca | Waterloo, October 12, 13, 14. |
| Wayne | Newark, September 7, 8. |
| Wyoming | Warsaw, September 28, 29. |

TOWN FAIRS.

| | |
|---|---|
| Galen | Clyde, September 17. |
| Bristol | Bristol Centre, September 21. |

### County Fairs in Ohio for 1853.

| | |
|---|---|
| Ashtabula | Jefferson, October 4, 5. |
| Athens | Athens, October 5, 6. |
| Belmont | St. Clairsville, October 4, 5, 6. |
| Clark | Springfield, October 6, 7. |
| Columbiana | New Lisbon, October 15, 16, 17. |
| Coshocton | Coshocton, October 20, 21. |
| Darke | Greenville, September 7, 8. |
| Franklin | Columbus, September 28, 29, 30. |
| Gallia | September 29, 30. |
| Guernsey | Washington, October 6, 7. |
| Hamilton | Carthage, September 28, 29, 30. |
| Hancock | October 13, 14. |
| Hardin | Kenton, October 19. |
| Harrison | Cadiz, October 6, 7. |
| Hocking | Logan, September 21. |
| Holmes | Millersburg, October 6, 7. |
| Huron & Erie | Monroeville, October 4, 5, 6. |
| Jefferson | Steubenville, October 6, 7. |
| Knox | Mt. Vernon, September 29, 30. |
| Lake | Painesville, October 12, 13. |
| Logan | Bellefontaine, October 5, 6. |
| Lorain | Elyria, October 5, 6. |
| Madison | London, September 29, 30. |
| Medina | Medina, September 14, 15. |
| Meigs | Middleport, Sept. 28, 29, 30. |
| Miami | Troy, October 19, 20, 21. |
| Morgan | McConnelsville, October 3, 4, 5. |
| Noble | Sarahsville, October 13, 14. |
| Preble | Eaton, October 20, 21. |
| Richland | Mansfield, September 27, 28. |
| Scioto | Portsmouth, Sept. 30, Oct. 1. |
| Seneca | Tiffin, October 6, 7, 8. |
| Stark | Canton, October 6, 7. |
| Trumbull | Warren, September 14, 15, 16. |
| Tuscarawas | New Philadelphia, Oct. 13, 14. |
| Vinton | McArthur, October 4. |
| Washington | Marietta, October 13, 14. |
| Wood | Bowling Green, October 5, 6. |
| Wyandot | Upper Sandusky, Sept. 29, 30. |

# Orchard and Garden.

## ROYAL HORTICULTURAL SOCIETY, ENGLAND.

This Society was founded in 1802, and commenced the publication of its Transactions in 1812, a volume appearing every year. They are standard publications on the subject of Horticulture, of the highest character. Thirty-two acres were leased of the Duke of Devonshire's estate, at Chiswick for an experimental garden, in which are tested all sorts of fruits, trees, flowers, and vegetables adapted to the climate.—Here too are tested various kinds of machinery suited to gardening purposes. By opening communication with kindred bodies, commercial houses and agents in all parts of the world, from Mexico to China, this Society has been the means of introducing and testing most of the new and rare plants that have come into cultivation in England, within the past 20 years, their list now of new plants exceeding two hundred.

The Society have also spacious rooms in Regent street, London, at which periodical shows are held, and where much of their business is transacted. Exhibitions are also held in the garden in May, June and July. In horticultural science the different classifications are assigned to a competent Professor, who does nothing else than investigate, test, and experiment in their department. A sufficient space is allotted to the different kinds of fruit, as apples, pears, plums and cherries, in which every known method of cultivation and training is tested. They have also a spacious fruit room, almost dark, well ventilated, in which the fruit is laid on wooden shelves arranged in tiers, and formed of narrow strips with small spaces between them. Choice pears and other fruit are laid on the shelves wrapped in papers.

They are building a large conservatory, of which a section only has been completed, which is one hundred and eighty feet long, twenty-seven feet wide, and of the same height. One half of the basement is below the level of the earth, the roof is curvilinear made of light iron, and covered with patent sheet glass. The air is admitted so as to first pass over large tanks of rain water and thence over hot water pipes, thus keeping it moist and warm. Narrow stringers run along the walls and a path each side of the central bed. On the stages are small flowering plants, so as to reflect their beauties by contrast. In the centre beds, plants grow without pots. A large variety of the choicest roses add their beauty and fragrance to the delights of the place.

The Society have an Arboretum, exhibiting various plants needing such protection, and a stove house for such plants as can thrive only in heat. There are also two span-roofed green houses, and a span roofed pit, in which are brought forward the new hybrid Japonicas, which have been so popular in London. The whole ground is occupied with all that is desirable and beautiful in fruit, plants or flowers, all of which on the grand exhibition days are open to the beauty and fashion of London. There are often fifteen or twenty thousand visitors, many of them coming from a distance. It is expected ladies will appear in full dress on those gala days.

These are the recreations of the nobility of England, who having means and time, are thus lavish in keeping up one of the most magnificent horticultural establishments in the world. We have condensed the account here given from the interesting "Glimpses and Gatherings," published by Rev. W. A. Drew, who visited London in 1851, as Commissioner from the State of Maine, to the great World's Fair. †

## THE GRASS PINK.

This beautiful plant is found in moist meadows and open swamps throughout the United States and Canada. Its scientific name is *Calopogon pulchellus*, or *Cymbidium pulchellum* of some authors. It is a Gynandrous plant and is grouped with the Orchidaceæ, famous for its many grotesque flowers and distorted stems and roots. The Orchidaceæ are natives of every part of the world, and are particularly abundant in the tropics, where numbers of them are found thriving on trees, both living and dead. There are something like 400 genera, and above 3,000 species.

The Grass Pink has a tuberous root from which rises a smooth and slender scape or stalk, sometimes to the height of 20 inches, bearing at the summit from three to eight very beautiful purple flowers, that are quite large, inverted and the several parts spreading. The lip of the flower which is a characteristic of the Orchidaceæ, is on the upper side, erect, narrowed toward the base, but spreading at the summit where it forms a concave disk, supporting a quantity of white and purple hairs. The plant has but one leaf which sheaths the base of the stalk, and in some measure resembles a rather wide blade of grass. It blooms in July, and where they are rather abundant they make the ground look surpassingly beautiful.

From the nature of the root and the general habit of the plant, there is but little doubt it might, with proper care, be transferred to the garden. In such case its habits should not be changed too suddenly, but as moist a situation given it as is practicable. There are a multitude of plants cultivated that will not equal the Grass Pink, for delicacy and real beauty.

The Cypripedium, or Ladies Slipper, so named from a fancied resemblance of its large saccate nectary to the slipper of Venus, is another beautiful plant, belonging to the same class and order with the Grass Pink. There are several species of them, one or two of which are found growing on dry land; the others inhabit swamps. The root of the *C. spectabilis* consists of a bunch of long thick fibers, and is much sought for as a nervine. The stem is sheathed by several large, ovate, pubescent leaves,—the flower nods at the summit, the nectary being of a whitish color, beautifully marked within by delicate purple spots. The opening is guarded by a broad petaloid lobe, beneath which are seen the wondrous pistil and stamens so peculiar to the Gynandria. The sepals and petals are of a greenish color stained with hues of purple and twisted much like corkscrews. The whole is partially sheltered by a large foliaceous bract. The Cypripediums flower in May and June.

The most beautiful species of this genus however, is the *C. acaule* or stemless ladies slipper. It is most commonly met with in swamps, though occasionally seen on hard land. The plant has but two leaves—quite large and springing directly from the root. Between these rises a scape often to the height of a foot or fourteen inches, bearing a single, large purple flower. It is worthy a place in the flower garden, where it will flourish, particularly if the nature of the soil is somewhat moist. The writer of this has seen it thus transferred and looking quite as well as in its native situation. Probably some of the other species, if not all, would suit themselves to a garden.

Very many of our native plants are worthy of attention in this respect. Well cared for, they would make quite as brilliant a show as many of the exotics. T. E. W.

## LATE SOWN VEGETABLES.

Some of the greatest delicacies for table use may be obtained from quite late sowings. We can speak most positively in regard to turneps. Both the round and the flat turnep may be sown at any time in July or August, and we have known it to come to considerable maturity in a season in which there were no early frosts, when sown in the first week of September. Special pains should be taken to enrich the soil, for in this way we secure two objects—the more rapid growth of the plant, and a sweeter and more tender vegetable. We suppose it is generally well known that the more rapid the growth of this and several other vegetables, the more mild and tender they are to the taste. Cabbages, onions, radishes, spinach, cauliflower, are all much more delicate in flavor, and agreeable to the palate when grown freely and rapidly than when their growth is stinted or slow. Cucumbers and celery may also be added to the above named, as being much milder when grown rapidly than when of slow growth. Some of these may be raised late in the season, as well as turneps, so as to supply the table with the delicacies of spring and summer until quite late in the fall and winter.

By the end of July and in the course of August, there will be vacant places in garden and field, which it will be good economy to sow with turneps. There will be, at all events, the pea and early potato ground; these and other such patches may be sown with round or flat turnep, and thereby, we will be making provisions both for our family and our stock. What we do not use for the table will be well relished by our cattle; and cows which have a tolerable supply, will not dry up so early as cows that have no green feed.—Observer, *in Alb. Cultivator.*

## PROPAGATION OF PLANTS BY LAYERS.

This is the time to multiply plants, by the process called Layering.

The best mode of doing this, is to spade up the ground lightly, around the plant to be multiplied. Then select a branch of this year's growth, and near a bud, which will be buried, cut in through the bark, and then turn the knife upward toward the point of branch, and slit it up a little way. Then make a little ditch in the earth, and bend down the branch into it, so that the place cut will be on the bottom of it, and pin it down with wooden pins, that have a hook in their tops. Bury this part two or three inches, and see that it be kept moist.

Roots will start from the part that has been cut. In the spring or late in the fall, the branch thus rooted may be separated from the parent stock, and set out to begin life on its own strength. Some only cut in a notch near the bud that they bury, and some do nothing; but the branches laid down are found to root quicker by being slit as above directed. Grapes, currants, gooseberries, roses, shrubs, &c., &c., are very easily multiplied in this way.—*Me. Far.*

## THE VICTORIA REGIA.

The first flowering of this magnificent plant, in the conservatory of J. F. Allen, Esq., of Salem, Mass., took place last week, and was witnessed by hundreds of visitors. We find the following description of the rare scene in the Salem Observer of Saturday:

"When the bud, which was very large, first burst, the outer petals expanded to the great diameter of 12 inches from tip to tip! This was about 5 o'clock on Thursday afternoon—for it is one of the many peculiarities of this plant that it has always unfolded its buds at that hour of the day. In color, the petals were of a pure white—the general form and appearance of the flower partaking of those of the pond lily and the magnolia. The inner petals remained closed until yesterday, concealing a host of smaller petals of a delicate pink color. During yesterday the flower was undergoing a change which results in an entire alteration of color of the petals from white to pink.—The flower continues for about 48 hours, and is immediately succeeded by others. A second bud has appeared upon Mr. Allen's plant, and has reached the surface of the water, while a third is part way up. These flowers will be constantly appearing, for an indefinite time, at the rate of about one a week. And it is probable their size will increase, as that of the leaves has done. Indeed, the second bud is obviously larger than the first one was at the same stage."

One of the leaves of this plant measures five feet seven inches across, and is said to be capable of sustaining a weight of thirty pounds. According to the *Bee*, Mr. Allon's kindness in allowing all who wished to see this beautiful plant, was sadly abused, holes having been punched in the large leaves, with canes and parasols, by some of the visitors—a species of vandalism of which no one but a savage or a Yankee could have been guilty.—*N. E. Farmer.*

# Domestic Economy.

## MODES OF PREPARING THE PEACH.

A writer in the New York *Times* publsihes a long account of the Peach, its uses, and the manner of preparing and preserving it. He concludes his article with the following recipes, which we commend our female readers, if they observe anything new in them, to keep until the proper time arrives to test their application:

Peaches in Brandy.—Wipe, weigh, and carefully select the fruit, and have ready a quarter of the weight of powdered white sugar: put the fruit into a vessel that shuts closely, throw the sugar over it, and then cover the fruit with brandy; between the top and cover of the pot, put a piece of double cap paper; set the pot into a saucepan of water till the brandy is quite hot, but not boiling; put the fruit into a jar, and pour brandy upon it, and when cold, put a bladder over, and tie it down tightly.

Pickled Peaches.—Take a gallon of good vinegar, add a few pounds of sugar, boil it for a few minutes, and remove any scum that may rise; then take cling stone peaches that are fully ripe, rub them with a flannel cloth, to get off the down upon them, and stick three or four cloves in each; put them into a glass or earthen vessel, and pour the liquor upon them boiling hot; cover them up, and let them stand in a cool place for a week or ten days, then pour off the liquor, and boil it as before, after which return it boiling to the peaches, which should be carefully covered up and stored away for future use.

Peach Preserve.—Take enough clarified sugar to cover the fruit, boil it till the syrup blubbers on the opposite side the skimmer, then put in the fruit, and let it boil lively two minutes; remove the same; let it stand from the fire till the next day; then take out the fruit, boil the syrup again, and as soon as the fruit boils take them from the fire, and when cold put into jars, and keep free from heat or moisture.

Peach Jam.—Gather the fruit when ripe, peel and stone them, put into the pan, and mash them over the fire till hot; rub them through a seive, and to each pound of pulp add a pound of white sugar and half an ounce of bitter almonds, blanched and pounded; let it boil ten or fifteen minutes, stir and skim it well.

Peach Jelly.—Take free-stones, not too ripe, wipe them, and cut into quarter; crack the stones and break the kernels small; put the peaches and kernels into a covered jar, set them in boiling water, and let them do till soft; strain them through a jelly bag till the juice is squeezed out; allow a pint of white sugar to a pint of juice; put the sugar and juice into a preserving kettle, and boil them twenty minutes, skimming very carefully; put the jelly warm into glasses or jars, and when cold, tie up with brandied papers.

Peach Wine.—Take nearly ripe fruit, stone it, and bruise the pulp to one quart of water, and let it stand twenty-four hours, then squeeze out the juice, and to every gallon of it add two pounds white sugar; then put it into a cask, and when it has fermented and become perfectly clear, bottle it up, and use at pleasure.

Mending Glass.—Melt a little isinglass in spirits of wine, and add a small quantity of water. Warm the mixture gently over a warm fire. When mixed by thoroughly melting, it will form glue perfectly transparent, and which will reunite broken glass firmly, neatly and invisibly. Lime, mixed with the white of egg, forms a very strong cement for glass, porcelain, &c., but it must be done neatly.—*Scientific American.*

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending July 19, 1853.

S. T. Barnes, of Columbus, Ohio, for improvement in press mould candlesticks.

J. C. Booth, of Philadelphia, Pa., for improvement in processes for obtaining chromates. Patented in England, Nov. 9, 1852.

A. H. Brown, of Washington City, D. C., for improvement in feathering paddle wheels for steamers. Patented in England, March 5, 1853.

Isaac Brown, of Baltimore, Md., for improvement in driving saws.

N. T. Coffin, of Knightstown, Ind., for improvement in hanging saws.

C. J. Conway, of New York, N. Y., for improvement in lamps.

John Jackson, of Lawrence, Mass., for improvement in spinning jacks.

Edmund Munson, of Utica, N. Y., for improvement in eyes for mill stones.

R. C. Pratt, of Canandaigua, N. Y., for improvement in machines for ditching.

John Farrel, of Philadelphia, Pa., for improvement in lining for fire-proof safes.

Bradford Rowe, of Albany, N. Y., for improvement in gripes for holding leather.

Geo. B. Salmon, of Elmira, N. Y., for improvement in grain winnowers. Ante-dated, July 6, 1853.

Ephraim Treadwell, of New York, N. Y., for improvement in ovens.

Wm. H. Thompson and Wm. H. Plummer, of Biddeford, Me., for improvement in compressers for flyers.

P. P. Trayser, of Baltimore, Md., for improvement in spike machines.

S. J. Sherman, of New York, N. Y., for improvement in mounting spirit levels.

T. C. Weildon, of Hartford, Conn., for improvement in manufacture of wigs.

Chas. Williams, of Philadelphia, Pa., for improvement in bristles for brushes.

Leonardo Westbrook, of New York, N. Y., for improvement in gutta percha stereotype compositions.

A. O. Wilcox, of Philadelphia, Pa., for improvement in caloric air engines.

Frederik Hesse, of Bethlehem, Pa., assignor to H. J. Oerter, for improvement in paper cutting machines.

DESIGNS.

J. J. Dudley, of Troy, N. Y., assignor to Johnson, Cox & Fuller, for design for a cook stove.

John Mason, of Providence, R. I., assignor to I. H. Holden, as the Agent of the "High Street Furnace Co.," for design for a cooking stove.

## PLANK ROADS.

Orville W. Storey, Civil Engineer, of Belfast, N. Y., furnishes the Working Farmer the following information relative to the construction of Plank Roads. Mr. S. has had considerable experience in laying out and building roads of this description, and consequently his statements are entitled to weight. He says:

The road-bed for Plank Roads should be so formed, either by embankment, turnpiking, or side ditches, as to admit of thorough drainage, and of sufficient width for teams to pass each other.

That part which is to be planked, must be prepared by plowing and otherwise pulverized, so as to leave an uniform bearing for the sills and planks. One track is sufficient, except near large towns, laid with plank eight feet long, four inches thick, where there is much travel or traffic of heavy loads—or three inches where the travel is light or the loads small, laid on one side, instead of centre of road, inclining a little downward towards the nearest ditch.

For roads constructed on lands which descend across its line, the plank should be laid on the side of road-bed next the low ground, as it will save much expense in maintaining a proper drainage. The plank should lie crosswise of the road, resting on four sills 6 inches wide—one inch thick for three inch plank. The inside sills to be four and a half feet apart in the clear, and the outside sills placed so as to leave six inches space from the inside sills; the outside sill to be laid so as to break joint with the inside sill adjoining.

On all roads with which I am acquainted, the planks are pine or hemlock, preference being given to pine at the same price.

The cost of turnpiking a road and laying planks, varies from 75 cents to $1 25 per rod in cleared lands, depending on the stiffness and other qualities of the soil.

I have no knowledge of any experiments having been made, either in Kyanizing plank or of any saturation with minerals, or any coating with tar, or charring.

Planks placed diagonally, are more liable to be displaced, in consequence of teams and vehicles coming in contact with one end, without a counteracting force on the other.

Wheels with wide tires would undoubtedly be less injurious to planks than narrow tires; but greater wear is made by the corks of horses, by butting and splitting the plank. Still, a more serious damage is done by neglect of a proper drainage. On many roads water is allowed to remain under the planks, causing them to float and acquire an uneven bearing, permitting the planks to spring and break before they are half worn.

Several roads have been built by contract, but on the best roads the planks have been laid by judicious foremen in the employ of the company. In this case the materials can be furnished and grading performed by contract.

## DAGUERREOTYPES OF THE MOON.

The curious and scientific cannot fail of being interested in the annexed account from the New York Times of the daguerreotypes of Luna herself. This wonderful invention has been used for years to amuse the public, and minister to our affections, by presenting faithful portraits of the absent or lost ones. It has now been fairly pressed into the service of the science of astronomy, and as will be seen has been eminently successful. The Times says:

The first lunar daguerreotype was taken by Mr. S. D. Humphrey, of Canandaigua, N. Y. At a meeting of the Cambridge Scientific Association, in 1849, five of Mr. Humphrey's pictures were exhibited by Mr. Wells. Since that time, Mr. Whipple, the Daguerreotypist, of Boston, has been very successful in daguerreotyping the moon, using the great reflecting telescope at Cambridge for that purpose. But lately he has quite popularized these lunar transcripts, by the newly discovered art of deguerreotyping on glass. This art, which is called crystalotyping, has never yielded more beautiful results. Mr. Whipple's Crystalotype of the moon ranks among the wonders of the age, and by its easy reproduction, enables every person, whose cultivated taste leads them to care for such things, to possess a picture of the moon, actually drawn by herself. The picture, let us observe, is a faithful copy of the lunar features,—as faithful as an ordinary daguerreotype of a friend's face. Nothing more curious has ever fallen under our notice.

These pictures are to be exhibited at the Crystal Palace, where they will attract, as they deserve, the attention of the public.

## BAR IRON—IMPORTANT DISCOVERY.

Messrs. Davis & Co., Cincinnati, have become interested with the owners of Hilton's patent process for making wrought iron directly from the ore, with wood or mineral coal, at a single heat, and have put the matter to a practical test with the most favorable results. They have put up a Furnace, Forge and Rolling Mill in one room, and the first attempt produced iron, though all the hands, with one exception, had never seen such a furnace. The furnace and puddling oven are connected; when the ore is melted it flows into the oven, and by tapping a few inches above the oven hearth, the slug or drop flows out. The iron is bailed and put under the trip hammer, made into blooms and prepared for the rollers; all done with but a small quantity of fuel.

The ore is pulverized and mixed with 20 per cent. of carbon—common bituminous coal—and then put into air chambers prepared for it, which are also heated by stone coal. In the puddling oven it is also heated by stone coal to a white or welding heat, and made ready for bailing. No charcoal, or anthracite, heretofore considered as essential, is used. Nine blooms, of 70 pounds each, averaging one in fifteen minutes, required but three bushels of stone coal to the bloom. They are now turning out about 2½ tons of the best quality of blooms every twenty-four hours, at a cost of $12,50 per ton in Cincinnati.

The iron manufactured by the new process has been subjected to the severest test, such as making into horse-shoe nails, nuts, &c., and proves to be as good quality as the best of blooms brought to the Cincinnati market. The above particulars of this important invention to the iron interest are obtained from the communication of J. Greer to the Dayton Journal, and Charles Cist to the Cincinnati Enquirer. Both have visited the works, and witnessed the process.—*Cleveland Herald.*

## THE MOUNTAIN BORER.

The Hartford Times speaks as follows of an invention by a Mr. Talbot of that city, called the "Mountain Borer:"

"Worked into its own machinery, is an engine of 60 horse power. This drives four piston rods, horizontally, and these turn four half-circle plates, of stout proportions, on which circular revolving blades are set. These four plates are turned with exactness about one-fourth of a circle and back, and are all set upon a revolving plate, of about ten feet in diameter, and as thus set, cut a circle of 17 feet in diameter. The machine weighs about 80 tons, and is of stout proportions throughout. The motion obtained by this invention is novel—entirely new.—By it the revolving knives, each running its quarter circle, cut completely from the centre to the circumference, and they do their work steadily and surely, cutting a round hole as they are turned by the large or centre plate. But we cannot describe the great machine so as to give a good idea of it, and will not attempt it. We say, however, that it stands among the greatest inventions of the age, and will bore its way to an enviable notoriety. It is to be taken to a rock at or near Harlem, N. Y., for an experimental trial. All the rare things in the Crystal Palace combined, are not equal to this machine, in the way of interest to the lover of true mechanical genius and bold conception.

The Coke Experiment.—The experiments with coke, as a fuel, for the passenger engines of the Baltimore and Ohio Railroad, continue highly successful. The Cumberland Miner's Journal says: "Is it now demonstrated that coke is not only far superior to wood as a fuel for locomotives, but that it can be used at one half the cost.—Such is the conclusion at which the Railroad Company have arrived, and accordingly have ordered the employment of coke on all their passenger locomotives as soon as the necessary alterations in the grate, bars, &c., can be effected. In the meantime, coke has been sent to many of the Northern railroads from this region, with the view to its introduction also in that quarter."

# Educational.

## ERRORS AND THEIR CORRECTION.

"We ask Advice, but mean Approbation."

"I would thank you," said one not long since, "to tell me when I do wrong;" (stating in what respect.) The opportunity presented itself, the error was pointed out, but the act was excused with the remark, "Well I seldom do so; I hardly know how I happened to do so this time," &c., (let it be remembered that this was a *habit;*) and then followed a somewhat tedious dissertation on such practices, and people who are guilty of them. The truth is, few people see their own failings, and still fewer are willing to be reminded of them. Habit, or self-love, or both, blinds the eyes of such, and they regard their own acts as praiseworthy, and while they ask advice, or instruction, they mean approbation.

Blindness to our faults shows great ignorance of ourselves; and those who are most ignorant on this subject not only have generally most faults, but are least willing to know themselves, or to be told of their faults, and least disposed to correct them.

The great remedy for this self-ignorance, and of course, the great corrector of our faults, as well as a great preventive, is self-knowledge, and this can be acquired only by self-examination. This requires no laborious, or protracted operation. Careful and frequent comparison of our own acts with those of others, is all that is necessary.—For example:—if we see in another an act, or a habit, which we think is wrong, let us look at ourselves, and see if we are not guilty of the same, or even worse; and if we are willing to know the truth, there is little doubt that we shall find enough of them.

Self-examination and consequent self-knowledge, is necessary to the correction of faults. Until we know our faults we certainly cannot correct them; and happy is it for us if we are willing to know and to correct them.

"O, wad some power the giftie gie us
To see ourselves as others see us!
It wad frae monie a blonder free us,
And foolish notion." H.

Out West, July, 1853.

## FALSEHOOD IN CHILDREN, AND ITS CURE.

BY MRS. CHILD.

Perhaps there is no evil into which children so easily and so universally fall, as that of lying.

The temptation, too, is strong, and therefore the encouragement to veracity should be proportionally strong. If a child breaks anything, and honestly avows it, do not be angry with him. If candor procures a good scolding, besides the strong effort it naturally costs, depend upon it, he will soon be discouraged. In such cases do not speak till you can control yourself. Say I'm glad you told me. It was a very valuable article, and I am truly sorry it was broken; but it would have grieved me much more to have my son deceive me. But having said this, do not reproachfully allude to the accident afterwards. I was about to say that children never should be punished for what was honestly avowed; but perhaps there may be some cases where they do wrong, from the idea that an avowal will excuse them; in this case, they tell the truth from policy, not from conscience, and they should be reasoned with, and unpunished. However, it is the safe side to forgive a good deal, rather than run the risk of festering habits of deception.

Should you at any time discover your child in a lie, treat it with great solemnity. Let him see that it grieves you, and strikes you with horror, as the worst of all possible faults. Do not restore him to your confidence and affection until you see his heart is really touched by repentance. If falsehood becomes a habit with him, do not tempt him to make up stories by asking him to detail all the circumstances connected with the affair he has denied. Listen coldly to what he says, and let him see by your manner, that you do not ask him questions, because you have not the least confidence in his telling the truth. But remember to encourage as well as to discourage. Impress upon his mind that God will help him to get rid of the evil whenever he really wishes to get rid of it, and that every temptation that he overcomes will make the next one more easy. Receive every evidence of his truth with delight and affection, and let him see that your heart is filled with joy, that he has gained one victory over so great a fault.

Let your family never hear trifling deception glossed over by any excuses; speak of them with unlimited abhorrence and contempt.

Above all things, let your own habits be of the strictest truth. Examine closely! You will be surprised to find in how many little things we act insincerely. I have at this moment in my memory a friend who probably would be very indignant to be told that she did not speak the truth, and I dare say that all she deemed important occasions, she might be relied upon; yet she did deceive her children. True she thought it was for their good; but deception never produces good. I once saw her remove a plate of plum cake from the tea table to the closet. Her youngest daughter asked for a piece. The reply was, "It is all gone; puss came and ate it up." At the same time the mother winked to a little girl two or three years older, not to tell that she had seen her put it in the closet. There is an old proverb about killing two birds with one stone; here two daughters were injured by one lie. The youngest was deceived, and the eldest was taught to participate in the deception.

More experience would teach the little girl that the cat did not eat the cake, and having found that her mother would lie, she would in all probability dispute her when she even spoke the truth. And after all, what use is there in resorting to such degrading expedients! Why not tell the child the plum cake is in the closet; but it is not good for you at night, and I shall not give you a piece until morning! If she had been properly educated, this would have satisfied her; and if she chose to be troublesome, being put to bed without her supper would teach her a lesson for her future course.

A respect for the property of others must be taught children; for, until they are instructed they have very loose ideas upon the subject. A family of children cannot be too much urged and encouraged to be generous in lending and giving to each other; but they should be taught a scrupulous regard for each other's property. They should never use each other's things, without asking first, "Brother, may I take your sled?" "Sister may I have your book?" &c. They should be taught to put them carefully in their place when they have done using them; and should be impressed with this idea, that it is a greater fault to injure another's property than to be careless of our own. If any little barter has been made, and a dispute afterwards arises, hear both sides with impartiality, and allow no departure from what was promised in the bargain. From such little things as these, children receive their first ideas of honesty and justice, as well as truth.

## CHILDREN'S RIGHTS.

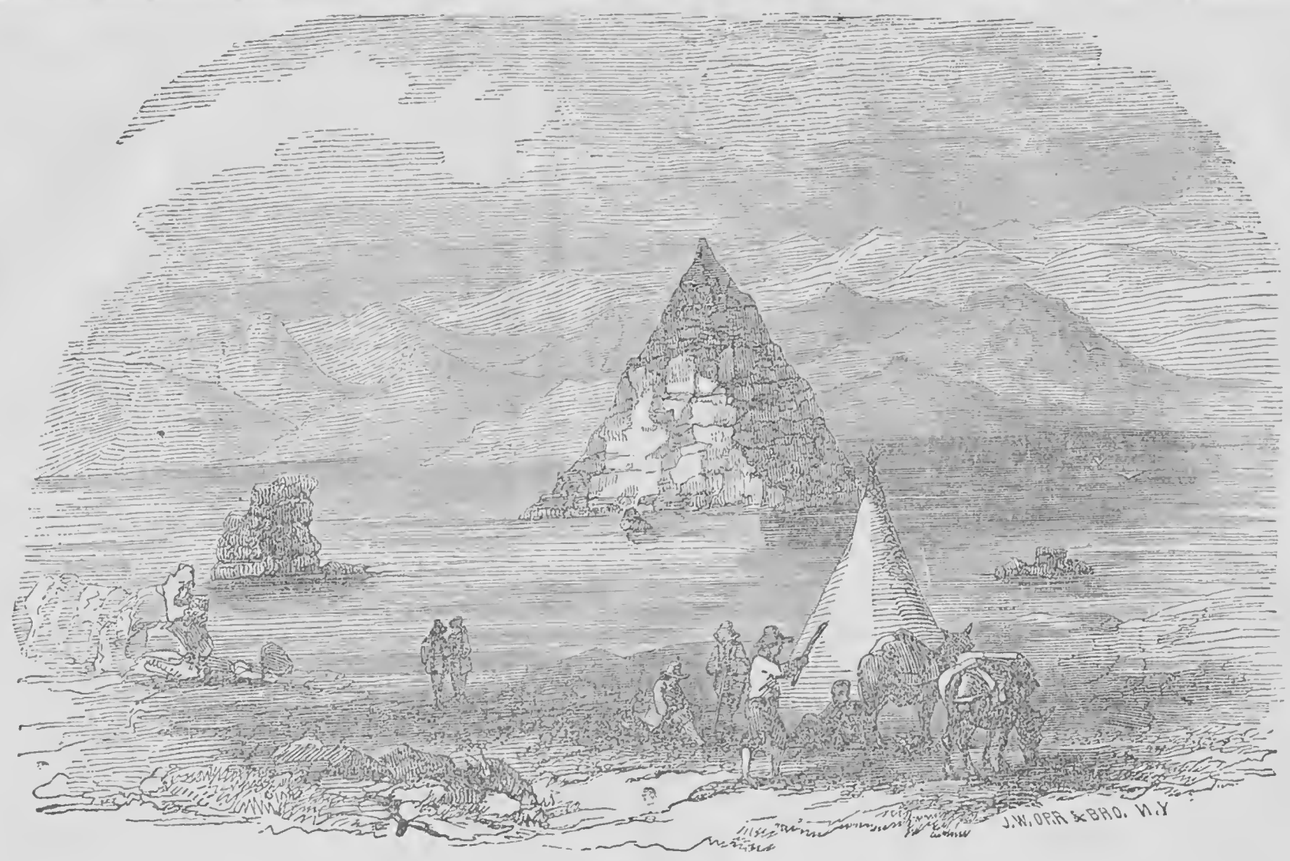
You have a pretty, attractive child; she is warm-hearted and affectionate, but vivacious and full of life. With judicious management, and a firm, steady rein, she is a very loveable one. You take her with you on a visit, or to make a call. You are busy, talking with the friend you went to see. A gentleman comes in and throws himself indolently on the sofa. His eyes fall upon little Kitty. He is just in the mode to be amused, and makes up his mind to banter her a little, for the sake of drawing her out. So he says,—

"Jemima, dear—come here!"

The child blushes, and regards him as if uncertain whether he intended to address her. He repeats his request, with a laugh. She replies, "my name is Kitty, not Jemmima," which her tormentor contradicts.—Kitty looks puzzled, (just as he intended she should,) but it is only for a moment.—She sees he is quizzing her. Well, Miss Kitty likes a frolic, if that is what he wants; so she gives him a pert answer—he laughs uproariously, and rattles fun round her little ears like a hail storm; Kitty has plenty of answers ready for him, and he enjoys the sport amazingly.

Bye-and-bye he gets weary and says, "There—run away now, I'm going to read the newspaper;" but Kitty is wide awake, and has no idea of being cut short in that summary way; so she continues her Lilliputian attacks, till finally he gets up and beats a despairing retreat, muttering, "what a very *disagreeable* child.

Mamma sees it all from a distance; she does not interfere—no—for she believes in "Children's Rights." Kitty was quite, well behaved and respectful—till the visitor undertook to quiz and teaze her, for his own amusement. He wanted a frolic—and he has had it—*they who play with children must take children's play.* Fanny Fern.



VIEW OF PYRAMID LAKE, OREGON.

The accompanying engraving of the very remarkable scene called Pyramid Lake, in Oregon, from the pyramid-shaped mountain or rock which rises from the centre of the water to a height of some 600 feet, is taken from Col. Fremont's narrative of his adventurous journey from the Dallas to the Missouri River.

The elevation of this lake above the sea is 4,890 feet, being nearly 700 feet higher than the Great Salt Lake, from which it lies nearly west, and distant about eight degrees of longitude. The position and elevation of this lake make it an object of geographical interest. It is the nearest lake to the western rim, as the Great Salt Lake is to the eastern rim, of the Great Basin which lies between the base of the Rocky Mountains and the Sierra Nevada; and the extent and character of which, its whole circumference and contents, it is so desirable to know. [The illustration was given in an early number of the Rural, but will be new to a majority of our readers.]

## CIRCULAR FROM THE SUPERINTENDENT OF COMMON SCHOOLS.

State of New York, Secretary's Office, Department of Com Schools, Albany, July 22, 1853.

To answer a great number of inquiries daily received at this office, and to guard against the consequences of misapprehension which many school officers have fallen into in regard to a recent decision of the Court of Appeals, the undersigned would state:—

The Court of Appeals has recently decided the Free School Law to be unconstitutional. But this decision in no respect affects the Act for establishing Free Schools throughout the State, passed April 12, 1851. Trustees of school districts may safely proceed to make out rate bills for the payment of teachers' wages under the last named Act. They may also safely levy and collect taxes voted under, or authorized by, the School Law of 1847 as amended by chapter 382 of the laws of 1849.

To protect Trustees from the liabilities incurred under the Act of 1849 which is now declared unconstitutional, the Legislature on the 30th day of June last, passed the following law to which the undersigned would call the attention of all parties interested:

AN ACT RELATIVE TO RECOVERIES AGAINST SCHOOL OFFICERS, PASSED JUNE 30, 1853.

*The People of the State of New York, represented in Senate and Assembly, do enact as follows:*

§ 1. Whenever a recovery has been or shall hereafter be had against the trustees or collectors of a school district for the collection of any tax, levied in the district by reason of the tax or any part thereof having been imposed pursuant to the provisions of the act entitled "An act establishing free schools throughout the State," passed March 29th, 1849, it shall be the duty of the trustees of the district for the time being, to ascertain the amount so recovered, together with the expenses of execution therefor, the interest thereon, and all costs, charges and expenses to which the trustees or collectors have been subjected in the defence of the action or actions, and to impose and collect in the manner school district taxes are levied and collected, a tax sufficient to discharge the amount so ascertained, and in addition thereto, such further sum as shall be sufficient to repay to all the tax-payers, who shall have paid the first-mentioned tax, and who shall not have brought actions therefor, the amount by them respectively paid, with interest thereon to the time the tax to be imposed is collected.

§ 2. From the moneys collected by virtue of the preceding section, there shall be paid to the persons against whom such recovery shall have been had, the moneys by them paid therefor, with interest and the costs, charges, and expenses incurred by them and so ascertained as aforesaid, and to each tax-payer who shall have paid any portion of the first-mentioned tax, and who has not brought an action therefor, the amount paid by him with interest to the time the tax to be levied by virtue of this act is collected.

§ 3. Where the trustees of school districts shall have paid the amount of any such recovery or any part thereof from moneys belonging to the district, the amount of moneys so paid with interest thereon shall be replaced from the moneys to be raised under this act, instead of being paid as in the second section provided, and the remainder of the moneys shall be applied as hereinbefore provided. Henry S. Randall,
*Secretary of State.*

Editors throughout the State are requested to copy.

If we scrutinize the lives of men of genius we shall find that activity and persistence are their leading peculiarities. Obstacles cannot intimidate, nor labor weary, nor drudgery disgust them.

## INTERESTING STATISTICS.

The following interesting statistics, compiled from an appendix to a report of the Secretary of the Treasury, to the United States Senate, on the colonial and lake trade of the United States, presents, at a glance, a picture of our great resources:

Our average imports from 1821, specie included, were $80,078,348; from 1848 to 1852, they were $181,966,579, showing that the average more than doubles in thirty years. Our average imports from 1821, were $69,439,785, and from 1848 to 1852, $175,943,360. In 1821 the tonnage of the United States was only 1,298,958 tons; in 1852 is was 4,138,441 tons, showing that it has more than trebled in thirty years.—Next to Great Britain, we have a larger tonnage than any nation in the world, and in five years, at the present rate of increase, we shall surpass Great Britain.

The value of our annual products exceeds three thousand millions of dollars, of which only about $170,000,000 are sent abroad, leaving $2,830,900,000 to be consumed and interchanged among the States. At least $600,000,000 is thus interchanged between the States of the Union.

The total debt of the several States in 1851, was $201,541,624, which was less by some millions than it had been during the previous ten years. The value of property assessed in the same States was $5,983,149,407, the real value being, however, $10,068,157,779—a good security, we think, for their debts, whether owing at home or abroad.

The total population of the villages, towns, and cities of the United States is only 4,000,000, while the rural population, the honest peasantry, their "country's pride," is 10,263,000. The four cities of New York, Boston, Philadelphia and Baltimore, contain a population of 1,214,000, the amount of whose real and personal property is $702,000,000, or $578 each. The property of the rural population is $2,312,000,000 or about $120 each.

From returns from the agricultural crops, it appears that we raise annually $143,000,000 in wheat, $391,200,000 in Indian corn, $190,275,000 in hay, $70,840,000 in oats, $73,125,000 in Irish potatoes, and $129,000,000 in cotton, the whole crop being $1,752,583,042.

The animals slaughtered are worth quite as much as the cotton, bringing some $183,000,000 per annum. One of the most useful of our crops—wine—is yet in its infancy, the West having made only a little over 1,000,000 of gallons in 1851, worth about $500,000; but the cultivation is increasing, and in a few years will be immense, especially when new Mexico and California, which are admirably adapted to it, shall go into the business.

No portion of the trade of the Union has grown more rapidly within a few years than that connected with the steam marine.—The total number of steam vessels now employed on our coast is 625, with a tonnage of 212,500, and employing 11,770 men as officers and crews. In the interior the number of steam vessels is 765, with a tonnage of 204,725, and employing 17,607 men.

Our whole steam marine, therefore, amounts to 1,390 vessels, with a tonnage of 417,236, manned by 29,277 men, and carrying, beside freight, about 40,000,000 passengers every year. In this vast travel, only 750 lives were lost in 1852—far too many, but not so many as some people, who fancy every steamboat a powder house, suppose.

He who flies too near the sun of honor will have his wings melted by ambition.

The glow of sunset is the reflection of the hedges of roses around Eden.

That which has its value from fancy is not very valuable.

# Sunday Reading.

## A TREE OF GOOD SEED.

The seeds of hope by mortals sown,
On sweet congenial soil,
Produce the fruits that all must own
Are sweet to those who toil.

"Hope is a plant that all may rear,
By God to mortals given,
To cultivate while here on earth
And reap the fruit in Heaven."

Written for the Rural New-Yorker.

The body is an outer garment, to protect us from the storms encountered on our life journey. Therefore it behooves us to keep it in as sound a condition as may be, lest it should wear out too soon.

At the end of our tour, the storms all passed, all around and above us beaming with the light of heaven, the rocks and thorns replaced by blooming flowers along our way, no more dust nor mud to soil our robes, death aids us to lay aside our outer garb all faded, and ragged, and stained, from its long exposure, and appear in a dress more befitting, a spirit purified and reconciled to God. Yet how many tears are shed upon the lifeless body by those who had learned to love us along life's way. Would they weep thus all tears of bitter grief, if allowed to see the glittering dress that is no longer hidden by that tattered garment? Or would ourselves be so reluctant to make the exchange, had we more faith in the promise, "They that be wise shall shine as the brightness of the firmament; and they that turn many to righteousness as the stars for ever and ever?"—"If ye loved me ye would rejoice, because I said I go unto the Father." Scissac.

## THOUGHTS ON DEATH.

Who has not been deprived of a friend by death? Who has not seen the speaking eye—heard the love-thrilling voice for the last time? Hushed in death's cold slumber is the voice of a father, mother, brother, sister, or friend; yet the memory of such remain. Impressed upon our heart's pure tablet is the face, form and deeds of the loved, yet departed one.

But where are those—the departed?—That's the query. Dwell they in the grave, or have they soared to the lands unknown to us, where happiness reigns supreme—a land of light and love, rendered thus by the visible appearance of God?

When darkness pervades our sight, when arrows rankle in our heart, when a loved one is torn from our bosom, and consigned to the damp, cold grave, we pray for their return, but should we? Why wish them back to be sufferers,—mayhap victims to treachery or vice, on this sin-stained earth? Why wish them to be partakers of misery? Let them rest; wish them not back. We shall soon meet with them,—soon, aye, *very* soon our dust will be mingled with theirs—our souls go where theirs have gone. We are being swiftly borne adown the rapid stream of Time—We can almost see death's gate, so nigh have we approached the line, the boundery line that connects life with death.—Then mourn not the departure of friends. They have but passed through what awaits every one of us poor, dying mortals.—*N. Y. Mirror.*

## MARTYRS.

The martyrs to *vice* far exceed the martyrs to *virtue*, both in endurance and in number. *Religion* does not forbid the rational enjoyments of life as sternly as *avarice* forbids them. She does not require such sacrifices of ease as *ambition*; or such renunciation of quiet as *pride*—murder sleeps like *dissipation*, or health like intemperance, or scatter wealth like extravagance or gambling. She does not embitter life like discord, or shorten it like dulling, or harrow it like revenge. She does not impose more vigilance than suspicion, more anxiety than selfishness, or half as much mortification as vanity.

## HAPPINESS.

True happiness is of a retired nature, and an enemy to pomp and noise. It arises, in the first place, from the enjoyment of one's self, and in the next, from the friendship and conversation of a few select companions. False happiness loves to be in a crowd, and to draw the eyes of the world upon her; she does not receive any satisfaction from the applause which she gives herself, but from the admiration which she raises in others.

"All is for the Best."—Dr. Johnson used to say that a habit of looking at the best side of every event, is better than a thousand pounds a year. Bishop Hall quaintly remarks, "for every bad there might be a worse, and when a man breaks his leg, let him be thankful that it was not his neck!" When Fenelon's library was on fire, "God be praised," he exclaimed, "that it is not the dwelling of some poor man!" This is the true spirit of submission; one of the most beautiful traits that can possess the human heart. Resolve to see this world on its sunny side, and you have almost half won the battle of life at the outset.

Anger.—It is the great duty of Christians to put off anger. It unfits for duty. A little jogging puts a clock out of frame; so a little passion the heart. A man cannot wrestle with God and wrangle with his neighbor at the same time.

# Miscellaneous.

## THE SEASONS.

TRANSLATED FROM THE GERMAN.

Hay and corn and buds and flowers,
Snow and ice and fruit and wine,—
Suns and Seasons, sleets and showers,
Bring, in turn, these gifts divine.
Spring blows, Summer glows,
Autumn reaps, Winter keeps,
Spring prepares, Summer provides,
Autumn hoards, and Winter hides.
Come, then, friends, their praises sound:
Summer, Autumn, Winter, Spring,
As they run their yearly round,
Each in turn with gladness sing!
Time drops blessings as he flies—
Time makes ripe and Time makes wise.

Written for the Rural New-Yorker.

## THE VALLEY OF MEMORY.

BY MISS ELIZA WOODWORTH.

Away in the shadowy land of the Past, sleeping in the quiet, uncertain light of Remembrance, is a valley, wherein is hidden a temple, solemn in its gloomy majesty, yet beautiful in the silent glory, resting like the farewell smile of fading Love upon lofty battlement, and glimmering through dusky aisle. And there, too, is a record, kept by a stern and faithful minister.

The pathway of life is shorn of its greenness, and the eyes that are tracing the labrynths are dim with gathering tears. Black and terrible the grim clouds are darkening the quaking heavens; lovely in its peaceful slumbers—woful in its fading beauty—stern and awful in its rising wrath. Muttering voices of anger are stirring the storm pall, wrapping the shuddering bosom of the skies, and coarse and heavy the loud clarion of the maddened tempest falls upon the desolate heart. Fearful of the Future, forgetful of the Present, the weary eye searches for the light of the Past. O! then, bright to "the pure in heart," is the valley—beautiful the temple—cheering the spotless pages, kept by the hand of Memory, and filled with the records of Innocence. Low tones of melody are going up from the green earth to the heavens bending above it; the wild shriek of the battling thunder is heard *afar off*,—and the black shroud of the tempest is seen as a vision; while dreams, bright as the sun—kissed rain-drops dancing on the sparkling bow of Omnipotence,—visit the heart and gladden the misty dimness of the little valley, with a light of beauty and heaven-born glory.

"Lord, keep my memory green!" Let not the sunny path of childhood be lost in the distance—let not the star of Hope, shedding light on the bosom of youth, fade amid the blackness of coming years!

Away, in that darkened valley, amid the hidden covert of the whispering forest, where the yew and the cypress twine a death gloom, blacker than the garments of the daughter of sleep, there rolls a sluggish river, reeking with the pestilential breath of its poisonous waters. The "man of *sin*," turns back to look for the treasures of a distant, tho' still remembered day. But heavy is the midnight hovering over the blood-stained ruins of the temple of innocence—fearful and forbidding are the torn pages of memory, as the stern recorder points with bony finger to the annals of hellish crime, and tells with the hollow voice of unforgetting remorse, of the ruined and the lost!

Alas! for the greenness of childhood, withered by the storm-breath of sorrow, and the budding hopes of youth, crushed in the gripe of scorn! But the *spirit*, tho' blighted in its aspirations, may yet remain *pure and unsullied*. And the burning lamp of heaven, lost for an hour in the blackness of the howling tempest, whose giant form soon sinks to the caverns of night, while its voice dies away in the lonely darkness of its far-off home, shall shine with a clearer glory amid the storm-scattered clouds. Wo! wo! unto him of the unclean hands, and the self-polluted heart! In vain may he ask for the waters of Lethe, or sigh for the dreamless tide of Oblivion. Forgetfulness visits not the chambers of darkness—Oblivian shall not wash away the grim foot-prints of Guilt. Not a voice of friendly cheer from the solemn land of the Future!—not a breath of melody to break the soundless gloom of the Present! "Wretched man that thou art!"—go thou to the dreary Past. Walk through the *once* bright valley—gaze on the fallen pillar—look on the desolated shrine of affection, and moral purity—bring up from the slimy depths of that sullen river, the wrecks floating within it! Dark and sad is the face of Memory—chill and awful her warning voice!

Yet, *thou*, O! youth! with the eye of love, and the voice of truth, take heed lest thou cause the beautiful temple of virtue to moulder by the slow, decaying hand of wrong and iniquity, or to fall beneath the tread of the tempest, shattered and ruined forever. What others have been, we, too, may become. Father in Heaven! shield us in the trying hour, and break the giant spell of temptation and evil!

Albion, N. Y., 1853.

## HOW TO LIVE LONG.

It is the easiest thing in the world, perhaps, to secure a long life, provided there is a moderately good constitution to start with, and provided also no accident intervenes. Yet how few there are who seem to be aware of this! If persons are to be judged by their conduct, indeed, we might conclude that nothing could be done to prolong life, but that it depended entirely on chance whether adult years were attained—whether death came at forty, or whether existence was prolonged to the scriptural "three score years and ten."

The laws of life, however, are as immutable and regular as those of astronomy.—Whoever lives according to those laws may reasonably calculate on a good old age.—Whoever systematically violates them may as certainly expect to shorten his existence. The human body is, in truth, but a machine; and, like all other machines, it may be worn out before its time by abuse and neglect.—Excesses on the one hand, or want of exercise on the other, will tear it prematurely to pieces, or allow it to rust away. Too little work, or too much, will alike prove fatal to a prolonged existence.

Americans violate the law of life principally through their excesses. In early manhood excess in convival enjoyment and even in worse kinds of dissipating, is unfortunately too common. But excess is far from ceasing even with mature manhood. With energetic persons, the desire to achieve a fortune has, at this period of life, generally succeeded to the pleasure-seeking phase of earlier years. The man, still radically unchanged, pursues business with as much avidity as ever he sought recreation. Early and late he is at his work, overtasking his mind, and exhausting his body by undue labor. At first, indeed, he does not feel the effects of his indiscretion. Morning finds him refreshed by the repose of the night; he seems to himself as vigorous as ever; and he returns to his pursuits with the same eagerness, the same tenacity, the same folly as before. But nature at last avenges herself. By middle age he is already an old man. Or, perhaps, he suddenly breaks down, even at an earlier period, becoming a confirmed valetudinarian, the victim of dyspepsia, rheumatism, gout, nervous disorders, or possibly a complication of all four.

If men would attain to the allotted term of life, they must shun excess in work, therefore, as well as in pleasure. To kill one's self by a greedy haste after riches, is as much a moral suicide as to destroy one's life by wine, by tobacco, by dining out, by late hours. It is not sufficient, however, to avoid excess merely, in order to arrive at "three score and ten." Judicious exercise must be mingled with habits of moderate living. Personal cleanliness must be preserved by bathing, by frequent changes of linen, and by friction of the skin to induce a healthy state of that membrane. Many an excellent clergyman has shortened his days, involuntarily, by remaining in his study, when he should have been sawing wood in the cellar, walking in the fresh air, or galloping over breezy hills. Many an individual, in both sexes, has brought on disease by neglecting to keep the pores of the body properly opened. The fashionable practice of turning day into night, and night into day, is also an enemy to length of years. There is no light so beautiful as God's free sunlight. The fair, fresh complexions of most Quaker girls, and the comparatively faded ones of fashionable women, is a testimony, present before us all, in favor of regular hours, and against gas-lit ball-rooms.—Plenty of light, also, even in day-time, conduces to health. The inhabitants of dark courts, like prisoners, wilt and grow wan.

A long life is rarely the lot of a passionate person. Indeed, only an iron constitution can withstand frequently recurring tempests of anger, hate, jealousy, and other evil emotions. Literally is such an individual "given over to a demon," to be racked and torn, year after year, till life escapes at last beneath the torture. To be just, moderate and true, is to be, almost certainly, a sexagenarian. Yet indolence, either of body or of mind, much less of both, is almost as fatal to a protracted existence as excess in pursuit of fortune, or in the chase of pleasure. Nature is never idle, and will not allow man to be so, without dwarfing his intellect and shortening his days. But as few Americans permit themselves to rust out, we dismiss this part of our subject without further comment.

Who will be wise, and live long? Who foolish, and die prematurely? Either course is before you, reader!—*Ledger*.

## ENERGY.

Energy is everything. How mean a thing is a man with little motive power! All the abilities nature has given him lie useless, like a great and mighty machine, ready at every point for action, but not a wheel turns for want of a starting power. A great man is like a great machine. He has a great power to set in motion the various and immense projects which he has in his hand; little motives can neither start nor stop him; they set in motion the powers of an ordinary man and render him a respectable, nay, even beautiful piece of mechanism, but never a magnificent one. Yet there is one thing which renders man supremely above the machine. By the working of his own mind he can improve and exalt himself; by directing his eye to what is great and good, he may become so. If then, we can become what we wish to be, what high objects should we aim at, and what resolute and energetic efforts should we be ever making to attain them?

## A QUAKERESS
### IN SEARCH OF A HUSBAND.

In a work recently published in England, entitled "Quakerism, or the story of my Life" the following amusing anecdote is related:

I was one evening, at a large tea party, introduced to a very beautiful young bride. She had a large figure, well, and most gracefully formed; the roseate hue of her cheek, and the soft brilliancy of her downcast eyes, were only equalled in beauty by the exquisitively fair neck, and the rich dark brown hair, banded in the smoothest Madonna style on her lofty brow. Her dress was of the richest dove-colored satin; and her quaker cap, and neck handkerchief folded in neat plaits across her bosom, were of India's most costly muslin. The handkerchief was attached to the dress by a gold pin, with a pearl head; and the belt of her dress was fastened in front by two more gold pins, each with a diamond head. The bridegroom was a very small, thin, awkward, ill-made man; his face—from which every morsel of whisker had been shaved off—was white, flat and meaningless; and his dress, though quite new, was badly made, and badly put on; it was, however a strictly Quaker costume. In the course of the evening I said to the lady who had introduced me.—"How did that mean looking little man ever manage to get such a very lovely bride?"—She smiled and answered, "Strange as it may seem, I assure thee it was Rachel who courted him, not he her. I will tell thee the story. About four years ago, Rachel's sister was married, and she was somewhat annoyed, that she, the eldest and so much the handsomer, should have been passed by; so she resolved to provide herself with a husband; and thou knowest when a woman makes up her mind to do a thing, she triumphs over every obstacle. Rachel's first step was to draw out a list of the names of eligible young men; opposite to each name she placed the amount of his annual income, as correctly as she could ascertain it. The most wealthy was placed at the head of the list, and so on in regular gradation. She had twelve names down.

They lived in all parts of England; one in London, one in York, one in Bristol, and so on. Sylvanus Otway was at the head of the list. She had never seen him, and he lived near Norwich. He was down for seven thousand a year. Rachel seriously informed her father and mother that she had 'a concern' to attend the Norwich Quarterly Meeting. They had no acquaintances they cared for there, and were disinclined to take so long a journey; but Rachel became so silent and sad, and so often told them she was burdened with the weight of her concern to go, that they at length yielded to her wishes; and father and mother, Rachel and her sister Susanna, and one of the brothers, all went to Norwich. As the father and mother were acknowledged ministers, of course they were taken much notice of, and invited to all the Friends' houses; amongst others, to Friend Otway's, and Rachel soon had the pleasure of being introduced to Sylvanus. She was delighted to find him a fine, handsome, intelligent looking young man, and to perceive that he was decidedly facinated with his new acquaintances; and when at parting, he whispered to her sister, loud enough for Rachel to hear, "I hope soon to be in your city; and to have the pleasure of calling at your house," her cheek flushed with triumph, and heart palpitated with joy at the success of her scheme. Sylvanus soon followed them, as he had promised, and proposed for Susanna. He was promptly accepted; and they were married as speedily as the rules of our Society would permit.—Rachel was exceedingly vexed and disappointed; but she is not a person to be discomfited by one failure, so she resolved to try again, but she has never been friendly with Susanna since. The next on her list was Josiah Gumble, of York, and his income was six thousand. Again she informed her father, that it was required of her to attend the York Quarterly Meeting, and she added, "it had borne on her mind that the ministry of her beloved father, at that solemn assembly, would be blessed to some waiting minds." There is nothing pleases our ministers more than flattery of their preaching gifts. Rachel is an adept at it.

I have often found it difficult to keep my features in sober decorum when I have heard her speaking of the inward peace she had felt from the acceptable service of her much valued Friends. And then she presses the hand of the minister she is flattering, with so much feeling, as she says; but they like it, and Rachel has her own ends in view. She went to York, and soon obtained the desired introduction to Josiah Gumble; he, too, was young, and passably well looking; Rachel contrived to be very much in his company; but she saw clearly that he could not be caught. She told me she had never met any man who was so coldly insensible to beauty, and so stupidly indifferent to flattery. However, Rachel was not disheartened; for it soon came out that Josiah was the victim of an unrighteous attachment to the daughter of a clergyman; for love of whom he deserted our Israel, and is now—alas! that it should be so—with his six thousand a year, gone over to the camp of the alien. The third on Rachel's list was John Jones, of London, her bridegroom now; he is worth about two thousand a year; and, as thou must see, no beauty. When Rachel first saw him, she was half inclined to leave him for somebody else; but the next on her list is only six hundred a year. The sacrifice was too great, and besides James Lewis might be as mean looking, so she resolved on the conquest of John Jones. It was very easily accomplished, he made no resistance, at once became the worshipper of her beauty; and now that they are married, I think it will be her own fault if they are not happy. He is not very wise, but he is good humored and good-natured."

"How didst thou become acquainted with this amusing story?" said I. "Is it not a breach of confidence to tell it?" "No, indeed," she replied: "there were more than a dozen of us in the room when she told it herself, and showed us the list; she said she did not want it now so she gave it to Martha Elton, and bade her give a copy of it to any of the girls who would like to try the same plan of getting settled in life."

## THE PHYSICIAN'S OATH.

The following "oath of the physician" is one of the most remarkable relics of antiquity. It is ascribed to Hippocrates, but it is believed to be of still greater antiquity. It is, however, certain that it was in vogue in his time, now more than two thousand years ago. It is alluded to in the writings of Plato, Soranus, Jerome and others. It may be well to remark by way of preliminary, that Appollo, the son of Jupiter, was the god of medicine. Esculapius was the son of Appollo. Hygeia (health) and Panacea (universal remedy) were Esculapius's daughters. In all oaths of these days, it was customary to invoke the gods and goddesses:

The Oath.—"I swear by Apollo, the Physician, by Esculapius, by Hygeia and Panacea, that I will fulfil, faithfully, to the extent of my power and ability, this oath, and this written engagement; that I will consider him who taught me this act in the light of a father; that I will watch over his interests, provide liberally for his wants, consider his children as my own brothers, and that I will instruct them in this profession, if such be their wish, without salary or compensation; that I will communicate to them, to my own children, and to adepts in this science, the common precepts of our profession and its secret requirements, but will conceal them from all others. According to the best of my knowledge I will make use of the rules of dietetics for the comfort and relief of my patients. I will remove from them everything that could be injurious to them—and all kinds of witchcraft. I will never administer a deadly poison to any one, whoever he may be, or however earnestly I may be solicited, nor will I prepare it for another to administer. I will never cause abortion. I will preserve my life pure and holy as my art. I will never remove calculi, but will direct such patients to those who make this their business. In every house in which I may enter it shall be only for the relief of the sick, preserving myself free from all voluntary iniquity; abstaining from all kinds of debauchery; forbidding myself all improprieties, whether with man or woman, slave or free. Anything which I may see or hear in the exercise of my profession, that ought not to be divulged, shall, by me, be regarded as an inviolable secret.

"If I faithfully fulfil the conditions of my oath, may my life pass happily away: may I gather the fruits of my labors, and live, honored by all, to the latest posterity. But if I fail therein, and perjure myself, let the contrary of all this happen."

## GYPSIES IN THE UNITED STATES.

It has been generally supposed that gypsies were unknown in the United States until their recent advent into New Jersey and Virginia; but a correspondent of the Philadelphia Gazette, at Bangor, writes that they have been known in New Hampshire, Maine and Massachusetts for nearly one hundred years. According to tradition, they were brought from Portsmouth, N. H., by a gentleman who endeavored to train them as household servants. He failed in the attempt and his gypsies afterwards betook themselves to the barren and inhospitable plains in the now town of Barrington, some twenty miles north-west from Portsmouth, where they and their descendants have resided in hovels, issuing forth from time to time among the people of New Hampshire, and the borders of Massachusetts and Maine, disposing of baskets and other articles of manufacture, telling fortunes, &c., &c.—They are to day but little advanced in point of civilization and the decencies of life, of those who have within a year or two, emigrated to Maryland, New Jersey, &c., though their blood is less unmixed with that of the Yankees. All efforts to reclaim them from their wandering life have proved futile; hence they are permitted to follow the bent of their inclinations without let or hindrance, unless they commit some heinous offence.

## A COURTSHIP IN PUNS.

A certain Mr. Par being smitten with the charms of a certain Miss Ann Marr, a provincial belle, whom he met at Harrowgate, was exceedingly perplexed to contrive how he should open his heart to her. At length he met her, and it was for the last time that season, at a public breakfast; and in the dread of losing her forever, he resolved, even there, to make a desperate effort to pop the question. Fortune favored the attempt. It happened that opposite the gentleman there was a plate of Parmesan cheese, and near the lady stood a crystal dish of marmalade. "Will you do me the honor to accept of a little *Par*, Miss Ann?" said the lover, with a look full of meaning, and moving his hand toward the cheese. "Tell me first," replied the damsel, with admirable readiness, lifting, at the same time, the top of the crystal, "whether or not you are fond of *Marr*, my lad?" "Above all things in existence!" exclaimed the enraptured youth. The offers were mutually accepted and understood as pledges of personal attachment by the parties, although nobody else comprehended the equivoque, or discovered anything in the transaction but common civility. The treaty thus opened was soon ratified, and Miss Ann Marr was invested with title of Mrs. Par.

# For the Ladies.

## I WAIT FOR THEE!

The hearth is swept—the fire is bright,
The kettle sings for tea;
The cloth is spread—the lamp is light,
The white cakes smoke in napkins white,
And now I wait for thee.

Come, come, love, thy task is done,
The clock ticks listeningly,
The blinds are shut, the curtain down,
The warm chair to the fireside drawn,
The boy is on my knee.

Come home, love, come; his deep fond eye
Looks round him wistfully,
And where the whispering winds go by,
As if thy welcome step were nigh,
He crows exultingly.

In vain—he finds the welcome vain,
And turns his glance on mine
So earnestly, that yet again
His form unto my heart I strain,
That glance is so like thine.

Thy task is done—we miss thee here;
Where'er thy footsteps roam,
No heart will speed such kindly cheer,
No beating heart, no listening ear,
Like those who wait thee home.

Ah, now along the crisp walk, fast,
That well known step doth come;
The bolt is drawn, the gate is past,
The babe is wild with joy at last—
A thousand welcomes home!

## MATERNAL INFLUENCE.

How many of the great and distinguished men attribute, and truly too, the eminence to which they have attained, to the simple teaching of childhood,—to the impressions made on their youthful minds by a kind and affectionate mother. The following beautiful tributo to a revered and beloved parent, from the richly gifted pen of Lamertine, is well worthy attention, and its sentiments impressed upon the mind will elevate its standard of thought and refine the feelings of the heart:

My mother had received from hers, on her death bed, a beautiful Bible of *Royaumont*, in which she taught me to read when I was a little child. This bible had engravings of sacred subjects on all its pages. Here was Sarah, here were Tobias and his Angel, here was Joseph, or Samuel; here especially were those beautiful patriarchal scenes where the solemn and primitive nature of the East mingled with all the acts of the simple and admirable life of these early men.

When I had recited my lesson well and read almost without mistake half of a page of Sacred History, my mother showed the engraving, and, holding the opened book on her knees, permitted me to view it while she explained it to me as a recompense. She was endowed by nature with a pious and tender spirit, and with an imagination the most sensible and brilliant; her beautiful and noble figure, reflected in her radiant countenance, all which glowed in her heart, all which characterized her thought; and the sound, clear, affectionate, solemn and passionate of her voice added to all she said an accent of force, of charm, and of love which still resounds at this moment in my ear, alas! after six years of silence. The sight of those engravings, the explications, and poetical comments of my mother, have inspired me from the most tender infancy with biblical tastes and inclinations. From a love of the things to a desire of seeing the places where those things happened, was only a step. I eagerly desired therefore, from the age of eight, to visit those mountains where God decended—those deserts where the angels came and pointed out to Hagar the hidden fountain whence she might revive her poor infant, deserted and dying of thirst; those rivers which flow out from the terrestrial Paradise; that heaven where the angels descended and ascended the ladder of Jacob.

This desire had never been diminished. I had always thought from that time upon a tour to the East, as a great act of my life. I continually constructed in my thought a vast and religious *epic poem*, of which these beautiful places were the principal scene; it also appeared to me that the doubts and religious perplexities would here find a solution and harmony. Then I could draw from her colors for my poem,—for life, to my mind, was always a grand poem, as to my heart it was of love. God, Love, and Poesy are the only three words I wish engraved on my tomb-stone if I ever merit one.

Female Heart.—The female heart is a singular organ. At a lecture, an evening or two since, Dr. Holmes said he was not one of those who believed in the equality of the sexes. He thought there are many things a woman can do a thousand fold better than a man. She understands her own sex as a man can never do. I doubt, said he, whether, in the most perfect union that ever existed between the heart of a man and a woman, there was not a spare chamber in the female heart to take in another female lodger. Thus constituted, woman was higher, according to the heraldry of nature, a most wonderful and complex creature.

A Paragraph from Goethe.—Goethe has written few passages more beautiful than the following:

"The year is going away like the sound of bells. The winds pass over the stubble, and find nothing to move, only the red berries of that slender tree, which seem as if they would fain remind us of something cheerful; and the measured beat of the thresher's flail calls up the thought that in the dry and falling ear lies so much nourishment and life."

MOORE'S RURAL NEW-YORKER.

ROCHESTER, AUGUST 6, 1853.

### PUBLISHER'S NOTICES.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

### To Correspondents, and Others.

FOR the information of correspondents, and others interested, we would state that articles intended for the outside pages (1, 4, 5 and 8) of the RURAL, must be at the publication office on or before Friday of the preceding week. Our edition is now so large that we are compelled to put the first form to press on Saturday — one week previous to the date of publication. The second form (four inside pages,) is closed on Tuesday evening or Wednesday morning,—and consequently all articles, notices, or advertisements, for immediate publication, should reach us on or before Tuesday noon.

We make the above statement and explanation for the reason that articles and advertisements, which require early attention, are frequently received too late for insertion in the number specified. Parties interested will please bear this in mind, governing themselves accordingly. Those who have supposed us amenable to the charge of neglect or omission in the premises, will please understand that we endeavor, at least, to give all matters of importance proper attention.

### Rochester Juvenile Reform Association.

THE great amount of crime and depravity found to exist among a class of children who had long roamed about the city, nearly destitute of homes or parental restraint, arousing the attention of the philanthropic among our citizens, a series of meetings were held last spring which resulted in the formation of a society charged with the important duty of effecting a much needed reformation among the vicious youth whose depredations and vices had become almost insupportable. To the proposition to have them placed in the public schools, was urged the objection that the capacity of the school houses and rooms hired for the purpose were already crowded to their utmost limits without accommodating those who desired to attend the schools. Active measures were immediately taken to procure the authority of law, from the Legislature then in session, to enable the Board of Education to increase the number and capacity of school houses, and to raise a larger amount of money to be expended in support of the School. Success crowned their efforts in both applications and an additional number of houses have been built and are ready for occupation.

To further the objects had in view by our citizens, a society was organized, funds raised, and two efficient agents appointed to effect the desired reformation among the juvenile population. For the time the agents have been employed, their labors have been crowned with signal success.—We give a condensed statement of their operations for June from the Daily Union, which cannot fail of being read with interest by all who are interested in works of good to our common race.

The agents report that they took from the streets and placed in school, 523 children, of which number 360 reside on the west side of the river, and 163 on the east side. Of these latter, 18 were taken from Sibley's Block in Mechanic Alley.—Twenty-seven of the number were neglected, and entirely destitute of parental restraint or care.—Nearly all these children are now in regular attendance at school.

The agents report that they found 22 girls and 33 boys destitute and homeless, requiring homes, food, clothing, instruction and employment.

Seven boys, from 7 to 12 years old, have been sent to the House of Refuge for crime and vagrancy. Several more of a similar class, are now under observation, and will probably require to be sent to the same school of reform.

In a few instances lads have been taken to situations in the country to break off their evil associations in the city, but the efforts in this wise have not proved very successful.

MERITED COMPLIMENT.—In announcing the election of C. VIBBARD, of Syracuse, Superintendent of the Central Railroad, and C. DUTTON, of Rochester, as Assistant, the Buffalo Advertiser pays the last named gentleman a compliment which we can cheerfully endorse. The Adv. says:—"Both gentleman are spoken of by those who are acquainted with them as certain to make energetic and efficient officers. Of Mr. Dutton we can speak from personal knowledge as a gentleman in every way qualified to discharge the duties of his office with eminent ability. His experience on railways, his industry, perseverance and mechanical skill peculiarly fit him for the post he is called upon to fill."

THE DROUTH, which has prevailed to some extent for several weeks past, is becoming very severe in many localities. We hear much complaint of its effects in this region, as well as other sections. The weather continues warm and dry. We had several showers on Monday and Tuesday, but the drouth was not sufficiently checked to prove of much benefit. We trust the windows of Heaven will soon be opened, for the drouth is becoming really alarming in some sections.

### Notes on the Wing.

*Saratoga Spa.—The Crystal Palace, its Contents and Surroundings—The Court of Impeachment—The Country, Crops, &c.*

LITTLE FALLS, Aug. 1, 1853.

EDS. RURAL:—Since my last, I have paid my respects to Saratoga, and the Crystal Palace,—attended the opening of the Court for the trial of Impeachments,—and for a few days enjoyed the luxuries of a country home—which *last* is most certainly not the *least*.

Of Saratoga, the far-famed watering place, it may be remarked that it holds its high rank among the fashionable resorts of the day, without any falling off of visitors or extravagant indulgencies. The tide of travel is perhaps stronger than at any previous period, though the great rush is yet to come. The probability is that the season will be extended on account of the State Fair, which is to be held here in September.

The Crystal Palace deserves a more extended notice. The structure, of itself, would require more space than I dare occupy; and the contents, if noticed at any length, would fill a volume.—The ground floor assumes the form of an octagon or an eight-square, and covers about three and a half acres. The entrances are from three sides, similar to an old-fashioned barn. The aisles, which are about forty feet in width, are called *naves*, and at their crossing place an open space is formed 100 feet in diameter. This is directly beneath the *dome*, which is the largest and most beautiful one in the United States. The remainder of the principal floor is divided up into apartments for the display of the various articles on exhibition. The second floor takes the form of a Greek cross. The galleries are twenty-four feet above the first floor, to which they are connected by twelve broad stair-cases. The space over the *naves* is open, so that a person can see from the ground to the roof. But near the wall of the building there is a broad connection, to afford a passage from one gallery to another. The appearance of the frame-work, which is entirely of iron, is very light and tasty, while the covering, of colored enameled glass, is of the most exquisite beauty. The main portion of the roof is constructed of boards covered with tin. This portion is seventy-four feet from the ground, and the dome reaches the extreme height of one-hundred and twenty-three feet.

The long delay in opening the Palace, caused many misgivings as to the show itself, but the display of articles is becoming quite creditable. The United States and mother England, Italy and Austria, Canada and the German States, Prussia and France, and a portion of the "rest of mankind," are opening their choicest treasures.

The goadings of the Press have aroused the managers to activity, and every day shows some improvement. There are refreshment rooms for the hungry, and comfortable seats for the weary. These enable visitors to spend the whole day in examining the almost infinite variety of objects on exhibition. It is true that many articles are displayed here that are not worthy of such distinction. Many varieties of *soap*, for instance, are here to be seen; also thousands of *daguerreotypes*, common articles of *perfumery*, &c.,—all of which may be viewed in the shop windows of any of our villages and cities. But the superiority in some departments, amply atones for defects and deficiencies. Persons visiting this place will find objects worthy of long and careful study. The department of Statuary is quite full and perfect; Machinery is well represented—the progress of the Arts is well exemplified, and Science has sent in her worthy offerings. I should be glad to enumerate, if space would allow.

I must enter my feeble protest against the claptrap, catch-penny shows and delusions about the Palace. Let visitors beware of them. The Latting Observatory will pay a visit on a clear day, but the rest are gross impositions that should be frowned down by *every body*. There is no hurry about visiting the Fair. The first of September is sufficiently early, as it will not be complete before that time.

Leaving New York, I again visited Albany to witness the proceedings of the Impeaching Court. But my stay was short, and so shall be my description. The Court organized Tuesday, July 26, and adopted a code of Rules for its government; after which the parties "joined issue," and the August body adjourned until 16th of this month, at which time the trial will commence.—It is to be hoped that this trial, which is the first of the kind in the history of our State, will result to the honor of the Court and the triumph of Justice over all party considerations.

But now for the country,—the glorious, Heaven-born country. After a few hours ride on the celebrated "Central Road," I found myself at that dearest of all spots, "the *spot* where I was born." What pleasant emotions are kindled by a reunion with the friends of our childhood!—What vivid recollections crowd the brain on viewing the scenes and scenery of our "youthful days!" I dare not trust myself to attempt more than the "mere mention" of such an exciting topic.

My attention and inquiries have been particularly directed to the crops and prospects of the country. The hay crop is generally light, and the drouth threatens corn in many sections. Old Herkimer, though turned almost entirely into cheese, has produced some superior winter wheat without injury from the weevil. Oats, barley, &c., promise a good yield. With the present ruling of prices and good crops, farmers will continue to grow richer and richer, notwithstanding the increase of taxes and the high price of labor. "Long may they wave!"—And may their sound common sense and sterling virtue ever predominate over the tricks of trade, the corruption of politics, and the degrading influence of the vicious and the criminal. *OWE.*

## Literary Notices.

MINER'S DOMESTIC POULRY BOOK:—A Treatise on the History, Breeding and General Management of Foreign and Domestic Fowls. By T. B. MINER. G. W. FISHER, Rochester,—1853.

THE publisher has favored us with a copy of this work. It comprises a volume of some 250 pages, well printed and profusely illustrated. In appearance it is a *taking* book,—but as to the reliability of its contents we are unable to speak so confidently, not having examined the volume sufficiently to warrant an expression of opinion on that point. We may have more to say hereafter. The work is for sale as above, and we presume by booksellers generally.

TWELVE YEARS A SLAVE.—Narrative of Solomon Northup, a citizen of New York, Kidnapped in Washington city in 1841, and rescued in 1853 from a cotton plantation near the Red River, in Louisiana. Derby & Miller, Auburn. 1853.

THIS volume is attracting considerable attention, and will probably achieve a popularity something akin to Uncle Tom's Cabin. The book contains some 330 pages, and is well executed and illustrated. DEWEY has it for sale.

THE MAGAZINES.

THE KNICKERBOCKER always "opens rich," but the July and August "issues" are superbly creamy. The man who is not content with a fresh number of "Old Knick" at hand, hath little or no music beneath his waistcoat. The 42d volume, commencing with July, appears in a new dress, with an addition of 16 pages to each number. Published by SAMUEL HEUSTON, New York—$3 per annum. DEWEY and MCMAHON, Rochester.

GRAHAM'S MAGAZINE for the present month, is a capital issue—replete with reading matter of a quality above par in the literary Magazine line, interspersed with superior illustrations. GRAHAM is evidently determined to be first in both quantity and quality of matter furnished.

GODEY'S "Book," for August, opens with an illustrated article on the new El Dorado, (Australia,) and is otherwise well filled. DEWEY has it.

The NATIONAL, LADIES' REPOSITORY, and ARTHER'S MAGAZINE, are also received. As they are always well stored with safe and sensible reading, we presume the number of each before us will furnish a feast of good things, when opened.

DICKENS' HOUSEHOLD WORDS.—This unequaled periodical is to be issued hereafter in monthly numbers, a change very much to the convenience of its numerous readers. The enterprising American publishers are very successful in sustaining the high reputation of the English work. Terms $2 per year. Address MCELRATH & BARKER, 17 Spruce St. New York.

DEATH OF JOHN C. MERRELL.—At a meeting of Rochester Typographical Union, No. 15, held in this city, July 30th, the following preamble and resolutions were unanimously adopted:

WHEREAS, It has pleased Almighty God to remove from among us, by death, our late worthy associate and fellow-craftsman, JOHN C. MERRELL, therefore,

RESOLVED, That we bow in humble submission to the will of our Heavenly Father, whose wisdom is infinite, and who "doeth all things well."

RESOLVED, That the Typographical profession, of which deceased was a member, has lost one of its brightest ornaments; and this Association (now in its infancy,) is thereby deprived of his judicious counsel and valuable advice.

RESOLVED, That the Union, while they grieve at the loss which they themselves have sustained, would tender to his bereaved partner, and the more immediate relatives and friends of the deceased, their heart-felt condolence in this their great affliction.

RESOLVED, That a copy of these resolutions be presented to the family of the deceased, and also, that they be published in our city papers.

D. D. T. MOORE, President.

J. B. FULLER, Secretary.

STATE TEACHERS' ASSOCIATION.—This Association commenced its annual session in this city on Tuesday of this week. We have room only to mention that the attendance was very large, (about 500) and the exercises of a very interesting and profitable character. Addresses were delivered by Mr. OGDEN, of Owego; Prof. DAVIES, of Fishkill Landing; Prof. WOOLWORTH, of the N. Y. State Normal School; Prof. BARNARD, of Connecticut; and other distinguished gentlemen. The reports, resolutions, &c., were of a practical nature. We shall try to find room for a more detailed sketch next week.

THE EDITORIAL CONVENTION, called to meet in this city on the 27th ult., was so thinly attended that no organization was attempted. We regret this result, and the more from the fact that it was apparently caused by misunderstanding, rather than lack of interest on the part of those most concerned. Those present concluded, we believe, to adjourn, individually, to meet at the Editorial Convention to be held at Elmira on the 8th of September ensuing.

SHEEP IN VIRGINIA.—It is stated there has been a larger number of sheep brought into Loudon county, Virginia, this year, than for several years past, and there are now about 10,000 fine wool sheep in Fairfax county, which number is being constantly increased. The great demand for wool has induced many of the Virginia farmers to pay more than usual attention to sheep graziug.

VERMONT MARBLE FOR RUSSIA.—The Czar of Russia has ordered eight blocks of Vermont marble, weighing six tons each. They are designed for the erection of a monument to Kieffleur, who is supposed to have been the originator of the movement for firing Moscow, on the advance of the French army.

SHOCKING MURDER.—A negro man murdered the wife of John Rains, of Heath's Creek, Mo., and attempted to kill her oldest boy, and was burnt at the stake by the infuriated people on the 13th ult. It being suspected that the negro's master prompted the deed, he, with all his family, was ordered to quit the State within ten days.

ASHLAND FOR SALE.—The farm of the late Henry Clay is advertised in the Lexington Observer for sale. It contains three hundred and thirty acres of the best land in Fayette county, Ky.

### Recent Fires.

DURING the past few days quite a number of serious fires have occurred, which are chronicled in brief below:

At Saratoga Springs, 28th ult., in a building opposite the U. S. Hotel, known as the Centre House, and occupied as shops and stores. The block belonged to Lewis Putnam. Being constructed of wood, the flames spread very rapidly. There was a great many goods removed, in a damaged state. The total loss is estimated at over $30,000. The insurance is known to exceed $15,000.

At Ticonderoga, Sunday evening, 24th ult., a destructive fire occurred in the saw mills of Joseph Weed, situated on the outlet of Lake George, at the upper falls. It spread with fearful rapidity, consuming the entire mill property of Mr. Weed, together with about $1,000 worth of lumber. The loss is estimated at $20,000. No insurance. It is supposed to be the work of an incendiary.

At Westfield, N. Y., July 28, the steam foundry and machine shop of Messrs, Crosgrove & Co., was entirely consumed by fire. The books and accounts were saved. Loss $10,000. No insurance.

On Sunday, 24th ult., at Elbridge, N. Y., the store of A. B. Ridgway and two dwellings were burnt. Ridgway's loss is $10,000. Insured $6,000.

The Woolen Factory at Cedar Grove, Cazenovia, was burned on Monday the 25th ult. The loss is estimated at $18,000; partially covered by insurance.

A fire occurred at Geneva, on Friday evening, 29th ult., which destroyed some 15 or 20 buildings on the corner of Main and Seneca streets.—No further particulars received.

HAMILTON COLLEGE COMMENCEMENT.—The annual commencement of Hamilton College was held at Utica on the 27th ult. The degree of A. B. was conferred on eighteen graduates. The degree of A. M. was conferred upon graduates in course.

The honorary degree of A. M. was conferred upon John W. Bulkley, of Williamsburg; Wm. G. Hathaway, of Chicago; Ranson H. Tyler, of Fulton; Rev. Spencer M. Rice, of Millville, Mass.; Rev. Horace Winslow, of New Britain, Conn.; Rev. E. C. Pritchett, and John W. Pomeroy, of Rochester.

The honorary degree of LL. D. was conferred upon Hon. B. Davis Noxon, of Syracuse, and Prof. J. B. Thomas, N. Y. city. That of D. D. upon Rev. Oliver Ellsworth Dagget, of Canandaigua, and Rev. Aaron Perkins, of Hamilton.

A MELANCHOLY TALE.—The Chicago Tribune informs us that five unknown persons, who were buried as such, killed by the collision, last April, at the junction of the Illinois Central and Northern Roads, were a family by the name of Kellogg, moving from the State of New York to Minnesota. They were a man, his wife, and three lads. An infant, unhurt, taken from among the ruins, it has been ascertained, belonged to the same family. The two elder sons, with a grown-up daughter, are living in Minnesota. They have been on to Illinois, have visited the graves of the family who were killed when on their way to meet them, and have taken their little sister away with them. This is a sad tale.

AN EXPLOSION.—An establishment located in one of the thriving villages adjacent to our city, and ostensibly devoted to Water-Cure, was broken up recently by a discovery on the part of its boarder-patients that its principals were using the facilities it afforded them for the insidious inculcation and practical realization of Mr. S. P. Andrew's remarkable free-and-easy notions respecting love and marriage. The general proclamation of this fact caused the prompt dispersion of all but three or four of the boarders, and the speedy closing of the concern. There are a good many wolves in sheep's clothing about, and a wise and clear discernment was never more necessary.—*N. Y. Tribune.*

PENSION LAWS.—The Commissioner of Pensions wrote 29th June, that under the annual provision of the pension laws, any assignment or mortgage of a man's pension is rendered invalid. If, therefore, a person refuses to deliver up a certificate of pension belonging to a friend, the pensioner and he can make affidavit of the fact, and if he proves that he is the identical pensioner, the agent where the pension is payable will be directed to pay him the amount due. The affidavit of the pensioner and the proof of identy must be properly authenticated before a justice of the peace, whose official character should be certified.

NEW WHEAT.—The Chicago Democrat says, Boone County has the honor of sending the first new wheat to Chicago this season. A lot was sent in from Belvidere yesterday, consigned to Mr. R. S. King, one of the principal commission merchants at the depot. Mr. King informs us that it was a very excellent article, and superior to last season's. It brought 91 cents readily, although it was a little damp. The wheat, both spring and winter, throughout the State, is spoken of as turning out remarkably well, indeed of much better quality than of any former year for some time.

RISE IN TEAS.—The Boston Post says the news from China is causing great commotion in teas, blacks having advanced there 15 per cent. and greens 30. A telegraphic dispatch from Trieste says business was stopped at all the northern ports of China, and even at Canton. The news of the capture of Nankin by the progressives, and of the desertion of Shanghai, is reported in various forms, and dealers in hyson and gunpowder are decidedly "rising." A little allowance should be made for the spirit of speculation.

"WOMAN'S RIGHTS" IN IRELAND.—An exciting election contest was going on at last accounts for the representation of Clare, Ireland, in Parliament. Col. Vandeleur is the conservative candidate, and a letter states that on the 25th ult., "Lady Grace Vandeleur, in person, canvassed the electors of Kilrush, and from her ladyship's open carriage, addressed a large assemblage of electors on behalf of her husband. She was enthusiastically greeted by the populace, and so inspiring an incident must tend to a favorable result."

HOGS.—The Louisville Journal publishes a table of the number of hogs in eighty-eight counties of that State, over six months old, showing an aggregate excess on the number last year of 192,000 head. There is thirteen counties yet to hear from; the total increase in the State will therefore be about 215,000 head.

AUGUST ELECTIONS.—Elections took place last Monday in Kentucky, Missouri, Texas, Alabama and Arkansas. In all of these, we believe, members of Congress were to be chosen. The election in Tennessee takes place on the 4th, and in North Carolina on the 11th.

## News Brevities.

—— There was not a bushel of corn for sale in Charleston on the 21st ult.

—— A college for the education of negroes is to be stablished at Bermuda.

—— Ex-Governor Paine, of Vermont, died at Waco, Texas, on the 16th ult.

—— The hay crop of New Hampshire is coming in as light as it did last year.

—— Joseph Bimeler, the founder of the Zoarite Socialist Community, in Tuscarawas County, Ohio, died at an advanced age on the 20th ult.

—— Professor Shurtleff, of Dartmouth College, is living at Hanover at the of 80. He is cheerful, full of fun, anecdote, and innocent mirth, as ever.

—— The Canandaigua and Niagara Falls Railroad, broad guage, has been completed, and the cars commenced making regular trips on Monday.

—— William A. Beach, Esq., of Troy, has received from the President the appointment of U. S. Commissioner for the northern district of New York.

—— The house once occupied by William Penn is still standing in Philadelphia. It is occupied, we have been told, as a second-hand furniture store.

—— Six new Revenue Cutters have just been launched at Bristol, R. I., and Somerset, Mass. They will severally bear the names of Gen. Pierce's Cabinet.

—— There are 180 men in St. Louis who are rich—worth from $30,000 up to $186,000. The possessor of the latter "heap" of "lucre" is Jas. H. Lucas.

—— One hundred and forty million dollars' worth of tobacco was consumed by Great Britain last year—enough to keep a million boys at a good school.

—— Thomas H. Cummings, Grand Worthy Patriarch of the Sons of Temperance of Ohio, died near Allianio on the 22d ult. Mr. C. was a Methodist clergyman.

——Donald Mackay, of East Boston, is building the largest ship ever constructed. It is for the California trade, and will carry 4,000 tons. It is 300 feet long, 50 wide, and 28 feet deep.

—— The President has concluded a contract with Clark Mills for the erection in Washington city of a colossal equestrian statue of George Washington, at a cost of $50,000.

—— The Sandusky City Herald, of the 18th ult., notices a wagon load of wortleberries, brought in by a farmer, consisting of twenty-one bushels. The load brought him $67 20.

—— St. John (N. B.) papers of the 30th ult., state that fires were raging in the woods at Shabic, and had already destroyed a large quantity of valuable timber. The hay crop throughout the provinces will be light.

# Foreign Intelligence.

## Foreign News by the Asia.

New York, July 29.

The Asia, from Liverpool Friday 16th, arrived at 10 o'clock last evening.

The news is briefly summed up.

The Eastern question is decidedly in statu quo —nothing authentic to change it in the least respect.

Lord John Russell stated in Parliament that it was by no means at dead lock, but negotiations were going on.

Capt. Stringham's energy in reclaiming Costa had prevented his being at Trieste.

Capt. Stringham having placed an Austrian brig under the guns of the St. Louis, interviews had taken place between Mr. Marsh and Baron Bruck, and so far as imperfect accounts indicate, matters will await orders from Viennia and Washington.

Two more Austrian ships of war are sent to watch the St. Louis.

The India mail had been telegraphed. The Burmese had refused to sign away their territory to the British.

Nothing of much importance elsewhere. Cotton was hardening, and apparently would rise if politics would let it. Fair Orleans is quoted at Liverpool 6⅞d@7d. Breadstuffs were firm, stormy weather having revived the hopes of speculators.

Wheat and Flour.—Baring & Brother's circular of July 15, says:—"The Corn Trade has been quiet through the week, and rather lower prices would be taken both for Wheat and Flour, but heavy rains the last day or two render holders firm. Last week's average of English Wheat was 47s8d, and 90,000 quarters returned. Fine white American would still bring 52s@57, while Flour ranges from 25s6d@28 per bbl. Floating cargoes of Mediterranen Wheat are offering on rather easier terms. Indian Corn, on the contrary, held at 6d@1s dearer."

From the London Times of the 16th.

Exchange was firm to near the close, when a panic arose in consequence of a rumor that Admiral Bruat's Squadron had been ordered to the Baltic. The 3's closed 76—go for the end of the month. 5's 81½ at 101—50.

Russia—A letter from a Russian officer in the Principalities, states that as the army would pass the winter there, officers were sending for their wives and families.

Mercantile advices from Vienna of the 11th, state that a general conviction prevails that the Turkish question might be regarded as settled.

Letters from Florence revive the rumor that the Grand Duke Leopold, of Tuscany, was about to abdicate in favor of his son.

Bullion in the Bank of England had decreased 150,000 pounds.

The steamer City of Glasgow, from Philadelphia, arrived at Liverpool on the 16th.

# News Paragraphs.

☞ In the foreign news by the Atlantic, it is stated that on the 1st of May, the city of Shiraz, in Persia, was destroyed, with 12,000 of its inhabitants, by the shock of an earthquake. This is the second city in Persia, and in former years had a population of 50,000 persons, but an earthquake in 1824 nearly destroyed it. It was formerly a place of great beauty, and is celebrated by the Persian poet, Hafiz, who was a native of Shiraz, for its beauty and fertility. Since the earthquake of 1824, it has greatly declined in both, most of its public structures having been ruined by that calamity.

☞ The police of Cincinnati have succeeded in arresting a gang of six counterfeiters. In their house was found $40,000 in counterfeit money, all on the State Bank of Ohio, except some fives on the Fairfield County Bank, of Connecticut. Boges, dies and implements were found, but the plates have not been discovered.

☞ There seems to be one prosperous artist in the United States. Clark Mills, the Republic says, has purchased a farm three miles and a half from Washington, whither he has removed his Elks, Buffalo, and other living models, and where he intends to locate his studio, and erect works required by his profession.

☞ Gen. Pierce's Diplomatists are preparing to depart. Mr. Buchanan, (Mr. D. E. Sickles as Secretary,) goes in the Atlantic on the 6th of August. It is thought Mr. Soule (for Spain) may go in the same vessel. Robert Dale Owen (for Naples) goes in the Pacific Ship Devonshire. Gen. Gadsden has left for Mexico.

☞ The amount of money in active circulation in the United States, is estimated in the Merchants' Magazine, at $295,477,257, which reckoning the population at 25,000,000,000, would make $13 per head. It was $11 in 1826 and 1836; and but $5½ in 1830.

☞ Rev. Dr. Parks, assistant minister of Trinity Church, New York, died on board the steamship Arctic, during her last voyage from Liverpool. Dr. Parks was formerly a clergyman of the Methodist Episcopal denomination.

☞ The Crystal Palace will be open at 9 A. M. hereafter, instead of 10. The receipts on Thursday of last week were $4,513. Total $1,-920.25. Aggregate contributions for the Washington Monument $591,47.

☞ In Union College Agricultural Chemistry will form an important department next winter, apartments being provided for it in a new building 80 by 50 feet, which also contains the finest apparatus room in this country.

Tufts' College.—The corner stone of the new Universalist College, to be erected at Walnut Hill, Medford, Mass., was laid on the 19th inst., with appropriate exercises, in the presence of a large number of the friends of the new institution and members of the Universalist denomination.

This is the first College under the patronage and control of the Universalist denomination in this country, and is therefore regarded by the members of that sect with feelings of peculiar interest. Its prospects now are bright and cheering, and its future progress and prosperity will be watched with interest not only by the members of the denomination of which it is the organ, but by all friends of a wise and liberal education.—*Boston Journal.*

A Noble Act Rewarded.—Rev. Rufus W Griswold has presented to Mr. Linus Benedict, of Norwalk, (who saved the life of his daughter, at the Norwalk calamity, after she was supposed to be drowned,) a very costly gold watch and appendages. as an evidence of his gratitude and that of his family, for his extraordinary and successful efforts on that occasion.

# California News,

## Arrival of the Georgia.

New York, July 29th.—The steamer Georgia, from Aspinwall, arrived at 1 o'clock, with the California mails of July 13th, and 300 passengers. She has $1,300,000, including $20,000 in the hands of passengers.

Later advices at Panama from Bogota state that political affairs were still unsettled. Another young man had been killed in a row. Attempts have been made to burn the city of Aspinwall, creating considerable excitement.

Most of the town of Crueces was destroyed by fire on the 3d of July. Fifty or sixty houses were burned. Doubtless the work of incendiaries.

Dates from Bolivia, June 20th, state that affairs are still unsettled. The President Belzy was raising troops in all quarters. Covija was seized on the 16th of June, by the Admiral of the Peruvian fleet. He issued a proclamation declaring the town occupied, and putting trade on the same footing as under the Bolivian government.

Mortality of Agriculturists.—It appears from the Massachusetts registry of births and deaths for 1851, that the duration of the lives of agriculturists was 12 years above the general average, nearly 29 above that of the common laborers, and 18 per cent. above the average age, at death, of mechanics.

State Prison Statistics.—There have been confined in the New York State prison during the last year 1,843 an increase of 119 over the previous year. Of 613 male prisoners 396 were intemperate. Twenty-three only are reported as well educated, and *ninety-two* have received no education at all.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Aug. 3, 1853.

All branches of trade are dull. Wheat comes in more freely, and good samples command $1,12½@1,14, though millers are not prepared to purchase extensively. Many of the mills are undergoing repairs preparatory to the fall trade,—while the streams in this vicinity are very low on account of the prevailing drouth.

Flour is quite firm, and sells to the city trade at $5,12½@5,38.

There is little or no change in the Provision market, except an advance in Butter, occasioned by the prevailing drouth and shortness of pasture. The price ranges from 12½ to 15 cents.

### Rochester Wholesale Prices.

| | | | |
|---|---|---|---|
| Flour, bbl. | $5,00@5,38 | Butter, lb. | 12½@15 |
| Pork, mess, | 15,00@16,00 | Cheese, | 7@8 |
| Do. cwt, | 6,50@7,00 | POULTRY. | |
| Beef, bbl. mess, | 10,00@10,50 | Turkeys, lb | 9@10 |
| Do. cwt, | 5,00@6,00 | Chickens, | 8@9 |
| Lard, tried, | 10@11c | SEEDS. | |
| Do. leaf, | 11c | Clover, bu. | $6,75@7,00 |
| Hams, smoked, | 10@11c | Timothy, | $2,25@3,00 |
| Shoulders, do., | 8@9c | Flax, | 1,25@1,37½ |
| Potatoes, | 25@31c | SUNDRIES. | |
| GRAIN. | | Whitefish, bbl. | $8,50@10,50 |
| Wheat, bu. | $1,12@1,14 | Codfish, cwt, | $4,50 |
| Corn, | 63@65c | Salt, bbl. | 1,63 |
| Buckwheat, | 63 | Apples, bush. | 50@63 |
| Rye, | 56@62 | Do. dried, | $1@1,25 |
| Oats, | 40@42 | Eggs, doz | 10@11c |
| Barley, | 00@56¼ | Beans, bu, | 1,00@1,12 |
| HIDES. | | Hay, ton | 8@10 |
| Slaughter, cwt, | 3,50@4,00 | Wood, hard, cord | 3,50@4,50 |
| Calf, lb. | 6@8 | Do. soft, | 2@3,50 |
| Sheep Pelts, | 1,00@1,75 | Wool, lb. | 45@55 |
| Lamb skins, | 50@75 | Flour barrels, | 36@37 |

### NEW YORK MARKET.

NEW YORK, August 1.

Flour—Demand for Western and State is more active—prices rather firmer for fresh ground State and good Ohio. Canadian firm—quite scarce at $5,12½@5,18. Sales Western Canal at $5,12@5,18 for common to straight State—5,-06@5,25 for mixed to fancy Michigan, Indiana and Wisconsin—$5,12@5,25 for common to good Ohio.

Grain.—Wheat—Market firm but quiet—the firmness in freights restricts transactions; sales white Ohio $1,30—Southern $1,17—white do. $1,20—other sales not made public.

Rye—quiet—new offered 74@75c.

Oats—firm—fair demand at 45@46½c. for Southern and Western.

Corn—Better, and in demand for the home trade; sales unsound 70@72c—72½@73c Western mixed.

Provisions—Pork market buoyant and demand fair—$15,87@15,94 for mess—$13,12 for prime. Beef firm at $8@10 for country mess—$12@12,87 for city mess and repacked Chicago.

Lard, Butter and Cheese firm.

### ALBANY MARKET.

Albany, August 1.—The market opened with a good inquiry for all the leading articles.

Flour, &c.—The market opened buoyant for Western and State. The stock here is very much reduced, and holders of favorite brands of both State and Western have realized an advance of 6d. ₱ bbl. on the current prices of Saturday. Sales of Ohio, Indiana and Michigan, common to good $4,87@5—favorite State $4,87@5,06—fancy Genesee $5,25@5,50—extra Ohio, Indiana and Michigan $5,25@5,50—extra Genesee $5,75@6,25.

Corn meal is firm and in good request at $1,31@1,37.

Grain—Good samples white wheat are scarce and wanted for milling. Sales prime white new Genesee at $1,32; Western red Wabash afloat $1,10 was bid and $1,12 asked. The market for corn opened firm at the advanced prices of Saturday. Sales at 72c. for Western mixed, and 72½c. for round yellow. Oats are lower; the supply exceeds the demand and buyers have the advantage. Sales good State and Western at 44@46c., but principally at 45@46c, the market closed heavy. In Barley and Rye there is nothing doing.

### BUFFALO MARKET.

Buffalo, August 1.—The market for flour is very firm this morning, the stock of good brands of fresh ground Ohio and Michigan being nearly exhausted. The inquiry is moderate, out side the retail demand, and we note sales of good southern Ohio at $4,60@4,62½—fresh ground Michigan and Ohio at $4,75, and extra Ohio at $4,87½.—The receipts continue light.

There is good inquiry for white wheat, and we hear but of one cargo offering on the market, and held firmly at $1,15. Sales white Ohio to arrive on private terms; Ohio mixed at $1,03.

Corn—High and market firm, with a good inquiry. Sales at 65c, part afloat and part delivered, and one cargo at 64½ afloat.

### NEW YORK CATTLE MARKET.

NEW YORK, July 25.—At Washington Drove Yard—At market 250 Beeves (all Southern and Western,) market firm. Prices ranging at from 8@9½c per lb; about 300 head left over unsold.

At Browning's—Offered 120 Cows and Calves. A larger number than has been offered for some time past.—Prices steady at $22,50 to $38@55,—20 left over.

Sheep and Lambs—Active.—4,200 in market. All sold at $2,25@5,50. Lambs, $1,75 to 3,50@4,50.

At Chamberlain's—Offered 250 Beef Cattle; prices ranging from 7@9½c.

70 Cows and Calves, and sales at $25@35 to 50.

Also 4,000 Sheep and Lambs offered; Sheep $2,25@3,50 to $4,50, and $1,75, 3,25 to $4,50 for Lambs.

### ALBANY CATTLE MARKET.

ALBANY, Aug. 1.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—637 at market. Prices—Extra, $7,50; 1st quality, $7; 2d do. 6,50; 3d do, $5@5,50.

Cows and Calves—18 in market. Prices from $25@30 to $40.

Sheep and Lambs—1,265 in market. Prices—Sheep at from $2,50@4. Lambs $2@3.

Swine—None in market.

### BRIGHTON CATTLE MARKET.

BRIGHTON, July 28.—At market 800 Beef Cattle, 30 pairs Working Oxen, 60 Cows and Calves, 5,500 Sheep and 325 Swine.

Prices—Beef Cattle—About the same prices were obtained as last week, viz:—Extra, $7,50@8; 1st quality $7@7,50; 2d do, $6@6,50; 3d do. $5@6.

Working Oxen—Sales $68, 75, 85, 100, 110@130.

Cows and Calves—Sales $22, 27, 30, 33, 42@50.

Sheep and Lambs—Sales at $2,75, 3, 3,33, 3,50, 4, 4,50 and $5,50.

Swine—Sales of small lots shoats 6¾@7; spring pigs 8½@9. At retail, from 8 to 10c.

### CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, July 27.—At market, 793 Cattle, about 700 Beeves, and 90 Stores, consisting of Workiug Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7,50 per cwt.; 1st. quality, $7,25; 2d do, $6,75@7,00; 3d do, $6,50; ordinary, $5,00@6,00.

Hides—$5,75@6 per cwt.
Tallow—$7@7,50 per cwt.

CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-8tw1m

Springfield, Ohio, May 1, 1852.

Mr. W. O. Hickok: *Dear Sir,*—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It supasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

☞ PEOPLE'S COLLEGE OF THE STATE of New York, Incorporated April 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. McCallum, of Owego, President of the Board of Trustees.
A. I. Wynkoop, of Chemung, Vice President.
Tracy Morgan, of Binghamton, Treasurer.
Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H. HOWARD, Secretary.

**LAKE VIEW**

HYDROPATHIC AND HOMŒOPATHIC INSTITUTE, at Rochester, N. Y., is one of the finest in the country, in its beautiful and healthful location, and its capacity and convenience as a Water-Cure. Accommodations for 150 persons. It has a Department for Female Diseases. Also a new and successful mode of treating *Consumption, Dyspepsia* and *Liver Affections.* Horse-back riding forms a part of the daily exercises.

For particulars address L. D. FLEMING, M. D., Principal and Proprietor, at Rochester, Monroe Co., N. Y.

References.—Gov. Seward, Auburn, N. Y.; Hon. John Greig, Hon. Francis Granger, A. Worden, Esq., Rev. O. E. Daggett and Rev. Manley Tooker, Canandaigua, N. Y.; H. Bennett, M. D., and P. M. Bromley, Esq., Rochester, N. Y. 187-2t*

**FOR SALE.**

A VALUABLE FARM OF 163 ACRES, four miles north-west of Weedsport, (a good market on the Erie Canal,) and 3½ from the Rochester and Syracuse Railroad. Said farm has 140 acres improved and in a good state of cultivation, and is well situated for two farms if desirable, as there is 2 houses, 2 barns, 2 orchards of a good variety of fruit; and a fine timbered lot on each end of the farm. Fifty acres seeded to clover and timothy, and thirty intended for wheat this fall.

Price $60 per acre. For further particulars address or apply to the subscriber on the premises.

JACOB EAKER.

Conquest, Cayuga Co., N. Y., July, 1853. 187-2t*

SUFFOLK AND ESSEX PIGS,

PURE BREED, for sale by EBEN WIGHT, Boston, Mass.,
187-2t or B. F. KEYES, Dedham, Mass.

**Hickok's Patent Improved Cider Mill and Press.**

WE have been appointed sole agents for the sale of this Mill and Press in the city of New York. This is the most approved mill now in use. Catalogues, with description and drawing will be forwarded by addressing us post-paid. Price $40. LONGETT & GRIFFING,
187-8t 25 Cliff St., New York

**S. W. DIBBLE,**

*Dealer in Allen B. Wilson's Stitching Machine.*

OFFICE, No. 8 Smith's Arcade, Rochester. This Machine works on an entire new priciple, and is said by scientific judges to be THE BEST MACHINE EVER INVENTED FOR SEWING.

It is simple in its construction, not liable to get out of repair, and stitches the finest linen, cotton or woolen goods in a superior manner. Tailors, seampstresses, cap makers, dress makers, and shirt and collar manufacturers will find this to be the best Machine ever invented for their use. Single Machines or County and Town rights, for its exclusive use, for sale on such terms that the purchaser may be sure of a handsome return from the investment.

**SUPERPHOSPHATE OF LIME.**

THE undersigned continue sole agents for the sale of Deburgs Superphosphate of Lime, which has proven Superior to all other brands, now in the market. Having sold nearly Three Hundred Tons this spring, and heard from a majority who have used it, they pronounce it equal to Guano in its effects, and is more lasting in the soil. As there are many substances called Superphosphate of Lime now offering in this market, which are of a different nature, to avoid impositions purchasers would do well by applying direct to the agency for their supply.

LONGETT & GRIFFING,
184-8w. No. 25 Cliff Street, New York.

**N. Y. State Agricultural College.**

This Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
Hon. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

The Trustees may be addressed (post-paid) at their respective residences, as follows:

Hon. John A. King, Jamaica, Queens County.
Henry Wager, Westernville, Oneida "
B. P. Johnson, Agricultural Rooms, Albany.
Wm. Kelly, Rhinebeck, Duchess Co.
N. B. Kidder, Geneva, Ontario Co.
Joel W. Bacon, Waterloo, Seneca Co.
Tallmadge Delafield, Geneva, Ontario Co.
Wm. Buel, Rochester, Monroe Co.
John Delafield, Oaklands, Seneca Co.

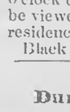
The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*

**THE TIME OF DAY.**

*New and Splendid Jewelry Store, just opened, with a New and Superb Stock of Goods, etc.*



JACOB PICARD, begs most respectfully to inform the public, that he has just opened the new, splendid and capacious Store, under the American Hotel, No. 96 State street, corner of Mumford street, Rochester, with an entirely new and superb stock of modern goods, recently imported or selected from the largest manufactories in New York, &c., in Watches, Jewelry, Clocks, Silver and Plated Ware, &c., which he is prepared to sell at prices lower than any other establishment in Western New York.

Those wishing to purchase will find at this Establishment an extensive variety of all kinds of goods to select from, all of which are of the best quality, and at the lowest prices.

J. P.'s stock consists of Gold Watches, from $25 to $225, warranted for one year. Silver Watches from $9 to $50; also warranted for one year.

Ladies' and Gentlemen's Jewelry, in immense variety, and combining all descriptions.

A large assortment of Clocks, from 1 day to 21 days' time, and from $1.50 to $75.

Mr. P. has constantly engaged, two workmen of considerable experience at Watch, Clock and Jewelry Repairing. Watches cleaned and kept in order by contract.

Buyers, remember the address:—Jacob Picard, Watch, Jewelry and Clock Establishment, No. 96, corner State and Mumford sts., Rochester. 179-tf.

**GREAT STOCK SALE.**

**Short-horn and Durham Cattle, and Southdown Sheep.**

ON Wednesday, the 7th day of September next, at one o'clock, P. M., I will sell, at my farm on Grand Island, six miles below Buffalo, about 30 full bred Short-horns, a few Devons, and about 30 high grade Short-horn and Devon Cattle, consisting of Cows, Heifers and Young Bulls.

The young Short-horns are chiefly the get of my imported bull Duke of Exeter (10,152)—a bull not exceeded, as a fine stock getter, by any other in the U. States.

The young Devons are the get of the bulls Candy and Quartley, both imported by Mr. Stevens. The superior of these bulls in blood, style and breeding, is not to be found. Quartley is my present stock bull.

I will offer at the same time 50 pure bred South-Down Sheep-rams and ewes. Also a few Middlesex pigs—both sheep and pigs the direct get of imported sires, from dams descended from late importations.

Catalogues will be ready by the first of August, and will be sent on application to me, by mail.

Terms:—All sums of $100, and less, cash. For larger sums, approved notes at four months, with intcrest, payable at Bank, will be received, if preferred.

A steamboat will carry all persons wishing to attend, across the ferry from Lower Black Rock to the farm, at 10 o'clock on the morning of the day of sale. The stock can be viewed at any time previous, by calling on me at my residence in this place. LEWIS F. ALLEN.

Black Rock, N. Y., June 15, 1853. 182-10t

**AUCTION SALE OF Durham Cattle and Blood Horses.**

THE Subscribers having disposed of the Hartford Farm, will offer at Auction, their entire herd of Blood Stock, on said premises, 1½ miles north of Avon, Livingston Co., N. Y., on Thursday, the 1st day of September next.

The above herd includes the noted bull "Defiance," who has proved himself one of the best stock getters in the State.—"Yonondeo," a very fine thorough-bred bull, sired by "Splendor," his dam the imported cow "Lady Morris;" 6 thorough-bred Cows, sired by "Splendor," "Oregon," "Currency," and "Defiance; 10 two year old Heifers, sired by "Racket" and "Splendor;" 17 yearling Heifers, all sired by "Racket" and "Yonondeo;" one fine red cow, sired by "Red Jacket" from an imported Devon cow; 6 Bull Calves, by "Defiance" and "Racket." Also the following blood Horses:—2 brood Mares and their colts; 2 fine three year old mares; 4 two year old colts, and one yearling—all bred from the best stock in this country.

For further information apply to or address the subscribers. DAVID BROOKS & SON.

July, 1853. 185-6tn1w* Avon, Liv. Co., N. Y.

**WESTERN LAND.**

THE undersigned offers for sale a valuable Farm of 500 acres, located in Clear Lake township, Steuben Co., Indiana, bordering the Michigan line on the east.

The above farm has 100 acres improved, the remainder well timbered with oak, whitewood and black walnut. On the premises is a dwelling house, and a large, commodious barn; likewise an unfailing water power, with a favorable location for a mill. The tract is favorably situated for two or more farms; and the subscriber offers the whole, or a part, in exchange for land or other property in this section, at a great bargain. Address

HENRY O. BARNUM.

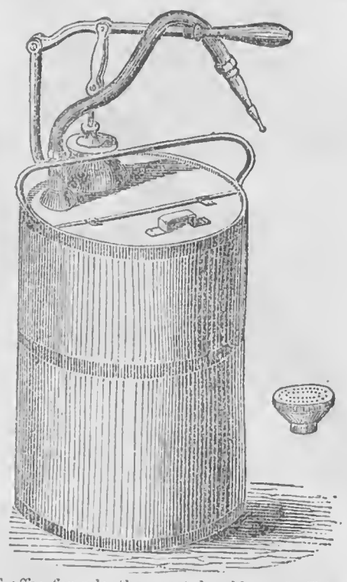
Walworth, Wayne Co., N. Y., 1853. 185-4teow

**GARDEN OR FIRE ENGINE.**

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N. B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.

Seneca Falls, N. Y., June, 1853. 183w10



WE offer for sale, the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union. WM. G. CREAMER & CO.,

Plumbers and Hydraulic Engineers, 64 State street, New Haven, Conn., and 4th Avenue cor. 9th St., New York. 185-8t.

**PREPARED SUPER PHOSPHATE OF LIME,**

BY THE UNION CHEMICAL WORKS, L. I.

**HOYT & CO., Agents,**

*No. 234 Water Street, and 122 West St., corner of Dey St., NEW YORK.*

A Fertilizer of the most approved quality, producing all the immediate effect of the best Peruvian Guano, with the advantage of being much more lasting in the soil.—Thoroughly tested, and found to more than realise the expectations of all those who have already tried it. The best evidence of this is the largely increased demand this season over the past year. Put up in bags of 160 lbs; barrels 250 lbs each. Buyers will please be particular to observe our brand upon each bag or barrel.

Also for sale, American and Foreign Field and Garden Seeds. English Ray Grass, Foul Meadow Grass, fine mixed Lawn Grass, White Clover, Osage Orange, &c.

178m3i.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, June, 1853.

**GARDEN AND FIELD SEEDS**

*From the New Establishment of Van Zandt & Bowdish,*

No. 114 State street, Rochester, N. Y.

CAN be purchased of the merchants generally throughout the country, in Papers or Packages, on the most reasonable terms. Also at the Agricultural Warehouse of E. D. Hallock, No. 24 Exchange street, near the Clinton Hotel, Rochester, N. Y.

The Seeds from this establishment can be relied on as being of the very best quality. They are mostly imported, or grown by the Eastern Shakers, and are warranted.—Full directions for cultivation printed on each Paper and Package. VAN ZANDT & BOWDISH.

Rochester, N. Y., 1853. 170m6.

**REAPING MACHINES.—IMPORTANT INJUNCTION.**

JUDGE NELSON, of the Supreme Court of the U. S., granted at Cooperstown, on Friday, the 24th ult., an injunction against Seymour & Morgan, of Brockport, restraining them and their agents from disposing of their wheat Reapers as an infringment of my pateut. Purchasers of machines make themselves liable to proseention by using them. C. H. McCORMICK.

☞ Mr. McCormick has recently obtained a renewal of his patent, including the reel. Manny's Reaper is as decided an infringement of his patent—subjecting the manufacturer and purchaser of it to the same penalties.

June 29, 1853. 183tf.

**MARSHALL'S BOOK BINDERY,**

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing irections for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.

April, 1852. [122tf] F. H. MARSHALL.

**GENESEE PAPER MILLS.**

CO-PARTNERSHIP NOTICE.—The subscribers having purchased the Genesee Paper Mills property, have this day formed a Co-partnership, under the name and firm of Adams, Huntington & Co., for the purpose of Manufacturing Printing Paper, and dealing at wholesale and retail in all kinds of Paper Stock. Office and Warehouse, No. 93 State street.

FRANCIS T. ADAMS, E. T. HUNTINGTON,
WILLIAM A. ADAMS, ALVAH STRONG,
ALBERT M. HASTINGS, D. D. T. MOORE.

Rochester, April 15, 1853.

**PROF. BROWN'S NEW STORE,**

**With New Goods, and Enlarged Accommodations**

CITIZENS OF ROCHESTER and Surrounding Country:—Grateful for past favors, I hope for a continuance and increase of the same. The front part of the store is exclusively for the sale of Goods; the rear for Shaving and Hair Cutting; the basement is a private room, divided into two, for the purpose of Coloring the Human Hair.

Gentlemen's Furnishing Goods.—Every article in this line. Collars of the latest make, and a larger stock than can be found elsewhere in this city.

Hair Work of every kind—the largest assortment made from the best materials, and shall be sold at the lowest prices. Perfumery, of my own and foreign make. Hair Oils that cannot be excelled. Brown's Antispassis and Hair Restorative, a well known article. Brown's Liquid Hair Dye, the best in the world.

A variety of Useful and Ornamental Articles too numerous to mention, at retail, but which I respectfully invite the public to examine.

Fishing Tackle.—Sportsmen, call and see.

To Ladies.—A lady will be in attendance in the front Store.

☞ Eight Chairs are kept in this establishment, giving that number of persons a chance to be shaved at once.—Nine persons are employed, showing the popularity and success of the proprietor. PROF. BROWN,

[129-tf] No. 26 Buffalo St., Rochester, N. Y.

**ROCHESTER STEREOTYPE FOUNDRY.**

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a Stereotype Foundry in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to

J. W. BROWN,

April, 1852. [122-1am-tf] Rochester, N. Y.

N. B.—Old type taken in exchange for work.

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred Suffolk Pigs for sale by the subscriber. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country.

Address C. J. HOLDEN,

June, 1853. [186m3] Walepole, N. H.

# Poetical.

Written for Moore's Rural New-Yorker.

## A BRIGHT-EYED BIRD, WITH SNOWY WINGS.

BY J. WILBER.

A BRIGHT-EYED bird, with snowy wings,
Oft cometh to our earthly home;
And in rich notes of music sings
Of happy hours in time to come.

It sings of golden Summer days,—
Of elysian groves and isles of balm;
Where light-winged Zephyr gaily plays,
Amid the sweet, delicious calm.

It sings of wealth, of love, of fame—
Of all the throbbing heart holds dear;
Nor cloud nor storm its song can tame,
Nor wint'ry blasts destroy its cheer.

'Tis HOPE—the siren—cheating still,
Yet still we list the pleasing strain;
And, in the darkest hours of ill,
Expect the dawn of joy again.

Sing on, sweet bird! though oft deceived,
Thy charmed song, well pleased, we hear;—
When sorest is the heart bereaved,
Then let thy notes swell loud and clear.

Enchanting warbler! may thy lays
To us, in life's dull path, be given;
Till, sweetly lured, we join the praise
Of all the "saved by hope," in Heaven.

Lockport, N. Y., July, 1853.

# Rural Sketch Book.

## THREE SCENES IN THE LIFE OF A WORLDLING.

### "CONTENTMENT BETTER THAN WEALTH."

BY T. S. ARTHUR.

#### Scene First.

"IT is vain to urge me, brother Robert. Out into the world I must go. The impulse is on me. I should die of inaction here."

"You need not be inactive. There is work to do. I shall never be idle."

"And such work! Delving in and groveling close to the very ground. And for what? Oh no, Robert. My ambition soars beyond your 'quiet cottage in a sheltered vale.' My appetite craves something more than simple herbs and water from the brook. I have set my heart on attaining wealth; and, where there is a will, there is always a way."

"Contentment is better than wealth."

"A proverb for drones."

"No, William; it is a proverb for the wise."

"Be it for the wise or simple, as commonly understood, it is no proverb for me. As a poor plodder along the way of life, it were impossible for me to know content. So urge me no further, Robert. I am going out into the world a wealth-seeker, and not until wealth is gained do I propose to return.

"What of Ellen, William?"

The young man turned quickly towards his brother, visibly disturbed, and fixed his eyes upon him with an earnest expression.

"I love her as my life," he said, with a strong emphasis on his words.

"Do you love wealth more than life, William?"

"Robert!"

"If you love Ellen as your life, and leave her for the sake of getting riches, then you must love money more than life."

"Don't talk to me after this fashion. I cannot bear it. I love Ellen tenderly and truly. I am going forth as well for her sake as my own. In all the good fortune that comes as the meed of effort, she will be a sharer."

"You will see her before you leave us?"

"No. I will neither pain her nor myself by a parting interview. Send her this letter and this ring."

A few hours later, and the brothers stood with tightly grasped hands, gazing into each other's faces.

"Farewell, Robert."

"Farewell, William. Think of the old homestead as still your home. Though it is mine, in the division of our patrimony, let your heart come back to it as yours.—Think of it as home; and, should fortune cheat you with the apples of Sodom, return to it again. Its doors will ever be open, and its hearth-fire bright for you as of old.—Farewell."

And they turned from each other, one going out into the restless world, an eager seeker for its wealth and honors; the other to linger among the pleasant places dear to him by every association of childhood, there to fill up the measure of his days—not idly, for he was no drone in the social hive.

On the evening of that day two maidens sat alone, each in the sanctuary of her own chamber. There was a warm glow on the cheeks of one, and a glad light in her eyes. Pale was the other's face, and wet her drooping lashes. And she that sorrowed held an open letter in her hand. It was full of tender words; but the writer loved wealth more than the maiden, and had gone forth to seek the mistress of his soul. He would "come back;" but when? Ah, what a veil of uncertainty was upon the future! Poor stricken heart! The other maiden—she of the glowing cheeks and dancing eyes—held also a letter in her hand. It was from the brother of the wealth-seeker; and it was also full of loving words; and it said that, on the morrow, he would come to bear her as a bride to his pleasant home. Happy maiden!

#### Scene Second.

Ten years have passed. And what of the wealth-seeker? Has he won the glittering prize? What of the pale-faced maiden he left in tears? Has he returned to her?—Does she share now his wealth and honor? Not since the day he went forth from the home of his childhood has a word of intelligence from the wanderer been received; and, to those he left behind him, he is now as one who has passed the final bourne.—Yet he still dwells among the living.

In a far-away clime, stands a stately mansion. We will not linger to describe the elegant exterior, to hold up before the reader's imagination a picture of rural beauty, exquisitely heightened by art; but enter its spacious hall, and pass up to one of its most luxurious chambers. How hushed and solemn the prevading atmosphere!—The inmates, few in number, are grouped around one on whose white forehead Time's trembling finger has written the word "Death." Over her bends a manly form. There—his face is towards you. Ah! you recognize the wanderer—the wealth-seeker. What does he here? What to him is the dying one? His wife! And has he, then, forgotten the maiden whose dark lashes lay wet on her pale cheeks for many hours after she read his parting words? He has not forgotten, but been false to her. Eagerly sought he the prize, to contend for which he went forth. Years came and departed; yet still hope mocked him with ever attractive and ever fading illusions. To-day he stood with his hand just ready to seize the object of his wishes, to-morrow a shadow mocked him. At last, in an evil hour, he bowed down his manhood prostrate even to the dust in mammon worship, and took to himself a bride, rich in golden attractions, but poorer, *as a woman*, than even the beggar at her father's gate. What a thorn in his side she proved! A thorn ever sharp and ever piercing. The closer he attempted to draw her to his bosom, the deeper went the points into his own, until, in the anguish of his soul, again and again he flung her passionately from him.

Five years of such a life! Oh, what is there of earthly good to compensate thereafter? But in this last desperate throw, did the worldling gain the wealth, station, and honor he coveted? He had wedded the only child of a man whose treasure might be counted by hundreds of thousands; but, in doing so, he had failed to secure the father's approval or confidence. The stern old man regarded him as a mercenary interloper and ever treated him as such. For five years therefore he fretted and chafed in the narrow prison whose gilded bars his own hands had forged. How often, during that time, had his heart wandered back to the dear old home, and the beloved ones with whom he had passed his early years! And ah! how many, many times came between him and the almost hated countenance of his wife, the gentle, loving face of that one to whom he had been false! How often her soft blue eyes rested on his own! How often he started and looked up suddenly, as if her sweet voice came floating on the air.

And so the years moved on, the chain galling more deeply, and a bitter sense of humiliation as well as bondage robbing him of all pleasure in life.

Thus it is with him when, after ten years, we find him waiting in the chamber of death, for the stroke that is to break the fetters that so long bound him. It has fallen. He is free again. In dying, the sufferer made now sign. Sullenly she plunged into the dark profound, so impenetrable to mortal eyes, and as the turbid waves closed, sighing, over her, he who had called her wife turned from the couch on which her frail body remained, with an inward "thank God! I am a man again!"

One more bitter drug yet remained for his cup. Not a week had gone by, ere the father of his wife spoke to him these cutting words—

"You were nothing to me while my daughter lived—you are less than nothing now.—It was my wealth, not my child, that you loved. She has passed away. What affection would have given to her, dislike will never bestow on you. Henceforth we are strangers."

When next the sun went down on that stately mansion, which the wealth-seeker had coveted, he was a wanderer again; poor, humiliated, broken in spirit.

How bitter had been the mockery of all his earthly hopes! How terrible the punishment he had suffered!

#### Scene Third.

One more eager, almost fierce struggle with alluring fortune, in which the worldling came near steeping his soul in crime, and then fruitless ambition died in his bosom.

"My brother said well," he murmured, as a ray of light fell suddenly on the darkness of his spirit; "Contentment *is* better than wealth. Dear brother! Dear old home! Sweet Ellen! Ah, why did I leave you? Too late! too late! A cup, full of the wine of life, was at my lips; but I turned my head away, asking for a more fiery draught. How vividly comes before me now that parting scene! I am looking into my brother's face. I feel the tight grasp of his hand. His voice is in my ears. Dear brother! And his parting words, I hear them now, even more earnestly than when they were first spoken. 'Should fortune cheat you with the apples of Sodom, return to your home again. Its doors will ever be open, and its hearth-fires bright for you as of old.' Ah, do the fires still burn? How many years have passed since I went forth! And Ellen? But I dare not think of her. It is too late—too late! Even if she be living and unchanged in her affections, I can never lay this false heart at her feet. Her look of love would smite me as with a whip of scorpions."

The step of time had fallen so lightly on the flowery path of those to whom contentment was a higher boon than wealth, that few footmarks were visible. Yet there had been changes in the old homestead. As the smiling years went by, each, as it looked in at the cottage window, saw the home circle widening, or new beauty crowning the angel brows of happy children. No thorn in his side had Robert's gentle wife proved. As time passed on closer and closer was she drawn to his bosom; yet never a point had pierced him. Their home was a type of paradise.

It is near the close of a summer day. The evening meal is spread, and they are about gathering around the table, when a stranger enters. His words are vague and brief, his manner singular, his air slightly mysterious. Furtive, yet eager glances go from face to face.

"Are these all your children?" he asks, with mingled surprise and admiration.

"All ours. And, thank God! the little flock is yet unbroken."

The stranger averts his face. He is disturbed by emotions that it is impossible to conceal.

"Contentment *is* better than wealth," he murmurs. "Oh! that I had earlier comprehended this truth!"

The words were not meant for others; but the utterance has been too distinct. They have reached the ears of Robert, who instantly recognizes in the stranger his long wandering, brother.

"William!"

The stranger is on his feet. A moment or two the brothers stand gazing at each other, then tenderly embrace.

"William!"

How the stranger starts and trembles! He had not seen, in the quiet maiden, moving among and ministering to the children so unobtrusively, the one he had parted from years before—the one to whom he had been so false. But her voice has startled his ears with the familiar tones of yesterday.

"Ellen!" Here is an instant oblivion of all the intervening years. He has leaped back over the gloomy gulf, and stands now as he stood ere ambition and lust of gold lured him away from the side of his first and only love. It is well both for him and the faithful maiden that he can so forget the past as to take her in his arms and clasp her almost wildly to his heart. But for this, conscious shame would have betrayed his deeply repented perfidy.

And here we leave them, reader. "Contentment is better than wealth." So the worldling proved, after a bitter experience, which may you be spared! It is far better to realize a truth perceptively, and thence make it a rule of action, than to prove the variety in a life of sharp agony. But how few are able to rise into such a realization!

—*Godey's Lady's Book.*

### THE MOSQUITO KING.

A CORRESPONDENT of the New Orleans Delta, writing from Blewfields, gives a very different impression of his Majesty of Mosquito from that which ordinarily obtains.—He says:

Americans who are accustomed to hear of the Mosquito King, as "his woolly-headed, breechless majesty," whom

> ——"let but satire lift his gun,
> The more the feathers fly the more the fun,"

would be agreeably surprised to meet him, and spend a few days with him at Blewfields. The King is about nineteen years of age, of slight and graceful figure, pleasing countenance, small feet and remarkably delicate hands. His color is that of an Indian; his hair straight and black; in short, his *tout ensemble* is that of the pure-blooded Indian, without the faintest touch of the negro. He usually dresses plainly but neatly—white pants, black jacket or coat, and straw hat. At times he wears his uniform, which is also neat, and becomes him well.—He has received a very fair education, and his manners with strangers are modest and reserved; but, on acquaintance, he proves lively, courteous and agreeable. He is very fond of Dory sailing, and manages one with great skill and daring; the stiffer the breeze the better he likes it, particularly if he happens to have a timid friend with him. He is an excellent swimmer, a bold rider, and very fond of horses. His greatest penchant, however, is for Dory sailing, and he always keeps a fine assortment of boats.

I do not think that the most intense American could avoid being, as I said before, agreeably surprised at meeting him; instead of a thick-lipped, wooly-headed Sambo—such an one as Mrs. Stowe would term "Afric's son."—a young Indian, possessing all the attributes of his race, and much of the manners of a gentleman. Much ridicule has been heaped upon him on account of the improper position taken by England in regard to him and his tribe, of which the 'king' seems to trouble himself but little; but no one, in his company, would feel disposed to indulge the feeling, for really there is nothing to ridicule. You see before you a young Indian, recognised by a tribe of at least two thousand five hundred as their king, receiving from them homage and tribute, and you naturally feel every disposition to show him respect.

A SLAVE OF GEN. WASHINGTON'S.—It is not generally known to our readers, that there is yet living near Cookstown, a slave of Gen. Washington's. He is 124 years of age, and can walk six miles a day. He is so old, that his fingers and toes are nearly all white. He belonged to Washington when he owned what is known as Washington's Bottom, on which Perrypolis now stands. The estate of Col. Cook was and is still bound for his living. He is to be taken to the World's Fair for exhibition, if arrangements can be made. It is well known that Barnum made his first "pile of money" by exhibiting a slave which he said belonged to Washington, but it was all a humbug.—For this man being a slave of Washington's, the record of the transfer from Washington to Colonel Sheeve, will prove. It is worth a trip to see him at his home.—*Monongahela (Pa.) Republican.*

# Wit and Humor.

### LOVE AND BUSINESS.

IT is pleasing to read the matrimonial advertisements. They were once poetical; now they assume a mercantile air which would entitle them to notice in Wall street as business transactions. Here is one which shows that *matrimony* is fast becoming a *matter o' money*. Read it:

"To Young Ladies.—A Gentleman worth $10,000 wants a wife worth $5,000. Address John Manning, New York Post Office."

We think John Manning is *unmanning* himself by such an advertisement.

TYPOGRAPHICAL.—"* of my existence, give me an }," said a printor to his sweetheart. She immediately made a ——— at him, and planted her ☞ between his i i's, nearly putting a . to his existence. "Such an outrage," was the ! of Faust, looking †† at her, "is probably without ‖ in this § of the country, and is a good subject for a ¶."

COCKNEYISMS.—*Witness*—"This here feller broke our windor with a tater, and 'it Isabeller on the elber, as she was a playin' on the pianner."

*Magistrate*—"The conduct of the prisona', and his general characta', render it propa' that he should no longa' be a memba' of societa."

AN Auburn paper thus describes a traveling circus:—"The circus was in town last week. Its 'grand entry,' was a grand fizzle. The gorgeous dragon chariot looked like a mud-scow with a zinc tail. The immense procession was a minute and a half in passing. The elephant swung his tail delightfully."

"FORGOT HER OTHER NAME."—"Tom, who did you say our friend B. married?" "Well, he married forty thousand dollars—*I forget her other name.*"

LADIES must be careful how they use their lips after eating blackberries, for they are apt to leave marks, particularly on those of gentlemen.

THE chap who fitted the key in the lock of Uncle Tom's Cabin, was sent to Washington to saw up the remainder of the old Cabinet.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

### ENIGMA.

I triumph,—I've headed a veteran band
For many a century past,
Whose names are still shouted in every land
By thousands whose youth is not past.

Time changes as soon as I cease to exist,
And ne'er can regain his full sway,
For his scythe cannot aid the grim monster Death,
To find among mortals his way.

☞Answer in four weeks.

ANY person or persons who will find the true answer to the above Enigma in four weeks, and send it, enclosing $2, to the Editor of the "Rural New-Yorker," shall be entitled to, and receive, one copy of the "Rural New-Yorker" for two years next ensuing the receipt of the answer and money,—for which term a receipt will be forwarded to each person entitled thereto.

Should the answer not be correct, according to the above conditions, the person thus sending the money will lose nothing, as the "Rural" will be sent one year for the $2. TOBIAS WITMER.

Williamsville, Erie Co., N. Y., July, 1853.

REMARKS.—We endorse the above offer at the suggestion of Mr. W.,—but wish the reader to understand distinctly, that the matter is not got up for speculation. We simply accede to the proposition of our correspondent.—ED.

### THE FLORAL ALPHABET.

[From the Bouquet, Marylebone Gardens.]

A is an *Arum*, in hedges 'tis found.
B is a *Bramble*, and trails on the ground.
C is the blossom of *Crab-apples* sour.
D is the *Daisy*, childhood's own flower.
E is an *Eglantine*, our Sweetbriar.
F is a *Fuchsia*, drops of red fire.
G stands for *Gorse*, perfuming the heath.
H is the *Heartsease*, bending beneath.
I is the *Ivy*, and climbs the old tower.
J is the *Jonquil*, spring's early flower.
K is a *Kingcup*, gold set in green.
L is the *Lily*, of flowers the queen.
M is the *Mignonette*, sweetest of weeds.
N the *Nasturtium*, pickle the seeds.
O is the *Orchis*, named from the bee.
P is a pale *Primrose*, pride of the lea.
Q is *Queen Margaret*, regal and rich.
R *Ragged Robbin*, lord of the ditch.
S the (*Wood*) *Sorrel*, haunting the dell.
T stands for *Thistle*, Scotchmen love well.
U stands for *Urtica*, of nettles beware.
V stands for *Violet*, to every one dear.
W *Wall-flower*, fragrant and gay.
X *Xmas-Holley*, to grace Xmas-day.
Y stands for *Yew*, dear, and you'll *not forget*.
Z The last letter of your Alphabet.

AGENTS WANTED!

THE CASKET is now fairly established, and the success of the enterprise beyond doubt, which enables the publishers to enter with renewed vigor into measures for extending its circulation. We feel very thankful for the many flattering compliments which we are daily receiving from private letters and the press, all of which agree in pronouncing the Casket the

Cheapest Juvenile Magazine in the World.

And that all our little friends, that every boy and girl may have the pleasure of perusing our magazine, we want *Ten Thousand Agents* to canvass for, and circulate the Casket, in every school-district, town and county, in the United States and Canadas, to whom a liberal percentage will be given. Specimen numbers furnished *gratis* on application. Send for one number and circulate it among the *little folks*, and you will confer a greater blessing than distributing gold and silver. Try it.

Address, *post-paid*, BEADLE & BROTHER,
*Buffalo, N. Y.*

*HALLOCK'S*
AG'L WAREHOUSE AND SEED STORE.
*No. 24 Exchange St., Rochester, N. Y.*

THE subscriber, late from the Establishment of Emery & Co., Manufacturers at Albany, where he has been engaged for the past six years, has been appointed their SOLE AGENT in Rochester and Western New York, for the sale of

*Emery's Celebrated Railroad Horse Powers and Threshing Machines; Circular and Cross-cut Saw Mills, Feed Mills, Corn-stalk and Hay-Cutters, &c.,*

adapted to the Power, and now offers them at manufacturer's prices, with the transportation added, and subject to the warrantee, as follows:—"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded." The attention of Farmers is solicited, and a careful investigation into the construction of this Power, and its comparative merits, as well as price requested, before purchasing elsewhere. He is also agent for their

**Combined Reaper and Mower,**

and keeps constantly on hand, Plows, Hay Cutters, Corn Shellers, Seed Planters, &c., &c., comprising a complete and extensive stock of Agricultural and Horticultural Implements generally, together with a full assortment of Field and Garden Seeds, of the best Imported and Shaker growth.

He is also agent for the sale of Seymour and Morgan's New York Reaper, Pierpont Seymour's Grain Drills and Broad-cast Sowers, Wheel Cultivators, Gang Plows, Clover Hullers, Cider Mills, Clover Gatherers, Horse Rakes, Scythes and Snaths, Hand Rakes, Grind Stones, &c.

He will be prepared to furnish dealers with Dunn and Taylor's well-known Scythes; also Manure, Straw, and Hay Forks, Snaths, Rifles, and other haying tools at manufacturers' prices, wholesale and retail.

Particular attention is called to a NEW PLOW, which is believed to be the best cast iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any Plow heretofore sold in Rochester—while the price is less than any other equally well finished.

The "uniform one-price cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time, will allow.

Farmers and others are invited to call and examine the stock of Machines and Implements, and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

☞ Circulars and Catalogues furnished gratis on application personally or by mail. E. D. HALLOCK.

MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

## Rural New-Yorker.

### Progress and Improvement.

### OBJECTS OF FALLOWING.

THE Summer Fallow has among its objects the destruction of weeds and the mellowing of the soil, and these must be considered and attended to, in order to reap the full benefits of the operation. The final objects—the reception and growth of the seed—are closely interwoven, and the result will be more or less satisfactory as these are more or less efficient and complete.

Clean culture is always desirable. Weeds and corn, or other cultivated crops, cannot be produced in this full perfection at the same time on the same soil. The useless plants take up the elements which should go to perfect the useful—and hence deprive them of a portion of nutriment necessary to their full productiveness. This statement is so simple and evident that few, perhaps, will admit any need of its repetition, yet everywhere, year after year, much of the power of the soil is wasted on weeds, which might readily be given to the growth of those cultivated for the sustenance of man and beast. Hence in summer fallowing the plowing should be so performed as to free the soil from the seeds as well as actual growth of such vegetation. This may in part be done by early and careful plowing, and frequent and thorough working with the wheel cultivator, so as to destroy the weeds as fast as they appear, and also excite the germination of those which lie dormant in the soil. A true fallow is bare of all vegetable growth—it rests from the production of plants of any kind. This character should be given as far as possible to our summer fallows.

The reduction of the soil to a fine state of tilth is also necessary to its full productiveness. The roots must be enabled to penetrate at will in search of food, and the ground should be open to the influences of air and moisture. The ameliorating effects of fallowing are in part due to the thorough disintegration of the soil by mechanical working and long exposure to atmospheric influences. No actual addition may be made of fertilizing elements, but those lying inactive in the soil, concealed in the debris of rock, &c., are reduced and dissolved in some degree, and thus add to the power of the soil. The air has greater facility of penetrating and bringing into activity the mould, thus frequently presented to its influence.

Deep tillage is as beneficial as fine tillage. A soil never stirred below a depth of six inches, has scarcely half the productiveness of one mellowed to double that depth. The roots of the crops grown have but a partial freedom of expansion in search of nutriment, and that nutriment is supplied and available but in part. A deep, free soil will be found full of fine roots penetrating every part of it, and every one has observed the vigor with which crops grow over a portion of the field which has its soil by any means thoroughly deepened and mellowed. Much has been written upon the subject of deep plowing—and no one who has practiced it on a well drained soil, but has found it of the highest benefit.

Manure is now often applied to fallows prepared for the wheat crop. It is generally composted through the summer, drawn out before the last plowing, piled in heaps, and only spread as fast as plowed in. No composting which will not burn up the manure, will have any effect upon the life of most of the seeds it contains. Hence we cannot rely upon such treatment for the extermination of the weeds which are thus sown upon the soil. If applied earlier, perhaps, the seeds might germinate, and be destroyed by subsequent cultivation in preparing for or harrowing in the seed.

To be in a proper state for sowing, the soil should be freshly plowed or cultivated in addition to the preparation already indicated,—freedom from weeds, deep and fine tilth, and the addition of suitable manures. Then, if evenly sown and covered to the proper depth, nothing will be lacking to its immediate and constant growth, and the production of a valuable crop in return.—But when weeds monopolize the room, and steal away the vigor of the plants—where the soil is hard, shallow and full of clods and stones, giving small room for the full development of the roots—and where the richness of the soil has been exhausted by long continued cropping without the application of manure—then one can hope for but small crops and less profits, and will find their farms continually deteriorating and wearing out, under such a shiftless system of operations. If profit is the end desired let the work be thoroughly performed.

### WHEAT.—RUST AND WINTER-KILLING.

EDS. RURAL:—On page 230, present volume, I notice your request (accompanying an inquiry over the signature of "Cultivator,") respecting rust and winter-killing of wheat, and why our light sandy and gravelly soils escape them so much better than heavy clayey soils do. This is a subject that every wheat grower should investigate and understand. Every observing farmer is forced to the conclusion that our sandy and gravelly soils, uniformly produce the best quality of wheat, while that land which is underlaid with a close or hard subsoil, if the wheat escapes winter-killing will uniformly produce the greatest burden of straw,—and if the season is favorable will far outdo the gravelly or sandy land in the yield of grain, which shows the soil is not destitute of the right kind of nutriment to form the wheat kernel.

Now, those kinds of land may exist on the same farm, or in the same neighborhood. The two are fitted and sown with the same care, they receive the same sunshine and showers, yet when the grain is ready for market there is a great difference in the quality. Hence arises the question, Why this difference? I contend that it is in consequence of too great an amount of surface water, at certain seasons of the year, on the land with a tenacious subsoil. And it is this surface water that is the cause of so much wheat being destroyed in winter. But how, and when, is it done? In our latitude it suffers the most in the month of March, when we have warm days and freezing nights. What water has accumulated on the surface through the day, by falling rain or melting snow, has filled every uneven place over the wheat field; at night it freezes; the first thing a sheet of ice, and frozen soil forms on the surface, and makes fast to the wheat plant.

Now, in what form does the frost penetrate the soil? Did you ever watch the formation of ice on the window, when there was a decrease of heat from the stove? If so, you get the idea how ice forms in the soil; as it penetrates it lifts the surface with the wheat plant. The next day it thaws all it froze the previous night; the water and soil settle down, and the wheat plant remains where it was lifted to; the next night it freezes again, when the wheat plant gets another lift, &c. And when freezing nights are past, the wheat plant, roots and all, lies on the surface of the ground. This is also the manner in which clover is hoisted out in freezing weather. Sufficiently and thoroughly drain such land, so that all the water that is not needed in the soil settles directly into the subsoil, and through that into underdrains and passes off. Then the wheat plant and clover have a better soil to protect their roots from the bleak winds of winter, and the freezings and thawings that they are subject to, than they would have in a sandy or gravelly soil.

But why is wheat more subject to rust on heavy soils? The cause is the same that winter kills wheat, (surface water,) though its effect is different. As soon as we begin to get April sunshine and showers, the cold snow-water on the sandy and gravelly soils, settles below the roots of the wheat plant, and it begins to make a healthy growth in the cool part of the season. But how is it with the wheat on the land with a hard subsoil? The cold snow water is compelled to work its way through the soil, and pass off on the surface, which holds the growth of the wheat in check, perhaps a fortnight.—When the soil becomes sufficiently dry and warm the growth of the wheat is crowded too much into the heat of summer; its growth is too rapid, like a plant in a hot-bed,—an unnatural growth,—yet, notwithstanding the check it received in the start, it ripens but a few days later than that on the sandy or gravelly soil, (letting in the warm air among the roots.)

Now, thorough drain this land with a close subsoil. It will become warm early and give the wheat an even start with that on the sandy soil; it has more time to make its growth, and in the cooler part of the season, which gives a stronger and healthier straw. Need I ask the farmer to look beyond his own fields for the proof of my views? Where is the wheat in your fields the most affected with rust? Is it not where it was nearly all destroyed in the winter with surface water? And where in the field was the brightest straw and the best berry? Was it not on the south side of the dryest knoll in the field? If so, remove the cause of rust by thorough draining, and the effect will cease,—except in those wet, warm, sultry, hot seasons which give too great a growth of straw on all soils. Low lands that border creeks and rivers are the strongest soils, and will be the most affected in such seasons. If farmers will only try a few experiments by thorough draining some small patches of their heavy soils—making the drains not over two rods apart, nor less than three feet deep—it will soon convince any one that the heavy soils are the most productive wheat soils. ALVIN WILCOX.

West Bloomfield, N. Y., 1853.

### "TRANSMUTATIONS, &c."—NO. 1.

As the subject of vegetable changes, or "transmutations," continues still to excite interest, everything that may throw light upon it, may have its value. 'HIEL's experience is highly interesting, and appears to me not to have been explained to entire satisfaction. (See RURAL No. 10, "Potatoes,"—No. 11, "Corn,"—No. 12, "Wheat,"—No. 19, "Wheat and Chess," &c.) His own suggestions appear as rational as any explanation that has been given, except the case of wheat and chess.

When varieties of vegetables intermix, the result is generally the formation of a new variety. This is well known to the producers of new varieties of corn, beans, &c.,—and it is also well known, that these new varieties, under certain circumstances, manifest a disposition to return to one or the other of their originals. It is, moreover, true, that the nature, or qualities, of the soil will often effect remarkable changes in some vegetables; (iron in a soil will deepen the color of a rose;) and that the seed of the same plant will often yield products very unlike each other; e. g., the seed of the potatoe and of the apple, &c. The bones, and even the flesh, of animals, (to say nothing of other qualities,) may be changed in color, or, to some extent, in composition, by their food. If, then, the circumstances that contribute to a change in a variety of vegetables, be reversed, a return to the original is by no means an improbability. Whether wheat and chess be varieties of the same original, it is hardly doubtful that many of the modern varieties of wheat are from the same original stock. Taking all these facts into consideration, it seems not difficult to account for most of the phenomena of "'HIEL's Experience." I would look to the soil or the climate, and perhaps to the season, for the chief part of the explanation.

As an evidence, and at the same time an illustration, of the influence of climate, soil, &c., on vegetation, it may be remarked, that some kinds of fruit, when brought from the Eastern to the Western States, become so changed in character and quality as to be no longer recognized as the same variety. This is true of several varieties of apples, pears, &c. Corn, under some circumstances, suffers a like change. The Eastern Flint corn, both white and yellow, if brought to the West, is said to prove a failure. There is no doubt that if cultivated for a time, it would *run down*, and when cultivated would rise again in a new character, and the result would be a different variety. H.

Out West, May, 1853.

### BRUSH FENCE.

DISCOURSES having been given on all the different fences in the catalogue, save that of brush, I have resolved to communicate my experience—expecting, if I do not benefit the seniors, to amuse the juniors of those districts where brush fence is a relic of antiquity, not now discoverable.

My first practical lesson, was as follows: The cattle of a pasture contiguous to an oat field, learned how, by night, to make their way into the oats. To prevent their depredations, I fenced with brush, a yard in which to shut them nights. My fence was constructed by falling trees one upon another, until of height sufficient, continuing to overlap the last tree upon those first felled,—the boughs and leaves, and in this instance the fruit, being uppermost, (the variety of tree being fire cherry,) made, to look at, a formidable fence. My fence completed, I viewed it with the pride of one who, having undertaken an important labor, feels that he has done his task, and won a victory.

The sun was creeping down toward the western hills, when I hastened to yard my cattle, anxious to behold their chagrin at being deprived of their usual feast of oats. After driving them in and barricading the entrance, I turned to observe the result. What was my surprise to see them greedily devouring my fence! Having got a taste of the cherries, they were filling themselves finely. Rapidly did the foliage and fruit disappear before the greedy jaws of these voracious quadrupeds. Eating the leaves and fruit nearest them, they would push on for more, until, the next morning, I found them on the wrong side of the fence, completely gorged with their evening's meal.

The next day I gave my fence an addition of cherry trees—at night the cattle eating through. Thus it was day after day, with my brush fence—and yet it answered a good purpose, for they lost their appetite for oats, and after eating up their fence, would lie quietly till morning.

Four rods wide and ten feet high, is said to be a lawful brush fence. I conclude you will be ready to vote with me that 'tis an *awful* fence, and if built of fire cherries would supply considerable *forage*.

JOHN SANFIELD.

Steuben County, N. Y., 1853.

WHAT if your neighbor has bought a new carriage, and his farm is no larger than yours, and you can't afford it; you need'nt say he cheated poor folks 'till he acquired the means to purchase it, or prophesy that he'll lose his property because he's so extravagant. Look out for your own affairs. See that your hay don't get wet, and your potatoes are dug in season, and the cattle don't break into your cornfield; in fact, my friend, mind your *own* business, and you'll have enough to do, without troubling yourself with your neighbor's. A. H.

### BINGHAM'S SHEEP SHEARING.

THE following table gives the weight of Mr. A. L BINGHAM's sheep after being shorn, and the weight of the fleece. It was furnished by one who took down at the time the weight of both. It must be borne in mind that the wool would shrink at least 60 per cent.—that the age of the wool was not uniform, some being at least a year and a-half, and that none of the sheep, shorn just a year from the day they were shorn, will produce as heavy a fleece as the one now taken off, unless well saturated with oil. I do not mean to say that the sheep had been oiled often before shearing. But unless they had been oiled I cannot account for the fishy smell of the wool, except by supposing that the sheep had been fed pretty profusely on fish. If Mr. BINGHAM will adopt the rule of the New York State Agricultural Society, as to his sheep and wool, there will then be something tangible and reliable. Send his fleeces to the same manufacturer that the Society has selected, and let him sort and scour, and then we can tell something about it. Till then all talk about heavy fleeces by him or anybody else, conveys little idea of the sheep for wool growing purposes. P.

Live weight of 81 French Merino Sheep belonging to A. L. BINGHAM, of Vermont, shorn on the 1st and 2nd days of June, 1853, at HYDE's, in Sudbury—together with the weight of the fleece, being unwashed, each in pounds and ounces:

| Sheep. lbs. oz. | Fleece. lbs. oz. | Sheep. lbs. oz. | Fleece. lbs. oz. | Sheep. lbs. oz. | Fleece. lbs. oz. |

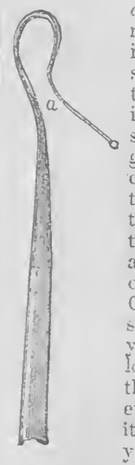
### THE SHEPHERD'S CROOK.

THIS implement is a convenient one for catching sheep. It is made in the form exhibited in the cut, of ⅜ inch round iron, drawn smaller toward the point—and the point made by a knob. The other end is furnished with a socket, which receives a handle six to eight feet long. The manner of using it is thus described in Mr. Stephens' admirable "Book of the Farm":

"The hind-leg is hooked in at *a*, from behind the sheep, and it fills up the narrow part beyond *a*, while passing along it until it reaches the loop, when the animal is caught by the hock, and when secured, its foot easily slips through the loop. Some caution is required in using the crook, for should the sheep give a sudden start forward to get away, the moment it feels the crook the leg will be drawn forcibly through the narrow part, and strike the bone with such violence against the bend of the loop as to cause the animal considerable pain, and even occasion lameness for some days. On first embracing the leg, the crook should be drawn quickly toward you, so as to bring the bend of the loop against the leg as high up as the hock, before the sheep has time even to break off, and being secure, its struggles will cease the moment your hand seizes the leg."



No flock-master should be without this implement, as it saves a vast deal of yarding, running, &c., and leads to a prompt examination of every improper or suspicious appearance, and a timely application of remedy or preventive—which would often be deferred if the whole flock had to be driven to a distant yard, to enable the shepherd to catch a particular sheep.

Dexterity in the use of the crook is speedily acquired by any one; and if a flock are properly tame, any one of its number can be readily caught by it, at salting-time—or, generally, at other times, by a person with whom the flock are familiar. But it is at the lambing-time, when sheep and lambs require to be so repeatedly caught, that the crook is more particularly serviceable. For this purpose, at this time alone, it will pay for itself ten times over in a single season, in saving *time*, to say nothing of the advantage of the sheep.—*Randall.*

SHEPHERD DOGS.—In answer to inquiries for sheep dogs, we would state that Mr. JAS. W. REED, of Lockport, N. Y., informs us that he has a very good one, a little over one year old, which he will sell for $25. Also, a few pups which he will sell at $10 to $12 each.

### INQUIRIES ABOUT HEDGES.

Eds. Rural:—As the period is not far distant when fencing materials will be in great demand, I think it time farmers were beginning to adopt some other method than that pursued at the present day, by the majority of them at least. Fencing with rails or boards is very expensive at the present day; but what, we may ask, is this expense, in comparison with the future? As we behold our noble forests disappearing, year after year, by the woodman's ax, we should act as farmers and men who feel an interest for the future, as well as for the present generation, by substituting some material different from boards or rails for fencing purposes, to offset in a measure for those noble forest trees which disappear under our direction.

Although my farm is at present, tolerably well supplied with rail timber, I wish to commence raising hedges, so that when needed I shall have them. We have growing in our country several different kinds of hedges for fencing purposes, but to most of them there is some objection. The English Hawthorn is highly recommended, but is subject to attacks of the woody aphis, and the slug that devours the foliage. The Osage Orange it is thought will not prove hardy enough for our climate. The Buckthorn has come into great favor with some, still there is a drawback on account of its not having thorns sufficient to prove a barrier to cattle. The Honey Locust is also highly spoken of as being a vigorous grower, with plenty of thorns over every part of it, but somewhat difficult to keep a vigorous growth of branches at the bottom. I would like to know your opinion, Mr. Editor, in regard to the different kinds of live fencing materials used in this country, and which you would prefer if you were going to plant fences for yourself. Also where the materials for propagating can be obtained, at what price, and which is the best manner of propagation. If you, or some experienced correspondent, will answer these inquiries through the Rural New Yorker, a favor will be conferred on your subscriber.

West Bloomfield, N. Y., 1853. E. G.

Remarks.—As we are unable to respond definitely to the above inquiries, we solicit a reply from some person who is posted on the subject—who can speak from experience, as well as observation.—Eds.

### INDIAN CORN IN ILLINOIS.

Eds. Rural:—You will be pleased to hear that the prospect for corn was never better. This is from the best information I have been able to obtain, true of the whole State. People who have never visited the fertile west, and judge of corn as known in "York State," have never seen what might be called a corn-field with *corn growing in it.* There may be seen here, hundreds of acres in a body, with stalks ten feet high, and the most of them with two or more ears on a stalk. There are an abundance of acres here that will produce more than a hundred bushels to the acre, and this too, without the use of the hoe in the field, except in planting.

Wheat in this section is very good, and so are most of the other grains. Prices are not high, but the great facility for growing crops compensates for that, which, with the smaller amount of capital necessarily invested in land, enables farmers to make a very fair business here at the west.

Corn ranks as the principal crop in many localities. We have not a little difficulty in shelling it. The corn shellers in general use work admirably in corn not too large, but at least one in five of the ears with us, cannot be got through them. This is a serious hindrance. By thus calling the attention of Eastern manufacturers to the defect, it may probably be readily remedied to the benefit of both purchaser and seller. I shall be pleased to give you any further information about our country that will be beneficial or interesting to your readers.

James B. Tibbetts.

Spring Bay, Ill., July, 1853.

Remarks.—Have our Illinois friends tried Mumma's Patent Corn Sheller? It is a good machine, and we think will shell as large corn as they can grow. It is (or has recently been) advertised in the Rural.—We advise western farmers to give it a trial.—Eds.

Exhibition of Horses—Some of the leading citizens of Springfield, Mass., have had under private discussion for some weeks, a grand plan for an Exhibition of Horses from all parts of New England, New York, and adjoining States, to take place at Springfield about the last of September. The plan embraces a liberal set of premiums for superior animals of various kinds, and the gathering there on the occasion of many distinguished gentlemen from abroad. The idea is a novel and good one, and we hope may be carried out.

### FARM FENCES.

The following article upon this important but trite subject, is well done, and deserves circulation and attention. We find it uncredited in a New England exchange:

The best fence is a good stone wall; but if wood is used, skill and judgment are necessary in the selection of material and the mode of preparing it.

The first item for consideration, in this matter, is *first cost*, and the second is durability. Sometimes a third item may be important, to wit, the land used up by the fence. The second is the only one of these that can be estimated with any degree of accuracy by any general formula, and even this one is far from being uniform. But let us say a word of each.

1. The stone wall. If material is at hand, or in the soil, and no especial obstacle or objection comes in to vary the result, our own opinion is decidedly in favor of stone fences. When properly laid, they outlast the builders. We know of fences of this kind, apparently as good as new, that have stood at least fifty years. These samples are chiefly of faced walls, with deep foundations, costing originally two or three times as much as an ordinary fence. But if they last as they now promise, the amount expended in their construction was a capital investment. We remember many miles of stone wall in our native place, which have stood an equal length of time, but which have needed occasional renewal or repairs. Portions have been thrown down, and were of necessity rebuilt.

It is well known that, in most parts of New England, stone wall is the prevailing style of fence, both on the highway and for dividing lots; and in all that region with which we are well acquainted, we have never known a farmer who did not prefer stone to any other material for this purpose.

To secure durability, the foundation should be placed below the action of frost, and the whole should be laid by a skilful man, so as to secure to the greatest extent the aid of gravitation and friction in resisting all violence from either side. When thus laid, this fence is a good security against domestic animals of all sizes.

But sometimes stones are scarce, and timber is very cheap, while labor may also be expensive. So it often is where pine barrens or other forests abound. There is also a great difference in the *amount of defence*, so to speak, which is required. Sometimes, it is chiefly, a mere landmark to point out a highway, and some of the oldest parts of New England furnish evidence that even this is unnecessary. The path beaten by the hoofs of horses or oxen, and worn by the friction of wheels, is the only index of the existence of a road, while nothing but a marked tree or a post or stone, indicate a plurality of owners of the soil. Such regions of country, however, furnish no occasions for the application of any general rules on this subject.

As to wooden fences, cedar, no doubt, is the most durable of all woods, and where it is abundant, so as to be cheap, it should be preferred, especially for posts.

All woods are made more durable by being charred before they are set in the ground. Decay or decomposition is a chemical process which requires the presence of certain elements which, in charcoal, are essentially wanting. Charcoal, we suppose, is never chemically decomposed by exposure to the air or water. It may crumble. It may be attracked in certain situations by elements not generally encountered. It may absorb moisture, so as to be broken by frosts, and the like; but still charring well pays its way, when timbers are to be set in the ground. But they should not be charred so extensively as to weaken materially their strength.

Many exporiments go to prove that the smaller end of timber should be set downward. The rationale of this is rather hypothesis than physiological demonstration, since we know of nothing which has been actually discovered, which implies an upper or under side to the circulating vessels which compose the wood. The tubes and cells present similar appearances at each extremity, though their form or shape, tapering or otherwise, may have an important bearing on this phenomenon.

Saturated solutions of corrosive sublimate, sulphate of copper, acetate of iron, and creosote, prevent the decay of timbers; so does tannic acid and an atmosphere of carbonic acid, however obtained. Pyrolignate of iron is also efficient and economical, as well as melted tar. On the other hand, alkaline and alkaline earths facilitate decay. Hence the character of the soil in which posts are to be set should be considered, and if unfavorable, foreign materials should be used in filling in around them. The deposition of insoluble gypsum in the body of the wood is a very efficient mode of preventing decay. This process may be performed usually by immersing the end of the wood in a solution of gypsum when the tree is first cut, though it requires considerable time to secure the entire success of the experiment. The timber should also be thoroughly enveloped with it.

We might give an estimate of the cost of various styles of farm fence, as some of our cotemporaries have done on kindred topics, but no one would perhaps be a safe basis of calculation, for one hundred miles square. Hence we leave the subject here, giving in a tabular form the items which each man must estimate for himself. These will vary, of course, with the season of the year, even on any given territory and for the same job. These items embrace the following:

1. Cost of material, and of preparing it.
2. Cost of transporting to the spot.
3. Preparing the ground for the superstructure, whether a wall or posts and rails.
4. Cost and amount of labor to be employed.
5. Value of land affected by the fence, whether by occupying space or by casting shade.

As to the age of timber and the season of the year when it should be cut, to secure the greatest durability,—young, or at least sound timber should be selected, and the spring or early summer is probably the best time for cutting it. The latest growth will then have become somewhat hardened, and the condition of the sap at that time *is said* to be favorable to their remaining sound for a long time. We do not attach much importance, however, to the hypothesis.

Wire fences are not generally approved, so far as our observation extends. When wires are stretched across a cheap frame, they may be very convenient for enclosing temporarily a small plot of ground, but for a permanent fence they will not pay. If they are used, they should be confined in their place by passing through substantial wooden posts, sufficiently near each other to attract the notice of animals. For one objection to them is, that cattle do not see them, and hence they are exposed to a degree of violence, even from quiet animals, which will severely try their strength.—Live posts, earthen or burnt clay posts, and and the like, we regard as ingenious, rather than practically useful. They may sometimes answer well, but not as a general practice.

A fence, the lower half of which is stone, and the upper half rails or wires, may serve a very good purpose, and where stone is scarce, it may be the best form of fence.

But, whatever style is adopted, let the materials be of good quality, and the work be done skilfully. Sham fences are among the most expensive forms in which a lack of practical skill in farming operations is often exhibited.

### CANADA THISTLES.

Our occasional correspondent, W. Tappan, of Onondaga county, communicates the following to the *Plough, Loom and Anvil*:

July and August are the months to exterminate Canada Thistles. Some people doubt whether they can be killed even by perseverance; but I am no doubter on this point. Thistles can be eradicated, and with much less difficulty than quack grass. The best way to get rid of them is to mow them when they have attained their full size. A man who has had experience in mowing and killing them, can judge as to the time when they should be cut down. The stalks are hollow; the blossoms are red—not much faded; the lower leaves are dead, and the weather warm and dry. When these appearance present themselves, you should make an attack upon your beds of thistles. Several years since, we had a large thrifty "patch" of them on rich soil, and the land was seeded down to timothy, though, in consequence of the luxuriant growth of the thistles, the grass did not amount to much; and the whole mass of stuff was mowed down in the month of July, and not one bit of it removed from the field. The second year after they were thus mowed, they were scarce—a few only remained in the field.—The lot has been mowed every year since, and to my certain knowledge there is scarcely a thistle to be found in the field. Another "patch" was served the same way, and the lot is now clear of thistles. Plowing them out by the roots is adopted to some extent in this section of New York, but on the whole, mowing them down in the months of July and August seems to be the best mode of extirpating them. I do not look upon them with one-half as much horror, either in the meadow or corn field, as I do upon quack-grass. This is decidedly a bad grass, and will soon take the advantage of a large field.

I am of opinion that Canada thistles can be killed by deep and thorough plowing.—For instance, if you have a piece of land which you wish to summer-fallow, and which has been and is burdened with thistles, you would doubtless make money by plowing at least three times, and not let your plow run less than *ten* inches deep. I think this mode of managing them would result in their final extermination. When they are mowed down close to the ground, the remaining portion of the stalk is usually filled with water; and this leads to the decay of the roots and the death of the thistles.

In central New York we are troubled a great deal with thistles, though we are gradually getting rid of them, and ultimately shall free ourselves entirely from them; or at least, I think such will be the case if we adopt the system of mowing them in hot weather, and at the right stage of their growth.

### RAIN IN THE UNITED STATES.

A paper submitted to the Association for the advancement of Science, by Prof. Blodgett, of the Smithsonian Institute, states the following interesting facts:

The portion of the continent east of the Rocky Mountains differs essentially from the western portion and from Europe, in regard to the distribution and amount of rain. Its fall is symmetrical and general, not irregular and local.

The actual amount annually falling is greater in low countries, and decreases with the elevation.

It is greater in the Mississippi valley than on the Atlantic coast in the same latitudes, by about one eighth.

It is less in the Alleghanies than on the Atlantic coast in the same latitudes by about one-eighth.

The law of distribution is deduced as one of regular decrease in amount with decrease in temperature; whether that decrease of temperature is due to increased elevation or higher latitude.

The sources of supply of moisture are considered as lying beyond the surface atmosphere.

### CHLOROFORMING BEES.

Mr. D. Smith, in a letter to the Edinburgh Courant, thus describes his discovery of "Chloroforming bees."

The quantity of Chloroform required for an ordinary hive is the sixth part of an ounce. My mode of operation is as follows:—I set down a table opposite to, and about four feet distant from the hive; on the table I spread a thick linen cloth: in the centre of the table I place a small shallow breakfast plate, which I cover with a piece of wire gauze to prevent the bees coming in immediate contact with the chloroform. I now quietly and cautiously lift the hive from the board on which it was standing, set it down on the top of the table, keeping the plate in the centre: cover the hive up closely with cloths, and in twenty minutes or so the bees are not only sound asleep, but contrary to what I have seen when they are suffocated with sulphur, not one is left among the combs: the whole of them are lying helpless on the table. You now remove what honey you think fit, replace the hive in its old stand, and the bees, as they recover, will return to their domicil. A bright, calm, sunny day is the best: and you should commence your operations in the morning, before many of them are abroad.

### FARMING IN ONONDAGA COUNTY.

The Syracuse Journal notes the improvement among the farmers in the towns of Manlius and Dewitt. Tracts of land but a short time since a wilderness, or entirely uncultivated, are yielding luxuriant crops; woodland has been converted into pastures for cattle and sheep, and comfort and plenty abound in all that region. Land not long since considered of little worth, is held at from $50 to $150 per acre. Municipal improvements, plank roads and railroads, have worked this change. And it is not only in the immediate vicinity of the city that these things are seen. On the hills in Pompey, Onondaga, Otisco, and the plains of Cicero, Clay, and Dewitt, real property in the soil appreciates in value, and the farmers are the lords paramount. No where in the State are farmers any longer to be considered poor men. They hold in their hands the truest source of wealth, and their gains are by far the most satisfactory kind.

Something for Farmers.—We saw, yesterday, the model of a machine for cutting corn in the stalk. It is partially upon the plan of Mr. McCormick's reaping machine, and is designed to cut two rows of corn at a time. Between two wheels there is an axle, to each end of which is attached a knife for cutting each row of corn. To the axle is also attached shafts for the horse which pulls the machine. The horse walks between the rows of corn, and the knife just on the inside of each wheel cuts the corn, which falls on a bed or place to catch it, in a manner resembling the operations of a wheat reaper. The bed which catches the corn, opens in the centre at the pleasure of the operator to discharge the corn in bundles. We are informed that with one man and a horse the machine will cut 20 acres of corn per day. It is the invention of a citizen of Illinois.—*Rich. Enquirer.*

Well Said.—"I subscribe for and read six agricultural papers, which I consider the best investment made during the year," says Mr. Bradley, in the Connecticut Valley Farmer, and he is clearly a sensible man; and we venture to add, that the time he spent in reading those papers, which some of his neighbors considered thrown away, was quite as conducive as any other towards the satisfactory balance sheet of his years doings he exhibited—viz:

| | |
|---|---|
| Value of the crop | $2,702 37 |
| Farm expenses, including interest on the value of his farm, and taxes | $1,242 50 |
| Net profit realized | $1,459 87 |

Or at the rate of $9.73 per acre.

How many of those farmers who "can't afford" to take or read agricultural papers have done better?—*New York Tribune.*

A Cow Trade.—The Springfield (Mass.) Republican of a late date says:—D. D. Warren, of this city, has recently sold a cow to Wells P. Hodgett on conditions that will interest our farmers and diarymen. The price of the cow is to be decided as follows: Mr. Warren is to have the privilege of feeding the cow for thirty days, and Mr. Hodgett is to give at the rate of $10 per quart for the milk which she *averages over sixteen quarts per day*, for the whole of thirty days. Thus, if she averages only sixteen quarts per day, he is to give nothing for her. If she averages twenty quarts he is to give $40; and if twenty-five quarts, $90. Marvellous stories are in circulation in regard to this cow, and we anticipate the result with interest, and shall make it known to our readers.

Good Farming.—Rawstone, in his "Remarks on Lancashire Farming," a very valuable work, says:

"It may be laid down as a standing rule, and as a guide to direct us, that all good farming—the whole of that process by which bad land is to be converted into good and productive, and to be continued in that state—is comprised in the three following operations of husbandry, viz;—1. To carry off all superfluous and stagnant water, by means of judicious draining. 2. To retrieve, through the medium of manure, the strength and fertility which has been exhausted by cropping. 3. To extract all noxious weeds, that the strength of the manure may be thrown into the crops, and not into the weeds."

There is not a day nor an hour that we can call our own.

### IMPORTATION OF STOCK.

During the past few months quite a number of important purchases of Improved Stock have been made in England by American Stock Importing Companies, and individual importers and breeders. In addition to the importations heretofore mentioned, we annex accounts of several others, as chronicled in the Mark-Lane (London) Express. That Journal of June 6 contains the following notice of a shipment of stock destined for Kentucky:

Seldom has it fallen to our lot to chronicle as valuable a cargo as left Liverpool on the 4th of June, in the "Crown," for Philadelphia; more particularly as relating to the agricultural interest. This may be inferred when we mention that in the ship mentioned were sent out fifty head of the choicest specimens of short-horned cattle which could be bought in old England; several of them being purchased at prices which may appear incredible; as probably no ship was ever freighted with anything like so valuable a cargo of this description. Twenty-four head of cattle and a quantity of of sheep, the property of R. A. Alexander, Esq., Airdri House, Scotland, were sent in her, destined for his estate in Woodford county, Kentucky, U. S. Some estimate may be formed of the high spirit and enterprize of this gentleman, when we mention that for two animals alone, a two-years old heifer and a yearling bull, named the "Duchess of Athol," and 2d "Duke of Athol," bred in this county by Charles Towneley, M. P., near Burnley, he gave the large price of £525, ($2,625.) To Mr. Strafford, of London, who had the superintendence of Mr. Alexander's cattle, we are indebted for several interesting particulars relating to the stock, and who informed us that these two animals were the produce of one cow—"Duchess 54th"—bought at the sale of the celebrated herd of Short-horns of the late Thomas Bates, Esq., at Kirklevington, and bred since that gentleman's decease. We also noticed in the cargo, some very fine young bulls, bought from the justly famed herd of F. H. Fawkes, Esq., Farnley Hall, as well as some very choice cows and heifers from the well known herds of Messrs. Bell, Bolden, Cattley, Combe, Downs, Fuller, Lowndes, Tanqueray, Wiley, &c. The Sheep, principally of the Cotswold or New Oxford breed, were from the crack flocks of Mr. W. Garne, of Aldsworth, and Mr. John Gillett, of Minster Lovell. The other portion of the stock consisted of 10 Short-horned bulls and 15 cows and heifers of the same breed, selected at very high prices for a large importing company, also from Kentucky, the agents for which, Messrs. Dudley, Garrard, and Van Metre, have succeeded, after much time and trouble, in the purchase of a splendid lot of cattle and sheep from the best herds and flocks in the kingdom.—In evidence of this we may cite those of the Earl Ducie, Lords Burlington and Feversham, Messrs. Ambler, Beasley, Bell, Booth, Emmerson, Fawkes, Hall, Hopper, Maynard, Smith, Tanqueray, and Townley. They also had several fine specimens of the Cotswold sheep from the flocks of Mr. W. Garne, and Mr. Lane, of Broadfield; some pure Leicesters from the flock of Mr. W. Sanday, of Holmepierpont; and some prime Southdowns from the unrivalled flock of Mr. Jonas Webb, of Babraham; besides a valuable stallion of the Yorkshire or coach-horse breed; we can only hope they may have the good fortune to get them out safe and well, and reap the reward which such spirited exertions deserve. We believe for the freight alone, exclusive of the food and fittings requisite for such a voyage, that about £1,200 ($6,000) was paid, while the cost of the stock, with expenses incurred, must have exceeded £5,000 ($25,000.)

The same paper of June 13th says:

We have again to report a further exportation of valuable cattle from Liverpool, during the past week. In the ship "Mary Carson," for Philadelphia, was sent out by Mr. Strafford of London, the splendid young short-horned bull "Harry Lorrequer," bought at the sale of Mr. F. Fawkes, Farnley Hall, for 130 gs.; also two other valuable young bulls, "Liberator" and "Squire Gwynne, (2nd)," bred by Mr. J. S. Tanqueray, of Hendon, with several heifers from his herd; as well as others from the herd of the Hon. H. N. Hill, Berrington, and a number of Cotswold sheep. Mr. Bell, of Mosbro' Hall, likewise sent in this ship eight short-horned heifers from his own herd, a young Devon bull bred by Mr. Davey, of South Molton, with some Devon heifers bred by the Earl of Leicester. Two other valuable cargoes are about to be despatched. "The Star of the South" will take out the far-famed bull "Balco," bred by the late Mr. Bates, of Kirklevington, and purchased at his sale in 1850, when one year old, by the Earl of Burlington, for 155 guineas. He has been used the last two seasons by Mr. Tanqueray, at Hendon, of whom he has been recently purchased by Col. L. G. Morris, the President of the N. Y. State Agricultural Society, on behalf of himself and Mr. Becar, of New York. These gentlemen have also purchased some highly valuable cows and heifers from Mr. Tanqueray, as well as of the Hon. H. N. Hill and Mr. Harvey Combe: they have further selected some splendid Southdown sheep from Mr. Jonas Webb, with a quantity of Berkshire, Suffolk, and Yorkshire pigs. The same ship takes out two very choice Devon heifers from Mr. Geo. Turner's herd. Again, Messrs. Browning, Farrar, and Phellis, agents for the Madison Co. Importing Company, Ohio, U. S., are sending in the "Monsoon," 23 head of short-horned bulls, cows, and heifers from the herds of Messrs. Booth, Fawkes, Hall, Knowles, Lawson, Raine, Thornton, Tanqueray, &c. Amongst the bulls is the first prize yearling at Sheffield, bred by Mr. Hall, of Kiveton Park. They will have, too, a number of improved Leicester rams and ewes from the flocks of Messrs. Brooke, Chapman, Hall, and Wood, as well as 13 pigs from the best breeders. Some estimate of the importance of these exports, destined for several parts of the United States, may be formed, when we mention that, from the best information we could procure, the cost of these, with the other stock mentioned in our last week's report, cannot be far short of £12,000, exclusive of the expense of shipping—in itself a heavy item, approaching, in fact, to £2,000.

The Short-horns above alluded to, shipped by Mr. Bell, are said to be for Mr. S. P. Chapman of Madison county, N. Y., Lorillard Spencer of Westchester county, and Dr. Herman Wendell of Albany. The Devons are for the Messrs. Wainwright of Rhinebeck, and George Vail of Troy.

Sales of Improved Stock.—It will be observed by reference to announcements in the advertising department of this number, that Messrs. David Brooks & Son of Avon, and Lewis F. Allen of Black Rock, offer some superior stock for sale at auction. As the sales include choice and valuable animals, of celebrated breeds and families, they are worthy the attention and attendance of those interested.

# Orchard and Garden.

## HINTS FOR GARDENERS.

*High Culture for Grapes.*—Dr. UNDERHILL, of Crown Point, whose grapes have attained high reputation in the New York market for size and flavor, pays great attention to the thorough preparation of the soil, and keeps it in the highest state of fertility by manuring and deep culture. He usually applies bone dust at the rate of twenty-five bushels per acre, and uses largely a compost of swamp muck, rich loam, leaf mould, sods, leaves, and grape cuttings, with stable manure, liquid manure, or yard drainings and potash. Grapes will grow on any soil if properly prepared. He has thirty acres in vineyard, and it is nearly all trenched three or four feet deep, but he now trenches by running a double Michigan plow some fourteen inches deep, and following it with the largest size subsoil plow, about as much deeper. This is a cheap and effectual mode of deepening the soil. Of course his land is thoroughly drained and in constant cultivation. We gather this from a statement in the N. Y. Agricultor.

*Summer Planting of Shrubs and Trees.*—The Prairie Farmer says, that shrubs and trees with full, fibrous roots, can be safely moved when in leaf, if it is done expeditiously and carefully on a cloudy day, so that there is no wilting of the leaf. It is desirable that considerable soil cling to the smaller roots—the more the better and safer will the removal be.

*Slitting the Bark of Trees.*—This is sometimes practiced with bark-bound trees, but it is always bad management. The bark remains thin and is apt to peel off and injure, and even kill the tree. It is a better way to aid the growth by loosening and manuring the soil about the roots, scraping off the moss and rough bark and washing the trunk with weak lye or soap suds.

*Soap Suds for Watering plants.*—Nothing can be better for summer watering of plants and vines, than the suds of the weekly wash, and no one who desires a good garden will suffer it to be wasted. For cabbages, cucumbers, beets, and the like, it seems especially adapted, and one of the most thrifty grape vines we ever saw, was watered with soap suds almost daily in dry weather. A large supply is not needed at once, but frequent waterings promote rapid and vigorous vegetation.

*Manure for Autumn Roses.*—Mr. RIVERS a famous Rose Culturist, applies a mixture of wood-ashes and guano, in the proportion of half a peck of guano to a bushel of ashes to his late roses, with most excellent effect. About two quarts of the mixture is applied to each shrub or tree, in a circle eighteen inches in diameter around the stem, where it is suffered to remain undisturbed until autumn. It should be applied early in June and covered with a thin grass mulch, and the effect will be that it will retain the dew and showers, and keep the tree in constant and vigorous growth, which is very necessary to the production of a good crop of flowers in the fall.

*Planting Strawberry Vines.*—Those who wish to cultivate this delicious fruit, perhaps need reminding that the present month is the proper season for planting the vines. The ground should be prepared by trenching to the depth of at least twenty inches, and should be well-drained and richly manured. For the subsoil, well-rotted stable manure is a good application.—The surface soil should have a coating of guano, and charcoal dust, also a half-bushel of wood-ashes to the square rod. Give the plants plenty of room and water them as they need, and they will generally bear fruit the first season.

## DEPTH OF THE ROOTS OF TREES.

In the spring of 1850 I removed an apple tree which was growing on a gravelly ridge, to a place prepared for it a short distance from whence it was taken. The tree was six inches in diameter, had been planted, I should judge about twenty years, and had been top-grafted a few days previous to its removal. The tree and most of the grafts set in it are growing thriftily.

In the place where the tree stood, I sunk a well, and in the digging traced the roots of the apple tree downwards to a depth of over twelve feet below the surface of the ground. My attention was called by the appearance of the roots, as the workmen were going on with their work, and a measurement was made. How much deeper the roots could have been traced I cannot tell, but I was well satisfied that they did extend some little below the measurement. From the great loss of roots, by their spreading so deep and wide, I had little expectation of saving my tree, and still less the grafts so recently set, but was most agreeably disappointed in both.

Randolph, N. Y., July, 1853. S. S.

## WATERING TREES AND PLANTS.

MANY cultivators have very indefinite and vague notions on the subject of watering plants; and hence we often see water given when it is not wanted, and again when it is most needed, it is not unfrequently applied in such a manner as to produce no benefit, sometimes positive injury. The great secret of success in watering, consists in furnishing just such an amount of artificial supply as the plant needs, without flooding on the one hand, nor stinting on the other. This must be judged of by the actual condition of the plant at the time. If, for example, it should be in nearly a dormant state, when it throws of scarcely any moisture, very little water is needed. Young trees, for instance, which are set out in the spring, sometimes remain several weeks without growing, and to flood them at this period, would tend more to cause decay than growth. It sometimes happens that such trees dry up at the top or branches, while the roots are kept deluged, in consequence of the want of circulation from the absence of leaves. In these instances it is better not to apply much water, except to the stem and branches themselves; and this if often repeated, will directly impart moisture to the tree, and not unfrequently stimulate it into a growing state, when other means would entirely fail; because in the absence of circulation, the moisture is applied precisely where it is wanted.

We have known cases where young trees have been actually destroyed by injudicious watering. Again, we have seen trees perish for want of watering. In the latter instances, growth had already commenced, and the young leaves were rapidly pumping the water from the soil up through the roots and stems, and a larger supply was needed than could be obtained. A plant in a state of rapid vegetation will consume or throw off in the air more than ten times as much water as a dormant plant.

When artificial watering is given, the operator should ascertain whether the supply descends sufficiently to reach the roots for which the benefit was intended. It is by no means an uncommon error to pour water on a hard baked surface, without descending an inch below, nor within half a foot of the roots of the plant. Such waterings will of course do more harm than good. It would afford instruction to superficial operators, to throw up a little of the soil, and witness the dry, ashy earth beneath the thin moistened crust. Water will penetrate freely into a mellow and well cultivated surface; but the removal of a few inches, to be again replaced after watering, will be advisable in most cases where the roots lie deep in the soil.

A hint as to the best time of day for watering, may be derived from an observation of the condition in which natural watering by rain is given. One reason why this penetrates the soil so effectually, is the moist state of the air, and the shading of clouds, preventing immediate evaporation, and connected with the even and gradual application which showers impart. Hence, watering under the hot rays of the sun should be avoided, evening proving the most advantageous time for this purpose; and if several light and successive applications are given, the moisture will penetrate more deeply into the soil.—*Cultivator.*

## CULTIVATION OF THE CALCEOLARIA.

It has often been to me matter of great surprise that the large flowering, or, as they are generally called, *herbaceous* calceolarias, are not more cultivated. You may visit, in this neighborhood, a dozen gentlemen's gardens, and not see more than a dozen plants of this beautiful section of calceolarias, and those few but miserable, half-starved, half-choked specimens, which, for the credit of both the gardener and calceolaria, would be better on the rubbish heap.

If you inquire the cause why they are not grown, ten out of twelve persons will confess "that they are beautiful things;" but, says one, they are so subject to the green fly; another says they were so bad to winter—I invariably lose them at that season; a third says that they die as soon as they have done blooming; and one good gardener told me the other day, "If a person gets them to do well once in his life-time, he has had his share of good luck." Now in answer to the first, are not geraniums, cinerarias, and a host of other plants which these men "grow respectably," subject to the green fly? And will not the smoke of tobacco, with which he kills the fly attacking his geraniums, kill the fly which is on calceolarias? As to their being hard to winter, it is more fanciful than real. If a person attempt to keep the "old plants" it may be true; but if cuttings are stuck in August or September, and be potted in 4 inch pots in October, and kept in a cold frame until Christmas, then placed on a shelf in the green house "near the source of ventilation," not kept *too wet*, not more than one in a hundred if even that will go off in winter.

PROPAGATION.—Select a place shaded from the mid-day sun, say under a north wall or hedge (not under the drip of trees;) spread six inches of rough cinder or coal ashes over the space requisite to hold the number you want, then put on six inches of the following compost:—leaf-mould, loam, and silver sand, in equal quantities; the whole passed through a fine seive. Let the *rough* be placed next to the ashes, and over all this put half an inch of silver-sand; water the whole; place on the land lights to mark the places. Take young shoots, as above-mentioned, in the beginning of September, prick them in the prepared bed, and place over them the glasses, keep them close, syringe them frequently, and not many will fail to grow.

TIME FOR POTTING.—Pot the cuttings, when rooted, in 4 or 5 inch pots to winter in. In February give them a shift into 6 or 7 inch pots, and when the roots reach the outside of this soil, put them into their blooming pots, say from 8 to 12 inch pots, according to the probabilities of the plant.

SOIL.—For wintering, loam and leaf-mould, one part each, and half a part of sand; for February potting, loam and leaf-mould, one part each, sand and rotten dung half a part each, and for final potting add more dung.—*Floricultural Cabinet.*

## ENTOMOLOGICAL DISCOVERY.

THE following note from our friend, Mr. S. Maxwell, Jr., describes a discovery he has made, which will prove of considerable value, on account of the ease with which the nit is removed. We have examined a number of plums since receiving the note and find in every case the nit under the brown speck, except where the puncture has exuded gum—then the worm is hatched out and has commenced his depredations.

CURCULIO.—I have within a week discovered a fact about the curculio which was new to me, and have also found it entirely new to others to whom I have communicated it. All those who have had fruit bitten by the curculio, have probably noticed a little brown spot on the inner edge of the crescent-shaped puncture. That little brown spot covers the egg left by the bug, and the puncture seems to be made for a place of safety for the young worm when hatched, and also to facilitate its operations in boring into the fruit. Persons having plum trees, and leisure, and wishing to preserve a few of the fruit after it has been bitten, can with the point of a penknife, or with the thumb or finger nail, easily remove the spot from its place, and no harm will come to the fruit except the scar left by it.—*Greenfield Republican.*

## FRUIT TREES TO SUPPLY A FAMILY.

No two persons would agree on the number of fruit trees required to keep up a good supply of fruit for a family of medium size. With any ordinary number, some seasons would cause a deficiency, and others occasion a large surplus. Good or bad cultivation would also make a difference of fourfold. The following may, however, be regarded as a full average, taking all circumstances into account, in connection with good management, and will frequently afford a large surplus:

40 apple trees, with a full share of long keepers; 20 pear trees; 15 peach trees; 12 cherry trees; 10 plum trees; 6 apricots: 4 nectarines; 5 quinces; 4 grape vines; 30 currant bushes; 15 goosberry bushes; 20 raspberry bushes: 5 square rods of strawberries.—*Fruit Culturist.*

# Domestic Economy.

## PRESERVED MILK AND OTHER EXTRACTS.

GAIL BORDEN, Jr., formerly of Texas, but now of N. Y. city, to whom was granted a Council Medal at the World's Fair of 1851, for his celebrated meat biscuit, has taken measures to secure a patent for some exceedingly valuable improvements in preparing and concentrating sweet milk in such a manner that incipient decomposition is completely prevented, and a concentrated extract produced either in cakes or in a more fluid state, which will keep sweet in any climate for months and perhaps for years.—We have kept a quantity of this milk for three months, and although it has stood in a tolerable warm place it is as sweet to-day as when we received it.

Mr. Borden, by the same improvements, extracts and concentrates coffee, tea, and other useful dietary matters, and produces those extracts in such a form that the strength of a pound of coffee can be carried in a vessel no larger than a small tea-cup, and it will keep fresh in any climate, and for a number of years. We have given samples of coffee, prepared by Mr. Borden, repeated trials during the past four months, and cannot but speak in the most favorable terms respecting its good qualities, and the real benefits which we anticipate from its introduction into public use. For persons going on sea voyages, or on long overland journeys, a few small tin canisters will be sufficient to equip them for partaking, with a little warm water, of a good milk and coffee beverage, properly sweetened, in the midst of the ocean, or in the depths of the forest.

For domestic use it will be the means of saving much in families, especially in warm weather, and at no time need there be any necessity for a person taking a cup of milkless coffee, even after a thunder storm, or a week of hot weather, with the thermometer daily at 97° in the shade, as it has been in this city the past week.

The means by which Mr. Borden prepares his extracts are now, ingenious, and philosophical, but as measures are adopted for securing patents abroad, we cannot describe them at present; suffice it to say that although milk and other vegetable extracts have been made heretofore, the new process is entirely different and very superior. The milk prepared by an improved process of Mr. Borden, even after it is months old, will, when dissolved in warm water and left to cool, produce a beautiful and sweet covering of cream. The coffee and tea have all their aroma preserved, and retain all their peculiar qualities. In large dairies at a distance from cities, large quantities of sweet milk can be prepared by Mr. Borden's apparatus, and sent down to be sold in every grocery, and it may yet become as common to ask for a cake of milk as it is now to ask for a quart. The mode of preparing these extracts is economical, safe, and certain, and we believe it is one of most useful improvements that has ever been discovered.—*Sci. American.*

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE
For the week ending July 26, 1853.

Cyrus C. Bisbee, of Rochester, N. Y., for improvement in shower-bath tables.

Richard C. Bristol, of Chicago, Ill., for improvement in rotary steam engines.

Wm. V. Burton, of Orange, Ohio, for improvement in plows.

F. B. Hunt, of Westfield, Ind., for improvement in mills for grinding apples and other substances.

David A. James, of Cincinnati, Ohio, for improvement in processes for making glue.

Owen Redmond, of Rochester, N. Y., for improvement in lamps.

Milton Satterlie, of Louisa, Ill., for improvement in seed planters.

Wm. M. Warren, of Watertown, Conn., for improvement in railroad car seats.

Ezra R. Benton, of Cleveland, Ohio, for improvement in bran dusters.

Jacob H. Carothers, of Davidsburgh, Pa., for improvement in corn planters.

Sylvester Davis, of Claremont, N. H., for improvement in bee-hives.

Ziba Durkee, of Alden, N. Y., for improvement in the beaters of smut machines.

F. O. Deschamps, of Philadelphia, Pa., for improvement in omnibus lanterns.

Jno. A. Elder, of Westbrook, Me., for improvement in curving the backs of books.

Daniel P. Hinman, of Philadelphia, Pa., for improvement in dying yarn parti-colored.

Levi Pitman, of Tom's Brook, Va., for improved plotting theodolite.

Jackson A. Rapp and Edward S. Wright, of Buffalo, N. Y., for improvement in straining saws by compressed air.

Frederick G. Vettercke, of New York, N. Y., for improvement in dying compounds.

Henry Lee Norris, of New York, N. Y., assignor to Samuel T. Armstrong, of same place, for improvement in preserving India rubber in the liquid state. Dated July 26, 1853. Patented in England, Feb. 24, 1853; do. in France, March 13, '53

RE-ISSUE.

Josiah Warren, of Harmony township, Ind., assignor to Leondardo Westbrook, of New York, N. Y., for improvement in composition for stereotype plates. Patented April 25, 1846. Re-issued July 26, 1853.

DESIGNS.

Julius E. Merriman, of Meriden, Conn., for design for a sewing bird.

Elihu Smith, of Albany, N. Y., for design for a parlor stove.

Hosea H. Huntley, of Cincinnati, Ohio, assignor to Daniel F. Goodhue, of same place, for design for a stove.

Hosea H. Huntley, of Cincinnati, Ohio, assignor to Daniel F. Goodhue, of same place, for design for a cooking stove.

Thos. Barry, of New York, N. Y., assignor to North, Chase & North, of Philadelphia, Pa., for design for a cooking stove.

Reuben H. N. Bates, of Providence, R. I., assignor to North, Chase & North, of Philadelphia, Pa., for design for a cooking range.

## CHEAP PAINT.—INQUIRY.

EDS. RURAL:—Will your correspondent, who gives the recipe for "cheap and durable paint," of which the constituents are hydraulic cement, white lead and oil, please give us a somewhat more definite article? I do not understand *how* to proportion "white lead ground in oil," with the hydraulic lime, "in bulk." I showed the recipe to a painter, who pronounced it good; and now I desire to make a trial of its merits. How much surface would a barrel of the lime suffice for? How much white lead and oil would be required for the same? and, what color would the result show? Not white, I presume. S.

Wellsboro, Pa., July, 1853.

## MANUFACTURE OF LIME.

THE "Wisconsin" gives a description of some lime kilns, recently erected at Milwaukee by Mr. P. C. Hale:

He has in operation one kiln, 16 by 20 feet in size, and 12 feet high, with an arched roof of brick, containing seven chimneys, and another kiln, nearly completed, much larger than the first, in which he can manufacture 600 barrels of lime per week, and is prepared to increase the number of kilns as fast as buisiness demands. These kilns are so constructed that nearly an equal amount of heat is thrown upon each stone at the same time. In consequence of the arch no cold air reaches the top stones, and the whole contents of the kiln are equally burned, leaving no small stones half burned, as is inevitable in the old fashioned kilns. As it is neither burned too much nor too little, it is purer and stronger than other lime.—The kilns are so constructed as to save about one-third of the wood and about half the labor of other kilns, and are burned in fifty-four hours, no matter how large the kiln. It is only necessary to keep the fires properly tended with suitable fuel, to insure a burn with as much certainty and accuracy, as the baking of bread in ovens.

REFRIGERATING CAR.—The last improvement is a car built expressly for the preservation of perishable articles of food, in which the delicacies of the season can be transported any distance without injury.—This car was loaded at New York with oysters, clams, &c., from that market, and sent to Cincinnati, whence it is to bring back choice fruits from the South.

## BRISTOL'S ROTARY ENGINE

Our readers will notice that a patent has been granted to Richard C. Bristol, of Chicago, Ill., for improvements in Rotary Engines; a patent was also granted in England on the 17th of last January. This rotary engine is very simple in all its parts, and it embraces features which remove many objections to the heretofore economical working of such steam motors. The description of the rotary engine to which these improvements relate, consists of an outer fixed annular case with open ends, and an inner wheel so fitted to it as to close its ends and leave a channel or steam way within it, outside of the wheel, the outer case having one or more abutments which project from its inside and fit to the periphery of the wheel, the latter having sliders or wing pistons, upon which the steam acts for the purpose of giving rotation to the wheel, by admitting the steam between the slides and the abutments spoken of.

The outer case is so supported that it is capable of yielding in any direction to enable it to preserve, at all times, the proper position in relation to the wheel inside and the working parts of it, notwithstanding any inequality of their wear, or any other cause which might induce them to work out of line.

The sliders are pushed out against the concave face of the annular case by means of small pistons attached to them and acted upon by the steam, but only at such times the sliders, or wings are acted upon themselves by the steam, the pressure of the said pistons ceasing as soon as the exhausting commences at the back of the sliders to which they are attached, and before the withdrawal of the latter to pass the abutments, so that no resistance is offered to their withdrawal or back stroke.

This engine cuts off the steam at any point desired; the packing consists of adjustable metal rings, and is not liable to wear uneven, or quickly, as the friction is small.—*Scientific American.*

## ARTIFICIAL MARBLE.

MR. BENJAMIN HARDINGE, of Cincinnati, has made a valuable discovery in synthetic chemistry, by which he is enabled to produce an artificial marble from common pebbles and sand. It is stated by the Express Messenger that he is about to erect in or near the city of Montreal a model palace, to be built entirely of marble and precious stones. The stones for the walls, which are now moulding, are formed of silicates in combination with mineral earths and pebbles, and angular spots of granite variegated with mineral oxides. The roof will be a lava of crystalized silicates of lime and white alumina, resembling the snow crust. The style of architecture will be unique. The pillars, pilasters, columns, capitals, cornices, architraves, mantols, &c., will be of agate, jasper, porphyry, &c., with collossal statuary of snow-white marble. The inside finish of the walls will be of porcelain, in landscapes, with ceiling of fresco of porcelain, rosewood and zebrawood, inlaid with pearl. The tables, both tops and frames, will be of sapphire and amethyst, embedded with bands of opal,—others of lapis-lazuli, chalcedony, onyx, set with garnet, topaz, ruby and cornelian. Others with entire frames of blood-stone moulded in rich patterns of altorelievo, with tops of onyx, and other chalcedonic formations.

## THE HILLOTYPE.

THE Troy Times understands that Mr. Hill has perfected his discovery, so far as regards transferring all the colors by a single operation. The only desideratum remaining is an aid in reducing the time required for making pictures from thirty minutes to, if possible, less than as many seconds. A similar difficulty, but not so serious, occurred in the bringing out of the Daguerrean discovery. Iodine, &c., were found to answer the purpose for the latter, but Mr. Hill has to deal with many colors, and a chemical that serves with one, may spoil or prove useless with another. The "stick" is now on the yellow. Mr. H. may discover the necessary accelerator of this color in one week or six months, but until he does find it, he will not be coaxed out, driven out, or smoked out. When the Hillotype comes before the public it will be as a full grown invention, ready to be made available to the fullest extent; as a fixed fact.

## THE NEW MOTIVE POWER.

WE have already referred to the invention of a new motive power, from which its projectors anticipate great results. The force applied is magnetic attraction, and the power is applicable to driving machinery, locomotion, navigation, and all other purposes for which steam is employed. It is also capable of lighting and warming. The great advantage of this power is its cheapness, nothing is consumed, and no cost being necessary in generating it. The machine has been applied to the magnetic telegraph with entire success. An engine is nearly completed to test the invention as a motive power on a large scale. The stock is in the hands of some of the shrewdest business men in Providence, and so much confidence is felt in the success of the experiment, that shares, the original cost of which was $50, have changed hands at $250. If it answers the expectations of its friends, limits can hardly be put to its value; if it fails, it will be in the category of many other good things.—*Providence Journal.*

RICE STRAW PAPER.—The Charleston Mercury says:—Paper made from rice straw is so abundant with us, that the rice-growing States should have the monopoly of the business of paper making.

# Educational.

## N. Y. STATE TEACHERS' ASSOCIATION.

The Annual Meeting of this Association was held in this city last week, continuing three days. The attendance was very creditable, embracing some five hundred of the prominent teachers of the State; also many prominent friends of Education from this and other States.

Prof. DAVIES, President of the Association, occupied the Chair, and in a brief and pertinent address, thanked the Association for the honor conferred in the selection, commending to their attention the great interests in which they were engaged, and for the promotion of which they had assembled.

A committee reported the order of business, which was adopted for the guidance of the Association.

Mr. COBURN, of Binghamton, from a committee appointed at a previous meeting, reported for the consideration of the Association alterations in our present School Laws, so as to remedy the present inequality in the distribution of the public money—recommending that the State Superintendent divide the fund according to the number of scholars, between the age of 4 and 21 years, as reported to him by the County Clerks, and then the several town Superintendents divide a small proportion, say one-fifth, equally among the districts of their respective towns, and the remainder in accordance with the present law.

2. The separation of the office of Superintendent from that of Secretary of State.

3. The organization of a Board of Education, to be composed of one member from each Senatorial District in the State, the Superintendent to be Sec'y of said Board.

4. The creation of a County Board, to be composed of the Town Superintendents as recommended by the State Superintendent in his last annual report, or the establishment of the office of County Superintendent.

5. An alteration of the law relative to the licensing of Teachers, or the manner of ascertaining their qualifications.

After a lengthy and able discussion, in which many teachers of experience participated, the first proposition was adopted as the sense of the Association. Further discussion was postponed, and Mr. OGDEN, of Binghamton, delivered an address on "Method in Teaching."

Mr. VALENTINE, one of the Editors of the N. Y. Teacher, a monthly paper published under the direction of the Association, reported the success of the Teacher to have exceeded their anticipations. It has an extensive circulation, embracing every State in the Union, except California and South Carolina, and all the counties of this State except four. There will be a balance of from $150 to $300 at the close of the year, in favor of the concern. The Treasurer reported $1,098 76 received for subscriptions and advertising, and that $1,058 54 had been expended. Report accepted.

Prof. T. H. BOWEN, of Albany, offered a resolution in favor of a penny contribution from the children of the United States, in aid of the Washington Monument. Also for a committee to prepare an address to the teachers of the State.

The Association was entertained by some excellent singing by Misses GREIG and DUFFIN, and Messrs. TILLINGHAST and ALLIS.

At the evening session the President, Prof. DAVIES, delievered an address upon the importance of "conforming to general laws in our system of instruction."

We cannot give a synopsis of the address of the learned Professor. It was sound, logical, instructive and marked throughout with mathematical precision and figures, and listened to with interest. The speaker received a vote of thanks.

### SECOND DAY.

A letter was read from S. S. RANDALL, written at Washington, intimating among other things, that the Legislature was too much absorbed in selfish and narrow-minded schemes to do justice to the cause of Education.

Mr. KIDDLE, of New York, read a lecture upon the "Motives to Mental Culture." The essay was a plain, practical elucidation of the importance of mental culture, and the causes or motives that incited to the labor. He also alluded to the vital necessity of maintaining a National Literature, and cited the great hindrances thereto, one of the most prominent of which has been the want of an international copy right law, which would prevent such an influx of foreign works that cost our publishers nothing, and the effect of excluding American authors from laboring to build up a National Literature.

The separation of the office of State Superintendent from that of Secretary of State, was next discussed. Several gentlemen participated in the discussion.

Prof. WOOLWORTH, of Albany, advocated the separation. There was nothing congonial in the kinds of duties the officer was now called upon to perform. It was out of his power to properly discharge the duties of School Superintendent, as the official duties were now necessarily divided. One great reason why schools were not more prosperous, was for the want of adequate superintendence. It needed officers here, as in Mass., to visit the schools, encourage the teachers and awaken the interest of the patrons.

Mr. RANDALL, State Superintendent of Schools, said he had not heretofore expressed an opinion on the subject. He felt bound to say he was in favor of the separation. The offices were originally separate, and were united when nothing like the present amount of duties were required of either of them. That officer now received and paid out the $800,000 raised by State tax. It ought to go into the treasury. He spoke highly of the system of County Superintendency, as one of the most beneficial acts of School Legislation. He should recommend the separation in his next, and probably last, report to the Legislature.

The proposition for a separation of the office of Secretary of State from that of Superintendent of Common Schools, was unanimously adopted.

The teachers of Auburn reported, by letter, their inability to attend the Meeting of the Association, as the vacation in the Scools of that city did not occur until August 12th.

Mr. HOWE moved to strike out the third and fourth resolutions under discussion, and substitute a recommendation that the office of County Superintendent be revived. After a brief and spirited discussion the Association voted not to strike out.

Prof. UPSON, of Hamilton College, according to announcement, read an essay upon "What is Practical Education?" It would be impossible to give an outline of the whole essay. It was well received throughout, and highly creditable to the author.

Mr. NEWMAN read a paper upon Free Schools compared with Parochial Schools, concluding by offering the following preamble and resolutions, which, after some revision, were adopted;

Whereas, we live in a Christian country and Christian State, where Christianity is an acknowledged part of our common law, therefore,

Resolved, That our public schools, from their connection with the State, and especially on account of the objects of their organization and their practical influences upon the minds and hearts of their pupils, are necessarily Christian institutions.

Resolved, That while we admit the liability, as in all other organizations, to occasional abuse, we yet believe that the general charges of infidelity on the one hand, and sectarianism on the other, are unfounded libels upon the organization and practical workings of our public schools.

Resolved, That in our opinion, parochial schools are not adapted to the circumstances of our population, and the character of our institutions, and that any appropriations for their support by our State or General Government, would be contrary to the spirit, if not the established principles of our constitution and laws.

The Association accepted the invitation of H. A. BREWSTER to attend a levee at his house, and adjourned to Thursday morning.

ELEAZER WILLIAMS.

[For the Rural New-Yorker.]

DURING a recent excursion west, while crossing Lake Erie on the steamer May-Flower, I became somewhat intimately acquainted with Rev. ELEAZER WILLIAMS, of Dauphinical pretension and historical interest. The readers of the RURAL are probably somewhat acquainted with Mr. W.'s history, yet a brief sketch of his personal appearance, &c., may prove acceptable.

While at supper, seated at the end of the table directly opposite, I noticed a jolly and venerable looking old gentleman, who seemed very busy in cracking jokes as well as in discussing the bounties spread out before him. His very expression of countenance gave an expression of gladness and sunlight to the whole concourse. There was however a shade of sadness and solemnity in his expression, which denoted past trouble and present anxiety. He was on the whole a noble looking man. It was Rev. ELEAZER WILLIAMS. I was introduced and discussed matters with him at considerable length.—He is very pleasant and urbane, extremely talkative and somewhat vain. No one can converse with him without coming to the conclusion that he is no impostor. Deceived he may be, but he is not of that character which would seek at the expense of truth to palm off the humbug of others. Many believe that he is in reality the long lost Dauphin. The family likeness is unmistakable. He showed engravings of King Louis, Marie Antoinette, Prince de Joinville and the jailor, Simon. I also had the pleasure of reading some of his manuscript sermons. Descended from such a long line of illustrious ancestry, he is certainly an orthodox representative of nature's Nobility. He has no desire to mount the throne of Franco, but ardently desires to have investigated and settled before the tribunal of public opinion, the question, "Have we a Bourbon among us?"

Mr. WILLIAMS is an elderly man, of portly size and pleasant demeanor. He is firmly convinced of the fact, (which has recently been the subject of so much magazine and newspaper comment,) that "we have a Borboarn among us." Strong circumstantial evidence exists to support the truth of his claims, and it would not be at all surprising if fickle and inconstant Franco should yet take means to investigate the matter to the certainty of a demonstration.

A life time spent in preaching the Gospel among American Indians, would little fit him to preside over the destinies of France, now swayed by the iron hand of BONAPARTE; yet Mr. WILLIAMS evidently entertains just and comprehensive views of political matters in the old world. He is, however, thoroughly American in his principles and aspirations, and I seriously doubt if the most splendid earthly honors or possessions, could for a moment tempt him to leave his humble sphere of an Indian Missionary. His expression, manners, and all other outward indications, denote a man of generous impulse and enlarged conception of duty. He has in view a crown, not of earthly duration, but eternal and in the heavens.

On parting, Mr. WILLIAMS gave me a number of autographs and promised to mail me one of his best sermons. It would not be a bad plan to publish it in the RURAL.—People have some anxiety to know how Bourbons write. Mr. WILLIAMS will be in Rochester within one or two months. He is to preach for Rev. Mr. LEE, of St. Luke's.

W. M. H.

### THIRD DAY.

Some remarks having been previously made reflecting upon the President for not appointing ladies on any of the committees, he handsomely defended himself by pointing to the beautiful pilasters and entablatures of the Hall, and requested that he should not be required to take down the crown, the beauty of the entablature, and place it in the dust of the pedestal.

The Association voted to hold its next session at Oswego.

Resolutions in relation to County Teachers' Associations were adopted, as follows:

Resolved, That as associated effort, as well as individual effort, is necessary in order to elevate the business of Teachers into a Profession, it is advisable and practical to organize in every County of this State, a County Teachers' Association.

Resolved, That the best interests of the community require the Legislature to give legal sanction to such regular organizations, delegating to them power to license Teachers.

The Convention elected the following officers for the ensuing year.

*President*—VICTOR M. RICE, of Buffalo.

*Vice Presidents*—JOHN R. VOSBURGH, of Rochester; SOLOMON JENNER, N. Y.; J. H. HARDEY, Elmira; J. WINSLOW, Watertown.

*Cor. Sec'y*—T. W. VALENTINE, Albany.

*Rec. Sec'ys*—A. S. PALMER, Utica; W. H. FANNING, N. Y.

*Treasurer*—O. MOREHOUSE, Albion.

Prof. T. H. BOWEN, Chairman, presented the address to the Teachers of the State, which was read by Prof. UPSON, and adopted.

Mr. DOUGLASS made the report from the Committee on Amendments to the Constitution. Report accepted.

The Committee reported as Editors of the New York Teacher for the ensuing year, the following named gentlemen, who were elected:

*Resident Editor*—T. W. VALENTINE, Alb.

*General Editors*—A. J. UPSON, Clinton; J. W. BULKLEY, Williamsburg; C. R. COBURN, Binghamton; T. H. BOWEN, Albany; X. HAYWARD, Troy; JAS. JOHONNOT, Syracuse; E. J. HAMILTON, Bath; R. D. JONES, Rochester; A. E. SCHERMERS, Kingston; S. G. LOVE, Randolph.

A series of complimentary resolutions were adopted, returning acknowledgments to the Board of Education, Mr. JONES, Superintendent, Mr. BREWSTER, and the Committee of arrangements, for the excellent preparations made for the holding of the Convention, the hospitality extended to the members, &c.

The following preamble and resolutions offered by Mrs. NORTHROP, a teacher in one of the public Schools in this city, were, after a few spirited remarks, unanimously adopted:

Whereas, It is a well acknowledged fact that woman occupies an important station as a Teacher, and that she is admirably and peculiarly fitted by nature to perform the duties of that station; therefore,

Resolved, That this Association recognizes the right of female teachers sharing in all the privileges and deliberations of this body.

Resolved, That female teachers do not receive an adequate and sufficient compensation, and that as salaries should be regulated only according to the amount of labor performed, this Association will endeavor, by judicious and efficient action, to remove the existing evil.

Mr. JOHONNOT offered a resolution recommending the Legislature to pass a General Union School Law, which shall enable such schools to raise the balance of their expenses by a tax, instead of by rate bills.—Adopted.

Mr. WILSON, of Allen's Hill, moved a Committee to arrange a uniform course of studies for Common Schools and Academies, to report at the next meeting. Adopted.

The Chair appointed Messrs. WILSON, WOOLWORTH and HOWE, as the Committee.

Mr. TURNER moved that the Teachers be requested to confer with their Trustees and secure if possible the recurrence of the annual vacations at a uniform period, so that teachers may attend the meeting of this Association.

Mr. JOHONNOT moved the appointment of an agent to travel through the State, and promote the cause of Education by lectures before institutes, &c., said agent to be paid a salary of $1,000 per annum.

Prof. THOMPSON moved to refer the subject to a Committee of three, instructed to report at the next annual meeting. Agreed to. The Chair appointed Messrs. JOHONNET, POMEROY and KEDDLE.

The Association adjourned *sine die*, after a brief and appropriate address by the President.

---

THE Astor Library building in New York has at length been completed, and the arrangement of the books is all that now remains to be done. The building was erected at a cost of $90,000. It will open early in October, with about 85,000 volumes, which have been purchased at an expense of $100,000.

# Sunday Reading.

## THE LORD'S PRAYER.—AN ACROSTIC.

[This beautiful and ingenious composition, though it had a great run in the papers some years ago, will probably be new to most of our readers.]

*Our* Lord and King who reign'st enthroned on high,
*Father* of Light! Mysterious Deity!
*Who* art the great I AM—the last, the first—
*Art* righteous, holy, merciful and just—
*In* realms of glory, scenes where angels sing,
*Heaven* is the dwelling-place of God our King.
*Hallowed* thy name, which doth all names transcend,
*Be* thou adored, our great Almighty Friend,
*Thy* glory shines beyond creation's space,
*Named* in the book of justice and of grace;
*Thy* kingdom towers beyond the starry skies;—
*Kingdom* Satanic falls, but thine shall rise.
*Come*, let thine empire, O thou Holy One,
*Thy* great and everlasting will be done!
*Will* God make known his will, his power display?
*Be* it the work of mortals to obey.
*Done* is the great, the wondrous work of love,
*On* Calvary's cross he died, but reigns above,
*Earth* bears the record in thy holy word.
*As* heaven adores thy love, let earth, O Lord;
*It* shines transcendant in the eternal skies,
*Is* praised in heaven—for man the Saviour dies.
*In* songs immortal, angels laud his name,
*Heaven* shouts with joy, and saints his love proclaim.
*Give* us, oh Lord, our food, nor cease to give
*Us* proper food, on which our souls may live.
*This* be our boon to-day, and days to come,
*Day* without end, in our eternal home;
*Our* needy souls supply from day to day,
*Daily* assist, and aid us when we pray;
*Bread* though we ask, yet, Lord, thy blessing lend,
*And* make us grateful when thy gifts descend.
*Forgive* our sins, which in destruction place
*Us*—the vile rebels of a rebel race.
*Our* follies, fruits, and trespasses forgive—
*Debts* which we ne'er can pay, or thou receive.
*As* we, O Lord, our neighbors' faults o'erlook,
*We* beg thou'dst blot *ours* from thy memory's book;
*Forgive* our enemies; extend thy race
*Our* souls to save, e'en Adam's guilty race,
*Debtors* to thee in gratitude and love,
*And* in that duty paid by saints above.
*Lead* us from sin, and in thy mercy raise
*Us* from the tempter and his hellish ways;
*Not* in our own, but in His name who bled,
*Into* thine ear we pour our every need.
*Temptation's* fatal charms help us to shun,
*But* may we conquer through thy conquering Son.
*Deliver* us from all which can annoy
*Us* in this world, and may our souls destroy;—
*From* all calamities which men betide,
*Evil* and death, oh turn our feet aside,
*For* we are mortal worms, and cleave to clay;
*Thine* 'tis to rule, and mortals to obey.
*Is* not thy mercy, Lord, forever free?
*The* whole creation knows no God but thee.
*Kingdom* and empire in thy presence fall;
*The* King Eternal reigns the King of all.
*Power* is with thee—to thee be glory given,
*And* be thy name adored by earth and heaven.
*The* praise of saints and angels is thy own.
*Glory* to thee, the everlasting one,
*Forever* be thy triune name adored.
*Amen!* Hosanna! blessed be the Lord!

---

## THE MOURNER.

As twilight deepened, a veiled form, with slow and measured tread, wandered in the church-yard. A little child, followed her footsteps, and its deep eyes grew thoughtful and almost sad, as they wandered from its mother to the objects around, shrouded in the gloom of evening.

At length the mother paused by a new made grave, drew aside her veil, and bent a piercing, agonized gaze upon the broken turf,—as though she fain would pierce the depths beneath, and gaze upon that loved form mouldering there, now hid from her sight—forever! O! how sacred a thing is grief, when a true heart mourns its loss.—Aside from the busy world it turns—alone—and in silence, and darkness of night, the crushed heart, bleeding, dwells with impassive fondness on its object—watching with passionate devotion, the flowers of affection, as they lie strewed, and withered, upon the altar of the heart.

The mother kneeled, and with upturned eyes, from which large tear-drops were falling upon her pale cheeks, raised her hands towards Heaven, and gave vent to the outpouring of her sorrowing heart, in broken exclamations of grief and tenderness. The child, nestling to her side, looked up wonderingly, the pearls of sympathy glistening in her starry eyes. Is there *one* scene, o'er which angles stoop with more than common interest, 'tis when a stricken mortal, feeling that the light of of life is dimmed forever, and turns away from this darksome world and longs to lay the throbbing brow and aching heart beneath the sod—by the side of the buried loved one.

"The Lord gave, and the Lord hath taken away; blessed be the name of the Lord," exclaimed a deep voice by her side. The mourner started, turned quickly, and recognized her pastor, who, but a few days previous, had with her followed the lifeless form of her husband to his long home.—He had seen her grief, and came to sooth her sorrow with the divine consolations of Religion.

DIANTHA.

---

THE everlasting hills will crumble to dust, but the influence of a good act will never die. The earth will grow old and perish, but virtue in the heart will be ever green and flourish throughout eternity. The moon and stars will grow dim, and the sun roll from the heavens, but true religion and undefiled will grow brighter and brighter, and not cease to exist while God himself shall live.

# Miscellaneous.

## THE FARMER'S DAUGHTER.

She may not, in the merry dance,
With jewel'd maidens vie,
She may not smile on courtly swain
With soft bewitching eye.
She cannot boast a form and mien
That lavished wealth has brought her,
But ah! she has much fairer charms,
The farmer's peerless daughter.

The rose and lily on her cheek,
Together love to dwell;
Her laughing blue eyes wreath around
The heart a witching spell:
Her smile's as bright as morning's glow
Upon the dewy plain,
And listening to her voice, we dream
That spring has come again.

The timid fawn is not more wild,
Nor yet more gay and free,
The lily's cup is not more pure,
In all its purity.
Of all the wild flowers in the wood,
Or by the crystal water,
There's none more gay and free than she,
The farmer's peerless daughter.

Then tell me not of jewel'd fair,
The brightest jewel yet
Is in the heart where virtue dwells,
And innocence is set!
The glow of health upon her cheek,
The grace no rule has taught her—
The fairest wealth that beauty twines,
Is for the farmer's daughter.

Written for the Rural New-Yorker.

## BENEVOLENCE.

Days passed in indolence and unrestrained luxury cannot be compared with those spent in carrying out a true spirit of benevolence. The happiness produced by the former course, bears the same relation to that resulting from the latter, that moonlight does to the undimmed glare of midday. The more benevolent an individual is, the more happiness he will have at his disposal. Our natures are so constituted that we cannot feel a sense of real happiness without doing good in some avenue of philanthropy.

As a proof of this fact, give an individual access to every means of earthly enjoyment—place within his reach the pleasures and luxuries of affluence—remove every restraint that could have a tendency to check his freedom of action—and you will see before you a specimen of perfect misery—the perfection of unhappiness—suffering in its last extremity of endurance. The knowledge of this explains why the plans of the selfish never prove a means of enjoyment. They may plan and carry them out with wisdom and prudence, still no undefined feeling of dissatisfaction turns their happiness in the channel of misery. They invariably anticipate beyond what can be attained, and the depression is as far below as their anticipations were above the mark of human attainment.

"This know; benevolence and love,
When youthful hope and joys have gone,
Will come like angels from above,
Nor leave in the dim light of dawn:
But ever present, and serene,
They're ever felt, but never seen;
And at the setting of Life's sun,
Mark the good deeds that we have done!"

An individual guided by such guardian spirits as Benevolence and Love can never be unhappy. The remembrance of his good deeds, will linger around the memory of his name long after the "planet has gone down."

W. E. K.

## A BEAUTIFUL LESSON.

What a beautiful lesson the simple circumstance, related in the following, teaches us. We clip it from an exchange, and have forgotten the author's name. How few such hearts are to be found in this world!

Touching Delicacy.—There were many little occurrences which suggested to me, with a great consolation, how natural it is to gentle hearts to be considerate and delicate towards any inferiority. One of these particularly touched me. I happened to stroll into the little church when a marriage was just concluded, and the young couple had to sign the register.

The bridegroom, to whom the pen was handed first, made a rude cross for his mark; the bride, who came next, did the same.

Now, I had known the girl when I was last there, not only as the prettiest girl in the place, but as having distinguished herself in the school; and I could not help looking at her with some surprise. She came aside, and whispered to me, while tears of honest love and admiration stood in her bright eyes:

"He's a dear good fellow, Miss, but cannot write yet; he's going to learn of me—and I wouldn't shame him for the world."

Why, what had I to fear, when there was this nobility in a laboring man's daughter?

Marrying for Money.—There are hundreds of idle young men who expect to keep themselves out of the workhouse by marrying a fortune! They don't care for beauty nor mind, but they idolize money. Only think of a man planting himself down, and living on his wife's money.

There are many things that are thorns to our hopes, until we have attained them, and envenomed arrows to our hearts when we have.

## THE TOMB OF WASHINGTON.

A correspondent of the New York Times gives the following description of the tomb of the only truly republican hero, the world has yet seen.

The tomb in which the remains now repose, is erected at the edge of the forest, in the bank of a slight acclivity fronting to the south. Its walls are of stone, very thick, and faced with brick—the entire structure being about thirty feet front by fifty deep. In style it is severely simple.—The front is about twelve feet high, and presents no trace of ornamentation. Over the entrance is set a plain marble tablet, which informs us that—

"Within this enclosure
Rest
The remains of
General George Washington."

Massive double gates of iron are hung in the front wall, guarding the entrance.—Looking through these, we see a room about twelve feet square—its walls whitewashed, and its floor of gravel. And here, exposed fully to the view, are placed the marble sarcophagi, containing the ashes of Washington and his excellent consort. That on our right is his resting place. We need not be told that it is so, for on its marble top, finely sculptured in *alto relievo*, are the arms of the States whose independence he did so much to achieve. Beneath this device we read the name of

"Washington."

'Tis enough. There can be no error here. One Washington only has lived, and it is *his* ashes that are before us. The other sarcophagus, at our left, is perfectly plain, bearing upon its lid the simple inscription—

"Martha, consort of Washington."

Over the centre of the rear wall of the apartment in which these sarcophagi are placed, is another tablet, on which is inscribed a text of Scripture, so obscured, however, by time and dirt, as to be quite illegible. The reader will have already discovered that the tomb is divided into two parts. The rear apartment is closed, as usual, with sepulchral vaults, and is the burial place of the Washington family.—Here already lie the remains of Judge Bushrod Washington and others. Just in front of the tomb, at the distance of a few feet, stand two plain marble obelisks, each twelve feet high, and surrounded by an iron paling. From the first of these we learn that "Within the tomb lie the remains of Judge Bushrod Washington and his wife Anna Blackburn. He was son of John Augustine Washington and nephew of General Washington, who appointed him one of his executors, and bequeathed him Mount Vernon." The other shaft is reared to the memory of "John Augustine Washington, son of Corbin and Hannah Lee Washington, and nephew of Bushrod Washington, who appointed him one of his executors, and bequeathed him Mount Vernon." The present proprietor of the Mount Vernon estate is John A. Washington, son of him whose memory is recorded on the last mentioned shaft. At the side of the tomb, and between it and the river, stands a smaller shaft, erected to the memory of "Mrs. M. E. A. Conrad, wife of Charles M. Conrad, of New Orleans, daughter of Lawrence and Eleanor P. Lewis, and grand niece of General George Washington." C. M. Conrad will be remembered as the late Secretary of War.

The tomb cannot be seen from the river, because of the intervening forest. Its sight is not so pleasant as several others in its vicinity. But it was chosen by Washington himself, whose modesty and love of retirement found expression even in selecting his grave where it would not present itself unsought to the eye of the passer. A little effort at improvement, however, would develop those touches of beauty and natural adornment with which a refined and tender sentiment so naturally seeks to surround the graves of the loved and lost. Already several small red cedars have shot up their graceful pyramids of green from the top of the tomb; the arms of the old oaks, and the shelter of the broad-leaved sycamore, are stretched out to protect it from the sun's burning rays; and the dogwood, in the spring season, presents its pure offering of white blossoms at a little distance. The ground itself is beautifully diversified; and a slight effort of art will suffice to clothe it in all the beauties of Mount Auburn or Greenbush.—Those attractions are not wanted to give interest to the scene; but would certainly be most gratifying to the heart of every pilgrim who drops a tear at this honored shrine.

## TOMB OF BENJAMIN FRANKLIN.

At intervals we find in print a reference to the obscure corner where lies hidden from public notice, the remains of the illustrious statesman and philosopher, whose labors here in our own midst are among the proudest memories of our metropolis. The following, which we find in the New York Evangelist, presents the subject briefly, yet strongly and truthfully:

"A dilapidated dark slab of stone, at the southwest corner of Fifth and Arch streets, Philadelphia, marks, or did a few years ago, the spot where rest the remains of Benjamin and Deborah Franklin; but you cannot see their grave nor read the inscription without scaling a high brick wall, in violation of the law, or securing a good opportunity and the favor of the sexton, each of which is said to be attended with difficulty. So well hidden is this grave, and so little frequented, that we have known many native Philadelphians, of men's and women's estate, who could not direct one to the locality where it may be found."

To take events cheerfully, and to promote the happiness of others, is the way to ensure an enduring spring of existence.

## A "FINISHED" YOUNG LADY.

The following is one of Fanny Fern's latest *hits*, being a dash at French Boarding Schools, and a "would be fashionable young lady:"

It is to go to a model boarding school, kept by an ex-French milliner; to be put in a room with four promiscuous young ladies, and to learn in three days, more mischief than her grandmother ever dreamed of. It is to stay there at the tune of thirty dollars per week, for several quarters, and come home "finished" and superficial, with a taste of Latin, a touch of French, a smattering of Italian, German, and Spanish, and a portfolio of crooked horses, distorted houses, lame sheep, and extraordinary looking abortions of cattle and fowl in general, the types of which were never found in Noah's menagerie. It is to sit in the drawing room in a flounced silk dress, with a waist half a yard in circumference, be-curled, be-scented and be-jeweled; to receive calls, while mamma looks through her spectacles and tries to mend Mademoiselle's stockings.

It is to have Mr. Fitz Humbug, some fine day, get on his knees, and request Mademoiselle to make him, what she has all along been desirous to do, "the happiest of men." It is to wear a white satin dress, or orange wreath, a long fleecy veil, a diamond pin, and respond Amen! to any quantity of things, of which Mademoiselle does not understand the full import. It is to commence housekeeping where the "old folks" leave off; it is to patronize fast horses, ruinous upholstors, operas, concerts, theatres, balls, and fetes of all kinds. It is to bring a few sickly children into existence and be tortured into eternity by careless hirelings.—It is to find after a few years' probation, that Mr. Fitz Humbug is just what his name imports. It is to have an "execution" in the house; it is for Madame to go into hysterics, and on coming to, to find herself in the sixth story in "lodgings," with a "tight" husband, an air-tight stove, a loose wrapper and a crying baby.

## GOOD ADVICE TO THE YOUNG.

Be industrious and economical. Waste neither time nor money in small and useless pleasures and indulgences. If the young men can be induced to save, the moment they enter on the paths of life, the way will ever become easier before them, and they will not fail to obtain a competency, and that without denying themselves any of the real necessaries and comforts of life. To industry and economy add self-reliance. Do not take too much advice.—The business man must keep the helm and steer his own ship. In early life, every one should be taught to think for himself. A man's talents are never brought out until he is thrown to some extent on his own resources. If in every difficulty he has only to consult his principal, and then implicitly obey the directions he may receive, he will never acquire that aptitude of perception necessary to those who hold important stations. A certain degree of independent feeling is essential to the full development of the intellectual character.

Attend to the *minutiæ* of the business, small things as well as great. See that the store is opened early, goods brushed up, twine and nails picked up, and all ready for action.

Remember that punctuality is the mother of confidence. It is not enough that the merchant fulfils his engagements; he must do what he undertakes precisely at the time, and in the way agreed to.—*John Gray.*

## A SHORT AND PITHY SERMON.

"Owe no man anything."

Keep out of debt. Avoid it as you would war, pestilence and famine. Hate it with a perfect hatred. Abhor it with an entire and absolute abhorrence. Dig potatoes, break stones, peddle tin-ware, do anything that is honest and useful, rather than run in debt. As you value comfort, quiet, independence, keep out of debt. As you value good digestion, a healthy appetite, a placid temper, a smooth pillow, pleasant dreams and happy wakings, keep out of debt. Debt is the hardest of all taskmasters, the most cruel of all oppressors. It is a millstone about the neck. It is an incubus on the heart. It spreads a cloud over the firmament of man's being. It eclipses the sun, it blots out the stars, it dims and defaces the beatiful blue sky. It breaks up the harmony of nature, and turns to dissonance all the voices of its melody. It furrows the forehead with premature wrinkles; it plucks the eye of its light; it drags all nobleness and kindness out of the port and bearing of man. It takes the soul out of his laugh, and all stateliness and freedom from his walk.—Come not under its accursed dominion.

## ELOQUENT EXHORTATION.

A reverend gentleman holding forth to the sinners of Placerville, Cal., on a late occasion, closed his address with the following exhortation to his hearers to loosen their purse-strings:

"And, now all ye merchants and money exchangers, and traders, and miners, and doctors, and lawyers, and printers, and esquires, and generals, and colonels, and captains, ye tradesmen of every craft, ye postmasters, ex-postmasters, and assistant postmasters, and ye office-seekers, ye landlords and landladies, ye auction men, ye people of Placerville—all of you—up to the new church on Sunday! Yes, ye bowling-alley men, ye Reservoir men, and ye Empire, ye South Fork men—come, 'from busy care awhile forbear.' Come tread the courts of the sanctuary, and bring unto the Lord God *an offering of gold and silver and precious things.*"

Right is a dull weapon, unless skill and good sense wield it.

# For the Ladies.

## GOOD AND BETTER.

A father sits by the chimney post,
On a winter's day enjoying a roast;
By his side a maiden young and fair,
A girl with a wealth of golden hair;
And she teases the father, stern and cold,
With a question of duty trite and old;
"Say, father, what shall a maiden do
When a man of merit comes to woo?
And, father, what of this pain in my breast?
Married or single—which is best?"

Then the sire of the maiden young and fair,
The girl with the wealth of the golden hair,
He answers, as ever do fathers cold,
To the question of duty, trite and old:
"She who weddeth keeps God's letter;
She who weds not doeth better."
Then meekly answered the maiden fair,
The girl with the wealth of golden hair:
"I will keep the sense of the Holy Letter,
Content to do well without doing better."

## ADVICE TO THOSE WHO NEED IT.

"Mind your own business."

Well, what if Dr. Munn's daughters *have* got white bonnets, and *did* wear the first bishop sleeves,—it's none of *your* business. You needn't vent your spite by telling how perfectly horrid they look, just because you didn't happen to wear them first,—nor doom yourself to wear a *red* hat, because *young* ladies will wear *white* ones. Let them be. See that your hat is a becoming one; be sure that you like your *own* sleeves, and your own dress, and your own actions, and let other people's alone.

Supposing pretty Nellie Lee didn't get a silk dress to be married in, or a white satin hat, as all other brides you ever heard of did; and supposing Frank didn't happen to sit with her the first Sabbath; and supposing he went to work in his shop the day after the wedding, instead of flaming off to New York, or the Falls; is it any of your business? When you get married, you can do as you please. You can spend in dress what you ought to save to get necessaries with, and in a wedding tour, the time you might better employ in darning your own stockings;—yes and you may, if you like, cause a platform to be raised at one end of the church, for you, and your adorable Herbert Augustus to sit upon, after being publicly introduced to the audience,—but you've no right to make ill-natured remarks because every body don't do the same.

Don't work yourself into a fit of allowerishness because the "writing master" goes to see Hetty Linwood, nor pity him so when he marries that artful creature. May be she didn't set any more traps than you did. Perhaps the difference was all in the bait. Don't waste your breath trying to make out they're going to be miserable, but set your wits to work to increase your own charms. Twist another lock of hair into *whiskerells*; put another ring on the hand that never wears a glove,—tie on a few more ribbons, "mind your own business," and try again.

Aunt Huldah.

## PRETTY INCIDENT.

We heard of a very pretty little incident the other day, which we cannot help relating. A young lady from the South, it seems, was wooed and won, by a youthful physician, living in California. When the engagement was made, the doctor was rich, having been very successful at San Francisco. It had not existed six months, however, when by an unfortunate investment, he lost his entire "heap." This event came upon him, it should be added, just as he was making ready to come and claim his bride. What does he do? Why, like an honorable, chivalrous young fellow, as he is, he sits down, and writes the lady every particular of the unhappy turn which had taken place in his fortunes, assuring her, that if the fact produced any change in her feelings towards him, she was released from every promise she had made him. And, what does the dear good, girl do? Why, she takes a lump of pure gold which her lover had sent to her when in prosperity, as a keepsake, and having it manufactured into a ring, forwards to him, with the following bible inscription, engraved in distinct characters on the inside:

"Entreat me not to leave thee or to return from following after thee; for whither thou goest, will I go; and where thou lodgest, will I lodge; thy people shall be my people, and thy God my God; where thou diest, will I die; and there will I be buried; the Lord do so to me and more also, if aught but death part thee and me."

The lover idolized his sweetheart more than ever when he received this precious evidence of her devotion to him, both in storm and sunshine. We may add that fortune soon again smiled on the young physician, and that he subsequently returned to the North, to wed the sweet girl he loved, and who loved him with such an undying affection. Nay, more, the happy bride and bridegroom passed through our city, not long since on their way to the home of the latter in the golden State.—Reader, this is all true. Young ladies who read the bible as closely as the heroine of our incident seems to have done, are pretty sure to make good sweethearts, and better wives.—*Church's Bizarre.*

## SLANG WORDS.

Miss Leslie, one of the most gifted and pleasing authors of our country, reads the following lecture to her sex, in her work entitled "The Behavior Book." We shall be glad to see her suggestions more generally attended to, even among those considered as of the "higher circle:"

"There is no wit," says the author of the Behavior Book, "in a lady to speak of taking a 'snooze,' instead of a nap, in calling pantaloons 'pants,' or gentlemen 'gents,' in saying of a man, whose dress is getting old, that he looks 'seedy,' and in alluding to an amusing anecdote, or a diverting incident, to say that it is 'rich.' All slang words are detestable from the lips of ladies. We are always sorry to hear a young lady use such words as 'polking,' when she tells of having been engaged in a certain dance too fashionable not long since; but, happily, now it is fast going out, and almost banished from the best society. To her honor be it remembered, Queen Victoria has prohibited the polka being danced in her presence.—How can a genteel girl bring herself to say 'Last night, I was polking with Mr. Boll,' or 'Mr. Cope came and asked me to polk with him?' Its coarse and ill sounding name is worthy of the dance.

We have little tolerance for young ladies who, having in reality neither wit nor humor, set up for both, and, having nothing of the right stock to go upon, substitute coarseness and impertinence (not to say impudence) and try to excite laughter and attract the attention of gentlemen by using slang. Where do they get it? How do they pick it up? Surely not from low companions! We have heard one of these ladies, when her collar chanced to be pinned awry, say that it was put on drunk; also, that her bonnet was drunk, meaning crooked on her head. When disconcerted, she was 'floored.' When submitting to do a thing unwilling, 'she was brought to the scratch.' Sometimes 'she did things on the sly.' She talked of a certain great vocalist 'singing like a beast.' She believed it very smart and piquant to use those vile expressions. It is true, when at parties, she always had half-a-dozen gentlemen about her, their curiosity being excited as to what she would say next. And yet she was a woman of many good qualities, and one who boasted of always having 'lived in society."

## DUTIES OF EDUCATED WOMEN.

The education of women, like that of men, should tend to prepare them for their duties; the difference of their employments will of course render their studies different. It is the duty of woman to educate her children, the boys until a certain age, and girls until they are married. How much wisdom is requisite to manage the mind and disposition of each child, so as to guide their intellects, manage their humors, to anticipate the effects of their growing passions, and to rectify their errors. How much prudence should a mother have in order to maintain her authority over them, without losing their friendship and their confidence. Surely the mother of a family ought to possess a religious, mature, firm mind, acquainted with the human heart. St. Paul attaches such importance to the education of children, that he says it is by "mothers the souls of children are saved."

I shall not attempt to specify all that they ought to know, in order to educate their children well. To do this, it would be necessary to enter into an entire detail of their studies; but we must not omit the subject of economy. Women in general are apt to neglect it, and think it proper only for the lower classes; those women especially who are brought up in idleness and indolence, disdain the detail of domestic life. It is nevertheless, from ignorance that the science of economy is despised. The polished Greeks and Romans took care to instruct themselves in this art. That mind is of a low order which can only speak well, and cannot act well; we often meet with women who utter wise maxims, yet, nevertheless, are very frivolous in their conduct.

## THE WOMEN OF GLASGOW.

A correspondent of the Baptist Register who writes from Glasgow, makes the following reference to the health of the women there, and its causes:

Many of the people here are very healthy—young girls, and married ladies, and even elderly ladies have rosy cheeks, and a youthful, healthy appearance. The ladies are fond of exercise; some of them walk from three to six miles per day. They love to jump from the healthy mattress bed into the bathing-tub every morning. The lady shoemakers here deserve a premium, for making shoes and gaiters. Instead of the sole being thin as a sheet of paper, as is often the case in America and Portugal, they are made very durable and substantial; and I can safely say, that the ladies of Glasgow, Greenock, and Paisley, wear stouter gaiters and shoes in the summer, than are worn by the ladies in the United States in the winter. Whatever may be the attainments of the ladies of Scotland, in other sciences, one thing in them is, in my mind, very praiseworthy—the care they take of their health. I am informed, by competent and very respectable physicians, that multitudes of the ladies of Scotland seldom take a teaspoonful of medicine, or enjoy the privilege of beholding the face of a physician, in his official capacity, till some months or years after marriage.

None of us know what we can live past till we have proved it. God sends us strange strength to carry us on from one great trial to the next that is reserved for us. We live through them—and past them. So that to the world they seem over; so that strangers cheerfully observe to each other, that "we seem quite ourselves."

MOORE'S RURAL NEW-YORKER.

ROCHESTER, AUGUST 13, 1853.

## Review of the Week.

During the past week few events have occured of sufficient importance to demand particular attention. The News of the Week may therefore be summed up very briefly—and we trust none of our readers are disposed to complain at the dearth of accidents by rail or water, or terrible tragedies caused by rum or wickedness. The items in other columns contain the gist of what is given in detail in the daily prints.

The latest news from Europe is of a pacific character. The difficulties between Russia and Turkey, are supposed to be amicably adjusted, though the eastern sky is not altogether clear.—The Russian autocrat may not have acceded to the arrangement proposed by the negotiating powers, though the probabilities are that he will acquiesce. The trouble between Switzerland and Austria is considered settled. The market for Breadstuffs continues firm, and advancing, notwithstanding the generally favorable harvest prospects. The crops in England and France are reported good; in Ireland they are satisfactory. The Chinese Empire is divided—Naykin made independent of the Tartar dynasty.

The result of the recent State Elections is not yet known. So far as ascertained, or reported, Kentucky has elected six Whig and four Democratic Congressmen,—the whigs having a large majority in the Legislature. In Tennessee the Whigs have elected their candidate for Governor, and have a majority in both branches of the Legislature. The Congresmen are equally divided—5 whigs and 5 democrats. It is reported that Missouri has elected 5 Whigs and 2 Democrats. Nothing reliable from other States.

The final reports of the wheat harvest of the country, confirm previous statements. The crop is fully an average one, the damage from the weevil and other causes having been overrated. We give elsewhere an interesting article from the Tribune on "The Crops Generally." Our information leads us to believe the Tribune's conclusions well founded.

The weather continues warm, and, in many localities, the drouth still prevails. During the week some sections have been favored with heavy rains, while others (and, in some instances, adjoining towns,) are suffering from extreme dryness. In consequence of the dry season, the corn crop must prove light in this region.

## The Wool Grower and Stock Register.

Though particularly interested in its success, we have refained from mentioning this journal for some time past, and not even noticed the new volume which commenced last month. We observe, however, that many of our contemporaries speak in very flattering terms of the W. G. & S. R., and we are inclined to endorse their good judgment in the premises! That it is conducted with care, and an earnest desire to promote the interests of those engaged in wool, stock and dairy husbandry, we happen to *know*—while we believe it is quite up to the times in style and appearance. The work is valuable to all interested in the subjects discussed, wherever located, and is obtaining a wide circulation. The following paragraph from the August No. indicates a prosperous commencement of the present volume:

Acknowledgments—Are due and tendered for the large measure of encouragement awarded to the W. G. & S. R. during the past month. We have the pleasure of reporting numerous accessions to our subscription list from almost every section of the Union,—the receipts during the month of July greatly overbalancing those of any *three* months heretofore. This is truly encouraging—the more so as many orders are accompanied with very flattering remarks relative to the value of the paper and the manner in which it is conducted. Thanks, gentlemen, for your generous aid and kind words of approval—with the assurance that your efforts, and expressions, are gratefully appreciated.

Of the many commendatory notices of the W. G. & S. R., which have receutly met our eye, the following are among the latest:

The Wool Grower and Stock Register commences its fifth volume with this month's number. It is published at Rochester, N. Y., by D. D. T. Moore, Editor of the Rural New-Yorker, who offers to furnish the monthly numbers of the current volume, and the first four volumes bound, for two dollars. It is a temptation difficult to be resisted by the multitude of intelligent and enterprising farmers who do not already possess it. Stock-breeding is yearly receiving increased attention in all the prosperous sections of our country.—*N. Y. Observer.*

The Wool Grower and Stock Register.—This valuable and cheap monthly should be in the hands of every farmer whose ambition is to excel in sheep and stock husbandry. It contains information worth any amount of money, and costs but 50 cents a year. The speculator can take no advantage of the farmer who has posted up his ideas monthly with the aid of the *Wool Grower*, for he is then even with the keenest, and his knowledge of his profession keeps pace with the progress of the age.—*Ashtabula (O.) Telegraph.*

The July issue of this valuable monthly is promptly on hand, and like its predecessors is well filled with valuable matter for the farmer. How any one engaged in raising Sheep or Stock, can get along without this publication we know not, and the low price—only 50 cts. a year—places it within the reach of all. A new volume commenced with the July number, affording a good opportunity to subscribe.—*Livingston Republican.*

It is our firm belief, that wool growing ten years to come, will be among the most profitable pursuits the farmers can follow; and that every one of them had better take the Wool Grower, at the very moderate price of 50 cents per year. It is worth twice the money, in advance, that the publisher asks for it.—*Vt. Watch. & State Jour.*

The Wool Grower.—We take great pleasure in calling the attention of our farmers to this valuable paper. We always read its articles with interest, and hope it will find a place on the table of every wool-grower of the West.—It is edited with ability and prudence, and is worthy its extensive patronage.—*Ohio State Journal.*

## Letter from Illinois.

Chicago, Ill., August, 1853.

Eds. Rural:—To travel westward in sultry Summer, and breathe the fragrant gales of Lake and Prairie, can but revive health, exhilerate spirits, or rejuvinate, in some degree, whoever makes the trial. Illinois is to-day, a healthful and prosperous State. Sickness is comparatively unknown. Such a time of universal appetite is seldom found. To sojourn here for a time, fairly makes one a ravenous consumor in the provision line. Commend me to an anchorage in this "Goshen" of America. That of Egypt, was regarded by the sons of Jacob, as a fat land, flowing with milk and honey. Our "Goshen," however, bears off the palm, for here flocks and herds feed without tending, and as for sweetning, the people have no time to enjoy such vanities.

Railroads now radiate from Chicago in almost every direction. The solitudes of Prairies resound to the echoes of the steam whistle; and wild fowl feel in the rumbling of cars over their once undisturbed haunts, an unfailing admonition of speedy death. Great improvements have been made within the past two years. Then was the season of poor crops—low prices—and almost general insolvency. Almost every farmer you would then meet with in a day's drive, looked as if his nose was about demolished on the financial grindstone. Now a pompous tread, and peculiar cock of the hat, indicate brighter times. The "Lords of the Soil" hold congratulations as in days of early settlement, when Illinois was deemed by many, the fabled land of Peace and Plenty.

Yesterday I made an excursion out to Richmond, to revisit early scenes, and revive youthful associations. The sun rose with unclouded splendor, reflecting its radiance of light from the domes of Chicago, and waters of Michigan. The dew was yet on the grass, and sylvan groves vocal with the sweet melody of warbling songsters. While riding along by rail, on the route to Union, mowers and cradlers began their days labor, and the golden fields of grain waved to and fro, as the winds ran in and out.

Elgin is a thriving town, situated on Fox River. It has grown rapidly, and within a few years, will become a city of wealth and consequence. Its water privileges are excellent, and it accordingly boasts of numerous mills. The scenery around is delightful and romantic. None who travel for health or pleasure, in this part of God's Western Vineyard, should neglect to visit Elgin. It abounds in good hotels, and the drives around it, for interest and varied attractions are seldom excelled. Commend the weary traveler to a season of rest in Elgin.

The next town of any consequence is Union. What glorious associations in that name! Political Union, to "save the Nation"—Religious Union, to give Gospel to Gentiles—to all, Matrimonial Union, to give connubial bliss, and perpetuate man on earth,—and last, not least, "Liberty and Union, now and forever," to transmit the blessings of good government, the immortal hope of Christianity, and light of everlasting truth!—From Union to Woodstock, our only means of conveyance was by stage. This, in days of steam power, and magnetic telegraph, was felt to be rather slow means of traveling,—but we bowed to the maudates of fate, and went on our way rejoicing.

Woodstock contains about a thousand souls. It has been built up within five years. It contains a number of fine buildings, and is the seat of Justice for McHenry County. Here is published the "Democrat," a paper which for local news and general interest would do no discredit to towns of lerger pretension. Its talented editor, F. D. Austin, Esq., will exert a commanding influence on the political fortune of northern Illinois. Success to undaunted perseverance and liberal enterprize.

Twelve miles from Woodstock is Richmond, a town of influence, but of mushroon growth.—Ten years ago, when I first visited this section, not a building was to be found on its present site. Within two years it will be in direct railroad communication with Chicago, Boston and New York. Land around Richmond is rapidly rising in value. The advance has been more than thirty per cent. within the past nine months. Land speculators, ho!

Crops throughout northern Illinois never promised a better yield. Flax is now extensively cultivated and yields a sure return. The weather is propitious. There is a great demand for harvest hands; the "fields indeed are large, and laborers few.

Chicago is all life, industry and animation.—Theatricals are in full blast. P. T. Barnum was in town a few days ago lecturing on Temperance, and blowing the hewgag in advance of his monstrous caravan. Barnum always kills more than one bird when he throws a stone. Is it meet that the prince of Humbug should be the Apostle of Temperance? Verily, the ways of this world are sometimes crooked! Truly, w. m. h.

Life, Eulogy, and Great Orations of Daniel Webster. Rochester,—1853.

W. M. Hayward, of this city, who is engaged in the publication of Speeches and Portraits of distinguished American Statesmen, will issue next week a volume with the above title. The *Orations* have already been published by him, and sold somewhat extensively. The *Life* was written expressly for Mr. H. by L. Gaylord Clark, the able and popular Editor of the Knickerbocker Magazine. The Eulogy is pronounced by those who have read it in manuscript, to be the best which has yet been pronounced on the immortal Webster. The work, complete, will form a volume of over two hundred pages, large size, and will be illustrated with a fine steel portrait of Mr. Webster. It will be likely to find a popular appreciation and extensive sale.

## Atlantic and St. Lawrence Railroad.

This road, which forms a direct communication between the Atlantic Ocean at Portland, Me., and the river St. Lawrence, at Montreal, is now nearly completed. It is an important line of road, and will open a new era in the business along the route. That portion of it which passes through the State of Maine, is in close proximity to the Androscoggin river, which affords an abundance of water power, now made available. As it approaches New Hampshire it opens a communication with one of the finest pine regions in all New England. After it passes the Canada line, it traverses a good country which has only needed some impetus to develope its rich resources. At the time the road was projected, it was asserted that on its completion, the Royal Mail Steamers would stop at Portland, and send forward the passengers and mails by railroad to Boston and Montreal, but the completion of the Grand Trunk Railway from Halifax, to connect with the Kennebec and Penobscot road, at Bangor, will render it unnecessary for the steamers to come farther than Halifax; after which we shall be regularly in receipt of weekly mails from Liverpool. Both of the roads named, with their connections, are important to the prosperity of the country thro' which they pass, and to the public. †

## Protection of the Birds.

There was one sensible and humane law passed by the last Legislature, for which they deserve public thanks. It goes into effect on the 11th of this month. Hereafter not the birds, but their perseentors are to be caught:

*The People of the State of New-York, represented in Senate and Assembly, do enact as follows:*

Sec. 1. Any person who shall kill or wound or trap any bird within any cemetry or public burying ground, or who shall destroy any bird's nest, or remove the eggs or the young therefrom, shall be deemed guilty of a misdemeanor, punishable by a fine of five dollars for every bird killed, wounded or trapped, and for every bird's nest destroyed or eggs or young birds removed, recoverable in any justice's court within the county where the offence has been committed, to be sued for by any person making the complaint. The penalty to go toward the support of the poor of the county.

Sec. 2. Any person who shall knowingly buy or sell any bird which has been killed or trapped, or shall have birds on sale, shall be deemed guilty of a misdemeanor, punishable with a fine of five dollars for every bird bought, sold or on sale, to be recovered and to be disposed of in like manner as provided for in the first section of this act.

## News Paragraphs.

☞ The Slave Trade in Cuba presents a new feature. It is said that dealers, encouraged by impunity allowed to importers of negroes from Africa, have engaged in the importation of Indians kidnapped from Yucatan. Nearly two hundred have been brought into the Island. Upon its discovery Santa Ana promptly issued instructions to the Mexican Consul at Havana, to demand their release as Mexican citizens. The Cuban authorities will doubtless be reluctant to grant it; but probably will find no other way of settling the matter

☞ Murderers, robbers, burglars, counterfeiters, thieves and gamblers are at present undergoing rigid investigation throughout the country, and so strong has the public sentiment become against them that very little lenity is shown wherever there is a possibility of convicting them. Now and then we hear of an attempt to shield a villain from justice, but such instances are very rare now, and may be traced to some political reason whenever they do occur.

☞ A new species of grasshopper have been very destructive to herbage of every kind this season, in the vicinity of Mercersburgh, Pa. It is of a light yellow color, larger than the ordinary species and most voracious, devouring grass, corn, potatoes and onions. Farmers are obliged to take up their vegetables to save them from destruction, as this army of insects entirely strip the gardens, and not only eat the leaves of corn, but stalks an inch in diameter are eaten off close to the ground.

☞ A marble monument, in the form of an obelisk, has recently been put up in the old burying-ground in Concord, N. H., to mark the spot where lie the remains of the son of President Pierce, who lost his life at the accident on the Boston and Maine Railroad, near Andover, in January last. The monument bears the following inscription:—"Benjamin Pierce, born April 13, 1841: died January 6, 1853: 'Go thy way, thy son liveth.'"

☞ The London Times says:—"In fifty years Ireland will be Protestant to a man. Both the Roman Catholics of Ireland and the race identified with that faith, are all leaving Ireland. Ere long there will be none left. At the present rate of emigration, which cannot be less than 200,000, chiefly Roman Batholics, in a year, our children will see the time when the Celts will be as obsolete in Ireland as the Phœnicians in Cornwall."

☞ Letters from Havana to July 29th, state that the cholera and yellow fever were committing great ravages throughout Cuba. In Havana, the troops were dying in great numbers of the fever. Another cargo of 450 slaves had been landed at a place on the South Coast, opposite Havana. After the slaves had been safely got on shore, the vessel was seized and part of the crew arrested by the authorities.

☞ Western cattle beeves are now delivered in New York from the North-western prairies, within a week, by means of railroads, at an expense of $10 to $12 per head. It would take from fifty to ninety days to drive the cattle from the Western parts of Ohio, Kentucky, Illinois or Arkansas.

☞ An order will be issued by the Commander-in-chief of New York, and perhaps by the Commander-in-chief of other States, that all muskets belonging to the State, issued to State troops shall be returned to the arsenals, and pieces with the percussion locks given in exchange.

☞ It is said that there is to be a great sham fight at Syracuse by the soldiers who will form the great encampment there. About 30 companies will participate in the mimic war, which will not be the least attractive part of the entertainment.

☞ An immense haul of counterfeit money has been made in Marshall county, Ala., where $100,000 of the stuff was lately taken from two counterfeiters, who were arrested, as also $1000 of good money.

## The Crops Generally.

During the month just closed we have traversed in various directions the large and productive region bounded by the St. Lawrence on the North and the Ohio on the South, and stretching from the Green Mountains on the East to the Cuyahoga on the West. In addition to the observations thus made, we have conversed with many intelligent travelers from nearly all parts of the country, and received letters giving some account of the state of the crops in almost every part of the Union. From the information thus obtained, we sum up the general state and prospects of this year's harvest as follows:

Wheat was considerably injured by the fly and the weevil, but not so seriously as was at first supposed. The crop is a fair average.

Rye came in well, but was not extensively sown. [It rarely fails.]

Grass and Hay are short in the average—we think not over three-fourths of an average yield throughout the Union. It was very gradually injured by drouth and by grass hoppers, and its later growth so hastened by the intense heat that very much of it suffered by standing in the field after it should have been cut. There is much yet out, which will not be worth nearly as much as it would have been if cut a fortnight ago. It is very short in the great grazing states of the West.

Indian Corn was quite extensively planted, and about half of all we have seen bears a good color, though often shortened by drouth. About a quarter of all we have seen is very miserable, and cannot yield ten bushels to the acre—much not five. The remaining quarter is rather worse than middling. There is time yet for improvement if rains are frequent and frosts hold off, but the probability now is that the yield per acre will be below an average. If so pork must be higher.—In the South corn is a great staple, and there will not be half a crop this year.

Potatoes cover a great deal of ground—we think more than usual—but the prospects for a yield are not bright. They have widely suffered from drouth, and the vines are generally less luxuriant than they should be. We hear reports that the dreaded rot has made its appearance in Westchester county, where rain has been abundant. We believe the average yield will be small, though many fields look well.

Oats are a failure. There was a great breadth sown, but the severe drouth of July has stunted them, so that they are short and look badly.—Even in Westchester county, where there has been rain enough, they look thin and feeble—a result attributed to the intense heats of June. We did not see a dozen really good fields in the last thousand miles we traveled. There will not be over half a crop.

Sowed Corn (for fodder) is doing fairly.

Buckwheat is seen in all stages—some fields in the blossom, others hardly out of the ground. The earliest sown is generally short. It is too soon to speak as to the latter.

Roots, other than potatoes, are not extensively sown, or are not yet up. The shortness of the grass crop ought to have induced a very general sowing of turnips and Indian corn, to eke out the deficiency of hay, but we do not learn that it has done so.

Our general conclusion is that grain will rule high, and probably advance during the next nine months, carrying pork along with it, and that cattle and beef will be cheaper in the fall. Sheep cannot well be dearer. But August may materially change all this. Grass and winter grain are mainly cut, while oats are past praying for; but Indian corn and potatoes may yet come in so bountcously as to insure general plenty.—*N. Y. Tribune.*

## Strange News from China.

The news from China is of an astonishing character. It is not remarkable for any unexpected success of the Rebels, or any recovery of their lost fortune by the Imperialists. The Insurgents now hold Nankin, which is reported to be in a state of ruin, Chin-kiang, and Yang-chow, and the possessions between these cities, all which are put into a complete state of defence. The Imperial party, however, are not by any means despairing. They gird themselves with great energy to prosecute the war, and have already purchased a number of foreign vessels, which had been sent up the river to them before the middle of May.

The current rumor of the massacre of a large number of Europeans is treated as a pure fabrication.

The British ship *Hermes* had returned from a voyage of discovery into the interior, and Sir Geo. Bonham had brought back from his eventful trip the most astounding intelligence respecting the character of the insurgents. He describes them as Christians of the Protestant order, acknowledging but one God, in three persons—the Father, Jesus Christ the Saviour, and the Holy Spirit.—Their Chief forbids the application to himsslf of the terms "Supreme," "Holy," &c., on the ground that they belong to God alone. Their moral code is the Ten Commandments. The Bible, translated into their tongue, is in common use. Their leaders are not only professors of religion, but give evidences of the possession of vital piety. Their notions of the moral government of the universe accord precisely with the doctrines of evangelical Christians in Europe and America. They not only profess, but seem to believe, that Deity is ever present with them. In their reverses, He tries their faith. When they succeed, it is all His grace. Their enemies charge them with the employment of magic. They reply that their only magic is prayer. They say that their Prince will be the Sovereign of China, if it is God's will; if it is not, there they will die. They show much ignorance of foreign nations, though their religious belief no one can doubt is the result of the instructions of the Protestant Missionaries. All accounts agree that the highest style of morality is required in their camp. Profanity, obscenity and immorality of all sorts among them was extremely rare. Indeed, their requirements in these respects are so strict, that for this reason many who would otherwise join their standard, stand aloof. They are disposed to regard all foreigners with friendliness, in consistence with the teaching of their religion.

This is very strange indeed. That among the queued Celestials a new race of Puritans should spring up, to war upon the ancient dynasty, basing their conduct upon questions of "right and wrong," invoking the God of Christians when they go out to battle, loathing idol-worship, insisting upon a high standard of morality in rebel camp and Court,—this is among the greatest marvels of a marvel-abounding age. Every new item will be awaited with interest. Our curiosity is thoroughly aroused. Our sympathies are excited. We strain our eyes toward the extreme East with intense cagerness, to see more of the wonderful events that are there transpiring.—*N. Y. Times.*

Paradise on Earth.—The Island of Martha's Vineyard seems to be the modern Utopia. Not a a criminal case has occurred there in eighteen years, nor has a glass of liquor been sold there during that period.

## News Brevities.

—— The aggregate loss by the recent fire in Geneva was about $8,000.

—— Ex-Senator Tallmage has taken the stump as a Spiritual Rapping lecturer.

—— Graduating class of Yale College, at its recent commencement, numbered 102.

—— Mr. Bryant, the poet, has received the degree of LL. D. from Union College, Schenectady.

—— There are at present confined in the Albany Penitentiary two hundred and forty convicts.

—— There were 571 deaths in New York last week—an increase of 48 over the previous week.

—— A larger amount of goods were sold in Philadelphia during July, than ever before in that month.

—— The fine steamer Ben Loder was sold at sheriff's sale on Thursday afternoon, at Geneva, for $17,700.

—— Counterfeit two dollar bills of the Union Bank, Brunswick, Me., have just been put into circulation.

—— Col. Benton's Senatorial Reminiscenees will be published in December, in two royal octavo volumes.

—— Seven hundred persons have been committed to the Boston jail, during the past six months, for drunkenness.

—— Zinc ore of a very superior quality, and in great abundance, has been found in the vicinity of Batesville, Arkansas.

—— A grand exhibition of horses is proposed at Springfield, Mass. About $1,500 are to be awarded in premiums.

—— It is stated that in case of need, the whole of the allied fleet could be towed up to Constantinople in twenty-nine hours.

—— The cotton factory at Wethersfield Upper Falls, Vermont, was burned by an incendiary.—Loss $25,000; insured for $11,000.

—— The returns from Tennessee and North Carolina, are very imperfect. In the former the Whig Governor is probably elected.

—— A County Treasurer in Ohio, who is a defaulter in the sum of $7,000 very innocently says "he has no idea how it occurred."

—— The new "Bible House" in New York was damaged by fire to the amount of about $10,000, a few days since—fully insured.

—— The cholera is still carrying away hundreds of slaves in Havana. One holder has lost one hundred and forty by this disease.

—— Cholera was so rife in Calcutta, June 8, that no less than eleven hundred persons were carried off in the course of two days only.

—— The subject of constructing a tunnel under the river at Chicago, for the passage of men, carriages and teams, is under discussion.

—— The Post Office Department has decided that the stamp of the Nesbit envelope cannot be cut off and used to prepay other letters.

—— The catastrophe at Niagara Falls by which three men were swept over the cataract, was the melancholy termination of a drunken spree.

—— The Meriden (Conn.) Whig announces a sudden death by cholera in that village. It says that several cases of the disease have occurred.

—— Handel's tuning-fork was sold recently in London for sixteen dollars. At the same sale a violin of remarkable excellence brought $1,200.

—— The late John Price Wetherill, of Philadelphia, left nearly $1,000,000 and no will. He preferred that the law should divide his property.

—— The deaths from yellow fever at New Orleans, for the week ending August 1, were 663!—A few cases of yellow fever have occurred at Mobile.

—— It is understood at Washington that Senators Mason and Hunter, of Virginia, will oppose the construction of the Pacific Railroad by Government.

—— The Bath (Me.) Times states that in consequence of the drouth the rust has appeared in the potato fields of that section, and the crops must be very light.

—— In consequence of apprehended deficiency in the crops throughout the Barbary States, the Bay of Tunis has forbidden exports of breadstuffs for three months.

—— Great damage was done to the buildings and crops in Orange County, N. Y., last week, by an extensive freshet. Canterbury and Cornwall were the towns that suffered most.

—— The English paper mills turn out about 150,000,000 lbs. paper yearly, worth £1,000,000 sterling—no inconsiderable amount of trade to be produced out of rags, straw, and old rope.

—— The Utica Herald says that Hay in all that vicinity is proving to be light. Old meadows are unusually light, and though new meadows seeded this year are better, they do not yield a full crop.

—— Thomas Brown and George Jones have been sentenced to the penitentiary for six months, in New York, for stealing Horace Greeley's old white coat from the editorial sanctum of the *Tribune.*

—— A boy was bitten on the ankle by a copper snake at Shookstown, Virginia; his leg swelled awfully, but he was cured by applying indigo and whisky to the wound, and drinking plenty of melted hog's lard.

—— Asa Holden, the last surviving soldier of the Revolution, in New York city, died on the 3d inst. He was born in Sudbury, Mass., on the 10th of May, 1762, and was consequently in the 92d year of his age.

—— Freights have risen enormously in the Levant and Black seas, in consequence of the existing troubles. Five guineas per ton have been offered for the conveyance of wheat from the sea of Azoff to England.

—— During the last quarter of the year there were received in the Dead Letter Department of the General Post Office at Washington, 2,081 letters which contained money. The aggregate amount was $12,608 97.

—— The heavy rains of Saturday caused considerable damage to roads in Jersey City, Newark and Paterson. Plank Roads and Rail Roads damaged. At Patterson the damage caused to a break in the Canal will amount to $100,000.

The Farming Mirror—Is the title of a neat 25 cent monthly just commenced at Lyons by R. L. Adams & Co. The number received was lost, or mislaid, before we could give it a perusal—but it appeared well, and we trust will meet deserved support. If friend A. will send us another copy, we shall have better material for a notice.

Ripe Peaches.—On Tuesday morning (9th inst.) ripe peaches were exhibited in Arcade Hall. They were labeled "Early Peru," and grew on the farm of O. L. Pardee, in Webster.

# Foreign Intelligence.

### Three Arrivals from Europe.

Since our last issue three steamers have arrived from Europe — the Washington and the Niagara, on the 4th — and the Baltic on the 7th, the latter bringing London and Liverpool dates to the 27th July.

There is no news of special importance. Breadstuffs are reported firm, and advancing, by each arrival. A private letter by the Niagara, dated Liverpool, July 23, says :—"Breadstuffs have continued very firm and active throughout the week, and flour and wheat have advanced. We quote Western Canal flour at 27s. 6d.; and Ohio at 28s. 6d. Yellow and White Corn 31s. 6d. Lard quiet at 53s."

We subjoin the most important items by the Baltic, as received by Telegraph :

The Baltic had 177 passengers. She was obliged to decline a large quantity of freight.

The Africa arrived out on the 24th ult., in the morning.

The ship Isle, of New York, for Liverpool, was burned at sea July 7th. Capt. Spench and crew were saved by the ship Ebenezer, of Liverpool. The cause of the fire was spontaneous combustion.

The Turkish difficulty was considered settled, although the Czar's acceptance of the proposals is not announced. His assent is daily expected. Until received nothing definite can be known.

Crops in Great Britain on the whole, are good. In Ireland they are satisfactory. No potatoe rot.

From France there is no news. A correspondent says the opening of the French ports for the import of Breadstuffs is more to quiet anxiety than any fear of scarcity.

Christina, of Spain, is in Paris, intriguing to marry her daughter to Prince Napoleon, they say.

The grape disease is feared in Portugal.

It is reported that England is negotiating with Denmark to obtain the command of the entrance of the Baltic, if war arises with Russia.

It is feared that breadstuffs will be short in Italy.

It is rumored in Constantinople that the United States are negotiating for the purchase of the port of Marmorizza.

The Russians are quiet in the principalities.

The Costa affair remains unchanged.

The St. Louis had left Smyrna, and two Austrian frigates had arrived there.

At the Cape of Good Hope, June 11, all was quiet,

Wednesday morning, July 27th.—Mails at Liverpool bring nothing noticeable.

Among the passengers by the Baltic are Bishop McSloane, T. Butler King, Gen. Cooper, and M. Julien and family.

The latest London dates are July 27. The India mail has arrived at Trieste. Dates from Hong Kong June 7, Calcutta 16, Bombay June 20.

The empire of China is divided, and Nankin is independent of the Tartar dynasty. There is great anxiety at Canton and fear of the rising.

Trade dull in India. From Burmah the intelligence is that no advance is to be made on Ava.

The screw steamer Lawston was lost on her passage from Shanghai to Hong Kong. The crew and passengers were saved.

Paris, July 26.—News of the crops in the south are favorable, particularly corn, figs and olives.—Same in Normady. Funds are steady.

Vienna, July 22.—A conspiracy has just been discovered. Forty-seven persons, and some of them students, have been arrested.

Difficulties between Austria and Switzerland were nearly settled.

The vanguard of the Russians entered Bucharest on the 25th.

Liverpool Markets.—Cotton closed on Tuesday (July 26) firm at last week's prices. Sales of Monday 10,000 and Tuesday 8,000 bales.

Corn Market.—Transactions in flour and wheat extensive, but without excitement; though very firm, no dearer.

Indian corn in moderate demand. White wheat 7s. 8d.@8s. 2d., red 7s. 7d. Western Canal flour 26s. 6d.@28s. Philadelphia 28s. 3d.@28s. 6d.—Canada 27s. 6d.@28s. 6d. Ohio 28s. White corn 31s. 6d.; yellow 31s.; mixed 30s. 6.

Brown & Shipley's Circular, and Richardson & Bro., in their report of Monday, quote weather wet and bad, and wheat very active and firm at Friday's rates; flour 6d.@1s. higher. In Tuesday's report they state the weather had become fine, and that their quotations of Monday were fully sustained. Corn was held with increased firmness.

Provisions.—More doing in beef and pork at easier rates. Stock extensive. Sides and shoulders unchanged. Cheese brisk at full rates. Lard 1s. dearer, with large sales. Tallow quiet.

Money.—English securities heavy in tone, with limited business. Consols closed for money and account at 98¾. Exchange on Paris lower; others unchanged.

---

Hairless Horse.—We saw on Friday last, a mare, with a colt by her side, owned by Mr. Hawk, of Rutland, which was entirely without hair.—She was seven years old, and shed her hair the past spring, just before foaling. Her color was sorrel, but now her skin was of a dark brown, resembling a rat. She appeared perfectly healthy, and at the time she shed her coat, the owner informed us she was so. She was purchased by a dealer from New York, (Col. Whidding,) and we should not be surprised to hear of her figuring among the curiosities at the World's Fair.—*Watertown Journal.*

---

The Senatorial Convert.—An announcement that an American Senator, sojourning in Rome, has been received as a convert into the Roman Church, and the subsequent surmise that this means Senator Douglass, is thought by a New York journal to be an error, and that the Hon. Joseph R. Chandler, of Philadelphia, a well known Catholic, now in Europe, must have been mistaken for a senator.

---

State Idiot Asylum.—The Albany Knickerbocker says the Committee appointed to select a site for this Institution, of which John C. Spencer, is Chairman, have purchased four acres of land for that purpose on the Troy road, at $1,500 per acre. The same land was sold one year ago, for $500, and the Knickerbocker says that far preferable and more healthy sites were offered the Committee at one-third the amount paid.

---

Iowa.—An exchange paper says the whole interior of the State of Iowa is full of settlers. A hundred emigrants were met in one day recently, by a traveller. $34,250 were received at the land office, in about six weeks, over and above all lands entered with warrants, which will reach a very large amount. The above entries were all by actual settlers.

# California News,

### Arrival of the Star of the West.

New York, Aug. 9. The steamer Star of the West, from San Juan, with San Francisco papers to July 15th, arrived here about 2 this P. M.

She has 400 passengers and $537,000 in specie, and $600,000 in the hands of passengers.

She connected with the Brother Jonathan, which left San Francisco at 3 o'clock on the 16th.

The mail steamer John L. Stevens, left San Francisco on the morning of the 16th for Panama with about $1,500,000 on freight.

The markets were inactive. Flour firm. Gollego and Hexel jobbing $15,50@18. Corn unchanged.

Provisions active. Mess pork $30@31. Hams 19@20c. Butter 30c. Lard 16@18c. Rice 5¾@9.

Dry goods active and improving.

Large sales of provisions had been effected during the week.

The town of French Creek was destroyed by fire on the 8th of July. Loss $50,000.

The town of Ophir was also burned. Loss $100,000. The summer fires were doing much damage in mountain and valley. Much grain had been destroyed. Wheat had suffered from rust.

Lola Montes was married to Mr. Hall, recently, of San Francisco.

Agriculture was generally thriving.

The mining news was still favorable.

---

Struck by Lightning.—A barn belonging to Mr. Anthony Waterman, Le Roy, Genesee co., was struck by lightning on Sunday, Aug. 7th, about 10 o'clock in the evening, which was consumed, together with a shed and horse barn.—There was a large quantity of wheat in the barn. Insurance on the barn $325. Loss $2,000.

---

Gold in Iowa.—A paragraph in the Clayton county, Iowa, Herald, mentions a report that gold had been discovered in Hardin county, and that numbers of persons had gone thither to seek it. It is added, however, that the specimens of gold found are of inferior value.

---

New Spring at Ballston.—The people of Ballston Spa are rejoicing over the discovery of a new Spring of excellent mineral water. If it should prove equal to Congress Spring at Saratoga, Ballston might once more prepare for receiving a share of the visitors who throng Saratoga.

---

☞ The Protestant Committee at Quebec has given $400 to lawyers there, to watch the course taken in prosecuting the Chalmers' church rioters.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Aug. 10, 1853.

There is a continued want of activity in the market.—Very little produce of any kind is offering, and quotations can hardly be any thing more than nominal. Judging from the amount brought forward we should think farmers were not threshing very freely.

The receipts by Genesee Valley Canal are cut off for a few days, by the failure of an aqueduct at Scottsville.

Flour—There has been considerable firmness in the market. Sales are made to the trade of best county Genesee at $5,37½@5,50. Some brands extra command fifty cents more.

Wheat—The demand for milling is not brisk in consequence of lack of water. Street parcels are readily taken at $1,18@1,19, and for cargo pure white Genesee probably $1,20@1,22 would be paid. This is but conjecture, based upon the small supply, and street price. Other grains are in small supply, prices fluctuating according to demand.

Butter—There is an increasing demand for butter, the dry weather having shortened the supply. Prime sells at 15@16 cents. Eggs are also in demand at 11@12.

In other marketable commodities little trade, and prices nominal.

**Rochester Wholesale Prices.**

| | | | |
|---|---|---|---|
| Flour, bbl. | $5,38@5,50 | Butter, lb | 12½@15 |
| Pork, mess, | 15,00@16,00 | Cheese, | 7@8 |

## NEW YORK MARKET.

NEW YORK, August 8.

Flour—Demand lest active for Western and State; prices easier for low grades. Home demand fair; sales at $5,25@5,31 for common to straight State; Canadian scarce and dull. Western nominal at $5,25@5 37 for mixed to fancy Michigan and Indiana; $6,25@6,14 for common to good Ohio.

Grain—Less firmness in the wheat market; demand fair. Sales mixed Genesee at $1,32; white Ohio at $1.34@1,35; choice white, Michigan at $1,36; new white Southern on private terms.

Oats—easier—sales of river and canal at 45@46c.

Corn—less active—sales at 72@74½c for unsound—75@76c for Western mixed—76@77½c for Southern yellow.

Provisions—Demand for Pork light; mess $16,62@16,75—prime $12,87@13. Butter unchanged.

## ALBANY MARKET.

Albany, Aug. 8.—The demand for flour continues fair and quotations, though showing no change, are firm.—Sales at $4@4.50 for sour; $4,94@5,18 for ordinary to good brands of Michigan, Indiana and Wisconsin; $5,12@5,25 for good fresh ground State; $5,37@5 75 for fancy Genesee and extra Western, and $5 75@6 25 for extra Genesee.

Corn meal—Sales at $1 50 for 100 lbs.

Grain—No sales of wheat on change, a lot of Yates Co., new, held at $1 40, and $1 36 offered. Corn is lower with more doing. Sales at 67c for some cargoes afloat; 71c for damaged, and 75c for sound Western mixed. Oats in good supply, with sales at 44@45½c. A sample of barley malt, a handsome article, was on market at $1 06.

## BUFFALO MARKET.

Buffalo, Aug. 9.—The market for flour yesterday was without activity. We notice sales mixed brands Ohio and Michigan at $4 75; straight brand Michigan at $4,81@4,87½, and a lot of sour No. 2, at $3.

Grain—The market for wheat was very firm but there was little inquiry. The only sale which came under our notice was of 4,000 bu. white Michigan on private terms.

Corn—Market easier and inquiry limited. Sales, delivered to boats, at 67c. Oats—demand moderate. Market almost bare of sweet lots. Sales prime at 40c in store.

## NEW YORK CATTLE MARKET.

NEW YORK, Aug. 1.—At Washington Drove Yard—The warm weather helps depress the market. Since our last the offerings have reached 2,400 head (all Southern and Western.) Prices steady at from 8@9½c per lb, as in quality. About 300 head left over unsold.

At Browning's—Offered 115 Cows and Calves. All sold at prices ranging at from $22,50 to $32.50@45.

Sheep and Lambs—6,249 on sale. The former brought 2@2,50, with a few extra at from $5,50@8. Lambs, $1,63@5. Left over 500.

At Chamberlain's—Offered 250 Beef Cattle; prices ranging from 7@9½c.

70 Cows and Calves, and sales at $25@35 to 50.

Also 2,400 Sheep and Lambs offered; Sheep $2@3,50 to $4,50@6,50; and $2@3,50 to $4,50 for Lambs.

## ALBANY CATTLE MARKET.

ALBANY, Aug. 8.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—486 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. 6; 3d do, $5@5,50.

Cows and Calves—18 in market. Prices from $27@30, 35 to $40.

Sheep and Lambs—1,229 in market. Prices—Sheep at from $2,50, 2,75, 3, 3,50, 4@4,50. Lambs $2, 2,25, 2,50, 2,75, 3@3,25.

Swine—100 in market. Prices from $4,50, 5,50@6.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Aug 4.—At market 1,200 Beef Cattle 325 Stores, 5,800 Sheep, and 430 Swine. 200 Beef Cattle unsold.

Prices—Beef Cattle—Extra, $7,50@7.75; 1st quality $7@7,25 2d do, $6,25@6.75; 3d do. $5@6.

Working Oxen—Few sold on account of the storm.—Sales $80, 92, 100, 115, 125 and 145.

Cows and Calves—Sales $24. 29, 33, 38. 45. 50@62.

Sheep and Lambs—Sales of lots at $2,75, 3,25, 3,50, 4, 4,75 and $5,50.

Swine—Ohio Hogs 6, 6¾ and 7c. Spring pigs by lots 8c. At retail, from 8½ to 10c.

## CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, Aug 3.—At market, 1,064 Cattle, about 800 Beeves, and 264 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7,50 per cwt.; 1st. quality, $7,25; 2d do, $6,75@7,00; 3d do, $6,50; ordinary, $5,00@5,50.

Hides—$6 per cwt.

Tallow—$7@7.50 per cwt.

Pelts—75c@1,00.

Calf Skins 11c per lb.

Barreling Cattle—None.

Veal Calves—$5, 7@12; at market 212.

Stores—Working Oxen—$102, 110, 112, 124. 131, 141 to 152.

Cows and Calves—$21, 25, 28, 31, 34, 41, 54 to 63,—at market 52.

Yearlings—$10, 11@12.

Two years old—$17, 19, 21, 24, 28, 30@32.

Three years old—$32. 35, 38, 41, 44, 52@62.

Sheep and Lambs—4,092 at market.

Extra, $4, 5, 5½@6.

By lot—$2½, 2¾, 3 to 3½.

Swine—Wholesale fat hogs at 5½c per lb.

Remarks—The market is well stocked and largely attended by the buyers, and a good day's business has been done. Sheep and Lambs sold quicker and much better yesterday than to-day. One large hog, in weight 1,212 lbs on exhibition, raised in Calais, Me., attracted much notice. There is in addition to our report, about 4,000 fat Beeves at Brighton, from the West. Mr. O. G. Pinkham, of N. Bridgewater, had the best lot of blood, Black Hawk and Morgan horses at market this season. The Cattle trains were all in promptly and in good condition.

120 cars came over the Fitchburg Railroad, and 108 over the Boston and Lowell Railroad, loaded with Cattle, Horses, Sheep, Swine and Fowls.

## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, August 4.—The offerings at Washington Drove Yard during the past week comprised 1,950 head of Beef Cattle, 350 Cows and Calves; 1,200 Hogs, and 700 Sheep and Lambs.

Prices—Beef Cattle—Sales were made at $6,50 to $9 per 100 lbs.

Cows and Calves—Milch cows ranged from $18@35; dry cows $7@13, and springers $14@25.

Hogs—We quote at $7@7,75 ₱ cwt.

Sheep and Lambs—There were 700 head offering, and all sold at from $2 to $6 each, and the latter $1,50@5,50 according to quality.

6th. THREE DOLLARS, in Books or Papers, to *each* of the Five persons sending the next (6th, 7th, 8th, 9th, and 10th) greatest numbers as above.

7th. TWO DOLLARS to *each* of the Ten persons sending the next (11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, and 20th,) greatest numbers, as above.

☞ That Post-Masters, Local Agents and Subscribers, wherever the W. G. & S. R. circulates, may have a fair and equal chance to obtain the Premiums, *traveling agents, post-riders, &c.,* are not included in the offer.

---

SPECIFIC PREMIUMS.

In order to reward *every one* who may send, as agent or for himself, one dollar or more on subscription to the W. G. & S. R., we offer to those who do not compete for the preceding prizes, the following liberal gratuities :

1st. To every person sending $1 for two copies of the W. G. & S. R., we will forward by mail a volume of the Genesee Farmer, (bound in colored paper) for either 1848 or '49 as preferred.

2d. to every one sending $2 for five copies.—or $3 for eight,—we will send either one of the three first volumes of the Wool Grower, well bound in handsome colored paper, or one of the vols. of the Farmer above named, as preferred.

3d. To every person remitting $5 for 14 copies—or $7 for 20 copies—we will send an extra copy of the fifth and either one of the preceding volumes—*or* two copies of any previous volume—*or* three vols. Farmer above named—*or* the Rural New-Yorker for six months. And we will pay like premiums, in the same proportion, for any additional number of subscribers.

☞ Back volumes of the W. G. & S. R., bound in colored paper, will be furnished to competitors at the same rate as copies of the fifth volume—and copies counted in making out their premiums.

Competitors for Specific Premiums will please specify what they want in letters containing remittances—when the volumes will be immediately forwarded.

---

☞ All competitors for Regular or Specific Premiums must comply with the following

**Terms, in Advance:**

Single Copy, 50 Cents a Year; Five copies for $2; Eight for $3; Fourteen for $5; Twenty for $7, and any additional number at the same rate—35 cents per copy. Back volumes, bound in paper, at same prices.

☞ Bills of all specie-paying banks, and postage stamps, received at par. Subscription money, properly enclosed, may be mailed at our risk, if addressed to

D. D. T. MOORE, Rochester, N. Y.

---

**Hickok's Patent Improved Cider Mill and Press.**

WE have been appointed sole agents for the sale of this Mill and Press in the city of New York. This is the most approved mill now in use. Catalogues, with description and drawing will be forwarded by addressing us post-paid. Price $40. LONGETT & GRIFFING,
187-8t 25 Cliff St., New York

---

☞ PEOPLE'S COLLEGE OF THE STATE of New York, Incorporated April 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made :

D. C. McCallum, of Owego, President of the Board of Trustees.

A. I Wynkoop, of Chemung, Vice President.

Tracy Morgan, of Binghamton, Treasurer.

Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H HOWARD, Secretary.

---

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

---

**Improved Portable Cider Mill and Press.**

HICKOK'S Improved Portable Cider Mill and Press, received the following premiums in 1852, viz.:—A Silver Medal at the Fair of the American Institute, N. York. Diploma at the Franklin Institute, Philadelphia. First premiums at the State Fair at Utica, and at the Columbia and Rensselaer County Fairs, and diploma at the Westchester County Fair.

Descriptive circulars sent free to all post-paid applications. See page 254 of this paper, for engraving. Price, $40,—and all persons living near Rochester or away from any agency, may order of me, and when they get the mill they may deduct the freight and remit the balance to me.

Manufactured by W. O. HICKOK,
Harrisburg, Pa.

Sold by LONGETT & GRIFFING, 25 Cliff-st., N. Y.
EMERY & CO., Albany.
DANA BROTHERS, Utica.
PROUTY & CHEW, Geneva.
HIGGINS & CALKINS, Castile, Wyoming Co.

O. GREGORY, Binghamton.
CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-8tw1m

---

Springfield, Ohio, May 1, 1852.

Mr. W. O. Hickok: *Dear Sir,*—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It supasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

---

*Decidedly the best and Cheapest Poultry Book in the Union.*

NOW READY,

**MINER'S DOMESTIC POULTRY BOOK.**

ORDERS received for over Two Thousand copies of this book in advance of its publication, which is unprecedented in the sale of any work ever issued on this subject.

This is an entirely new work, and one of the most valuable books for practical uses that has ever been published. In preparing it, the main object was to study the *actual wants* of the Fowl-breeder, more than their fancy notions, besides containing full directions for Breeding, Raising, and keeping the several kinds that come under consideration; when and how originated; a large number of cuts from life, of some of the best breeds in the country; prices at which they are selling in the market; together with such other matter as was thought necessary. The varieties at present are so great, that a book published five years ago, is now behind the age. This work contains a vast amount of new and useful matter, and in the number of its illustrations, great amount of practical matter, and its fine typographical execution, is ahead of any other work on Poultry ever published. The book contains

**Over One Hundred and Thirty Fine Portraits!**

of the most perfect specimens of newly imported and native breeds of fowls, and other cuts which have cost from $700 to $800,—being double the number found in any similar book, while the price is only one half as much.—The names of all the new and imported breeds are given, so that any person being at all interested in them, can here find their full description, origin, &c., &c. Recollect

ONLY FIFTY CENTS,

for the most complete book on Poultry ever published.

Dr. J. C. Bennett, of Fort des Moines, Iowa, formerly of Great Falls, N. H., author of "A Poultry Book," and one of the most extensive breeders of Poultry in this country, to whom the proof sheets were shown, writes :

"No book ever published will *compare* with yours, as to *splendid and life-like engravings*, and it will unquestionably be the best book published on the subject, and will sell in preference to any other work. *It will receive my untiring energy for its sale all over the United States*, and I have no doubt its sale will reach 50,000 copies the first year."

As it is expected this work will have a very extensive sale, it will be an object for book dealers, peddlers, agents, and others, to make early application.

The book is handsomely printed, on good paper, 12 mo. size, contains 256 pages, and sold at the low price of 50 cents paper, and 75 cents in full cloth binding. Those wanting books sent to their address will send in their orders early.

Books sent by mail to any part of the Union on receipt of the following :

For one copy, in paper, .....50 cts., cloth 75 cts.
" two copies do. .....$1,00, " $1.38
" three do. do. ..... 1,25, " 2,00
" four do. do. ..... 1,50, " 2,50

Books sold to peddlers, agents, and others, at reduced prices. Address, post-paid, GEO. W. FISHER,
Bookseller and Publisher.
Rochester, N. Y., July, 1853.

**N. Y. State Agricultural College.**

This Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments :

JOHN DELAFIELD, President of the College.
Hon. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

The Trustees may be addressed (post-paid) at their respective residences, as follows :

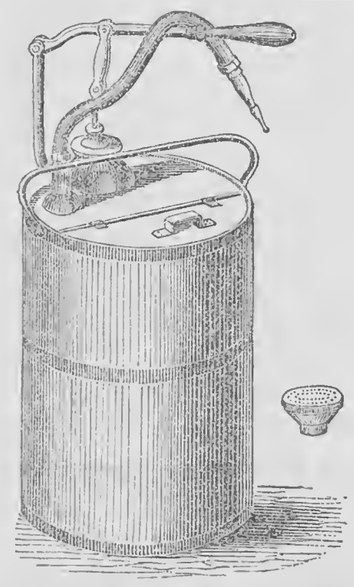
Hon John A. King, Jamaica, Queens County.
Henry Wager, Westernville, Oneida "
B. P. Johnson, Agricultural Rooms, Albany.
Wm. Kelly, Rhinebeck, Duchess Co.
N. B. Kidder, Geneva, Ontario Co.
Joel W. Bacon, Waterloo, Seneca Co.
Tallmadge Delafield, Geneva, Ontario Co.
Wm. Buel, Rochester, Monroe Co.
John Delafield, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*

---



WE offer for sale, the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union. WM. G. CREAMER & CO.,
Plumbers and Hydraulic Engineers, 64 State street, New Haven, Conn., and 4th Avenue cor. 9th St., New York.

**GREAT STOCK SALE.**

**Short-horn and Durham Cattle, and South-down Sheep.**

ON Wednesday, the 7th day of September next, at one o'clock, P. M., I will sell, at my farm on Grand Island, six miles below Buffalo, about 30 full bred Short-horns, a few Devons, and about 30 high grade Short-horn and Devon Cattle, consisting of Cows, Heifers and Young Bulls.

The young Short-horns are chiefly the get of my imported bull Duke of Exeter (10,152)—a bull not exceeded, as a fine stock getter, by any other in the U. States.

The young Devons are the get of the bulls Candy and Quartley, both imported by Mr. Stevens. The superior of these bulls in blood, style and breeding, is not to be found. Quartley is my present stock bull.

I will offer at the same time 50 pure bred South-Down Sheep-rams and ewes. Also a few Middlesex pigs—both sheep and pigs the direct get of imported sires, from dams descended from late importations.

Catalogues will be ready by the first of August, and will be sent on application to me, by mail.

Terms :—All sums of $100, and less, cash. For larger sums, approved notes at four months, with interest, payable at Bank, will be received, if preferred.

A steamboat will carry all persons wishing to attend, across the ferry from Lower Black Rock to the farm, at 10 o'clock on the morning of the day of sale. The stock can be viewed at any time previous, by calling on me at my residence in this place. LEWIS F. ALLEN.
Black Rock, N. Y., June 15, 1853. 182-10t

PREPARED SUPER PHOSPHATE OF LIME,

BY THE UNION CHEMICAL WORKS, L. I.

**HOYT & CO., Agents,**

*No. 234 Water Street, and 122 West St., corner of Dey St., NEW YORK.*

A Fertilizer of the most approved quality, producing all the immediate effect of the best Peruvian Guano, with the advantage of being much more lasting in the soil.—Thoroughly tested, and found to more than realise the expectations of all those who have already tried it. The best evidence of this is the largely increased demand this season over the past year. Put up in bags of 160 lbs; barrels 250 lbs each. Buyers will please be particular to observe our brand upon each bag or barrel.

Also for sale, American and Foreign Field and Garden Seeds. English Ray Grass, Fowl Meadow Grass, fine mixed Lawn Grass, White Clover, Osage Orange, &c.
178m3i.

---

**SUPERPHOSPHATE OF LIME.**

THE undersigned continue sole agents for the sale of Deburgs Superphosphate of Lime, which has proven Superior to all other brands, now in the market. Having sold nearly Three Hundred Tons this spring, and heard from a majority who have used it, they pronounce it equal to Guano in its effects, and is more lasting in the soil. As there are many substances called Superphosphate of Lime now offering in this market, which are of a different nature, to avoid impositions purchasers would do well by applying direct to the agency for their supply.

LONGETT & GRIFFING,
184-3w. No. 25 Cliff Street, New York.

---

**WESTERN LAND.**

THE undersigned offers for sale a valuable Farm of 500 acres, located in Clear Lake township, Steuben Co., Indiana, bordering the Michigan line on the east.

The above farm has 100 acres improved, the remainder well timbered with oak, whitewood and black walnut. On the premises is a dwelling house, and a large, commodious barn; likewise an unfailing water power, with a favorable location for a mill. The tract is favorably situated for two or more farms; and the subscriber offers the whole, or a part, in exchange for land or other property in this section, at a great bargain. Address

HENRY O. BARNUM.

## "MY ANGEL WIFE."

BY IDA FAIRFIELD.

She stole across my pathway,
A vision of delight—
A spirit, still and beautiful,
Yet glorious and bright.

She stood beside my hearth-stone,
My fondly cherished dove,
And round my heart she folded
The pinions of her love.

God gave her to my bosom,
My own, my gentle bride,
In treading life's dim pathway,
My counsellor and guide.

If sorrow hovered o'er me,
Her heart, so pure and warm,
Was still a holy refuge,
A shelter from the storm.

When darkness was around me,
Her love was still the ray,
To light my weary footsteps
Along the thorny way.

But from the distant Heavens,
There came a voice of love—
My angel wife was needed
To swell the choirs above.

Her spirit wings unfolded,
The message to obey,
And with one sigh at parting,
She sped upon her way.

Ah! me, the bitter anguish,
My household bird has flown,
And I am left in darkness,
To struggle on alone.

But in the midnight watches,
A form is by my side;
And o'er my aching forehead,
Soft fingers seem to glide.

My glad ear drinks in music,
The rustle of bright wings,
And o'er my heart a rapture,
Some blessed presence flings.

I cannot catch the shadow,
I cannot chain it here;
But it brings a breath of Heaven,
It bears away each tear.

And I know that it will meet me,
When this veil is rent away,
When the spirit-bird is loosened,
From its prison-house of clay.

I know that it will guide me,
Through the darkness of Death's night,
To the presence of my Saviour,
To His paradise of light.

Walton, N. Y., 1853.

## A LOVE EPISODE,

### WHICH IMPARTETH A GOOD MORAL.

Albert Morris was a young Philadelphian, of family, wealth, fine talent, considerable beauty, and with all these, an honest and feeling heart, acute sensibility, and pure, correct moral principles.

It chanced that one sunny afternoon in October, this unexceptionable hero of ours was sauntering down Chestnut street, in a listless or rather unhappy mood, his brow lowering, and his eyes glancing about with a restless look of discontent. Now what possible trouble or annoyance could come nigh so fortunate and charming a young man.

Suddenly he gazes an eager look forward, his eyes brightened, his cheek flushed, and his step quickened. Surely he could not mistake that form, that gait, that air—no, it was Clara Atwood. She did not see him, or seemed not to mark him till they were almost face to face. Then she smiled, blushed, and paused a moment, as Morris, lifting his hat, inquired with a joyful air, when she arrived in town.

"Only last night," she replied, and after a few more words, passed on.

Miss Atwood was an undeniable beauty, and a belle of much celebrity. Her taste in dress was exquisite, though rather on the magnificent order. She had many accomplishments, a keen wit, and some genius, so it is little wonder that as far as she had revealed herself, she had been enchanting to the poetical and somewhat irrepressible Albert Morris. It was spring when they first met, and before they both left the city for the summer, dreams, wonderous pleasant, in which the peerless belle always appeared, became perilously frequent with him.

And Miss Atwood? Why, she smiled sweetly on all he said or did, and bent herself toward him slightly—very slightly, from the pedestal of her pride. With a most comfortable faith in her own irresistibleness, she ever considered the heart of every man she met as a kind of fruit, very ripe, and very soft, and only waiting the least possible shake on her part, to fall into her hand or at her feet.

But let us return to that walk of our hero's down Chestnut Street.

His heart was filled with indescribable emotion, he involuntarily turned his head to look after the fair lady. As he did so he remarked that as she swept along with her half nonchalant, half haughty gait, the fringe of her rich mantle caught on the edge of a basket borne by a poor old woman who was hobbling with a crutch. The basket was filled and piled up with large oranges, and as Miss Atwood gave an impatient pull to extricate the fringe, she half upset the basket—purposely it was evident—and out rolled a golden shower of oranges. With no expression of regret, but with a frown like midnight, and a cool "You should keep out of the way," she pushed majestically on, and entered Levy's inviting doors. The old woman stood the image of despair; a poor, feeble creature, jostled by the fashionable throng, she could not help herself in this sad extremity. Surprised, indignant, and shocked beyond expression, Morris, with with one of his quick, humane impulses, turned back to assist her; but he was too late, for a slight graceful figure sprang forward, and two dear little white gloved hands began picking up the oranges and replacing them in the basket of the grateful old dame, and a sweet, kind voice said—

"O, do not thank me—it is nothing!" and then Morris caught a glimpse of a fair young face, not a beautiful face, but one fresh and sunny, and wearing an expression pure and noble, and good withal. He saw large brown eyes filled with soul, and warm, red lips, tremulous with feeling, and a clear, broad brow, stamped with intellect, over which waved hair of dark rich shade. All these he saw underneath a little cottage bonnet of white silk, unadorned by ribbon, lace or flowers; for the young lady before him was that sweetest of imaginable creatures, a pretty Philadelphia Quakeress.

At that moment the soulless statue, Albert had half deified by his admiring homage, fell from its pedestal, and a fair ideal of womanly loveliness, sanctified by goodness, mounted triumphantly to its place.

Do not condemn my hero, when I say that he followed a respectable distance behind the young Quakeress, as she walked up Chestnut street, then turned and passed up Seventh street to Arch, and up Arch almost to Broad street. Finally, she ran lightly up some dazzling white marble steps, and entered a plain but elegant looking mansion. As Morris passed, he glanced at the door plate. It bore his own name: and with a feeling half pleasure, half pain, he recollected that here resided a distant relative of his father's. There had once been some difference between the families, and all intercourse had long since been suspended.—As might have been anticipated, Mr. Albert Morris suddenly became an active peacemaker. Such a cold feeling of estrangement between those connected by the ties of kindred, was unnatural, unchristian, and ought no longer to exist. Thus he argued, until his mother (now a widow,) and his nice, obliging sisters, set forth on a visit of conciliation, or rather reconciliation. This was perfectly successful, and soon the long frozen tide of social intercourse flowed again sunny and swift.

Oh, such times as the two families had together! Such morning walks and rides; and then such social evening gathering for all sorts of innocent and sensible enjoyment. Indeed it was pleasanter and better, and more delightful, every way, than I can tell.

I surely need not say how glad was Albert in his heart, when he listened daily to the praises of dear gifted cousin Annie, from his affectionate sisters and enthusiastic young brothers, and even from his thoughtful, intelligent mother. Ah! the heathen divinity's fairy bark sometimes has smooth sailing say what they will.

It happened that Annie was deep in the study of the German at the time, and Albert presently discovered that he really must rub up his knowledge of that grand language. After this what enchanting long mornings, what charming jaw-dislocating hours they spent over Goethe and Crabbe, and Gessner and Gleim, and Pfeffel Pfizer.

But the time came when it was away with these old fellows, and let the heart speak through lips and eyes, a poetry more delicious, and eloquence more subduing.

* * * * * * *

"My dear Albert," said Annie Morris, now two months a wife, "what possessed thee to send home that enormous orange tree? I could scarcely find room for it in our conservatory."

"Ah, Annie," he replied, "I love the orange; it is a sacred fruit to me."

"Now, what can'st thou mean?" said the little wife with some surprise.

"Listen to me then, my love," he rejoined. "As by the apple, Adam lost his paradise, so by the orange have I found mine.—What! still mystified? Ah, bless you, and bless all crippled old orange women, say I"

"Ah, Albert! said Annie, blushing deeply, and smiling through her tears as she wound her arms around the neck of her young husband; "did'st thou see that? I was a little ashamed at the time; there were so many looking at me—but I could not help it."

"To be sure you could not help it; your hands go about such work on their own account. Help it, indeed!"

* * * * * * *

On the morning after the little street incident, which was the stepping stone to the happy fortune of Albert Morris, Miss Clara Atwood was seated in her most graceful attitude on a purple velvet sofa, in an elegant parlor, awaiting a call from that self-same gentleman. There came a ring at the door, and presently a servant entered, bearing a basket—a pretty little French affair—filled with oranges, and a card, on which was written, "With the compliments of A. M." The cheeks, neck, and brow of the haughty beauty became crimson, as she dashed the significant offering to the floor.

Last winter she was married—well, all the world said. She has a large house in Walnut street, a fine country seat, a magnificent carriage, and her servants sport a dashing livery. In short, luxury and display surround her. She is still beautiful, brilliant, witty, gay, and it may be happy; but I do not think she ever cultivated orange trees in her conservatories.

---

Pride.—Pride is disgusting, if it manifest itself in contempt of others, even of the lowliest. A careless, frivolous fellow, may deal in ridicule and contempt. Without respecting himself, how can he respect others? But a man who is conscious of his own worth, has no right to undervalue his fellow-men.—*Goethe.*

---

He that too much refines delicacy, will always endanger his quiet.

# Personal Sketches.

## GRANT THORBURN.

Your paper of July 7 (writes a correspondent of the Beloit, Wis., Journal,) contains a paragraph, cut from the New York Tribune, noticing the marriage of Grant Thorburn, the "Laurie Todd" of other days. It has occurred to me that you and your readers might like an introduction to the old man and his personal characteristics.

One would think, on reading his letters, that he was of the phtriarchal style, with erect figure, long white hair and beard, and slow and dignified mien. His reminiscences of the past run so far back into the early life of the city and country of his adoption, that we unconsciously silver his fancied appearance with the frosted accompaniments of ago. But who ever, from a letter, a volume, or a discourse, formed a correct impression of an author?

A few weeks since I happened into the business office of a book-publishing friend in New York city. He was busy in conversation with the funniest little old man I ever looked at. His diminutive figure was hid, and, as it were, extinguished under a long, loose, immense gray overcoat, the skirts of which swept his ancles. His little bullet head was pushed up into a broad-brimmed, low-crowned gray hat. His neck, which seemed as large as his waist, was enveloped in the snowiest of cravats, and his square-toed shoes, with their shining buckles, were polished to the highest degree, and altogether as restless as a popple leaf. Perceiving that I had come on business, the old gentleman turned to give me the opportunity of addressing my friend, who, in his turn, perceiving that I was unacquainted with the ancient apparition before me, introduced me, by saying, "Don't you know Grant Thorburn?"

"No."

"Well, this is Laurie himself, or rather Laurie beside himself. If he shows any aberration of mind, pray don't notice it, for the old boy is just going to marry a young girl."

"And why shouldn't I?" broke in Mr. Thorburn: "I am eighty-one years old, to be sure, but look here"—and putting one hand on the counter or long table, he sprang over to its other side as nimbly as a boy. "There! if you can do that, you are fit to marry anybody. I can leap a five barred fence as well as ever I could; and see there too"—and from under the skirts of his overcoat, he put out a leg, the symmetry of which was well shown by the closely-fitting tights and knee-breeches which enveloped it—"there's as handsome a leg as any of you can brag of."

We assented, and I took the opportunity of saying that I was extremely gratified to have met him, for I had heard of him, and been familiar with his writings all my days. He grasped my hands, and for the first time looked me in the face.

"Sir," said he, "I feel complimented. I have written to gratify old and young, and I think I have been somewhat successful. You are young yet, and have a chance of doing a great deal of good, if you only try; and I have this advice to give you: if you are a layman, don't betray your country; if you are a clergyman, preach extempore sermons."

On these subjects, as on a text, the old man rattled on for some minutes, giving me full opportunity for seeing that he had short grey hair, large, bright, hazel eyes, and a restless, constant play of his features. He was constantly pulling off his hat and replacing it, and making most extraordinary bows at his emphatic words, and catching at my coat button holes with one hand, and with the other hand, and with both hands, and seemingly forgetting where he was, or who was about him, he flashed along in his discourse as if he and I were the only persons in the universe, and that our lives depended on my conviction of the truth of his counsels.

All of a sudden he stopped, and demanded first my name, business, residence, and persuasion; and second, which of his writings I liked best.

Easily satisfying his first question, I hesitated on the second, but finally suggested his account of his visit to Jenny Lind.

The old man fairly shook like an earthquake with laughter. I had excited agreeable recollections, it seemed, and he enjoyed the reminder. So he laughed until he made us all laugh in concert, although we knew not what we were laughing at. I was beginning to feel "foolish," when he suddenly ceased roaring, and said, semi-confidentially, "Sir, she *did* kiss auld Laurie Todd, *right here!*" and he put his finger on his mouth.

And so he went on in the same style about Jenny Lind for a moment, but unconsciously came back to the betrayal of the country, and extempore sermons, which were his hobbies for that day.

Suddenly he stopped, saying, "Good morning, gentlemen," and dashed out, but instantly re-adpeared, to give us the benefit of some new idea on extempore sermons, and to say that he should write out his ideas on that subject, and send them to, I think, the Christian Intelligencer. But having said that, he could not resist the inclination to enlarge upon it. How like a great bob-o'link he seemed, flirting about the room, now bowing an idea to me, now hat in hand, going over a dainty bit of personal recollection of old times, and now with hands and arms in those great caverns of pockets, prophecying for the future!

Quaint old man! He rode his hobby until he was out of breath, and then, with a "God bless you, gentlemen," the elfish goblin dashed out into the hall, and tripped into the street as lightly as the swallow flies, and as merrily as a robin sings. And that is all I ever saw of Grant Thornburn.

# Wit and Humor.

## "IT'S ALL RIGHT, CAPTAIN."

As the fleet steamer R. was coming up the Mississippi, not long since, several way passengers came on board at Vicksburg, and among others a giant looking middle aged Kentuckian, who very soon became the subject of curiosity, wonder and general remark. After traveling a short distance, the party, except "our hero," made their way to the "Captain's Office" and paid their faro to the place of destination. The next day, the clerk made bold to call on the delinquent passenger, who had taken no berth, but had passed the greater part of his time in his chair, and with his usual urbanity of manner, asked the Kentuckian to give him his place of destination, as it would help him in making up his book, intending his question also as a gentle hint for him to pay his fare.

The giant rose from his lethargy and replied,

"I'm going up the river a-piece. It's all right, Mr. Clerk."

The clerk not being much the wiser from this answer, again politely asked—

"At what point do you intend to land, sir?"

"Don't land at *no point*, Mr. Clerk. It's all *right* though."

Here the clerk left our hero and went to consult the Captain, who at once lost his wonted good humor, as the clerk related the result of his interview with the delinquent customer. The Captain proceeded forthwith to bring the matter to a focus, and accosted the Kentuckian saying,

"How far are you going to bear us company up the river, Uncle?"

"Oh! I'm going a-piece with ye—but it's all *right*, Captain!"

"But, sir," said the Captain, "you have neither paid your fare nor given the clerk your place of destination, and you are old enough to know the custom of steamboat men, that when a man refuses to pay his fare, or to give a good reason for not paying, we put him ashore immediately."

"W-e-l-l, Captain, 'spose 'tis your custom, but it's all *right!*"

Here the Captain lost his patience and resolved to put him ashore forthwith, and accordingly ordered the pilot to land, and told him to make ready to go ashore, to which he very graciously replied:

"It's all *right*, Captain."

The boat landed; and the plank put out, the giant was told to walk, to which he readily assented, saying:

"It's all right."

After getting on terra firma, the Captain gave him a short blessing for giving him the trouble to land and threatened him a tip top dressing if he ever saw him again, &c. To which the old man responed again with an air of triumph, pointing to a fine looking cottage just above him on the bank:

"It's *all right*, Captain; that's my house. It's *all right.*"

---

Spiritual Facts.—That Whiskey is the key by which many gain an entrance into our prisons and almshouses.

That Brandy brands the nose of all those who cannot govern their appetites.

That Wine causes many to take a winding way home.

That Punch is the cause of many unfriendly punches.

That Ale causes many ailings, while Beer brings many to the bier.

That Champaigne is the source of many real pains.

That Gin slings have 'slowed' more than the slings of old.

That the reputation of being fond of cocktails, is not a feather in any man's cap.

That the money spent for Port supped by portly gents, would support many a poor family.

## MISCELLANEOUS ENIGMA.

I am composed of 14 letters.
My 1, 9, 7 is a species of wood.
My 2, 5, 6, 9 is the first name of a noted danseuse.
My 3, 12, 14 is a female deer.
My 4, 2, 14, 9, is the name of an insect.
My 5, 9, 10, 8 is a species of grain.
My 6, 9, 7, 14 is a small body of water.
My 7, 9, 10, 14 is the nickname for a girl.
My 8, 11, 1, 14 is much worn by ladies.
My 9, 2, 14 is a favorite drink of the English.
My 10, 14, 9 is a popular beverage.
My 11, 9, 10 is an article worn by men.
My 12, 11 is an interjection.
My 13, 12, 6, 14 is a small animal.
My 14, 2, 13 is a species of wood.
My whole is the name of a popular song.

For the Rural New-Yorker.

## PARADOXICAL EXAMPLE.

Three boys, A, B, and C, went to market with eggs. A had 50, B 30, and C. 10 eggs; each sold their eggs at the same price per piece,—and each received the same amount of money. At what price did they sell their eggs, and how many cents did each receive? J. H. H.

State Normal School, Albany, N. Y.

☞ Answer next week.

*HALLOCK'S*

**AG'L WAREHOUSE AND SEED STORE.**

*No. 24 Exchange St., Rochester, N. Y.*

THE subscriber, late from the Establishment of Emery & Co., Manufacturers at Albany, where he has been engaged for the past six years, has been appointed their Sole Agent in Rochester and Western New York, for the sale of

*Emery's Celebrated Railroad Horse Powers and Threshing Machines; Circular and Cross-cut Saw Mills, Feed Mills, Corn-stalk and Hay-Cutters, &c.,*

adapted to the Power, and now offers them at manufacturer's prices, with the transportation added, and subject to the warrantee, as follows:—"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded." The attention of Farmers is solicited, and a careful investigation into the construction of this Power, and its comparative merits, as well as price requested, before purchasing elsewhere. He is also agent for their

**Combined Reaper and Mower.**

and keeps constantly on hand, Plows, Hay Cutters, Corn Shellers, Seed Planters, &c., &c., comprising a complete and extensive stock of Agricultural and Horticultural Implements generally, together with a full assortment of Field and Garden Seeds, of the best Imported and Shaker growth.

He is also agent for the sale of Seymour and Morgan's New York Reaper, Pierpont Seymour's Grain Drills and Broad-cast Sowers, Wheel Cultivators, Gang Plows, Clover Hullers, Cider Mills, Clover Gatherers, Horse Rakes, Scythes and Snaths, Hand Rakes, Grind Stones, &c.

He will be prepared to furnish dealers with Dunn and Taylor's well-known Scythes; also Manure, Straw, and Hay Forks, Snaths, Rifles, and other haying tools at manufacturers' prices, wholesale and retail.

Particular attention is called to a New Plow, which is believed to be the best cast iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any Plow heretofore sold in Rochester—while the price is less than any other equally well finished.

The "uniform one-price cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time, will allow.

Farmers and others are invited to call and examine the stock of Machines and Implements, and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

☞ Circulars and Catalogues furnished gratis on application personally or by mail. E. D. HALLOCK,

177tf No. 21 Exchange st., Rochester.

**GARDEN OR FIRE ENGINE.**

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N. B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.

Seneca Falls, N. Y., June, 1853. 183w10

**THE JUVENILE INSTRUCTOR,**

BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 4 cts on each paper.

Price per year—single copies, 25c.; Five to one address, $1; Ten do, $1,70; Twenty do, $3; Thirty do, $4,20; Fifty do, $6,50; One hundred do, $12.

Address LUCIUS C. MATLACK,

183m3. Syracuse, N. Y.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

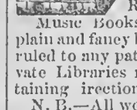
Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, June, 1853.

**MARSHALL'S BOOK BINDERY,**



BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing irections for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.

April, 1852. [122tf] F. H. MARSHALL.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,

[169m6.] 36 State St., Rochester, N. Y.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

**For both Country and Town Residents.**

PUBLICATION OFFICE,

Burns' Block, corner State and Buffalo Sts.,

Rochester, N. Y.

**TERMS, IN ADVANCE:**

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

**Terms of Advertising**

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

**THE WOOL GROWER AND STOCK REGISTER.**

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 34. ROCHESTER, N. Y.—SATURDAY, AUGUST 20, 1853. WHOLE NO. 190.

**MOORE'S RURAL NEW-YORKER:**
A QUARTO WEEKLY
**Agricultural, Literary and Family Newspaper.**

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page.

# Rural New-Yorker.

## Progress and Improvement.

### AUGUST.—FARM WORK.

A FEW brief hints on the duties of the farmer for this month may yet be in time.

Those who have summer fallows, or intend putting in wheat, must bend their whole energies to see the entire process well and thoroughly performed; and what is of equal importance, during the fearful advance of the most insidious enemy that the wheat grower has ever had to encounter—the weevil—to *sow early:* from the first to the tenth of September, and on no account later than the twentieth. The experience of the past year fully justifies this view, of not only sowing early, but also the earliest varieties. With all these precautions, and the thorough drainage of the fields, and the avoidance of low and mucky soils, subject to be affected by frost and the retardation of the plant in the spring, we think that the climate of the West, assisted by the most judicious culture, will still insure the wheat farmer a fair remunerative crop.

Now is the important period to destroy bushes, old hedge rows, &c. All biennial plants, or thistles, burdock, &c., should be now cut, as it destroys seeds and roots.—To kill all the forest shrubs of pastures and fields, some suppose that the *man in the moon* is to be consulted, but our readers may rest assured that there is more propriety and equal efficiency in consulting the *man in the Rural!* The philosophy of the right period, often consists simply in cutting when the plant has so far exhausted its vital powers as to be unable to develope and put forth the dormant buds every where distributed on the surface of the stem, and during the warm period, which causes the sap to sour and undergo decomposition, destroying its entire vitality and causing it to die. There are some exceptions to this rule—the willow, dwarf oak, &c., but worst of all the elder, (we blush for the name,) is so inveterate a sponge where it gets a footing, that nothing short of eradication of root and branch will eject it from the soil.

Our opinion is, that every one who can spare time to thresh his wheat, should do so before seeding, and thus have it ready for marketing at once. Many believe it now brings a price that cannot be sustained when the western crop commences to arrive.

Root crops should now be looked to, and if too late to hoe, it will pay well to draw all the large and seeding weeds before they ripen. Field Turnips, if too thick, which is a prevailing fault when sown broad-cast, should be thinned out—pass a hoe blade between every plant—don't be afraid it will double your crop.

Do, or at least commence doing, all the work required for the year in the wet and swampy grounds—ditching, getting out wood, rails, &c. September may be wet and the winter open.

Let all *highway*-men cry, "*stand and deliver,*" to all the taxable citizens in their beats, who have not yet "faced the music"—not their purse and watches, but their lawful duties in *mending their ways*, rendering them a caution to plank roads and other monopolies.

Dig, clean out and deepen wells when required—a good supply secured the last of this month, will insure a lasting supply. *

### HOW TO KEEP HARNESS IN ORDER.

THE subject indicated by the above heading has been discussed of late in the RURAL by two or three correspondents, but is of sufficient importance to bear further comment. With all due deference, we are constrained to express the opinion that few of those directly interested give proper attention to the durability and appearance of harness, carriages, &c. We will therefore give the mode of oiling and washing harness practiced by one who is qualified to speak understandingly upon the subject.

Observing the good condition and fine appearance of the harness of Ald. BAKER, proprietor of the most extensive livery establishment in Rochester, we requested him to impart to us, for publication, the *modus operandi* by which so desirable a result was achieved. In compliance therewith, he stated the course adopted as the best and most economical, after twenty years experience in a business which required considerable attention to tackling apparatus. His process of oiling and washing harness is substantially as follows:

Take Neats Foot Oil, and Ivy or Patent Black—the latter well pulverized, or to be made so before using. Mix thoroughly—adding the black until the oil is well colored, or quite black. In cool weather the oil should be warmed somewhat before mixing. With a sponge apply a light coat of the mixture—only what the leather will readily absorb, unless the harness is very dry, in which case a heavier coating may be necessary.—After the harness is dry—which will be in from two hours to half or a whole day, depending upon the weather and previous condition of the leather—wash thoroughly with soap suds. In making the suds use *good Castile soap and cold rain-water.*—(Warm water should never be used on harness leather.) Apply the suds with a sponge. Rub off with buckskin. This will give your harness a nice, glossy surface, and the leather will retain a good color and continue pliable for months. If it becomes soiled with mud, or sweat, an application of soap and water, as above directed, (without oiling,) will be sufficient to give it a bright appearance.

Two applications of this oil and black mixture a year, (or once every six months,) will be sufficient to keep harness, as ordinarily used, in good order. It may be necessary for livery men, and others who use harness constantly, to apply the oil oftener—but in most cases two oilings a year, and washing with suds when soiled, will keep a harness in good trim for sight and service. This process will pay a large dividend in extra service and durability,—to say nothing of improved appearance.

Ald. B. assures us that the same, or a very similar, application is just the thing for carriage tops which are made of *top-leather.* The only difference in treatment is, that less oil should be used, or rather a lighter coating applied—and it should be washed off *before drying in,* top-leather being thin and much more penetrable than harness. Of course this mixture would not answer for enameled leather, of which some carriage tops are constructed.

### KILLING NOXIOUS WEEDS.

THIS subject is one worth inquiring about, and one on which a comparison of facts and experience would be valuable.

It is a well known truism that the leaf is the lung or breathing organ of vegetable life. The tenacity with which roots retain vitality vary in an extraordinary degree, and is possessed almost exclusively by perrenial plants. The Canada Thistle is one of the most tenacious of life of all the pests of the field,—and yet they may be eradicated by one season's constant cutting down with the hoe, especially if a hot and dry one. We have known them to be entirely annihilated by once mowing, about harvest time, and have known it to fail a hundred times after. What its success depended upon,—whether the period of its age, the weather, or other peculiarity,—could not be ascertained.—Milk weed, (*asclepias syriaca.*) nettles, thorough-wort, (*eupatorium perfoiliatum.*) and other perrenials that infest new and low meadows, yield to the scythe after two years mowing. Johnswort, we believe to be an exception, and is a hard customer.

The narrow-leafed dock is nearly a biennial, and often dies if allowed to fully ripen its seeds; but if cut before, always sprouts and multiplies its suckers. The broad-leaf dock is much more tenacious of vitality, and never says die—like quack grass,—short of being dried and put thro' a coffee mill. *

### "TRANSMUTATIONS, &c."—NO. 2.

AFTER reading 'HIEL'S "Experience," I had almost concluded to yield my former objections against the change of wheat to chess, but facts have recently come to light or been recalled, which have revived former incredulity. These facts are,

1st. That there appear to be two varieties of chess; the proper wheat-chess, and another variety which seems to be indigenous. They so nearly resemble each other that a careless observer would hardly notice the difference. The principal apparent difference is this:—1st. That in the lattor variety, the branches of the panicle stand nearly at right angles to the main stem, while in the former they diverge very little; and 2d, that the latter is less bearded, or bristled, than the former, and a little later in coming to maturity.

2d. That farmers are exceedingly careless in regard to the destruction of either kind. They suffer it to get into their barn-yards, and to grow and ripen in the fields. I have seen it growing in meadows and by the side of old straw, and stack yards, along fences and farm-roads, in such quantities as, in some places partially, and in others wholly, to root out every thing else. This is then cut with the other grass and taken into the barn or put into the stack, for hay, and the result may easily be seen.

3d. Farmers are exceedingly careless about obtaining clean seed. I have seen several piles and *bins* of wheat which were said to be fair samples of western wheat—such as is generally used for seed. Yet for impurities, especially in the shape of chess, it more resembled the "screenings" of New York wheat, than the general crop. I have not a doubt that in many cases, twenty-five to fifty grains of chess might be found in a single handful, such as a man would ordinarily take in sowing. Yet this is sown for "clean seed," is perhaps winter, or spring-killed, and the chess survives and yields a full crop, (there being enough sown to produce it, even without the presence of any in the soil,) and the wheat is accused of becoming chess.

This carelessness in regard to chess seems to arise in some measure from a belief among some that "chess will not grow," (for there are some men claiming to be *sane,* who deny the vitality of chess;) and hence infer that wheat produces chess. Unbelievers, try it.

4th. So far as I can learn, not a single case of transmutation seems well authenticated; in other words, they all seem to have occurred in cases, or under circumstances, which are calculated to destroy confidence, or render the supposed changes explicable in some other way.

5th. My honored father raised wheat as long as it would grow in that part of the country, (Montgomery Co., N. Y.,) surrounded by neighbors who believed the doctrine of transmutation. He always took special pains to have clean seed. I have often seen him look for five to ten minutes to find a single grain of chess in his seed. Such was the seed that he sowed; and the result was that when the wheat was winter-killed, wholly or in part, there was *no chess there.* H.

Out West, July, 1853.

MAN ought never to be idle. Inactivity frustrates the very design of creation; whereas an active life is the best guardian of virtue, and the greatest preservative of health.

GROUP OF SPANISH MERINO EWES.

### WHAT ARE NATIVE CATTLE?

WE are continually reminded by the breeders of choice stock, of the great superiority of their favorite herds over the "Native Cattle." Talk with a dairyman in the rich valley of the Mohawk of the breed of cows preferable for the dairy, and he will assure you that, eschewing all the noted varieties, he prefers the native cows. So we find elsewhere men who express a strong preference for the native breeds. We have often been led to inquire,—What are Native Cattle?

If our understanding of the subject is correct, there is no kind of neat cattle that are indigenous to the country which we inhabit. In the early settlement of this continent at James River and Plymouth Rock, it is probable the pilgrim fathers brought with them such cattle as they possessed, not having much regard to choice animals or purity of blood and pedigree. At this late day it would be difficult to ascertain the particular kind, unless it could be known what breed was most common, and in good repute at the points from which the pilgrims embarked. One colony may have brought Devons, another Durhams, a third Herefords, or Ayrshires, as was most convenient. After arriving here they had not the means and numbers to be careful in their manner of breeding, and it is not unreasonable to conclude that if the herds were different in the commencement, they must, from the necessity of the case, have been early blended into one heterogeneous herd, partaking of the qualities of all the different kinds, though probably each in many respects differing from the others.

Every breeder well understands the ruinous effects of breeding in-and-in, and will at once comprehend the kind of stock which would be likely to spring from such origin. Thousands of weak, degenerate people, idiots and lunatics, are the consequence of a want of attention to this law in the human family. So well has this been understood that prohibitory laws have been enacted in nearly all countries. What is true of the human family, must of necessity be true in the brute creation. The early stock degenerated, not only in quality and size, but in their qualities of taking on fat, or secreting the lacteal fluid. We so premise, because it is hardly possible for degenerate, unhealthy animals to perform these natural functions as well as they would be done by well bred, and consequently healthy animals; and because breeding in-and-in cannot insure for any length of time such a herd. Subsequent importations have prevented the destruction of the stock, and by crossing and recrossing may have in some instances effected an improvement, which has kept the native cattle, so called, from becoming unworthy of breeding. We opine then, that native cattle are but the degenerate products of unwise and unskillful breeding, and cannot be equal to pure bloods, or those that have been grown by careful and judicious crosses.

If there are occasional valuable or superior animals found in the common herds, may they not be attributed to a strain of better blood, which, without any known rule or law, has thus, after years of disappearance, been presented in the animals in question? We think observation will go far toward demonstrating that in many respects they have a striking resemblance, in contour and conformation, to some one of the breeds from which they unquestionably originated. We have occasional specimens of the Galloway, better known as "mulley," though it may be safe to assume none of that breed have been imported, or at most, not more than a few isolated cattle.—The best milker we remember in a series of years, was a *native* which bore a strong resemblance to the Herefords. We recollect others whose size, build and spotted faces resembled the Ayrshires.

Such, to our mind, are the native cattle,—a hybrid, embracing all the different kinds which have been bred or imported, on this continent, and probably many of those raised on trans-Atlantic shores. We are not engaged in breeding cattle, and only offer these suggestions as the result of reflection and observation upon the subject treated. We shall be pleased to have others give a more full elucidation. H. C. W.

### QUALITY OF LAND FOR PASTURES.

MR. MOORE:—I send you the accompanying article, which was cut from the Mark-Lane Express. Will you be kind enough to publish it in the W. G. & S. R., and in the RURAL?—as I think there is much land in this country very similar to that described, and I know I can see the difference in the land here. One pasture will produce more flesh, another more milk. Yours truly,

W. H. SOTHAM.

"COWS FOR DAIRY PURPOSES.—At the last quarterly meeting of the Hereford Farmers' Club, a discussion took place on the subject of the capabilities of Herefords as milkers; in the course of which Rowan, a practical chemist of Hereford, explained that the land of Herefordshire was greatly deficient in the phosphates, which were most essential to the formation of milk. It had been observed that in Cheshire the milking properties of the cows had very much deteriorated, from the fact that the cheese made from their milk was exported from the country, nothing being supplied to the land in its stead with similar elements. An analysis of the milk had proved that the curd was very rich in phosphoric acid, and the remedy for the deterioration consisted in the application of bone dust. The fact that Herefordshire was very deficient in the phosphates would in a great measure account for the non-milking properties of our cows; and a good milker brought here from another country would in a few years, most probably, become a very bad one. The chairman, Mr. Lingwood, said this had been the case with a Suffolk cow of his own, and he was compelled to feed her. Mr. Haywood inquired whether upon the application of bone manure, the difference in the quality of grass would be perceptible. Mr. Rowan replied that it would, and then observed that the geological formation of Herefordshire and Cheshire was in some respects similar; the greater part of the former resting upon the old, and of the latter upon the new red sandstone. Mr. Newton observed that Gloucestershire was a dairy county, and its soil had a good deal of blue clay lias in it, which was very rich in phosphates.

The chairman added that many of the farms were on the oolite formation. Mr. Rowan said, a very cheap method of supplying phosphate to the land, was by the use of coprolites, which could be obtained from Essex and the eastern parts of England. They contained about 80 per cent of phosphate of lime. The Chairman feared that Herefordshire was at too great a distance from Essex. Mr. Rowan replied that they might be got to Gloucester by rail at a cheap rate, and thence to Hereford by canal. After some further discussion, the meeting arrived at the following decision:—'It is considered that much may be done to improve the milking properties of the Hereford cattle intended for the pail, if made to calve in the month of May, and at about two years old, and if due regard was paid to the herbage and the management of the milking. That the Hereford cattle are considered superior to those of any other breed, in so far as they combine the aptitude to fatten with their character of milkers. It is also observed that the pastures of the county of Hereford, from the deficiency of phosphate in a large portion of the districts are not well adapted for dairying.'"

### DEEP PLOWING,—PREPARING SEED WHEAT.

Eds. Rural:—As deep plowing is now deservedly all the rage among most farmers, permit me to describe how I plow deep with my ordinary team, and am not obliged to use "three yoke of cattle" to plow a furrow twelve inches deep.

I got my blacksmith to make me a clevis much like an ordinary plow clevis, excepting that the forward part (where are the notches for setting the plow deep or shallow,) was made wider on one side. This, instead of being put on the plow beam in the usual way, or perpendicularly, was put on flat ways with the ground, or horizontally. By having several holes for the small pin, I could set it deep or shallow, as I pleased. Then, by placing the chain or whiffletrees in the middle of the beam, I went once around, plowing a furrow seven inches deep in the usual manner. It was then but the work of a moment to alter them to the outside notches, so that the plow would again follow in the same furrow five inches deeper. Some of this furrow would fall back again, but all the better, as it would be loosened and the poor soil not turned out. I prefer this in ordinary cases to having the whole depth turned out at once, even if I could raise team enough to plow that depth,—and I find that one team will plow a twelve inch furrow in this way, as easy as three teams will when plowed at once.

The season for sowing wheat is at hand, and most farmers now brine and lime their wheat previous to sowing. Those who take the old method of preparing brine in a barrel and putting the wheat in, a bushel at a time, know that this is "no feel of a job." Some of your readers may not know that it does as well to spread the wheat on a barn floor and sprinkle salt upon it, at the rate of about six quarts to every ten bushels of wheat, and then wet it with water. The water quickly dissolves the salt, when lime or plaster may be put on in the usual way. To those who are not aware of this, it will be worth one year's subscription to the Rural New-Yorker. F. W. L.

Greece, N. Y., August, 1853.

### NEW INSECTS.

Not a year passes over but what we hear of the depredations of some new and heretofore unknown insect, grub, or worm.—Some varieties appear in great force one year, threatening a general sweep of devastation; the next, contrary to all expectation, they are heard of no more. What law of nature governs in such cases it is difficult to determine. The measuring wheat worm of ten years ago, and the appearance of the grasshoppers in countless myriads, and then their disappearance for years, are familiar cases in point. The cut-worm, curculio, rose bug, melon bugs, orchard caterpillars, bee moth, weevil, *et id omne genus*, seem to multiply and increase with their ability to find sustenance.

What is to be the final result, with only man to fight against prolific and redundant nature, is difficult to foresee—for one-half of these marauders, no bird or reptile will touch. And for aught we know, there will come some insect that will prey upon man; in fact, it is said that such an one prevails in some quarters already, one that not only silently and certainly saps the constitution, but inflicts a dreaded disease known as the *dreadful dreamings*. It is called in these parts the *worm of the still*. *

### POLAND OATS.

Mr. A. Dryer, of Brighton, near this city, has shown us several stalks of Poland oats, just harvested, the size and general appearance of which are worthy of notice. The stalks are quite large and stout, and about 5½ feet in length—one of them measuring nearly six feet. Though both the straw and kernel were very heavy, none of the grain was lodged. Mr. D. grew about an acre, and is greatly pleased, and withal astonished, at the result. On counting he found that the heads average from 30 to 40 more grains than our common oats. He is quite confident that the acre will yield from 75 to 80 bushels, notwithstanding the dry season. In his opinion the Poland will yield at least one fourth more than the ordinary oats.

This result certainly goes to confirm what has heretofore been said in favor of these oats, yet we should like to hear from others who have experimented with them the present season. The comparative value and superiority of the Poland over common varieties, can only be arrived at by comparing the results of different experiments.

The United States Agricultural Society have employed the artist Lossing to sketch a view of Mount Vernon and objects of interest there including the celebrated carved mantle, sculptured with agricultural devices. The society are intending to ornament a diploma of membership with the sketches.

### DESTRUCTION OF BUSHES.

Now is the time to destroy bushes, briars, thistles, &c., and all particularly interested, or afflicted, should at once commence a war of extermination. Both farm and highway are too often desecrated with these nuisances, and it behooves every cultivator who looks to profit and neatness to give the matter seasonable attention. The following article from the last number of the *Boston Cultivator*, is to the point:

In many places there are grounds which cannot well be plowed, that afford tolerable pasturage if not too much occupied by bushes. The shrubs which are inclined to grow in these situations, are alders, briers of several kinds, whortleberry bushes, &c. Where these are permitted to grow, they prevent the growth of grass to a great extent, and make that which does grow sour and worthless.

The mode usually adopted for killing bushes in such circumstances is to mow them. The efficiency of this has been found to depend much on the time of the year in which the work is done. Cutting in winter seems to have little effect towards destroying them; they start with the return of spring and grow rapidly. The effect is nearly the same if they are cut while the foliage is developing. All trees and shrubs make their annual growth in a few weeks from the time of putting out leaves. During the remainder of the season the wood hardens, and the buds for next season's foliage are set. The juncture when the leaves have attained their full size and the growth of the season is checked, is sometimes called the "turn of the sap."—The vitality of many plants is greatly impaired if they are cut at this time. But with other species, cutting at another period—the last of August—is more fatal.

It has been for a long time the popular belief that some shrubs, if cut in the old of the moon in August, when the sign was in the heart, would "bleed to death." Whether the moon or the sign have anything to do with the matter or not, we believe the fact has been proved that the effect of cutting many shrubs the last of August, is more destructive to them than if the work is done at any other time.

The black alder usually grows in moist rich ground, such as is very natural to grass. From their rapidity of growth they soon occupy the ground to the exclusion of other vegetation, and appropriating the best soil to their use, they occasion much loss. Attempts are often made to eradicate them which do not succeed, and this produces discouragement, which induces the farmer to allow them to grow unmolested. The results of trials at cutting alders at various seasons of the year, have proved that the time above mentioned is preferable. We might cite much evidence in support of this, but perhaps what we have already said may induce some to undertake the work.

In killing briers and small bushes, *bruising* sometimes answers better than cutting. A tool called a "bush-whacker" has been used for this purpose. Briers and whortleberry bushes may be kept down by sheep, after having been closely cut with a scythe. It is necessary, however, to stock heavily, in order to compel the sheep to eat the bushes as soon as they start. If the bushes are closely kept down for a year or two, the grass will spread and form so close a sward, on good land, that the bushes will have little chance to grow. It is important that when the work is once begun it be followed up. Once mowing may be partly effectual, but if the sprouts are not cut at the proper time the next season, the labor is in a great degree lost.

### CHEESE MAKING FROM A SMALL DAIRY.

We have received requests from several of our lady correspondents, to write a short article on cheese making, especially in reference to that large class of farmers who keep but few cows. It always gives us pleasure to comply with the requests of the ladies, especially of those who are good housekeepers—know how to milk a cow, make good butter and cheese, and cultivate a small flower-garden.

First rate cheese, can be made from a few cows, but it is attended with more labor in proportion to the amount made, than in a large dairy, inasmuch as the curd has to be made every morning and placed aside till you have sufficient to make a good-sized cheese. The milk is placed in a tub, and warmed to the proper temperature, (95 deg. Fahr., or about as warm as when taken from the cow) by adding a portion of heated milk. The rennot is then added, the milk well stirred, and afterwards let alone till the curd is well come. The time this occupies varies fifteen minutes to two hours, according to the amount of rennet, the temperature &c.—the better it is put together, and the more rennet is added, the quicker the cheese will come. As a general thing, the longer it is coming, the tenderer and sweeter will be the curd. If it comes too quickly, it is owing to an excess of lactic acid being formed from the sugar of milk; so that the curd has that hard, tough, white appearance, that is the case when the curd is precipitated by vinegar, or any other acid; but, if there is a very slow formation of lactic acid, the curd is gradually precipitated in flocks, less dense, and very sweet and tender. It is then broken up quite fine, either by hand or a curd-breaker made for the purpose, which cuts it into very small pieces. After this, it is allowed to stand and settle. The whey is then drawn off and passed through a sieve, to remove any curd there may be in it. The curd is then placed in a strong cloth, and well pressed to remove the whey. It is then placed in a cold place, and the operation repeated daily—or every other day, if the milk will keep sweet, as it will in the fall—till there is curd enough to make a cheese of the desired size. When the right quantity is obtained the curd is all broken up very fine, salted and well mixed. In putting the curd in the vat to be pressed, a cloth sufficiently large to cover the whole cheese is placed in the vat, and into this cloth the curd is put.—When the curd has filled the vat, a "fillet" (usually made of sheet tin, and from three to six inches wide, and sufficiently long to lap over four or five inches when placed round the cheese,) is placed inside the vat for an inch or so, and the cloth drawn up straight, so that when being pressed the fillet will not cut it. The whole of the curd is then put in, the cloth turned over the top of it, a smooth board placed over this and then it is ready to press. After it has been pressed for some time, it is taken from under, and punctured all over with a skewer, either of wood or iron. Place it on the press again, until it has become sufficiently consolidated to take out of the vat without falling to pieces. It must then be turned, or inverted in the vat, and a clean cloth put round it. Place it again under the press, occasionally turning it and putting round it fresh cloths, till the cheese when pressed does not wet them. It is then all right, and should be kept in the dairy, or other cool, damp place, for a few days, placing a little salt round it, when it may be taken to an upper room, where it will require turning very frequently, or the side next to the floor will mould. Let the room be dark and well ventilated.—*Western Agriculturist.*

### CLASSIFICATION OF SOILS.

The want of some system of classifying soils, has long been felt. The arbitrary terms in common use, convey no definite idea of the subject. A writer in the Farmer's Magazine recommends a classification based on analysis. We are not prepared to say that this mode is at present practicable, but it is at least worthy of attention. His plan is as follows:

1. *Siliceous soils*, containing from 90 to 95 per cent. of sand. These would be divided, on the same principle, into blowing sand, coarse sand, good agricultural sand, and calcareous sand.

2. *Loamy soils;* 70 to 90 per cent. of sand separable by washing, subdivided into coarse sandy loam, fine sandy loam, loam, rich loam and calcareous loam.

*Clayey soils*, with 40 to 70 per cent. of sand; divided into clay loam, clay, and calcareous clay.

Each of these soils, termed calcareous sand, calcareous loam, &c., contains 5 per cent. of lime.

*Marly* soils constitute a fourth group, in which the proportion of lime ranges between five and twenty per cent., and are divided into sandy marls, loamy marls, and clayey marls.

*Calcareous* soils contain more than 20 per cent. of lime. They are divided into sandy calcareous, loamy calcareous, and clayey calcareous. While in calcareous sands, clays, and loams, the proportion of loam does not exceed 5 per cent. The difference of composition denoted by difference of name, is similar to the sulph*ates* and sulph*ites* of chemical nomenclature, which contain different proportions of sulphuric acid.

According to the quantity of pebbly fragments yielded by a square yard, or by a cubic foot of the soil, they may be denominated *gravels*, or *gravelly* sands, loams, and clays.

*Vegetable* soils vary from the common garden mould, which contains from 5 to 10 per cent: of vegetable matter, to the peaty soil, in which the organic matter is about 60 to 70 per cent. They will be vegetable sands, loams, clays, marls, &c.

Considered geologically, soils may be classed in three groups:

1. *Local* soils, or those derived exclusively from the debris of the rock on which they rest, unmixed with the materials of other rocks.

2. *Erratic* soils, containing the unmixed materials of several, and in many cases distinct formations, transported by currents of water which, at the close of what is called the tertiary period of geology, acted irrospectively of the present lines of drainage and sea levels.

3. *Alluvial* soils, composed of finely divided matter, transported and deposited by rivers and tidal currents, in subordination to the existing levels and lines of drainage.

### IT PAYS TO USE MANURE.

That it pays to use manure, the success of a farmer in Centreville, Md., abundantly proves. He purchased a farm in 1844, which had previously produced scarcely enough to support a family, and in the nine years which have since elapsed, he has used 10,998 bushels of ashes, 17,865 bushels of stone lime, and 9,700 of shell lime, besides street manure, in all costing $3,224 68. In 1844, the produce of the farm sold for $491 58, and it gradually increased until 1853, when it sold for $3,504 47. The sales for the nine years amount to $15,215 20, or $12,390 52 over and above the cost of the manure. At the rate of the yield of 1844, the aggregate sales of the nine years would have amounted to only $4,424 22, so that he has a clear gain from increased produce of $8,566 30, by the application of manure for nine years. The increase of labor employed should also be taken into account, but even then a handsome profit is shown from the use of these fertilizing materials.

These figures speak for themselves, and render comment scarcely necessary. An increase of over $3,000 in the produce of a single farm from the addition of manure, is certainly a convincing argument.—*Country Gentleman.*

### TO CLEAN CHESS OUT OF SEED.

The following seasonable directions and observations are worthy the attention of every wheat grower, and especially of such as believe in transmutation. They were communicated to the *Albany Cultivator* by John Johnston, of Geneva, one of the best practical farmers in Western New York:

To clean all the chess out, take the riddles out of the fanning mill, leave the screen in—take off the rod that shakes the riddles and screen; pour the wheat slowly into the hopper with a basket or a half bushel; turn the mill a little quicker than for ordinary cleaning, and every grain of chess will be blown out, unless where three chess seeds stick together, which is sometimes the case with top seeds.

If every farmer will clean his seed wheat in this way, I will warrant that wheat will never turn to chess after the land is once clear of it; but the difficulty will be to get the farmer to try it. It is too simple to be believed. I have seen some men who stand high as agriculturists, whom I could not make believe it, until I went to their barns and showed them that it could be done, and effectually. This fact itself is worth much to wheat farmers, if they will only try it.—Two men will clean from 10 to 15 bushels per hour. If the wheat is light say weighing 50 to 55 lbs. per bushel, considerable wheat will blow away with the chess; but with such wheat as we raise here, weighing from 60 to 64 lbs. per bushel, little if any of the wheat will be blown out. In some cases it is better to raise the hind end of the fanning mill about two inches from the floor; more wind can be given, and not blow away the wheat. Every man that tries this will find it answer, and every reader of your paper should tell his neighbor that don't read.

I have not raised a wine-glassful of chess in more than twenty years. Before that I had lots of it, and was sure wheat turned to chess.

A very extensive wheat raiser has agreed to come this fall, and make a part of one of my fields grow chess without sowing it, for which I have agreed to give him the remainder of my crop. He may destroy the wheat, but chess he cannot make of it.

### THE ARAB HORSE.

Layard, the explorer of Nineveh, who is as familiar with Arabs as he is with antiquities, gives in his late work on Assyria, some curious details respecting the true horse of the desert. Contrary to the popular notion, the real Arabian is celebrated less for unrivalled swiftness than for extraordinary powers of endurance. Its usual paces are but two, a quick walk, often averaging four or five miles an hour, and a half-running canter; for only when pursued does a Bedouin put his mare to full speed. It is the distance they will travel in emergency, the weight they will carry, and the comparative trifle of food they require, which render the Arabian horses so valuable. Layard says that he knew of a celebrated mare, which carried two men in chain armor beyond the reach of some Aneyza pursuers. This mare rarely had more than twelve handfuls of barley in twenty-four hours, except during the spring, when the pastures were green, and it is only the mares of wealthy Bedouins that can get even this allowance. The consequence is that except in the spring, the Arab horse is lean and unsightly. They are never placed under cover during the summer, nor protected from the biting winds of the desert in winter. The saddle is rarely taken from their backs. Cleaning and grooming are strangers to them. They sometimes reach fifteen hands in height, and never fall below fourteen. In disposition they are as docile as lambs, requiring no guide but a halter; yet in the flight or pursuit their nostrils become blood red, their eyes glitter with fire, the neck is arched and the mane and tail are raised and spread out to the wind; the whole animal becomes transformed.

The vast plains of Mesopotamia furnish the best breeds, and these breeds are divided into five races, of which the original stock was the Koheylch. The most famous belong either to the Shammar, or to the Aneyza tribes. Their pedigrees are kept scrupulously, and their value is so great, that a thorough-bred mare is generally owned by ten, or even more persons. It is not often that a real Arabian can be purchased. The reason is that, on account of its fleetness and power of endurance, it is invaluable to the Bedouin, who, once on his back, can defy any pursuer except a Shammar or Aneyza with a swifter or stronger mare than his own. An American racer, or even an English hunter, would break down, in those pathless deserts, almost before an Arabian became warmed up to its work. Where thorough-bred mares have been sold they have brought as high as six thousand dollars; but these, it is understood, are not the best of the race. The Arab who sells his mare can do nothing with his gold, and cannot even keep it, for the next Bedouin of a hostile tribe, who comes across his path, and who has retained his mare, will take it from him and defy pursuit. Layard thinks that no Arabian of the best blood has ever been seen in England. If this is so, we can scarcely suppose that any have come to America, but must believe the so-called Arabians, given to our government at various times, to be of inferior breeds. Rarely, indeed are the thorough breeds found beyond the desert. It will be a subject of regret, to those who admire fine horses, to learn that the Arabian is considered to be degenerating; the consequence of the subjugation of Arabia, and the decline of the Bedouin tribes.—*Philadelphia Bulletin.*

The Ontario County Fair is to be held at Geneva, on the 28th and 29th of September.

### LAWNS AND GRASSES.

Lawns connected with country houses will vary in extent from half an acre to several acres, as the case may be, although in this country of "land saving," there will be very little danger of getting the lawn too large, even if it should include twenty, thirty or forty acres in extent. Where the house and farm buildings can stand near the central point of the lawn, it will be better if it has a high and commanding aspect; however, that must depend on circumstances, as the highest point on the lawn will be the best for the buildings to stand upon, whether that be upon one side or central. It will be well, where the builder is designing a place for a new residence to select a point near or in the midst of a belt of forest trees. This he will find to be a great advantage over building on an open place where he has got to wait a short lifetime for small trees to grow up to make shade. In such cases, however, of barren points, some trees of a large growth should be immediately transplanted about the buildings.

As to the general management of lawns, it must vary according to the size, situation, circumstances of the owner, &c. Of course the general design of a lawn is to remain in permanent grass and growing trees. And in the first place, whatever the size of the lawn, whether it be one acre or twenty, we would have but one outside fence or enclosure. All cross sections of fences have a bad look and spoil the prospect. Wire or iron fences are the most substantial, look the best, and are the cheapest for a lifetime that can be built.

The laying out and preparing a lawn for seeding down to grass, requires a great deal of labor and judgment to have it well done. The land should be plowed deep, subsoiled and well pulverized; the surface should be made smooth with a fine teeth harrow and rakes. By this, we do not mean to pull down natural hills or conical knolls, to fill a natural valley or ravine. We should much prefer to have the land remain in its natural state as to form of surface or position. The kinds of grass seed to be sown should be a mixture of Red Top, Kentucky Blue Grass, and White Clover, sown with a liberal hand, and this to be covered with a fine teeth harrow, or hand rake, and the whole surface to be made smooth by the roller.

Where lawns are only an acre in extent, the after-cultivation can be done by shearing, or mowing with a lawn scythe. This tool can be had at any of the implement stores, and in the hands of a competent man, good work can be done. But mowing a swath with the ordinary scythe is one thing, and cutting or shearing with the lawn scythe is another business altogether. The grass should be cut once or twice a month through the growing season, and it should be cut even and alike; for it is only in this way that a close, tight sward can be obtained, and that after two or three seasons of experiment and growth. They understand this business better in England than we do, because they have done more at it, still we can by a little practice learn enough to answer all useful purposes.

Where the lawns are several acres in extent, the practice of cutting with a scythe would be laborious, slow, and expensive.—In this case, we think that the grass might be fed down by sheep. This could be done by enclosing the sheep with a cheap wire hurdle fence, to be moved over the lawn as the grass is fed down, and so after the ground is all gone over the first plat will be ready for the sheep again. Then the sheep would scatter their droppings, or manure, over the surface, and it being of such fine quality, it would be the best top dressing the lawn could have.—L. Durand, *in Horticulturist.*

### DRILLING WHEAT.

Edward Stabler, in his admirable essay on the advantage of drill seeding, states that after examining its results on some 800 or 1,000 acres, besides large experience on his own land, he finds there is not a single instance where it has not proved the most profitable, first, in the saving of seed, and secondly in the increased product of the grain, amounting to from one to six or seven bushels per acre. He thinks five pecks of seed drilled are equal to two bushels sown broadcast. He has known the increase, in one case, by careful comparison of the two modes, to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A vender offered a drill for the increase in a crop of fifty acres of wheat—to be determined by sowing a few strips broadcast for comparison. But before harvest the farmer preferred paying the hundred dollars, the price of the drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.

Potash as Manure.—Ashes or potash renders most of the humus soluble in water; consequently it produces a very marked and powerful effect, rendering vegetation for a while extremely luxuriant; but the evils that follow from too free use of this substance are very great, for the soil in a few years is deprived of vegetable matter and is rendered barren. Hence, it is absolutely necessary if you make free use of the ashes in the amendment of soils, that a constant supply of vegetable matter should be introduced into them, to furnish a sure supply of nutriment to the plants.—*Farm and Garden.*

Agriculture is the primeval, and the most noble employment of mankind. Without a knowledge of the principles of the science of this art, man would become an uncivilised barbarian, subsisting like the brute creation on a scanty supply of fruits and roots.

# Orchard and Garden.

## GRAPE CULTURE.

EDITORS RURAL:—On page 239 of your present volume, is an article by Mr. E. A. McKAY, on the culture of the Grape, which I have read with much interest and profit. If I recollect correctly, ten years ago last spring I bought two Isabella and one Bland Grape vine. The Isabellas were one year's growth from cutting. They were set in a row less than 7 feet apart, (too thick now for vines of their size;) the Isabellas are the most productive, and the best fruit. They loaded heavy with fruit the fifth year, and since then we have had a good supply. The circumference of the centre Isabella vine is 9 inches at the ground; the other has two branches and their united girth is near 15 inches. They both extend off in numerous branches, some of which are 50 feet in length, and loaded with fruit from near the ground, their entire length.

The best idea I can give of them is in the expressed opinions of those I have invited to view them. Some say the two Isabella vines have 15, others 20, and others 25 bushels of fruit on them. One gentleman from Canandaigua, after viewing them, said he would pay for a single vine, like one of them, in his garden $25. Another, from Lima, when I told him of it, said he would double the amount, for it would seen pay for itself at that.

I consider the only reasons why people, especially farmers, have not given more attention to the culture of the Grape, are, the want of a proper knowledge of the value of the fruit, how easy vines are multiplied from cuttings and layers, and the treatment they require to secure a good crop of fruit. Many fail by not using the knife freely and at the proper time. My two Isabella vines that have such a remarkable crop of fruit on them, were pruned about the 26th of last November, immediately after the leaves had fallen. I took off full two thirds of last years growth, which was cut into cuttings of the length of three joints, and made nearly 1,000. I removed the top soil in my garden, and laid them in, and covered with earth, where they remained till last spring. After giving away a quantity, and selling some, the rest were set out, and I now have growing from them over 770 vines. Nine tenths of them have formed roots. Some of them have grown 24 inches, with side branches starting out at each leaf; and the most remarkable thing is, one cutting has a cluster of grapes that bid fair to ripen.

While all other kinds of fruit are being destroyed by swarms of enemies, with me the grape has nearly escaped them—though I have had some mildew; but if Mr. McKAY'S preparation will prove a preventive, its application will be attended with but a small expense.

From close observation, I have come to the conclusion that with proper culture, in our latitude we shall suffer but little loss from mildew. I have always observed that those clusters that hang directly in the sun, the entire season of their growth, are seldom affected with mildew; and to effect their exposure I summer prune considerable, plucking the leaves and sidelings, as far on the young wood as the fruit extends. Yet, with my present views, I should question its being best to summer prune vines that are loaded with fruit so close as to start the growth of the next year's fruit buds. More perhaps on this subject next spring.

ALVIN WILCOX.

West Bloomfield, N. Y., August, 1853.

## THE STATE ON FRUITS.

MR. MOORE:—Accident brought to my notice a few days since, the two last volumes of the Natural History of this State, being the *tail*, it is to be hoped, of that most extravagant *shave*, the Geological Survey,—a mass of printed paper weighing some hundred pounds, and costing some hundreds of thousands of dollars, and of no more use to the great mass of the people, than so many *tomes* of black letter astrology; unless they have studied the *dead* languages and *live* sciences as a profession.

I did not mean, when I commenced this article, to say any thing in gross as to the work, as that has been commented upon "long time ago," by thousands who have given the subject any attention; but I was so struck with the *extraordinary knowledge* of the subject of the fruits now prevailing in this State, exhibited in the last two volumes, that I could not resist the desire to bring the subject before your readers.

The list of Apples described, I think, numbers 186, not fifty of which are now known and acknowledged as worth cultivation, as will be seen by looking over the Transactions of the Fruit Conventions, or consulting the lists of any respectable nurseryman or treatise on fruit culture. One dozen, or twenty at fartherest, constitute all the valuable qualifications now known of winter apples, and a half dozen each of summer and fall fruit. What is the propriety of describing, and giving costly colored plates, of fourth, fifth, or fiftieth rate fruits, at enormous expense?

It is said the bare coloring of the plates cost five thousand dollars, and done by boarding school misses at that. They are truly "painted to kill," and in such meretricious colors, as can only be found in the purlieus of the Five Points. Such pictures were never seen by nature in her *studio*, nor any where else, except by Mahomet in his seventh heaven; they do not exist on the earth nor under it. All of our best apples are grouped on two plates, badly drawn and worse colored, and without even the country sign painter's direction,—"This is the man, and this the horse."

I have no patience with the subject, and quit it with disgust; but I should like the opinion of JOHN J. THOMAS and P. BARRY, or other acknowledged Pomologists on this subject, whether I am an ass, or the State book makers. H. Y.

Rochester, August, 1853.

## NEW PEACH.

WE were shown a small basket of ripe peaches yesterday, (8th inst.,) by CHAS. L. PARDEE, Esq., that were raised on his farm in Webster, in this county, which from their early maturity we think deserve the attention of fruit growers and amateurs. The earliest known varieties worth cultivation in this region, are the Early Ann and Tillotson, and they hardly show any signs of ripening yet. This peach is of medium size, dark purple, very strongly ribbed on all sides, and yellow fleshed.

If this peach grows on a thrifty tree, and there is no extraneous cause for its precocity, it certainly merits the attention of those curious or interested in this fine fruit to the invegtigation of its habits—whether the leaves mildew or are subject to the curl. Mr. P. had it from New Jersey, under the name of the *Early Peru*—a name we have failed to find in any of the nursery lists, or descriptive fruit treatises.

## MULCHING.

WE believe there can be no extravagance in any praise bestowed upon the practice of mulching; especially in this climate is it most invaluable. We press the practice upon all, who have anything to do with trees, or with any vegetation that can be conveniently reached by the practice. The following remarks from one of our exchanges, we know not which, are very much to the point:

Mulching will promote moisture in the soil, even when neither artificial nor natural watering is given, simply by arresting such as rises upwards through the earth. In one instance, a striking illustration of this effect was furnished during a very long season of drought, which injured and threatened to destroy a row of newly transplanted apple trees. Their leaves had already began to turn yellow, and growth had ceased, but on coating the ground about them with a crop of mown weeds, a change was soon effected, and in three weeks the leaves had returned to their deep green hue, and in some instances growth had recommenced. But on no kind of tree is mulching more necessary than on newly transplanted cherry trees.—Thousands of these are lost every season, after they have commenced growing, by the drying heat of mid-summer, and the evil is sometimes increased by superficial watering. A deep mulching will generally prove a complete remedy if seasonably applied.

Some interesting facts on this subject were stated, and valuable suggestions made at one of the conversational meetings of the Massachusetts Horticultural Society.—S. Walker remarked that he had used tan, saw-dust, litter, leaves, &c., but he believed short, newly mown grass one of the best things.—he had mulched a great deal with it, and found it laid close to the soil. He also recommended the succulent weeds of the garden or roadside. He found tan and saw-dust to be useful merely by retaining the moisture. D. Hagerston had found sedge from salt marshes best, particularly if cut short; a good watering upon it made it lay close to the ground. He found it excellent for strawberries. He had also found tree leaves excellent, if they had partly decayed, so as not likely to be blown away.—Old hot-bed materials made of leaves and manure had proved particularly fine. Several spoke of the ill effects of too deep a mulching, but we think the more common error is in spreading the covering of the soil too thinly.

CHICORY.—Our correspondent, F. A. Nauts, urges the cultivation of this plant, Cichorium Intybus. In this vicinity, it is considered rather a noxious weed, which the farmers are anxious to get rid of. We doubt much if it will supply the place of a good cup of java. Von Thaer speaks of one objection to it in England, that they can't get the plow deep enough to destroy the roots when they want a rotation, and that it spreads very rapidly. Before introducing new plants, it is well to look at the facility of getting rid of them, in case of disappointment as to their profit. Dr. Darlington in his Flora Cestrica remarks, "it is justly ranked among the unprofitable intruders.—*Pa. Farmer.*

## DESTROY THE APPLE WORM.

THE present season will be a good time, to diminish the numbers of the apple-worm.

As there will not be so many apples as usual, of course there cannot be so many of these insects propagated, and an opportunity thus offers to thin off the numbers of the remainder, so that the apples which may grow another year, will not be so much infested with them.

There are several ways by which this may be done. One way, is to let hogs or sheep run into the orchard, which will be likely to eat the apples which these worms cause to fall and thus destroy them. Another mode is to gather up the windfalls, and either throw them over to the hogs, or cook them, and mix them with the swill that you feed to the hogs, and thus be sure to destroy them.

There is another way by which many of them can be entrapped and killed. These worms sometimes leave the apple while it hangs on the tree, and crawl down the trunk in search of some convenient place, to spin their cocoon, in which to undergo their transformation into a miller or moth state. If you place a woolen rag in the crotch of the tree, the worms in their journey down, will be very likely to come in contact with it, and finding it warm and comfortable, will be likely to crawl under it, and spin their cocoons there.

They can then be discovered by lifting up the cloth, and thus easily destroyed. It is worth some little pains to diminish their numbers at this time.—*Maine Farmer.*

## FRUIT TREES.

IF fruit dwindles in size, and becomes defective, and knotty, a scientific farmer knows that the earth needs phosphate of lime, one of the most necessary ingredients to a full and perfect development of fruit.

The scientific farmer would then gather *leaves*, and burn, or pulverize them, and after digging round his tree so as to expose the roots, put half a bushel of bone dust, leaves and leached ashes, mixed in equal portions, to each tree, and thus afford the material for a perfect development of fruit.

If peach trees dwindle, the leaves crisp, and curl up, or in other words have *the yellows*, they need *iron*. A man may as well live without breath, as a peach tree without iron. If the ground does not naturally furnish it, the owner must, or be disappointed in his hope of fruit. In such case go to the smith shop, or machine shop, and get the scales, or what is better, the iron turnings, and after digging away, round the roots, so as to expose them, apply one quart of *scoriæ*, or scales, or turnings, to each tree, a pint of salt, and a peck of leached ashes, and the curled leaves will give place to delicious fruit.

The yellows in the peach tree, is the same as the yellow water in the horse; both arise from a want of iron. Infuse that into the system, to act as a receiver of electricity, and the yellow water in horse, and the yellows in the peach tree are matters of history.—*Ohio Farmer.*

# Domestic Economy.

## PRESERVING PEACHES.

WE are confident of the thanks of every notable housewife for the following recipe for preserving peaches, which we obtained from the wife of an experienced fruit grower in this vicinity:

To twelve pounds of peaches, take six pounds of clean brown sugar, and one pint best cider vinegar. Simmer the sugar and vinegar together, which will make a clear syrup. Pour boiling water upon the peaches, and remove them in two minutes from the water, and wipe them dry without breaking the skin. Put them into the syrup and boil gently until the fruit is cooked to the stone. Keep the preserves in jars, which must be kept closely covered and in a cool place. They should be inspected occasionally, and if a white mould appears upon the surface of the syrup, it must be carefully skimmed off, and the syrup scalded and returned to the peaches. The peaches tried last fall were seedling variety, ripened the last of October. They were acid, but preserved the peach flavor in a high degree, which was retained by this method in the most perfect manner. This is the most economical, and, to our taste, the very best preserve we know of.—*Providence Journal.*

HOUSEHOLD MEASURES.—As all families are not provided with scales and weights referring to ingredients in general use by every housewife, the following may be useful:

Wheat flour, one pound is one quart.

Indian meal, one pound two ounces is one quart.

Butter, when soft, one pound one ounce is one quart.

Leaf sugar, broken, one pound is one quart.

White sugar, powdered, one pound one ounce is one quart.

Best brown sugar, one pound two ounces is one quart.

Eggs, average size, ten eggs are one pound.

Sixteen large table-spoonfuls are half a pint, eight are one gill, four half a gill, &c.

RECIPE FOR JOINING GLASS.—Melt a little isinglass in spirits of wine, and add a small quantity of water. Warm the mixture gently over a moderate fire. When mixed by thoroughly melting, it will form glue perfectly transparent, and which will unite broken glass so nicely and firmly that the joining will scarcely be perceptible to the most critical eye. Lime mixed up with the white of an egg forms a very strong cement for glass, porcelain, &c., but must be done neatly, as, when hard, the superfluous part cannot be easily smoothed down or taken off.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending Aug. 2, 1853.

James A. Bazin, of Canton, Mass., for improvements in rood musical instruments.

George W. Brown, of Tylerville, Ill., for improvement in seed planters. Ante-dated Feb. 2, 1853.

Lebbeus Caswell, of Harrison, Me., for improvement in seed planters.

Samuel R. Cline, of the District of Spring Garden, Penn., for apparatus to regulate the supply of water to steam-boilers.

H. B. Conant, of Geneva, Wis., for improvement in abdominal supporters.

Thomas J. Eddy, of Waterford, N. Y., for improvement in railroad car-wheels.

C. S. Boynton, of New York, N. Y., for improvement in a paper-ruling machine.

Joseph R. Miller, of Jersey City, N. J., for improvements in sub-marine tunnels.

Joseph A. Scholfield, of Westerly, R. I., for improvement in temples for looms.

John M. Reeder, of Memphis, Tenn., for improvement in the construction of steam boilers.

John R. Richardson, James Waterman, and Ebenezer Wilder, of New Castle, Pa., for improvement in machines for making spikes.

Ithiel S. Richardson, of Boston, Mass., for improvement in atmospheric telegraph and railway. Patented in England, December 7, 1852.

Stephen P. Ruggles, of Boston, Mass., for improvement in printing presses. Ante-Dated Dec. 2, 1853.

Nathan Thompson, Jr., of Williamsburg, N. Y., for improved mode of indicating the height of water in steam-boilers.

William Van Arden, of Poughkeepsie, N. Y., for improvement in machinery for making railroad chairs.

Stephen Waterman, of Williamsburg, N. Y., for improved mode of obviating the danger from steam-boiler explosions.

Jesse Young, of Franklin Furnace, Ohio, for improved arrangement of pipes for hot-blast pipes.

Austin O. Wilcox, of Philadelphia, Penn., for improvement in hot-air engines.

Jean Theodore Coupier and Marie Amedee Charles Melher, of Paris, France, for improvement in the manufacture of paper stuff. Patented in France, May 7, 1851.

Julius Herriet, of New York, N. Y., assignor to J. Gaylord Wells, of Hartford, Conn., for improvement in elastic type for printing on irregular surfaces.

George T. Parry, of Spring Garden, Penn., assignor to John Rice, of Philadelphia, Penn., for improvement in anti-friction boxes.

DESIGNS.

Julius Hobzer, of Philadelphia, Penn., for design for cooking-stoves.

Allen Gerould and John H. Ward, of Middletown, Conn., for design for a sewing bird.

## ELECTRO TELEGRAPHIC DEVELOPMENT.

THE extent of telegraphic communication completed and in operation throughout the world at the beginning of the present year may be estimated, as far as can be gathered from the returns, at nearly 40,000 miles.—Of this amount there were nearly 4,000 miles in Great Britain, of which 100 miles only were underground, with about 400 or 500 miles in course of construction in England, Scotland, and Ireland, and as many more projected. In America there were 20,000 miles of telegraph completed and in operation, with 10,000 more in process of construction, uniting in one great network the principal cities of the United States, the Atlantic and Pacific Oceans, and the extreme boundaries of that extensive continent.—In Europe there were about 11,000 or 12,000 miles of telegraph in operation and as many more projected or in progress. In Germany there were 3,000 miles completed. in Austria 3,000, and in Prussia between 3000 and 4,000 miles. France, until lately in the rear of other nations, is now extending her telegraph lines in all directions, her completed mileage at the present moment being small compared with that of other countries, her principal communications being those between London and Paris, Stratsburg and Marseilles. Russia has just commenced her system of telegraph between St. Petersburg, Moscow, and Cracow, and the ports on the Baltic and Black Seas. In addition to her existing lines between Naples and Gaeta, Italy is continuing the Neapolitan line from Terracina to Rome, so as to connect with the lines of Upper Italy.—Denmark has about 400 miles of telegraph; Belgium 500, and the Netherlands line has just been completed from Amsterdam to the Hague. About 400 miles are about to be constructed in India. Switzerland is introducing the instantaneous communicator, as well as other continental cities, so that the only unsupplied portions that will soon present themselves on a telegraphic map of the world will be Australia, Africa, and China.—*London Mechanics' Magazine.*

THE COTTON GIN.—Whitney, the inventor of the cotton gin, placed one upon his plantation in Georgia, the first that was used in Wilkes county, and perhaps the first in the State. He and his partner, Durkee, erected a gin house, into which women only allowed to enter. Mr. Lyon, who lived a few miles distant, by dressing himself in women's clothes, obtained an entrance, and after viewing the machinery made his improvement, the saw gin. Mr. Whitney got his first idea of the invention from a gin used to prepare rags for the manufacture of paper.

## SAILORS' ASSISTANT.

IT has often been a matter of surprise that sailors could brave the severe storms and succeed in reefing topsails, and performing other duties equally hazardous. It appears an important invention has just been perfected for the purpose of reefing sails, which claims among others the following advantages:

First: The topsail can be reefed from the vessel's deck, in the heaviest gales, by the watch on deck, rendering it unnecessary to call all hands for the purpose. Second: The topsail can be reefed without laying the sail aback, or changing the angle of the top sail yard—a most important consideration when beating in a narrow passage, or when it is an object to save time. Third: The reefs are made much snugger, stronger, and handsomer than by the old plan. Fourth: The topsail can be reefed in less than one-quarter of the time required by the old plan. Fifth: The weight of rigging aloft is lessened rather than increased. Sixth: The plan can be adapted to the present rig of vessels at small expense.

## ARTIFICIAL LEG.

THERE is the famous Anglesy leg, the redoubted Palmer leg, and the Yerger leg.—but that is not to say that no improvement can yet be made; we are certain that a good improvement has just been made in artificial legs by David B. Marks, of New York City, who has taken measures to secure a patent for it. This artificial leg is intended to perform all the movements of the natural leg in walking. In taking a step the foot is brought flat to the ground, with the perfect rigidity of the knee-joint, which is maintained until the ankle is bent by bringing the body forward, as the opposite leg takes the next step. This bending of the ankle leaves the knee free to make the slight bend which is necessary to raise the heel from the ground, and when the knee is thus bent the ankle becomes stiff, with the toe slightly raised to prevent its dragging during the early portion of the movement of the leg in taking the succeeding step, and it remains stiff until it is necessary for the stiffening of the knee and the depression of the toe to bring the foot flat to the ground, both of which latter movements are effected simultaneously. The improvement relates to the means or devices by which the movement of the knee and ankle-joints are controlled, and the necessary rigidity maintained during the cessation of these movements.—*Sci. Am.*

## AN EXTRAORDINARY DISCOVERY.

THE attention of men of science in Paris, has been drawn to an extraordinary discovery made in a neighboring department.—A grave-digger in throwing up some earth, came upon a body in a state of perfect preservation. On examination it proved to be that of an individual buried thirty-seven years ago. He had died from the effects of of the bite of a mad dog. The shroud and coffin had fallen to dust, but the body remained intact. This is the third exhumation made within twenty years, of the victims of hydrophobia, under similar circumstances; and it would really seem that they are beyond the reach of decomposition.—The registry of deaths was consulted and no mention of the embalment of the body was found.—*Exchange.*

[We do not believe this story, unless the deceased had been treated with arsenic to cure the disease.—*Sci. Am.*

## IMPROVED REST FOR PLANING IRON.

B. F. HAYS of Chicago, Ill., has taken measures to secure a patent for an improvement in the cutter rest for planing iron.—It consists, 1st, in employing a double-faced tool-rest, having the faces reversed and planers so arranged that one set will cut the reverse of the other; that is, one set will cut as the reciprocating bed which carries the work to be planed, travels forward, and the other set will cut while the bed is being moved backward. No time is therefore lost in waiting for the return of the bed, as in common iron planers, to take a new cut.—Whenever the bed or carriage commences to return, one planer is thrown out of operation, and the reverse plane is thrown into action.

THE CHROMATYPE.—The Chromatype, discovered by Mr. Hunt, consists in washing good letter paper with the following solution: Bichromate of potash, 10 grs.; sulphate of copper, 20 grs.; distilled water, one ounce. Papers prepared with this are of a pale yellow color; they may be kept any length of time without injury, and are always ready for use. For copying botanical oil specimens or engravings, nothing can be more beautiful. After the paper has been exposed to the influence of sunshine, with the objects to be copied interposed between them and it, it is washed over in the dark with a solution of nitrate of silver of moderate strength; as soon as this is done, a very vivid picture makes its appearance; and all the fixing these photographic pictures require, is well washing in pure water.

LAVA WARE.—This is the name of a new article of manufacture, made from iron slag the waste of smelting furnaces. A floor tile left in our office, looks as smoothly as polished and stronger than marble, and costs only about a tenth as much. After the iron is drawn off, the melted sand and clay, mixed with iron, which remains as waste, greatly in the workman's way, can be cast into tiles, urns, bowls, table-tops, and various useful things, at a very small cost. As a new thing, this is worthy the attention of those who are most interested.—*Tribune.*

# EXCELSIOR.

MUSIC BY T. H. BOWEN.

# Sunday Reading.

## HOMES OF THE DEPARTED.

If yon bright stars which gem the night
Be each a blissful dwelling sphere,
Where kindred spirits re-unite
Whom death has torn asunder here—
How sweet it were at once to die,
And leave this blighted orb afar,
Mix soul with soul to cleave the sky,
And soar away from star to star!

But, oh! how dark, how drear, how lone
Would seem the brightest world of bliss,
If, wandering through each radiant zone,
We failed to find the loved of this!
If there no more the ties should twine,
Which death's co d hand alone can sever,
Ah! then these stars in mockery shine,
More hateful as they shine forever!

It cannot be—each hope and fear
That lights the eye and clouds the brow,
Proclaims there is a happier sphere
Than this bleak world that holds us now:
There is a voice which sorrow hears,
When heaviest weighs life's galling chain;
'Tis Heaven that whispers, "Dry thy tears;
The pure in heart shall meet again!"

## THE THRONE OF SOLOMON.

The following account of a remarkable piece of mechanism is taken from a Persian manuscript called "The History of Jerusalem." It purports to be a description of the Throne of King Solomon, and if the details are correctly given, it undoubtedly surpasses any specimen of mechanism produced in modern times, notwithstanding the wonderful inventions that have taken place in every branch of science.

The sides of it were pure gold, the feet of emerald and rubies, intermixed with pearls, each of which was as big as an ostrich's egg. The throne had several steps; on each side were delineated orchards full of trees, the branches of which were of precious stones, representing fruit—ripe and unripe; on the tops of the trees were to be seen figures of plumage birds, particularly the peacock, the etub and the kurgos. All those birds were hollowed within artificially, so as occasionally to utter a thousand melodious notes, such as the ear of mortals never heard. On the first was delineated vine branches having bunches of grapes, composed of various sorts of precious stones, fashioned in such a manner as to represent the various colors of purple, violet, green, and red, so as to give the appearance of real fruit. On the second step, on each side of the throne, were two lions of terrible aspect, large as life, and formed of cast gold. The nature of this remarkable throne was such, that when Solomon placed his foot on the first step, birds spread forth their wings, and made a fluttering noise in the air. On his touching the second step, the two lions extended their claws. On his reaching the third step, the whole assembly of demons and fairies and men repeated the praise of the Deity. When he arrived at the fourth step, voices were heard addressing him in the following manner: "Son of David, be thankful for the blessings which the Almighty has bestowed upon you." The same was repeated on reaching the fifth step. On his touching the sixth, all the children of Israel joined them, and on his arriving at the seventh, all the throne, birds and animals, became in motion, and ceased not until he had placed himself on the royal seat, when the birds, lions, and other animals, by secret springs, discharged a shower of the most precious perfumes on Solomon; after which two of the kurgesos descended and placed the golden crown upon his head.

Before the throne was a column of burnished gold, on the top of which was a golden dove which held in its beak a volume bound in silver. In this book was written the Psalms of David; and the dove having presented the book to the King, he read aloud a portion of it to the children of Israel. It is further related, that on the approach of wicked persons to the throne the lions were wont to begin a terrible roaring, and to lash their tails with violence; the birds also began to bristle up their feathers, and the assembly also of demons and genii to utter horrid cries, so for fear of them no one dared be guilty of falsehood, but confessed their crimes. Such was the Throne of Solomon, the Son of David.

## PROSPERITY AND VIRTUE.

It is unfortunate for mankind, that these situations which favor pleasure, are too generally adverse to virtue. Virtue requires internal government and discipline; prosperity relaxes the mind and inflames the passions. Virtue is supported by a regard to what is future; prosperity attaches us wholly to what is present. The characteristics of virtue are modesty and humility; the most common attendants of prosperity, are pride and presumption. One should think that prosperity would prove the strongest incitement to remember and to honor that God who bestows it. Yet such is the perverseness of human nature, that it proves much oftener the motive to impiety. The changes of the world call the attention of men to an invisible power. But a train of events proceeding according to their wish, leads them to nothing beyond what they see. The Supreme Giver is concealed from view by his own gifts. This instance of success they ascribed to a fortunate occurrence of worldly causes; that acquisition, to their own skill and industry; unmindful of Him who from the beginning arranged that series of causes, and who placed them in circumstances where their industry could operate with success. From forgetting God, they too often proceed to despise him. All that is light or giddy in their minds is set in motion by the gale of prosperity. Arrogance and self-sufficiency are lifted up, and their state is considered as secured by their own strength.—*Dr. Blair.*

# Educational.

## AN ESSAY ON WORDS.

Some one has remarked, as truly as sententiously, that "Words are things." The perpetual utterances that greet our ears, though they are sent forth oftentimes at random, and seem to perish even in their birth, are yet, when viewed aright, of weighty importance. They are more than mere agitations of the air — more than empty sound — more than an impression made on the organs of hearing. They afford an index to the character of the speaker, and influence deeply, for weal or woe, the passive hearer. Though they pass from memory, they have reached that Omnipresent ear which no sound escapes, and, at a future day, will all be made to pass in review before the thoughtless utterer. "By thy words thou shalt be justified, and by thy words thou shalt be condemned."

How often has the fate of a whole lifetime depended on the utterance of a single word! Who has not seen a man, one perhaps of more than ordinary abilities, whose fevered brain has been turned, and he made a poor shiftless *thing*, without purpose or energy, solely because one whom he doted on as his life, spoke to him a contemptuous *"No!"* That fatal word annihilated his hopes, and struck out the sun from his day of mortal existence. By a word, sworn friends have been alienated forever. By a word, feuds have been engendered, that were not quieted till long years of blood and carnage had desolated whole regions. A word spoken in jest has often inflicted a heart-wound, that has healed not this side of the grave. And a kind word has more than once unsealed the long pent up fountain of affection in some neglected outcast, and from that moment a new spirit has animated the degraded one; — the power of ignorance and vice has been broken, and nobler influences have thenceforth controlled the aspiring soul. Reproachful words have struck upon the ear of the dullard, and indications of genius have followed the stroke, as the heated iron scintillates under the blows of the smith's hammer. The words of some impassioned orator have decided again and again the fate of nations. The pleadings of some earnest advocate have more than once completely overborne the strongest array of proof, and elicited from the excited jury a favorable verdict. A listener to one of the masterly orations of Webster, remarked that "every word weighed at least twelve pounds." Such force and efficiency does language possess, when it is controlled and guided by a giant mind.

But vast as is the influence of spoken words, it becomes as nothing when compared with written ones. Penned far back in the regions of antiquity, they have been borne down on the stream of time, speaking anew to each generation, and exerting their influence on myrads whom the writer's voice could never have reached. The tremendous outpourings of eloquence from Demosthenes, and copious flow of argument and persuasion from Cicero, move us in this nineteenth century as they moved the listeners ages since. The grand epic of Homer, and the sweet pastorals of Virgil inspire and tranquilize us as they did generations that perished long ago. And still their mission is not ended. Till men cease to pursue the study and cultivation of letters, their power will continue to increase and their influence widen.

No philosophical study is more interesting or important than Philology; since by it we learn the derivation and history of words, thereby having opened to us a rich field of investigation and research. Words, as well as men, have their history, and it is exceedingly curious to trace them from their origin, through their various transformations, either to the period of their becoming obsolete, or to the position and rank they hold at the present hour. And not only is this a curious study, but it is one of the first importance to the writer or speaker. No person can become a correct and forcible writer who has not a thorough knowledge of the precise meaning of the words he employs; neither can any one take rank as an effective orator, who has neglected to discriminate between the thousands of words in a language, so that he cannot fix upon the very ones that express just the information he would impart.

There is oftentimes an occult meaning wrapped up in common words, concealed from all but the inquiring scholar, that is at once evolved by a knowledge of their etymology, and which, when ascertained, throws a new interest around them. Some have undergone mutations, gradual and almost imperceptible at the time, until their original character has disappeared altogether. Others have taken a new meaning in consequence of their connection with some great event in the history of the human race. Ever and anon, new words are coined, not capriciously, but with reference to the acknowledged principles of Philological science, to meet the exegiences of the occasion. Again, there is a class that claim no affinity with their fellows, the puzzle of lexicographers and etymologists, which start into notice, no one can tell how or from whence, but which, nevertheless, so patly express a current idea, that they hold a firm position, despite their illegitimate origin. A little volume recently published, entitled "*The Study of Words*," from the polished pen of an English scholar, Richard Chenevix Trench, is worthy the attentive perusal of every one, especially of writers for the public. It contains sufficient information to set the thinking student on the track of more extended and recondite inquiries, that cannot fail to richly reward the diligent searcher.

It links us more closely to the past, to know that this and that and the other word, used by us daily in the intercourse of life, once formed part and parcel of the noble Roman tongue; that another and another often fell from the lips of the refined and philosophic Greek; that Franco, with her conquring hero, bequeathed us a large variety; that Germany, with her Saxon innovators, largely infused strength, vigor and simplicity; and that not a few of the weightiest, expressed the thought of the Hebrew, as he worshipped in the magnificent temple at Jerusalem, or listened to the thunder-voice from Sinai, or perchance held converse with Abraham, Noah, or Adam.

Lockport, N. Y., 1853. J. W.

## REGISTRY OF PERIODICAL PHENOMENA.

The following observations on the registry of periodical phenomena have been issued in a circular by the Smithsonian Institution:

The Smithsonian Institution, being desirous of obtaining information with regard to the periodical phenomena of animal and vegetable life in North America, respectfully invite all persons, who may have it in their power, to record their observations, and to transmit them to the Institution.—The points to which particular attention should be directed, are, the first appearance of leaves and of flowers in plants; the dates of appearance and disappearance of migratory hybernating animals, as Mammalia, Birds, Reptiles, Fishes, Insects, &c.; the times of nesting of birds, of moulting and littering of Mammalia, of utterance of characteristic cries among reptiles and insects, and anything else which may be deemed noteworthy. The Smithsonian Institution is also desirous of obtaining detailed lists of all the animals and plants of any locality throughout this continent. These, when practicable, should consist of the scientific names, as well as those in common use; but when the former are unknown, the latter alone may be employed. It is in contemplation to use the information thus gathered, in the series of tables, showing the geographical distribution of the animal and vegetable kingdoms in North America.

## A WORD TO BOYS.

We find the following "word to boys" in one of our exchanges, and particularly recommend its perusal to our young readers. Get it by heart, lads:—"Who is respected? It is the boy who conducts himself well, who is honest, diligent, and obedient in all things. It is the boy who is making an effort continually to respect his father, and to obey him in whatever he may direct to be done. It is the boy who is kind to other little boys, who respects age, and who never gets into difficulties and quarrels with his companions. It is the boy who leaves no effort untried to improve himself in knowledge and wisdom every day—who is busy and active in endeavoring to do good acts towards others. Show me a boy who obeys his parents, who is diligent, who has respect for age, who always has a friendly disposition, and who applies himself diligently to get wisdom, and to do good towards others, and if he is not respected and beloved by everybody, then there is no such thing as truth in this world. Remember this, little boys, and you will be respected by others, and you will grow up and become useful men."

If you wish to have care, perplexity, and misery, be selfish in all things; this is the short road to trouble.

# Natural History.

## NATURAL CURIOSITY.

We were shown the other day by Henry A. Meetze, Esq., of this village, one of the most beautiful fowls we have ever seen or read of. We need hardly attempt a description. It appears to be a cross between a pea fowl and a guinea fowl, and resembles also the game fowl. Each and all these species have a showing in the picture, and yet, strange to say, you cannot for the life of you identify the family or families to which it belongs, or its gender.

The bird is about the size of a half grown pea fowl, made a good deal after that form, with a back and head that looks as much like the pea as guinea fowl and yet it is said there is not a pea fowl within five miles of where it was raised. The sides or wings are of the game fowl color, and the breast the color of the swamp owl. The feet are those of the guinea, but the legs look unlike anything of the kind we recollect ever to have noticed, being dark and perfectly knotty. It makes a loud shrill noise when approached which cannot be likened to one species, but which indicates distinctly its varieties. It is perfectly formed and very sprightly. There is another color of which it partakes, and which we forgot to mention in place, which is the wild turkey. It was hatched by a common dung-hill hen. Mr. Meetze, after keeping it several days so as to give an opportunity to the curious of the village and country of seeing it, prepared a neat, comfortable cage and started it in care of Col. A. G. Summor for the World's Fair.—*Lexington Telegraph.*

## THE WATER BUFFALO.

The water buffalo is an animal much in use at Singapore, for purposes of draught. It is a dull, heavy looking animal—slow at work, and I think, disgusting in appearance; but remarkable sagacity and attachment to its native keepers. It has, however, a particular antipathy to a European, and will immediately detect him in a crowd. Its dislike to, and its courage in attacking the tiger, is well known all over India. Not long ago, as a Malayan boy, who was employed by his parents in herding water buffalos, was driving his charge home by the borders of the jungle, a tiger made a sudden spring, and seizing the lad by the thigh, was dragging him off, when two old bull buffalos, hearing the shriek of distress from the well-known voice of their little attendant, turned round and charged with their usual rapidity. The tiger, thus closely pressed, was obliged to drop his prey to defend himself. While one buffalo fought and successively drove the tiger away, the other kept guard over the boy. Later in the evening, when the anxious father, alarmed, came out with attendants to seek his child, he found that the whole herd, with the exception of the old buffalos, had dispersed themselves to feed, but that they were still there—one standing over the bleeding body of their little friend, while the other kept watch on the edge of the jungle for the return of the tiger.—*Peppel.*

Canary Birds and Canary Seed.—The Boston Atlas having mentioned that during last year 56,000 bushels of Canary seed were imported, costing $13,500, a writer in the Journal of Commerce adds the intelligence that 41 000 canary birds are annually imported, costing $17.360, making a total of nearly $31,000 for birds and their feed.

# Miscellaneous.

## RURAL ANECDOTES.

ORIGINAL AND SELECTED, DOMESTIC AND FOREIGN.

"A story in which native humor reigns,
Is often useful, always entertains."—*Cowper.*

ACHIEVMENTS OF SCIENCE.—Lord KAIMES the distinguished auther of Elements of Critizism, and other works, was one of the earliest improvers of Scottish husbandry, and a most enthusiastic farmer. One day in walking over his farm in company with his land steward, who was a disciple of the old school and much opposed to modern innovations on established customs, his lordship in descanting on the future achievments of Agriculture, finished by saying,—"I have no doubt, Sir, but the time is not far distant when a farmer will carry out to his field, in his waistcoat pocket, a sufficiency of manure to fertilize an acre of land!" The old steward stopped short, scratched his head and exclaimed,—"I ha'nna the least doubt o'it, ma lord; no the least doubt o'it; but when a farmer carries the manure of an acre out to his field in his waistcoat pocket, I'm thinkin' he'll easily bring hame the produce in his coat pocket!"

A MODERN FARMER'S WIFE.—A young lady, who perhaps is better acquainted with French than farming, was recently married to a farmer. In examining her new domains, she one day visited the byre, (cow house,) when she thus interrogated her milkmaid:—"By the bye, Mary, *which is the cow that gives the buttermilk?*"

A GOOD HINT BY A NOVICE.—A metropolitan tradesman paid a visit to his country cousin, who was a Scotch farmer. In walking over the farm the attention of the cockney cit was attracted to a particularly tall and verdant spot in a field of wheat. On inquiring as to the cause of the superiority of this spot over the rest of the field, the farmer said, carelessly, "O, its only where the *muck-midden* lay." "Muck-midden," repeated his southern relative, "why, what is that?" "Its what you English gents would call a dung heap," said the Scotchman, laughing. "I think," replied the Londoner, casting his eye over the dwarfish crop, "*it would be a good hidea to make it all muck-midden!*"

THE BEST FOR PLANTING.—A gentleman passing through a potate-patch observed an Irishman planting some potatoes. He inquired of him what kind he had there?—"Raw ones to be sure," replied the son of Erin; "if they were boiled ones they wouldn't grow."

THE PROSE OF AGRICULTURE.—A romance reading young man, from a large city, was one day passing a moorland farm which was half covered with furze and heath, and had a fine back ground of barren rocks and dark pines. He remarked to the farmer, who was grinding his way through ragged roots of stones—"A magnificent locality, Sir!—one of nature's triumphs!—an embodiment of poetry!" "O, yes," said the farmer, wiping the large drops of perspiration from his brow, "the poetry of the place is weel enough; but if ye had to plow up the proso o' my ground, ye would wish the poetry far enough."

COLERIDGE ON HORSEBACK.—Coleridge was a remarkably awkward horseman—so much so as generally to attract notice. He was once riding along the turnpike road, in the county of Durham, (England,) when a wag, approaching him, noticed his peculiarity, and (quite mistaking his man,) thought the rider a fine subject for a little sport, when as he drew near, he thus accosted Mr. C.—"I say, young man, did you meet a *tailor* on the road?" "Yes," replied Mr. C. (who was never at a loss for a rejoinder,) "I did; and he told me, if I went a little farther, I should meet a *goose!*" The assailant was struck dumb, while the traveler jogged on.

A SINGULAR IDEA.—Sir JOHN SINCLAIR when engaged with his great and useful work, "The Statistical Account of Scotland,"—the account of each parish being, in general, drawn up by the parochial clergyman,—wrote no fewer than four letters to an aged minister in the Highlands without being able to elicit a reply. The indefatigable Baront, however, penned a fifth letter written with *red ink*, which so wrought upon the fears and superstition of his reverence, that he immediately answered Sir JOHN'S letter, and in due time produced an able and interesting account of his parish.

HE "LISPED IN NUMBERS."—A young gentleman farmer, who lisped, having bo't some pigs, asked a neighbor for the use of a pen for a few days. Said he—"I have juth been purthathin thome thwine—two thowth and pigth. I want to put them in your pen, till I can find a place for them." "Twe thousand pigs!" exclaimed the neighbor, "why, my pen will hardly hold a dozen!" "You don't understand me Mr. Bent. I don't thay two thouthan pigth, but two thowth and pigths!" "I hear you," said Mr. Bent,—"two thousand pigs! Why, you are crazy!" "I tell you again," exclaimed the man angrily, "I don't mean two thouthand pigth, but two thowth and two pigth!" "Oh, that is what you mean, eh? Well, then, the pen is at your service."

CONCISENESS DESIRABLE.—A formal old gentleman finding his horse uneasy under the saddle, alighted and called to his servant in the following manner:—"Tom, take off the saddle which is upon my bay horse and lay it upon the ground; then take the saddle from the gray horse and put it upon my bay horse; lastly, put the other saddle upon thy gray horse." The fellow gaped all the while, and at last cried out—"Lack-a-day, Sir! could not you have said at once 'change the saddles?'"

## LOSS OF HUMAN LIFE BY WAR.

THE last number of the Companion to the Almanac contains a curious return, compiled from official sources, of the killed and wounded of the regular British troops in the military and naval actions from 1798 to 1815. The results exhibit a less amount of bloodshed than the popular imagination usually connects with great wars. The total number of killed was 19,795, of whom 1,160 were officers. The total number of wounded was 75,359, of whom 9,720 were officers. The proportion of the killed in the navy as compared with those in the army, is about one-fourth; but the wounded were in a much less proportion; a fact which would seem to imply, that the means of destruction is much more effective in the former branch of force. It would manifestly, however, be wrong to speak, in round numbers, of 20,000 lives as the total amount of loss by sea and land during these twenty-two years of war. We know not how many of the wounded never recovered, or had their lives shortened and embittered by the injuries they had sustained. We are also without any means of stating the number of missing, or of tracing their fates. It would probably be nearer the truth to speak of 40,000 lives sacrificed by the war. The actions of that warlike period were not of a sanguinary character during the first few years. For example, the loss of men in 1797 was only 38, three of whom were officers.—Even in the year of the arduous campaigns of Sir Ralph Abercrombie, in Egypt, the loss was no more than 507 men and 22 officers. In the years of the Peninsular campaigns, the numbers increase to 1,380 in 1809, which includes the slaughter at Corunna; and 1,628 in 1811, which saw the bloody encounters of Baressa, Fuentes de Onore and Albuera. The slain of 1818 were nearly 3,000. At Waterloo, there fell 171 officers, and 2,341 private men, while the wounded were respectively, 680 and 9,005.—*N. Y. Mirror.*

## WHERE IS ALL THE GOLD.

IN an elaborate article on the currency, it is stated that nearly six years have elapsed since the discovery of gold was made in California, and within that time at least two hundred millions of gold have been added to the currency of the world, from that single source, and from Australia, fifty millions of dollars. We estimate the aggregate addition to the gold currency of the world, within the past six years, to be about two hundred and fifty millions of dollars. Yet it appears, by official returns received from time to time from the great banking institutions of Europe and the United States, that there has been no increase in the amount of gold bullion or coin in their vaults. The total amount on hand is now no greater than it was six years ago. It has not, therefore, become the basis of the paper currency. The increased value of metallic currency must have passed from the mints into active circulation, or, at all events, into the hands of the people. Just so: the gold has passed into the hands of the people, and the people are making way with it. We met a friend, a few days since, with a bag containing $900 in gold coin, which he was hastening to have melted and metamorphosed into watch-cases. He was but one out of thousands all over the country who are "watching" their gold, and hence its absence on the solid basis of our wide-spread paper currency.—*Saturday Courier.*

## A JAIL IN INDIA.

BAYARD TAYLOR—the admirable correspondent of the N. Y. Tribune—visited the Agra Jail, Northern India, and among other things, gives the following account of the "exercises:"

"Here were hundreds of men seated at their looms, weaving carpets, singing the multiplication table in thundering chorus. '*Twelve times twelve,*' sang the monitor, in a shrill sole: '*one hundred and forty-four!*' burst out the chorus, in all sorts of voices. We went into the Blacksmith's shops, where the prisoners, by a refinement of punishment, were made to forge their own fetters, themselves fettered. '*Seven times sixteen,*' sang the solo, as he raised his hammer.—'*One hundred and twelve,*' was roared in answer, drowning the clang and bang of the iron. In the women's department, there was a shrill tempest of vulgar fractions: the cooks recited astronomical facts while mixing their rice. even the hardest cases confined in solitary cells were going through their 'a-b abs,' through a hole in the door to a monitor who was standing outside."

## THE NEW CARPET.

"I CAN hardly spare it, Jeannette, but as you have so set your heart upon it, why I suppose I must."

The young wife looked with rapture upon the ten shining gold pieces.

"One hundred dollars," she said to herself "how rich it makes me feel. It seems a great deal to pay for a carpet, but "gold worth is gold," the old saying is, and one good purchase is better than a dozen poor ones. I'll buy one of the very finest and most beautiful Brussels."

Afternoon came; the rosy babe was laid asleep in his cradle, and the little maid received a score of charges to linger by its side every moment till the darling woke up. Jeannette, finished with eager anticipation, looked her prettiest, and throwing a mantilla over her handsome shoulders, she was just hurrying away when a loud ring at the door brought out a very pettish "oh, dear!" and the expected intrusion.

"Oh, Jeaunette!—*dear* Jeannette!" and a pale young creature sank panting on the sofa. "We are in such a trouble—such dreadful trouble! Can you help us? Do you think we could borrow a hundred dollars from your husband? Couldn't you get it for us, Jeannette? You know you said I might always rely upon you when trial came, and poor Charles expects every moment to have his little stock of goods attached, and he is so sickly!"

"Dear, dear!" said Jeannette, her great good heart suddenly contracting! "Edward told me only this morning not to ask him for any money for three months;" and she gathered her purse up tightly in her handkerchief; "I'm sure if—I—only—*could* oblige you, I would; but I expect Edward is really hard pushed. You know he has just commenced business. Can't you get it elsewhere? Have you tried?"

"Yes," answered her friend, despondingly, "I've tried everywhere. People know that Charles is sick, and cannot repay immediately. Oh! it seems to me some creditors have such stony hearts! Mr. J—— knows just our circumstances, yet he insists upon that money. Oh! it is so hard! It is so hard!"

Her pitiful voice, and the big tears running like rain down her pallid cheeks, almost unnerved Jeannette's selfishness.

But that carpet—that beautiful carpet she had promised herself so long, and so often been disappointed of its possession, that she could not give it up. She knew her husband's heart—and that he would urge her to self-denial—no; she would not see him—if she did it was all over with the carpet.

"Well," said her poor friend, in a desponding voice, rising to go, "I'm sorry you can't help me; I knew you would if you could, and it is something to know that—but I go back with a heavy heart. Good morning, dear Jeannette; I hope you will never know what it is to want and suffer."

How handsome the new carpet looked as the sun streamed in on its wreathed flowers, its colors of fawn, and blue, and crimson, its soft, velvety richness—and how proud felt little Mrs. Jeannette at the lavish praises of her neighbors. It was a bargain, too; she had saved ten dollars in its purchase, and bought a pair of elegant window shades—a beautiful match for her beautiful carpet.

"I declare!" said her husband, "this looks like comfort; but it spoils all my pleasure to think of poor Charley Somers. The poor fellow is dead."

Jeannette gave a little sharp scream, and the flush faded from her face.

"Yes! that *rascally* J——! For the paltry sum of a hundred dollars, he attached every thing in the little shop, and was so insulting besides, that Charles, springing angrily up in his bed, ruptured a blood vessel, and lived scarcely an hour afterward. You knew he has been weak and sickly this great while."

"And Mary?" issued from Jeannette's bloodless lips.

"She has a dead child; and they tell me her life is despaired of. Why on earth didn't they send to *me?* I could easily have spared the money for that purpose. If it had stripped me of the last cent, they should have had it. Poor fellow—poor Mary!"

"And I might have saved it—*all!*" shrieked Jeannette, sinking upon her knees on the rich carpet; "oh, Edward, will God ever forgive me for my heartlessness? Mary did call here, and with tears begged me to aid her—and I—I had the whole sum in my very hand—and coldly turned her away. Oh! my God! forgive me; forgive me."

In the very agony of grief, poor Jeannette would receive no comfort. In vain her husband strove to soothe her; she would not hear a word in extenuation of her selfish conduct.

"I shall never forget poor Mary's tears; I shall never forget her sad voice; they will haunt me to my dying day. Oh! take it away—that hateful carpet; I have purchased it with the death of my dearest friend. How could I be so cruel? I shall never be happy again, never—never!"

Years have passed since then, and Mary with her husband lie together under the green sod of the church-yard. Jeannette has grey hairs mixed with the bright brown of her tresses, but she lives in a home of splendor, and none knew but to bless her. There is a Mary, a gentle Mary in her household, dear to her as her own sweet children—she is the orphan child of those who have rested side by side for ten long years.

Edward is rich, but prosperity has not hardened his heart. His hand never tires of giving out God's bounty to God's poor; and Jeannette is the guardian angel of the needy. The "new carpet," long since old, is sacredly preserved as a memento of sorrowful but penitent hours, and many a weary heart owes to its silent influence the prosperity that has turned want's wilderness into an Eden of plenty.

# For the Ladies.

Written for Moore's Rural New-Yorker.

## COUSIN ANNIE'S STORIES OF THE WEST.

BY PRUDENCE FAY.

"NOW, cousin ANNIE, you have had time to rest after your long journey," said the light-hearted LAURA WATSON; "so please tell us all about the West. Tell us of the prairie flowers, and the prairie beauties, if there are beauties who live in the bright glare of the sun, receiving the full benefit of each breath of wind. Tell us of the corn fields, for I have heard one would equal an eastern farm. And the pork, of which one farmer, produces as much as a whole settlement here."

"Well, girls, which will it be—first the flowers, and beauties, or the corn and pork."

"Oh! the substantials first; but you must know our curiosity is up, so you must tell us every thing," was the reply.

"Get your work, then; it is not good to be idle, even while we are telling stories, and I wish to finish this patch-work quilt, before my return. And beside, if you should sit idle it might influence me to do so."

"But," said Ellen Watson, "why do you make patch-work quilts? We have none, and mother says it is a waste of time."

"I will tell you after awhile why I make them,—and time thus spent is often better employed, than many other ways that daily excite our attention and observation. But the corn-fields come first. I have stood upon a rising ground, and without changing my position, have looked upon twenty-two thousand acres of corn."

"Twenty-two thousand acres?—surely cousin, you are joking."

"Not at all, girls. And should you ever stand upon an eminence where the corn is high enough to conceal the ground, you would not hesitate to pronounce it a beautiful sight. I have visited at a farmer's on the prairie where there were two thousand acres of grain in one field—one thousand five hundred in corn, the remainder in wheat and oats. The same farmer had fifteen hundred hogs fattening, and many have even more. Then the poultry; the yard was large, but every spot seemed alive. They seldom brought in less than a bushel of eggs each day. The prairie hens were nearly as plenty as the domestic fowls; the eastern farmers would have thought them very annoying, but there grain was so plentifully raised, that what they destroyed was not grudged them. Prairie chickens cannot be tamed. I saw a pen with more than a hundred in it, taken as soon as hatched, but were as wild as those on the broad plain. Autumn or spring flocks of wild geese are ever in sight, committing sometimes fearful depredations in the fields of wheat, for which, as a penalty, one always in those seasons occupies a conspicuous place on the well filled table, of the prairie farmer."

"It must be very convenient for those who are commencing on new farms to have fowls so plenty," said Laura; "but then fruit must be very scarce."

"In the newly settled portions, apples and peaches, and in fact all cultivated varieties, are,—but then delicious strawberries, and indeed berries of all kinds, grow almost every where; plum groves are frequently in the midst of a farm, fox grapes of the largest size are very plenty—so the farmers on those beautiful prairies know but little of the privations of those who settle in the timber.

We have this morning talked of the substantials, as LAURA calls them; so if you please we will talk of the flowers and beauties, another time,—and then I will probably explain to ELLEN, why we make patch-work in the West."

## KATE HUNTLEY'S EXAGGERATION.

"OH! there are thousands!" said little Mrs. Huntley, to her dress-maker, who was measuring silk by the yard, thousands and plenty."

Just then she caught a sly glance from her young husband, as he looked over his paper. She knew it was in rebuke for her exaggeration, so she said laughing—"I can't help it, William, 'if I was to die;' so just let me talk as I please; I don't hinder you."

William Huntley had never been pleased with this peculiarity of his pretty bride. The habit of exaggeration he know led to embellishment, and that to unscrupulous falsehood. Ever since their wedding day he had tried seriously to check this propensity. But alas! he found like many another lord of creation, that

"When woman won't, she won't,
And there's the end on't."

Never was the young and handsome Kate Huntley more voluble, or in better spirits than to-day. The magic of fine colors and rich silks, and the winning small talk of the little dress-maker, who was a droll genius in her way, had set her tongue on hinges, and she indulged her besetting habit with perfect abandon.

The Huntleys were to have a small party in the evening, and Mr. H. determined to try an experiment which he had long had in contemplation. So when the ladies had assembled, and the gentlemen were fast dropping in, with the rest came young Huntley, looking quite flushed and nervous.

"Why are you so late, Mr. Huntley?" asked his wife, looking up with meek displeasure.

"My dear, if it had been to make my last will and testament, I couldn't have come sooner," he said earnestly. "I've been working like a dray horse; thousands of clerks to oversee, twenty thousand cartloads to ship off, millions of accounts to attend, besides it's been hotter than six ovens all day."

By this time every eye was upon him—astonishment and mirth predominant; but our young husband took it coely, wiped his heated brow, and looked as unconcerned and innocent as if he had said nothing to attract attention; but his wife's rosy cheeks grew rosier.

"What do you think of L's new book?" asked a gentleman, as the conversation turned on literature.

"Heavenly!" exclaimed Huntley, rolling his eyes, and casting a half furtive glance towards his wife. "It sets me in perfect raptures—I feed on ambrosia—I drink nectar. If I could see the author I should certainly take my heart in my hand, and give it to him."

A smile went round the assembly.

"By the way, I've been round to Allen's new house," he added, following up his advantage. "Happy Allen! what a situation! Soft, balmy airs, blowing over a salt marsh loaded with vapors—a palace of a house—two stories high and painted yellow—glorious trees—cut down within a foot of the ground—splendid garden—with one rose-bush—and a wilderness of pig-weed—charming view—flats on every side—delightful pond—peeping here and there under the thick green scum and duck-weed—I should think Allen would be as happy—well, I can't think of anything less than a king."

By this time the company were pretty well initiated into Huntley's secret. The ladies laughed faintly, for they were every one of them guilty in a greater or less degree of hyperbole—as perhaps you may be, reader. They rallied, however, and jested with their tormenter, but he sustained his part admirably throughout the evening. Every song that was sung bid fair to set him in raptures. If he told the truth, he was intending to die twenty times—transported out of himself with joy twice as often; never was so delighted in all his life, every five minutes—and by the way he risked his thousands one would have thought him cashier of the bank of England. Everything was "sublime or horrible;" every woman "beautiful as an angel," or homely as a "hedge-fence."

In vain his pretty wife endeavored by all the masonic signs of wedlock, to stop her roguish husband; and she could scarcely keep her equanimity till the last guest had gone. Then she burst into a passion of tears, and "would not be comforted."

"Come, Katy, tell me how it all looked and sounded;" said Huntley, half relenting that he had vexed her so.

"You knew you looked ridiculous," she answered through her sobs; you know you mortified me *half to death.* I wish—mother—had—been—here, you wouldn't have dared to treat me so. I shall never *hold up my head* again in society. I thought I should die."

"Now Katy," replied her husband, despairing at the failure of his efforts, "how do you think you sounded yesterday, when you declared your neck was broken because you tripped over a brush—or when your dress-maker fitted your dress you said it was a *mile* too large; were not those expressions fully as ridiculous as mine?"

Katy reflected a moment. "I don't see as I can help it," she said pettishly, "I've talked so over *since I was born.*"

"Is there any need of such extravagance, Katy? come, let your good sense answer."

"Why no, I suppose not;" answered Katy, only pouting a very little, "but I can't help it; everybody talks so."

"Not everybody, Katy. Come, what shall I get you if you will only break yourself of this odious habit? I'll buy you a beautiful little pony."

"Oh, delightful!" exclaimed Katy; "I'd do *anything in the world* for such a gift—yes, I'll stop it if I have to *cut my tongue out!*"

"Oh! Katy, Katy, cried her husband, you are incorrigible."

But Katy *did* try, and may you dear reader succeed as well as she. — *Olive Branch.*

## INTERESTING TO YOUNG LADIES.

SHE stood beside the altar when she was sixteen. She was in love; her destiny rested on a creature in fashionable clothes with an empty pocket. He "came of a good family," however, and blood you know is something. She looked lovely as she pronounced the vow. Think of a vow from auburn hair, dark eyes, and pouting lips, only sixteen years old! She stood beside the wash tub when her twenty-fifth birthday arrived. The hair, the eyes, and the lips were not calculated to excite the heart. Five cross, young children were about the room, some crying, some breaking things, and one urging the necessity of an immediate supply of the lacteal secretion. She stepped in despair, and sat down, and tears trickled down her once plump and ruddy cheeks. Alas! Nancy, early marriages are not the dodge. Better enjoy youth at home, and hold lovers at a distance, until you have limb, muscle and heart to face the frowning world and a family. If a chap really loves you, he can wait two or three years, make presents, take you to concerts, and so on, until the time comes, Early marriages and early cabbages are tender productions.—*Williamsburgh Times.*

MOORE'S RURAL NEW-YORKER.

ROCHESTER, AUGUST 20, 1853.

**PUBLISHER'S NOTICES.**

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ FOR TERMS, &c., see last page.

## An Eventful Week.

IN some respects the past week has been one of the most eventful on record. The intense heat of the weather, and its fearful results, will long be remembered, It is unparalelled in the history of this country, if not of the world. The accounts published elsewhere of the dire effects of the heat in New York and vicinity, the recent murderous tragedies upon the railroads, and the ravages of the fearful epidemic in New Orleans, present a record of mortality which cannot fail of awakening most painful emotions in the mind of every reader.

—Truly, after perusing the chronicle of such heart-rending calamities, every home-abidiug denizen of the God-made country may well rejoice—not only that his "lines have fallen in pleasant places," but that he is comparatively safe from the catastrophes and epidemics which annually, aye, daily, destroy so many of his fellow men.

## The Celebration at Plymouth Rock.

IT has long been the custom of the decendants of the Pilgrims to celebrate the anniversary of their landing at Plymouth Rock. As is well known, the landing was effected in mid-winter, upon one of the most bleak shores of all the New Englaud coast. The anniversary celebration has heretofore been held at the same time of year, which has rendered it inconvenient and prevented the atteudance of thousands of the sons of the worthy Pilgrims. At the suggestion of Hon. EDWARD EVERETT, the Plymouth Society celebrated this year, not the arrival at Plymouth, but the departure from father laud, Delft Haven, Holland, which occnred on the first of August.

The preparations for the gathering were most ample and awakened the love of home which is ever a cardinal virtue in all true New England hearts. The "Sons of New England Society," of New York, accompanied by the Light Guards and Dodworth Band were out in great nnmbers. The people of Plymouth, and indeed of all parts of New England, helped to swell the throng. The project of erecting a monument uear the spot of the landing, at a cost of $50,000, induced thousands to visit the hallowed place. The streets at intervals were spanned with arches of evergreen, beariug appropriate mottoes and commemorative inscriptions, while from the houses and across the streets were flags, streamers, festoons and wreaths of flowers. The Antiquarian curiosities were also freely added to the other nnmerous attractions.

A simple service was performed in the Church which stands on the site of the one first erected by the Pilgrims, at which was sung the following original hymn written by E. H. SEARS, a youug Unitarian Clergyman of Mass:

Beneath the hallowed ground where now we tread,
New England's first and holiest martyrs sleep;
And ocean waves, to celebrate the dead,
Lift the eternal anthems of the deep.

And here their mighty spirits linger long:
They walk abroad through all the hallowed air,
And where a pulse for freedom beats more strong,
Know ye that Pilgrim blood is coursing there!

O ye, whose sacred dust on Burial-hill,
Kind mother Earth in holy trust contains!
Above the cause ye loved keep watchful still,
And roll your fire through all our langnid veins!

Then from New England's hills, afar and near,
A light shall stream in columns to the skies,
And like a new Aurora shall appear
Where'er a race in chains and darkness lies!

After the church exercises, a national salute was fired; when a procession formed, which passed through the principal streets and by the "Rock," entering a pavillion on the common, where a sumptuous dinner had been prepared. Richard Warren, a native of Plymouth, presided, and on the right and left, at the same table, sat Edward Everett, Charles Sumner, senators of Massachnsetts; John P. Hale, Governor Clifford, Rev. Dr. Wm. Adams, and Rev. Samuel Osgood, of New York; with various others of merely local distinction. Immediately in front were the venerable Josiah Quincy, and his son Josiah Quincy, Jr.

After dinner, the President of the day, opened the further proceedings in a neat but brief speech, and closed by stating that the citizens of Plymouth had subscribed six thousand dollars toward the proposed monument, to which one thousand had been added by MOSES H. GRINNELL, of New York. Speeches followed from EVERETT, SUMNER, HALE, and others, continuing until seven o'clock, P. M. The evening was enlivened by music and fire works, closing a day long to be remembered by the descendants of the Pilgrim Fathers. †

EDITORIAL CHANGE.—We observe that our friend, and occasional contributor, D. W. BALLOU, Esq., has retired from the Niagara Democrat. He is succeeded by CHAS. J. FOX, formerly of the Niagara Cataract. While we regret to part with friend BALLOU, (who, we believe, goes to Wisconsin,) we wish his successor a prosperous career.

## Intense Heat.—Terrible Effects.

FRIDAY and Saturday of last week were probably the hottest days ever known in New York, Albany, Rochester, and other northern cities. On Friday at 2 P. M., in this city different Thermometers marked 98, 99 and 100 degrees in the shade! Of course the heat was intense—tho' we hear of only one or two deaths from sun stroke in this vicinity. In New York, however, the effects were terrible—the number of deaths on Sunday alone reaching *one hundred!*

Many deaths have occrred in other cities, viz., 21 in Brooklyn, 10 in Boston, 13 in Troy, and about the same number in Albany. In Philadelphia, Baltimore, Williamsburg, Jersey City, Patterson, and other places, many deaths are also chronicled as the effects of the heat.

The *Tribune* of Monday says:—"Our reports give about two hundred and twenty sudden deaths during the past six days in this city and environs, from the terrific heat. Such a terrible visitation is unparalleled in the history of this country. We attribute this scourge to several causes:—First, heat; second, Alcohol; third, pestilential filth. The thermometer was above 100 deg. in the shade almost every day, and the heat endnred by those fully exposed to the sun was often as much as 115 degrees."

We condense the annexed from a more extended account in the same paper:

### Two Hundred and Twenty Deaths by Heat in New York!

THE frightful heat of the last week seems to have culminated on Saturday in a degree of heat more fatal than any ever before known, at least so far as the mortality thereby occasioned shows. The number is entirely unparalleled, so far as we know, in the history of the world. It is perfectly horrible, and betrays not only unequalled heat, but, in many cases, most unheard of carelessness on the part of the victims. [Here, in the Tribune, follows the appalling list.]

The above accounts, with those preceding for the week, number nearly TWO HUNDRED AND TWENTY DEAD, and FIFTY to SIXTY prostrated but not gone at the hour at which our reports closed.

The heat for the past six days has been most awful. In our publication office, a place with ten or twenty windows and doors, constantly open to the east, south and west, the mercury has ranged, from 9 A. M. to 4 P. M., from 90 to 102 degrees, and nearly averaging 90 for the remainder of the day and night; in our composing room, with fifteen open windows in the fifth story, and a free circulation of the air (when there was any) from all points, the mark has been from about 90 to 98, day and night.

From various accounts received, we should judge that at least a hundred horses have been killed in the meantime in this city alone. All sorts of business in the traveling line has been retarded; railroad trains delayed, omnibuses reduced to half speed, and pedestrianism brought almost to a stand still.

Another such a week would outrival in mortality the height of the Cholera of 1849.

The number of deaths last week is reported at 585; but the real number must have been at least 700—the heaviest mortality having occured too late to be included in Saturday's report.

Every city, town and hamlet in this neighborhood has suffered in like proportion, and even in the airiest regions of country (the Eastern bank of the Hudson) the complaint of the heat has been equal in all but deaths.

In the city last night, there was a small sprinkle of rain, and a most gratefully cooling breeze. We think the worst is over.

THE DROUTH AND THE CROPS.—A general want of rain is felt over this, the New England, and the Western States, with occasional local exceptions, where partial showers have refreshed vegetation. In many parts it has become excessively dry; the earth is parched, and summer crops nearly ruined. No rain has fallen in large extents of country to wet dry earth one inch since the 10th of June,—now more than eight weeks. In such localities early planted corn and potatoes must be a failure, oats and barley light, and the root crops, unless rain soon falls, will suffer severely. Buckwheat and English turneps are now beyond a hope in many parts.

Apples nearly a total failnre—killed in the blossom by the cold and wet spring, and yet without the agency of frost. Peaches a very moderate crop in this section—sufficient for the local markets, but will furnish few to send away. The peach crop is said to be a fair one at the East, and large in Ohio.

FATAL ACCIDENTS.—*Caution.*—Last week a Mr. GILBERT, of Brighton, was so severely injured by stepping into a threshing machine, that he died on Saturday. A boy was also killed, in Henrietta, a few days ago, by falling into a threshing machine while it was in motion—being literally torn to pieces. We also learn that Mr. JOHN MUDGE, (formerly of Wheatland, and father of A. G. MUDGE, Esq., of this city,) was killed in like manner while engaged in threshing in Livingston Co., Mich. Such fearful results should serve as a warning to all who work about threshers, or like machinery, to exercise proper caution.

GREAT FAIR IN ST. LOUIS.—A late number of the St. Louis Republican states that several gentlemen of that city are about to engage in the necessary arrangements for a great fair in St. Louis next year. It is in contemplation to embrace an exhibition of all the products of mechanical skill and industry—all inventions, for every purpose—all agricultural productions—every variety of goods and wares, without restricting their manufacture or production to any section of the country.

OVID ACADEMY.—The Fall Term of this excellent and popular Institution will commence on the 14th of September ensuing. The school is under superior management, and located in one of the most beautiful and healthy villages in the State. We can therefore confidently commend it to all interested. For terms, and other particulars, see advertisement.

## Horrible Railroad Tragedies!

LAST week three or more murderous Railroad Tragedies were perpetrated—two on Tuesday, and one on Friday. Commencing with the last and most fatal, we annex brief accounts of each. We condense the following from the N. Y. Times:

### Awful Railroad Accident—Fourteen Lives Lost. Thirty or Forty Seriously Injured.

Disagreeable necessity obliges us to shock the sensibilities of our readers by the recital of another terrible calamity from a collision of Railway trains.

At 8 o'clock, Friday morning, a collision occurred on the Providence and Worcester Railroad which caused the death of fourteen persons, and seriously injured about forty more. The collision occurred between the regular up train and the excursion train from Weetings. The latter was out of time, and met the up train at Valley Falls.

The collision occurred at a sharp curve beyond Centrall Falls; the down train was behind time, and proceeding at the rate of 40 miles an hour to reach the switch from which there is a double track to Providence. In one minute the train would have reached the switch. The up train waited the usual time at Pawtucket, and then, having the right to the road, proceeded at a slow rate round the curve.

The spectacle presented was most horrible.—The wreck of engines, both of which were demolished, and the killed and the wounded all lay together in one unsightly mass. The cars of the down train suffered most. Several were broken in pieces, and two of them were run together as you would close a spy glass. The up train received but little damage, and, fortunately, no persons in it were killed or seriously injured.

The excursion train consisted of six long passenger cars densely crowded; and the cries of those who were within, and who were not instantly killed, were heart rending. As they were taken out, some with broken arms and some with limbs and bodies otherwise mangled, the painfulness of the scene cannot be described.

There was soon a large number of persons on the ground, doing all they could to alleviate the sufferings of the wounded, and to see the remains of those who were dead properly cared for. The Boston train coming in stopped nearly an hour to render assistance. For a time, an intense excitement prevailed, and imprecations were hurled at the heads of railroad companies, directors, conductors, engineers, and all who are in any way connected with railroads.

The first passenger car, which was next to the engine, contained about thirty passengers, nearly all from Whittinsville, and many of whom were either killed or wounded.

The third car, on the downward train, was driven over and into that preceding it some twenty feet, crushing everything human within. The killed and wounded had to be dragged from beneath.

THE DEAD.—The names of all the dead have not yet been ascertained. The following however, have been identified.

Mr. Finney, Pastor of Grace Church, Providence; John Perkins, of Uxbridge, the fireman of the Worcester train. He leaves a wife and two children. The wife of S. S. Mallory, of Central Falls; W. Wood, of Northbridge; Mrs. Plaut, wife of Geo. Plant, of Whitinsville; Peter Plant, son of Geo. Plant; A Charlesworth, Thomas Brown, & Wm. Fullerlove, of Whitinsville; Mrs. Caroline Richmond, wife of John Richmond; Peter Rogers, of Milford, and his brother; Mr. Goldthwaite, of Uxbridge. The other names are as yet unknown.

### Dreadful Railroad Catastrophe!
*Five Persons Killed, and Twenty Wounded!*

ON Tuesday evening, 9th, a collision took place on the Camden and Amboy Railroad, between the Philadelphia and New York trains. Five passengers were killed instantly, some of the others were injured—it is feared, fatally. Both of the trains, it is said were out of time. Among the dead are two children of D. H. Durkin, Esq., of New York; an Irish woman, nurse of the children, name unknown. These were sitting together on one seat. Also, a German about 40 years of age, name unknown, and a returned Californian, also unknown.

Among the wounded are Wm. Relyea, of Union, Broome county; Joseph Davies, of Lewiston, N. Y. Wm. Relyea is wounded severely on the head, and it is thought he cannot recover. The number injured is over twenty. The passengers held an indignation meeting, and denounced the company and its officers.

STILL ANOTHER.—About 11 o'clock on Tuesday night (9th) the Express train over the New Haven Railroad ran against a rock weighing about three tons, which had fallen on the track near Portchester. The engineer, Theo. Humphrey, was instantly killed, and the fireman badly injured.—The locomotive, tender and baggage car were smashed, and a passenger car injured.

THE YELLOW FEVER AT NEW ORLEANS, is most appalling. We doubt if it was ever before equalled either in that or any other city in the United States. By a telegraph dispatch it appears that in *twenty-four hours* 237 persons were interred, of whom 194 died of yellow fever. During the *week* ending August 7th, the number of deaths was *eleven hundred and thirty*, of which 950 were by yellow fever.

The number of deaths by the same disease on Monday, August 8th, amounted to 204. This, in a population probably not exceeding 75,000, (for multitudes have left,) is an awful mortality indeed. The same number per week, if continued sixteen months, would extinguish the population entirely. None but the Omniscent can comprehend the heartrending sorrow connected with this appalling mortality.

FROM NEW ORLEANS.—The Delta, of the 3d, says:—"The Levee presents a scene of awful desolation. The bustle on the wharf is hushed—the animated crowd has departed, and no man knows whither. The ships are all gone, and a solitary steamer, whose straggling passengers seem afraid to land, finds an ample berth at the deserted wharf. No cabmen are there to importune you for a fare, for their calls are now to the grave. *Sick! Dying!! Dead!!!* These are the words on every lip. Opera music and dancing, seem sacrilegious now."

LATEST FROM NEW ORLEANS.—A telegram from New Orleans, dated 13th states that the total number of interments for the week ending at 6 A. M., furnished by the Board of Health was 1,518 of which 1,277 were of yellow fever, being an increase over the previous week by the epidemic alone, of 398, and a total increase of 467.

A despatch dated the 14th shows a slight abatement on the returns of Saturday, the cases of yellow fever being 153.

## Destructive Fire in Seneca Falls.

WE regret to learn that the flourishing manufacturing village of Seneca Falls was visited by a destructive conflagration on Friday evening last. The following particulars of the fire, which consumed property valued at over $50,000, we condense from the Seneca Co. Courier, Extra:

The fire broke out in the barrel factory of Messrs. YOUNG & Co., at about 7 o'clock, and speedily communicated to the adjoining buildings. Owing to the high wind and extremely hot weather of the preceding four or five days, the building burnt like tinder, and in an incredible short space of time property to the value of *Fifty-five thousand dollars* was destroyed. The principal sufferers are Messrs. Cowing & Co., Young & Co., J. Sackett, Gibbs & Milk, Howland, Westcott & Miller, and W. G. Oatman.

Nothing but the almost superhuman exertions of the citizens, aided most providentially by a slight shower of rain, saved the fire from crossing the river and laying a still greater portion of the village in ruins. A number of persons were more or less injured by over-exertion, falling of walls, &c. At least 150 persons are thrown out of employment by the conflagration.

The following are the individual losses, so far as ascertained:—W. G. Oatman, Globe Mill, $18-000—insured $9,000. Westcott & Miller, Sash Factory, $20,000—insured $6,000. R. Howland Plaster Mill, $3,000. Gibbs & Milk, Planing Mill, $1,000—insured $600. Nye & Young, Barrel Factory, $3,000—insured $1,500. J. Sackett, building, $3,000—insured $1,000. Cowing & Co., Pump Factory, $6,000 to $8,000—insured about $3,000.

## Opening of Trade with Japan.

WE have been surprised (says the Journal of Commerce) at the confidence felt by some of the officers of the Japan expedition that they should succeed in effecting a commercial arrangement with that country, hitherto closed to the commerce of Christendom, except Holland, and to the latter under many restrictions. Perhaps the annexed paragraph from a California paper will throw some light on the subject:

"A business transaction took place a few days since that is likely to be productive of important results in the history of the commercial world.—A purchase of 10,000 pounds of rice was made by one of our most respectable Chinese merchants, which it is proposed to ship to Japan on board the ship Hamilton, which is now under Chinese colors, having been purchased from her American owners by two wealthy Chinese merchants. The Chinese have long been on trading terms with the Japanese, and their vessels are allowed to enter their ports and trade. The undertaking is a novel one, and, in the event of its succeeding, it would not require the foresight of a prophet to predict a very sudden increase in the mercantile marine of China, which would soon be able to show as handsome a fleet of clippers as any nation in the world. It would not be strange were it to happen that the opening of the ports of Japan should be brought about by the Chinese who have settled in California. Indeed, we are strongly inclined to the belief that such will be the case, and that the world will yet have to acknowledge themselves indebted to California for it all. The powerful changes going on throughout the world—the result of the gold discoveries—are every day becoming more and more apparent, and it would not be presumptive to suppose that the ports of Japan would be as free to the world before three years as are those of China now."

A SINGULAR CASE.—A Miss Read, of West Boylston, took chloroform a few days ago for the purpose of having a tooth extracted, and after the operation was performed, she was attacked with severe pain in the head, became unconscious, and apparently died. Her friends supposing her dead laid her out for burial, and began to prepare for the funeral ceremonies: but their grief was unexpectedly turned to joy and astonishment, on finding that the supposed dead began to revive! She eventually recovered the full possession of her faculties; but what is still most singular in her case, as we are told, she suffers violent pains in her head as regularly as evening approaches, and at length, and about the same hour each night, falls into a swoon very similar to that which in the first instance was supposed to have been the sleep of death. This case certainly presents a most remarkable escape from premature burial.—*Worcester Trans.*

ARDUOUS FEAT.—English papers state that an American female, called by the romantic name o Miss Kate Irvine, has commenced at Sheffield, in England, the arduous task of walking 800 miles in as many consecutive hours, for a bet of £500. The lady pedestrian is described to be abont 30 years of age, tall, and of rather prepossessing appearance. Her carriage is remarkably erect. She wears the Bloomer costume—a straw hat, a jacket of thin black material, a light vest with bright buttons, a tunic silk skirt, and light boots. She started for the first mile at six o'clock in the evening, and accomplished it in 12½ minutes. The average time of each mile up to Thursday evening, varied from 12½ to 13 minutes, which, for a woman, may be considered really wonderful.—Nearly 300 persons paid a visit to the fleet-footed American on the first day.

THE AMAZON EXPEDITION is still in contemplation. The N. Y. Times' correspondent states that the parties interested, had a consultation at Washington three weeks since, and presented their scheme to the Cabinet, asking Government protection, which of course, was refused. Prominent New York merchants are the projectors of the enterprise. Their argument is that the countries owning navigable waters emptying into the Amazon, have a right to use the outlet of the river; and expeditionists propose to avail themselves of that right by the invitation of Equador, Venezuela and Peru. The answer to this by our Government is, that if those countries have a right to navigate the Amazon, it is not a transferable right.

CALIFORNIA PAPERS.—Since the conquest and settlement of California by American citizens, a surprising number of newspapers have sprung up in that State. Some have flourished and become firmly established. The last that has come to our notice is called "the Present and the Future," and is published by Dr. E. A. Theller, well known in this city. The foreman of this establishment, Mr. C. T. Wilson, is also from Rochester, having been foreman in the office of the Rural New Yorker. The paper is printed in both English and French, and presents a very handsome appearance.—*Roch. Dem.*

## News Brebities.

—— Mrs. Fanny Kemble (Butler) is reading Shakspeare in England.

—— The East Genesee Annual Conference is now in session at Elmira.

—— Richard Sutton has been selected Reporter for the Impeachment trial.

—— A regatta is to come off on Oneida Lake, during the month of September.

—— Capt. C. M. Cochran, of Oswego, was drowned at Detroit on the 6th inst.

—— There was a balance of $8,098,004 02 in the Sub-Treasury at N. York, on Saturday.

—— The People's College Association will meet at Owego, on Wednesday, the 27th inst.

—— Rev. Dr. Tucker, of Buffalo, has returned from an extensive and protracted tour in Europe.

—— The Rev. Mr. Hanson is now writing a book to prove that there is a "Bourbon among us."

Hon. John Knox, of Seneca county, late First Judge, died at Watertown, on Sunday, July 31, aged 70.

—— The Missouri delegation in Congress will stand four whigs to three democrats, including Benton.

——The contributions to the Washington Monument in the Crystal Palace have reached the sum of $1,200.

—— The highest tax paid in New York is by Wm. B. Astor, whose tax this year is something over $40,000.

—— Abraham W. Woodside, a celebrated Painter, died from the effects of heat in Philadelphia, on Monday.

—— The entire amount collected in New York city for the sufferers in New Orleans, up to Saturday, was $19,189.

—— About 9,000 tons of railroad iron, were received at Chicago in the month of July, sufficient to lay 100 miles of track.

—— The Syracuse Chronicle says twelve fugitive slaves passed through that city last week, on their way to Canada.

—— The village, town, and city population of the United States is 4,000,000. The rural population reaches 19,263,000.

—— A young eagle was caught in Orleans co., the other day. Its extended wings measured about seven feet from tip to tip.

—— The telegraph line from Portland to Montreal, by way of the Atlantic road, is rapidly going forward, and will soon be completed.

——The Congressional delegates of Tennessee, stand 5 Dem. and 8 Whigs. Stanton has been elected in the Memphis dist. by 6 maj.

—— A man in Thorndike, Mass,, recently won a wager on counting a half bushel of berries in five hours. The berries numbered 35,524.

—— The citizens of Baltimore have raised $6,-000, and propose to raise $10,000, for the relief of the New Orleans sufferers by yellow fever.

—— We learn from the Indianapolis Journal that Mr. Carey H. Boatright, of that place, was married for the *tenth!* time a few days since.

—— The Troy Times gives the names of twelve persons—all laborers—who died from the effects of the heat on Friday and Saturday forenoon.

—— A despatch from Nashville states that Johnson, dem., is elected Governor of Tennessee by 3,000 majority. The Legislature is whig.

—— The barn of Anthony Waterman, in Le Roy, was struck by lightning and consumed, with its contents, on Sunday evening. Loss, $2,300.

—— Last week, fifteen couple of fugitive lovers found their way to old Squire Shelton, at Aberdeen, Brown co., Ohio, and were married.

—— The stock of the Union Bank of Rochester is to be increased to $500,000. A Savings Department is to be connected with the Bank.

—— Arthur Spring, son of Spring who was recently executed at Philadelphia, has been appointed Messenger in the office of the Register of the Treasury.

—— A day or two ago in Boston, a gentleman purchased an antique piece of furniture, and on getting home found $250 snugly stowed away in a secret draw.

—— A letter from Surinam, dated July 16th, states that the slaves there are soon to be emancipated, and that one thousand Chinese Coolies are to take their places.

——Benjamin Mallory, a venerable soldier of the Revolution, and one of Gen. Scott's right-hand men through the whole war of 1812, died at Lockport on Tuesday week.

—— Mr. George Burrows has been elected Superintendent of that branch of the N. Y. Central R. R. heretofore known as the Rochester, Lockport & Niagara Falls Road.

—— Rev. Dr. Griswold, whose wife and daughter were badly injured by the late Railroad disaster at Norwalk, has made a settlement with the Railroad corporation. The sum paid was $10,000.

—— A mass of Copper, weighing 6,300 lbs. from the North American mine, is on its way to the Crystal Palace. It was chiseled ont of a solid mass, estimated to weigh at least forty tons.

—— David A. Miller, Esq., who has resided at Mount Morris, Livingston county, since 1816, died in that town on the 5th, aged 65. His wife died on *the same day of the same month*, six years ago.

## Canadian Items.

THE potato crop of Lower Canada is said to promise very favorably.

Horse stealing has become alarmingly common in various parts of the country.

The construction of railway bridges over the various streets of Hamilton is going on.

During the present season no less than 35,015 pounds of wool have been purchased at Oshawa.

In the neighborhood of London the Great Western Railway is progressing with great rapidity.

The directors of the Grand Trunk Telegraph Line have opened offices at Woodstock and Ingersoll.

Near the Shediac river in New Brunswick, fires have been raging for a considerable time and large quantities of timber have been destroyed.

According to the Ottawa Citizen, the survey of the Canal at the Chats has commenced and the improvements of the Ottowa are to be proceeded with at once.

The inhabitants of Simcoe have confirmed the vote of the Council to take £50,000 in the Wood stock and Lake Erie Railroad.

It is generally understood that Lord Elgin shortly goes to England on a temporary visit, along with Lady Elgin and his family.

In the township south of Quebec, it is generally reported, gold abounds in great quantities.—One man was recently offered ten thousand pounds for his claim in the gold region.

# Foreign Intelligence.

### Arrival of the Humbolt.

NEW YORK, Aug, 15.

The steamship Humbolt from Havre, and Southampton Aug. 3d, arrived this afternoon with 186 passengers. Among them S. B Goodrich, late U. S. Consul at Paris, Hon. Caleb Lyon, member of Congress, Hon. A. C. Mann of Utica.

LIVERPOOL MARKETS—Aug. 2d. From James McHenry's circular—Market for breadstuffs less active to day than for some days previous, and the extreme prices of flour and wheat are maintained.

Indian Corn steady.

Lard has advanced with increasing demand and moderate stock. Barrels sell at 15s@16s.

Beef and Pork wanted. Bacon, fair business doing. Shoulders have declined to 30s, at which there is more demand. Cheese much looked for.

Cotton steady at firm prices. Sales Monday and Tuesday 15,000 bales.

London money market shows no change of moment. Consols declined to 97¾.

Several arrivals of Australian gold had taken place, amounting to about £1,500,000.

The America arrived at Liverpool on the 31st ult.

The West India Mail Steamer La Plata arrived at Southampton the same day with $701,576.

Among the reports current during the past ten days has been one to the effect that the Bank of England had been selling stock. It is believed, however, by well informed parties, to be totally without foundation.

Letters from Brest, of the 20th ult., state that a certain activity is displayed in the arming of vessels.

The Russian question is again the prominent feature of foreign news by this steamer.

It is feared that the Emperor of Russia would decline to withdraw his forces from the Danubian principalities as stipulated for, in the proposition of the great Powers. The English and French fleets in that case will be ordered to pass the Dardanells, and a peaceful settlement of the dispute thereby be greatly jeopardized.

Several telegrams had been received in London in reference to the Eastern question. One dated Constantinople, July 29, stated that the Port and Representatives of the Great Powers had accepted the propositions of the Austrians. According to this arrangement the fleets of Great Britain and France are to withdraw from Besika Bay, while the Russian troops are to evacuate the Turkish Provinces.

Turkey would then send an Ambassador extraordinary to reopen diplomatic relations at St. Petersburgh.

The Morning Chronicle informs that the United States had offered the Porte many and active forces.

A conference is to be opened at Vienna at the consent of Russia.

The London Times states that the proposal which had at last been agreed upon at Vienna and despatched to Constantinople, can hardly fail to be adopted by the Porte.

Uneasiness was created by the news of a decree of the Czar for a fresh levy of recruits throughout the eastern part of the Empire, and two in a thousand of the Jews are drawn, the levies to commence on the first of November. This measure was interpreted as a warlike one.

A Telegram in the Morning Chronicle, states that Moldavia had declared itself independent of the Porte and refused to pay tribute.

From Wallachia, the same step was expected. It is asserted that the Porte proposes to address an ultimatum to Russia, in which, after paying due regard to the protections and the right of the Sultan's Christian subjects, that Sovereign declares, in spite of those repeated assurances of the Czar, he should persist in offering war.

The Porte is resolved to accept it, but that the responsibilities of which must lie with Russia.

It is further asserted that the above document has been communicated to the Embassadors of England, France, Austria, and Prussia.

The prospect for the crops in England was more promising.

---

HITTING PARTRIDGES.—The Washington County Post says, a person in Union village, having had *sanded* sugar sold to him, inserted in the paper, the following advertisement:

NOTICE.—I purchased of a grocer in this village, a quantity of sugar, from which I obtained *one pound of sand.* If the rascal who cheated me will send to my address seven pounds of good sugar, (scripture measure, of restitution,) I will be satisfied; if not, I shall expose him.

On the following day *nine* seven pound packages of sugar were left at his residence from as many different dealers, each supposing himself the person intended. This may be called bringing down "the coon" by a newspaper bullet.

---

LIVING GIRAFFES.—Two gigantic Giraffes, or Cameleopards, arrived at New York on Thursday, in the steamer Washington, from Bremen. They are beautiful and graceful creatures, and in good health. One is 17 feet high and the other 15 feet. Their owner, Herr Bernhard Hartman, accompanies them, having brought them from Egypt to have them exhibited in this country. Some 18 years ago a pair of Giraffes were imported, at an expense of about $40,000, by Welch & Co., but they soon died, and none have been seen alive in America since. It is a question whether these two will long be able to stand the changes of our climate.

---

AN AGED MAN AND AN OLD BOY.—A correspondent of an Irish paper, writing from Monaghan county, Ireland, gives a remarkable instance of longevity. Owen Duffy, when 116 years old, lost his second wife; he subsequently married a third, by whom he had a son and daughter. His youngest son is two years old, and his oldest ninety.—He is now 122 years of age, and retains in much vigor, the use of his mental and corporeal faculties. He walks frequently to the county town, a distance of some eight miles.

---

HIGH PRICE FOR WHEAT.—The Chicago Press of the 8th inst. says:—We have in our office a sample of new wheat which was sold yesterday at the depot for $1.03 per bushel. It came over the Railroad from St. Charles, and was sold by John Radcliff, commission merchant at the depot. The berry is not large, but every kernel is plump and bright.

---

WISCONSIN CROPS.—The reports from all parts of our State, as to the results of the harvest, are of the most gratifying character. The yield of grain is unprecedentedly large,—quality superior, and prices rule unusually high. Hay, too, is a very full crop, and potatoes and corn are looking superbly.—*Milwaukee Sentinel.*

# News Paragraphs.

☞ There was a severe thunder storm in Boston and vicinity on Sunday evening, 14th. In Charlestown the Baptist parsonage was struck by lightning, and the wife of the pastor, Rev. Mr. Russell, was instantly killed. A child in her arms escaped injury. At Groveland, the house of William Fowler was struck and himself and wife knocked down senseless. Two barns were also destroyed. Several houses in Lowell, Lawrence, and Haverhill, were also struck, and several persons injured, but we hear of no further deaths.

☞ The unfortunate man Hull, whom Lola Montes has just caught in a matrimonial net at San Francisco, was formerly a printer on the Free Press, a little weekly paper published at Xenia, Ohio. He is Lola's third husband, all of whom, at last advices, were alive and well.

☞ New Orleans papers of Wednesday last contain intelligence from Mexico to the 27th ult. The cholera had been raging at Cordona and Jalapa. An insurrectionary movement at Guatamala had been suppressed. The Jesuits were then under consideration.

☞ A Western Pennsylvania company have set up a claim to the whole of the Western Reserve of Ohio, under a grant from Connecticut, alleged to have been made after the year 1762, when Charles II. granted to that colony a patent for the Reserve.

☞ Twenty-four head of splendid Durham cattle have recently been imported at New York, by an Ohio company, besides twelve Suffolk swine and 23 Leicestershire sheep. They have left for their new home on the plains of Pickaway, Ohio.

☞ We undrstand that McLean, the murderer, who stabbed Wm. Maine on the evening of the 10th, at Jordan, was taken last evening in Sennett, near the railroad. Ere this he is probably in the Onondaga jail.—*Auburn Adv.*

☞ The Chicago Tribune says that on Monday vessels were offering to take corn from that city to Buffato at *one cent per bushel.* That is the lowest figure at which freights were ever offered in that market.

---

HORRIBLE.—The head of the Rev. Mr. Penny was instantly torn from his body in the Worcester Railroad murder! The awfully mangled state of the dead was such that they had to be wrapped up from public view. So states our reporter who was present.

—When a railway company can only make one track, the State should add another.—*Tribune.*

---

CARS STOPPED BY GRASSHOPPERS.—One day last week, the cars on the Watertown Railroad were stopped between that place and Cape Vincent by the multitude of grasshoppers upon the track. The rails were so thickly covered with them, and the car wheels smashed them up so beautifully between a hop and a jump, that it had the effect of grease on the rails, making the wheels revolve swiftly, while the train remained stationary.

---

EMIGRATION TO UTAH.—The Danish Government has been officially informed that there are thirteen hundred Danes on the eve of emigrating to Utah. Prodigious efforts are making by the Mormons throughout the north of Europe to direct emigrants to their State. Their object is to attain the required population for the admission of Utah into the Union.

---

SINGULAR SUICIDE.—In Manchester, N. H., on Sunday 14th, Catharine Cotton and Clara C. Cochrane, of New Brighton, after supper dressed themselves in white, went out hand in hand to the canal, jumped in, and were drowned. A young man was nearly drowned in attempting to rescue them. From letters left behind, it appears that they had contemplated suicide for some time.

---

LEAD PIPES *vs.* NEURALGIA.—A correspondent of the *N. Y. Evening Post* attributes the obscure nervous diseases which have within the last few years changed *neuralgia* from a scientific to a *household word,* to the use of water impregnated with lead, and refers to the published testimony of Drs. Mott, Parker, and S. C. Foster, in support of his theory.

---

WOMEN'S CONVENTION.—A call is issued for a Women's Rights Convention, to be held in New York on the 6th and 7th days of September. It is signed by 37 prominent characters, such as Mrs. Mott. Paulina Davis, Abby Foster, Lydia Fowler, Mrs. Gage, Lucy Stone, &c., &c.

---

"OURSELF."—What a word! Just as barbarous as *myselves.* Yet it is a word that many editors make use of. Why? Certainly not because they adopt the plural number; for that would require them to say ourselves. Can anybody tell why?

---

USING POSTAGE STAMPS TWICE.—At the United States District Court, in session at Utica on the 14th inst., Ezekiel O. Smith, of Galway, Saratoga county, was convicted of using a Postoffice stamp the second time, and fined $50 dollars and costs.

---

STRANGE.—On the 4th inst., says the Warren (N. J.) Journal, a little time before dark, a storm of insects was blown from the Delaware, up the Pequest. The storm continued two hours resembling a drifting snow squall.

---

☞ The Bavarian government has decided that executions shall no longer take place in public, but in the interior of prisons.

THE WOOL GROWER AND STOCK REGISTER:

A MONTHLY JOURNAL

**Devoted to the Wool and Stock Growing Interests**

THIS is the *only* Journal published in America, primarily devoted to the important and profitable interests of WOOL and STOCK GROWING, etc. It contains a large amount of USEFUL and RELIABLE INFORMATION on Wool, Stock and kindred subjects, and should be in the hands of

**Every Owner of Domestic Animals!**

Whether located East or West, North or South, for much of the matter given in its pages is equally interesting in all sections of the United States, Canada, &c., and not furnished in any other publication.

THE FIFTH VOLUME, commencing July, 1853, will be ENLARGED by the addition of eight pages to each number, (as a cover, for notices, &c.,—making in all, 24 Large Octavo Pages,) and otherwise improved. Published in the BEST STYLE, and illustrated with numerous SUPERIOR ENGRAVINGS: embracing Portraits from life, of Sheep, Cattle, Horses, &c.,—Designs of Farm Buildings, etc. The Reviews of the Wool and Cattle Markets, given in each number alone worth many times the price of the paper, which is

**ONLY 50 CENTS A YEAR!**

Five Copies for $2; Eight for $3; Fourteen for $5; Twenty for $7,—*in advance.* Back vols, bound in paper, at 40 cts. each—in sheets at 35 cents. Premiums offered to those who form clubs. Specimen numbers, &c., sent free. See Premium List below.

☞ NOW IS THE TIME TO SUBSCRIBE,—as all subscriptions should commence with the volume. Bills of all specie paying banks, and postage stamps, received at par. Money, properly enclosed, at our risk,—if addressed to

D. D. T. MOORE, Rochester, N. Y.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Aug. 17, 1853.

THERE has been rather more activity in the marke during the week past. Farmers have brought wheat in more freely, which has given more activity to trade.

FLOUR—The prices of last week have not been changed. Supply has been better, and a number of loads have been shipped east.

GRAIN—Wheat has been more freely offered, coming in by teams, canal and railroad. The influx has tended to depress the price, which has fallen off full two cents per bushel. Street sales are made at $1,15@1,16; cargo $1,16 @1,17, and possibly a fraction more for extra white. The quality is excellent. Corn is still wanted at 63@65c. Oats in demand at 40@42c. Barley is in request, for which 58, 60@65c. is paid. The price is unsettled.

VEGETABLES—Potatoes are offered freely at 56@62c, and are of good quality. Other vegetables are in good supply; rates change daily. Of fruits the supply is fair. Apples and pears sell at 50@75c. No peaches offering. Apricots nearly gone and very high.

BUTTER—The demand for butter increases, the dry, hot weather having curtailed supplies, so that 15, 16@17c. are paid as per quality. Cheese is abundant, but sells at 6@7.

HAY—Fair supply, with sales at $12@15.

SHEEP AND LAMB SKINS—We notice some offering, mostly from butchers; prices are graduated entirely according to size, quality and amount of wool.

**Rochester Wholesale Prices.**

## NEW YORK MARKET.

NEW YORK, August 15.

Flour—There is increased firmness in State, supply of fresh ground being light, and for this there is a fair demand—western brands are firm and in steady demand for export and the trade. Canadian firm and plenty at $5.18@ 5,25. Sales Western Canal 5,000 bbls. at $5,12@5,18 for common to straight State—$5,12@5,31 for mixed to fancy Michigan, Indiana and Wisconsin, and common to good Ohio.

Grain—In wheat there is little doing—the assortment poor—market firm. Sales 24,000 bus. white Ohio on private terms. Rye—demand fair. Sales 1,000 bus. old western in store 90c; 8,00 bus. new southern 85c. Oats plenty and market easier. Sales 24,040 bus. 70@72c for unsound—72@73 for western mixed—72½ southern mixed—73@74 southern yellow—72@73½ white southern.

Provisions—Pork market firmer and demand good—$15,50 for mess—$12,75@12.87 for prime. Beef in moderate demand—$7,50@10 for country mess—$11,87@12,50 for city mess and repacked Chicago—$4,75@6,25 for prime. Cut meats steady. Lard weak at 10¼@10¾. Butter and cheese steady.

## ALBANY MARKET.

ALBANY, Aug. 15.—The offerings on 'Change this morning were fair for the season; but our markets were dull, and transactions were quite limited.

Flour—The market shows no change in prices since Saturday. The sales were made to the extent of some 700 bbls.

Grain—There were several samples of Wheat offered, but we did not learn of any sales. Pure Genesee was offered at $1.33@1,34.

Corn—Market very dull. Sales 2,000 bu. western mixed at 72c., in lots. Several cargoes on the market unsold.

Oats—better. Sales 8,500 bu. at 38c. for damaged, and 46¼ for prime western.

## BUFFALO MARKET.

BUFFALO, Aug. 15.—The market for flour continues without change, and the inquiry this morning is limited to the home demand, the sales being about 700 bbls. at $4,-75@4,81 for good to fancy brands of Ohio and Michigan. There is no export demand, boats being somewhat scarce, and buyers holding back for the next steamer's news.

There is a moderate speculative enquiry for wheat at lower figures, and holders are rather more willing to meet buyers. The sales of the morning are 10,000 bus. white Michigan at $1,10½; 4,500 bus. do. at $1,10¼ afloat; and 3,700 bus. red Ohio on private terms.

Corn—dull and lower. Market inactive. Cargoes offering at 63c without takers, up to noon. Sales 3,700 bus. on private terms.

## NEW YORK CATTLE MARKET.

NEW YORK, Aug. 1.—At Washington Drove Yard—The warm weather helps depress the market. Since our last the offerings have reached 2,500 head (all Southern and Western.) Prices steady at from 8@9½c per lb, as in quality. About 300 head left over unsold.

At Browning's—Offered 75 Cows and Calves. All sold at prices ranging at from $25, 35@55.

Sheep and Lambs—6,331 on sale. The former brought $1,75 to $5,50@7,50. Lambs, $1,62½ to $5,53. Left over 300.

At Chamberlain's—Offered 250 Beef Cattle; prices ranging from 7@9¼c.

60 Cows at $25@35 to 50. 50 Calves, 4@6¼c per lb.

Also 4,000 Sheep and Lambs offered; Sheep $2,50@3,50 to $4,50@6,00; and $1,25@2,50 to $3,50 for Lambs.

## ALBANY CATTLE MARKET.

ALBANY, Aug. 15.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—579 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. 6; 3d do, $5,50.

Cows and Calves—25 in market. Prices from $25@ 30, 35 to $40.

Sheep and Lambs—885 in market. Prices—Sheep at from $2,50, 2,75, 3, 3,50@4. Lambs $2,50@2,75, 3, 3,25.

Swine—119 in market. Prices from $5,50, 5,75@6,12½.

## CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, Aug 10.—At market, 1,757 Cattle, about 1200 Beeves, and 557 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7,50 per cwt.; 1st. quality, $7,00; 2d do, $6,50@6,75; 3d do, $6@6,25; ordinary, $1,00@5,00.

Hides—$6 per cwt.

Tallow—$7@7,50 per cwt.

Pelts—75c@1,00.

Calf Skins 11c per lb.

Barreling Cattle—None.

Veal Calves—$5, 10 12@17½; at market 174.

Stores—Working Oxen—$98, 105, 112, 127, 132, 141 to 157.

Cows and Calves—$20, 25, 28, 31, 36, to 42.

Yearlings—$9, 10@11.

Two years old—$18, 21, 23@25.

Three years old—$31, 34, 36, 38, 41@48.

Sheep and Lambs—3,962 at market.

Extra, $4, 4½, 4¾, 4½, 5@6.

By lot—$2¼, 2¾, 3 to 3½.

Swine—Wholesale fat hogs at 5½c per lb. Soft still 5@ 5 1-6.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Aug 11.—At market 1,600 Beef Cattle, 550 Stores, 5,800 Sheep, and 985 Swine.

Prices—Beef Cattle—Extra, $7@7,25; 1st quality $6,50 @6,75; 2d do. $6@6.25; 3d do. $4,75@5,75.

Working Oxen—Sales $70, 85, 100, 110, and 125.

Cows and Calves—Sales $22, 27, 31, 38, 42, 48@55.

Sheep and Lambs—Sales of lots at $2,75, 3,25, 3,50, 3,62, 4,25 and $5,50.

Swine—Still Hogs 5 13-16 and 5 15-16. Shoats 6¼ and 7½c. Spring pigs by lots 8c. At retail, from 7 to 10c.

HOPS.—There is nothing new of interest in regard to Hops. The indications as to the new crop are about as stated last week, and prices do not materially change. The English papers speak more encouragingly of the crop in that country—still it is not now anticipated that prices here will be much controlled by that fact. Hops *must remain* very high—or there is no truth in the signs of the times.—*Cooperstown Journal.*

---

THE WOOL GROWER.—We take great pleasure in calling the attention of our farmers to this valuable paper. We always read its articles with interest, and hope it will find a place on the table of every wool-grower of the West.—It is edited with ability and prudence, and is worthy its extensive patronage.—*Ohio State Journal.*

**ACADEMY AT OVID.**

THE Fall term of this Institution will commence on Wednesday, September 14th, and continue fourteen weeks. This School is open to youth of both sexes.

Instruction is given in both the ancient and modern languages; in General Agricultural Chemistry; in Civil Engineering, in Music, and in all branches of study pursued in the most approved Schools in the country.

Lectures are given on Chemistry, in all its branches; Physiology, Natural Philosophy, the science and art of Teaching, and on Morals.

The Board of Instruction consists of Rev. AMOS BROWN, EDWIN PIERCE, WILLIAM H. BREWER, GEORGE B. VOSE, and Misses ISABELLA MEAD and ANGELINA JAMESON. The Gentlemen are all of them graduates of some of the best New England Colleges, and the Ladies have proved themselves entirely competent to their stations.

Charge for instruction on the Piano Forte is $10 per quarter, and $4 per quarter for French, Painting, or Drawing, &c.

Pupils boarding themselves, or with their particular friends, are charged $4, $6 and $7 per term of fourteen weeks for tuition, according to the studies pursued.

The Trustees beg leave to assure the public, that no measures on their part will be spared to make this a FIRST CLASS INSTITUTION. They will immediately erect additional buildings to be used as a boarding house for Young Ladies, Chapel, &c., at a cost of $10,000 or more, and will make all other necessary improvements.

Catalogues with an appendix, affording all requisite knowledge of the School, will be sent to persons requesting it, on application to Rev. A. Brown, Principal.

HALSEY SANFORD, Sec'y.

Ovid, August 10th, 1853. 190-4w

**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1818,—also by the subscriber in January last. Address

JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.

Boston, August, 1853. 190-13w-1m

☞ PEOPLE'S COLLEGE OF THE STATE OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.

A. I. WYNKOOP, of Chemung, Vice President.

TRACY MORGAN, of Binghamton, Treasurer.

HARRISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

**Improved Portable Cider Mill and Press.**

HICKOK'S Improved Portable Cider Mill and Press, received the following premiums in 1852, viz.:—A Silver Medal at the Fair of the American Institute, N. York. Diploma at the Franklin Institute, Philadelphia. First premiums at the State Fair at Utica, and at the Columbia and Rensselaer County Fairs, and diploma at the Westchester County Fair.

Descriptive circulars sent free to all post-paid applications. See page 251 of this paper, for engraving. Price, $40,—and all persons living near Rochester or away from any agency, may order of me, and when they get the mill they may deduct the freight and remit the balance to me.

Manufactured by W. O. HICKOK,
Harrisburg, Pa.

Sold by LONGETT & GRIFFING, 25 Cliff-st., N. Y.
EMERY & CO., Albany.
DANA BROTHERS, Utica.
PROUTY & CHEW, Geneva.
HIGGINS & CALKINS, Castile, Wyoming Co.
C. E. YOUNG, Main-st., Buffalo.
O. GREGORY, Binghamton.
CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-8tw1m

SPRINGFIELD, Ohio, May 1, 1852.

MR. W. O. HICKOK: *Dear Sir,*—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It supasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

**Hickok's Patent Improved Cider Mill and Press.**

WE have been appointed sole agents for the sale of this Mill and Press in the city of New York. This is the most approved mill now in use. Catalogues, with description and drawing will be forwarded by addressing us post-paid. Price $10. LONGETT & GRIFFING,

187-8t 25 Cliff St., New York

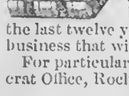
**AUCTION SALE OF**
**Durham Cattle and Blood Horses.**

THE Subscribers having disposed of the Hartford Farm, will offer at Auction, their entire herd of Blood Stock, on said premises, 1½ miles north of Avon, Livingston Co., N. Y., on Thursday, the 1st day of September next.

The above herd includes the noted bull "Defiance," who has proved himself one of the best stock getters in the State,—"Yonondeo," a very fine thorough-bred bull, sired by "Splendor," his dam the imported cow "Lady Morris;" 6 thorough-bred Cows, sired by "Splendor," "Oregon," "Curreucy," and "Defiance; 10 two year old Heifers, sired by "Racket" and "Splendor;" 17 yearling Heifers, all sired by "Racket" and "Yonondeo;" one fine red cow, sired by "Red Jacket" from an imported Devon cow; 6 Bull Calves, by "Defiance" and "Racket." Also the following blood Horses:—2 brood Mares and their colts; 2 fine three year old mares; 4 two year old colts, and one yearling—all bred from the best stock in this country.

For further information apply to or address the subscribers. DAVID BROOKS & SON.

July, 1853. 185-6tnlw* Avon, Liv. Co., N. Y.



TO BOOKBINDERS.—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber.

F. H. MARSHALL.

Rochester, July 21, 1853. 187-tf

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred SUFFOLK PIGS for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,

June, 1853. [186m3] Walepole, N. H.

**DAGUERREOTYPES.**

THE Subscriber continues the business of Daguerreotyping, at his old stand in Chappell's Block, 82 State-st. Grateful for past favors, he will, as heretofore, adhere to the motto, that "whatever is worth doing at all, is worth doing well,"—trusting therein for a continuance of public patronage. Pictures copied, and all other work done in the highest style and finish known to the Art.

Rochester, Jan., 1853. [162-o8m] S. B. SMITH.

THE WOOL GROWER AND STOCK REGISTER commences its fifth volume with this month's number. It is published at Rochester, N. Y., by D. D. T. MOORE, Editor of the Rural New-Yorker, who offers to furnish the monthly numbers of the current volume, and the first four volumes bound, for two dollars. It is a temptation difficult to be resisted by the multitude of intelligent and enterprising farmers who do not already possess it. Stock-breeding is yearly receiving increased attention in all the prosperous sections of our country.—*N. Y. Observer.*

**N. Y. State Agricultural College.**

THIS Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
HON. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

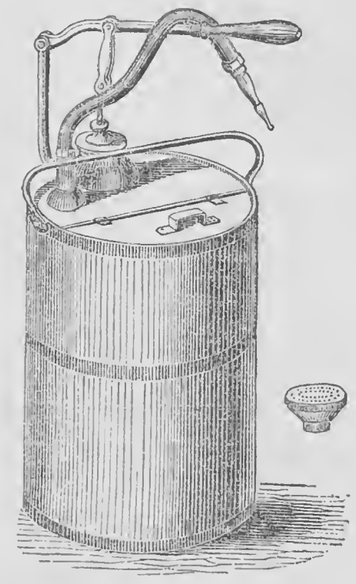
The Trustees may be addressed (post-paid) at their respective residences, as follows:

Hon. JOHN A. KING, Jamaica, Queens County.
HENRY WAGER, Westernville, Oneida "
B. P. JOHNSON, Agricultural Rooms, Albany.
WM. KELLY, Rhinebeck, Duchess Co.
N. B. KIDDER, Geneva, Ontario Co.
JOEL W. BACON, Waterloo, Seneca Co.
TALLMADGE DELAFIELD, Geneva, Ontario Co.
WM. BUEL, Rochester, Monroe Co.
JOHN DELAFIELD, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*



WE offer for sale, the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union. WM. G. CREAMER & CO.,

Plumbers and Hydraulic Engineers, 61 State street, New Haven, Conn., and 4th Avenue cor. 9th St., New York. 185-8t.

**GREAT STOCK SALE.**

**Short-horn and Durham Cattle, and South-down Sheep.**

ON Wednesday, the 7th day of September next, at one o'clock, P. M., I will sell, at my farm on Grand Island, six miles below Buffalo, about 30 full bred Short-horns, a few Devons, and about 30 high grade Short-horn and Devon Cattle, consisting of Cows, Heifers and Young Bulls.

The young Short-horns are chiefly the get of my imported bull Duke of Exeter (10,152)—a bull not exceeded, as a fine stock getter, by any other in the U. States.

The young Devons are the get of the bulls Candy and Quartley, both imported by Mr. STEVENS. The superior of these bulls in blood, style and breeding, is not to be found. Quartley is my present stock bull.

I will offer at the same time 50 pure bred South-Down Sheep-rams and ewes. Also a few Middlesex pigs—both sheep and pigs the direct get of imported sires, from dams descended from late importations.

Catalogues will be ready by the first of August, and will be sent on application to me, by mail.

TERMS:—All sums of $100, and less, cash. For larger sums, approved notes at four months, with interest, payable at Bank, will be received, if preferred.

A steamboat will carry all persons wishing to attend, across the ferry from Lower Black Rock to the farm, at 10 o'clock on the morning of the day of sale. The stock can be viewed at any time previous, by calling on me at my residence in this place. LEWIS F. ALLEN.

Black Rock, N. Y., June 15, 1853. 182-10t

**PREPARED SUPER PHOSPHATE OF LIME,**
BY THE UNION CHEMICAL WORKS, L. I.
**HOYT & CO., Agents,**
*No. 234 Water Street, and 122 West St., corner of Dey St., NEW YORK.*

A FERTILIZER of the most approved quality, producing all the immediate effect of the best Peruvian Guano, with the advantage of being much more lasting in the soil.—Thoroughly tested, and found to more than realise the expectations of all those who have already tried it. The best evidence of this is the largely increased demand this season over the past year. Put up in bags of 160 lbs; barrels 250 lbs each. Buyers will please be particular to observe our brand upon each bag or barrel.

Also for sale, American and Foreign Field and Garden Seeds. English Ray Grass, Foul Meadow Grass, fine mixed Lawn Grass, White Clover, Osage Orange, &c.

178m3i.

**SUPERPHOSPHATE OF LIME.**

THE undersigned continue sole agents for the sale of Deburgs Superphosphate of Lime, which has proven Superior to all other brands, now in the market. Having sold nearly Three Hundred Tons this spring, and heard from a majority who have used it, they pronounce it equal to Guano in its effects, and is more lasting in the soil. As there are many substances called Superphosphate of Lime now offering in this market, which are of a different nature, to avoid impositions purchasers would do well by applying direct to the agency for their supply.

LONGETT & GRIFFING,

184-8w. No. 25 Cliff Street, New York.

**WESTERN LAND.**

THE undersigned offers for sale a valuable Farm of 500 acres, located in Clear Lake township, Steuben Co., Indiana, bordering the Michigan line on the east.

The above farm has 100 acres improved, the remainder well timbered with oak, whitewood and black walnut. On the premises is a dwelling house, and a large, commodious barn: likewise an unfailing water power, with a favorable location for a mill. The tract is favorably situated for two or more farms; and the subscriber offers the whole, or a part, in exchange for land or other property in this section, at a great bargain. Address

HENRY O. BARNUM.

Walworth, Wayne Co., N. Y., 1853. 185-4teow

## RASH WORDS.

Rash words! Oh, could I but grieve o'er the woe,
O'er the pain of your sting, and the discord you sow,—
Could I weep o'er the pangs of the grief-riven heart,
Till repentant and softened, you all should depart,—
Oh, how glad were the sunshine, how placid the sky
How joyous the light, of each soul-beaming eye.

Rash words! How unkind on the listening ear!
Ye call forth the sigh, and ye mingle the tear!
Ye come with a frown and a darkened eye,
And truth, love, and gentleness, hover and fly.
Ye fall on the *heart!* and more dread is your power
Than the storm-threatning sky or the frost to the flower.

Rash words, oh, forbear! From this green earth, away!
The sun shines benignantly, how can ye stay!
The sky smiles in love, uncongenial to thee,
The soft winds are whispering, "sinless and free:"
Sweet notes of contentment, wild gushes of joy,
Are reproachfully blent with your notes of alloy.

Rash words, ah! how grevious the deeds ye have done!
Ye have darkened the light of the happy home!
Ye have cast o'er the spirit of gladness a cloud,
And wrapped the young heart in its early shroud:
Ye have breathed on the spirit o'erladen with care,
Till it sank 'neath its load, to the shades of despair.

Ye fell on the heart of the trusting young bride!
From the life of the chosen one, at her side—
And she shrank 'neath the stroke, like a flower in the blast,
But her spirit now rests, and the tempest is past:
And she sweetly sleeps, in her dreamless bed,
With the flowers at her feet, and the blue sky o'erhead.

Ye were borne to the ears of the wearied one
As he wandered forth from his comfortless home!
And ye rang in his ear, and weighed on his soul,
Till he turned for relief to the dead'ning bowl,—
Ye have lured him on with the sparkling wave,
Down the dark, dark path, to the drunkard's grave.

Barre, N. Y., July, 1853. VIANA MEADOWS.

# Rural Sketch Book.

## THE HUMP-BACKED COUSIN.

TRANSLATED FROM THE FRENCH.

BEHOLD an extraordinary adventure of the latter days. If it were not an extraordinary occurrence, one need not relate it.

A father of a family inhabiting the Rue de la Michordiere, received last summer, a letter from his nephew, who was in the employ of Hyder Abad. The letter concluded thus:

"I have received the portraits of my two cousins, Marie and Margaret. I have never had the pleasure of seeing them, as I have lived with Hydor Abad since my youth, but I am sure that those two portraits are resemblances. I will arrive at Havre by the ship Inos Ego, about the first of October, and on my arrival, I am determined to marry the beautiful Mar—"

The breaking open of the letter had destroyed the rest of the name. It was impossible to tell if the cousin had asked Marie or Margaret in marriage. The two sisters, united previous to this time, have commenced to live in misunderstandings, each of them positive that it is the part of her name which was torn off in breaking the seal.

The father employed his eloquence in calming the anger of his daughters, when a servant, sent in advance, arrives from Havre, announcing that his master went to Paris with the evening train.

The sevant was overwhelmed with questions, and replied that his master was ruined, and that he had, moreover, on his left shoulder, the horrid protuberance which had caused, according to Planude, so many misfortune to Æsop, the Phrygian.

The two cousins determine, herenpon, to remain single forever, before marrying a cousin, hump-backed and ruined.

As they take this oath for the thirtieth time in twelve hours, the cousin arrives. His uncle warmly embraces him, the cousins make a polite bow, and turn away their eyes.

The uncle then explains the incident of the torn letter, and asks the matrimonial intentions of his nephew.

"It is my cousin Marie whom I come to marry," he replied.

"Never! never!" screamed Marie. "I am contented with my condition, and I will remain in it."

"Mademeisolle," said the nephow, "I have adopted the customs of the country where I have been educated. Read the customs of Hyder Abad, in Travernier. There when a young man is refused an offer of marriage he withdraws himself from society as a useless being."

"He kills himself!" exclaimed the other sister, the good Margaret.

"He kills himself!" replies the nephew, in the tone of a man about to commit suicide.

"The poor cousin!" said Margaret, weeping, to come such a distance to die in the bosom of his family."

"I know, continued the nephew, 'that my deformity afflicts the sight of a woman, but in time the eyes of a woman become habituated to all things. I know, also, that my commercial business is not prosperous. Thrown very young into the diamond business, the only occupation of Hyder Abad, I lost there all the fortune of my father; but I have acquired experience; I am young, active and industrious. These are riches in themselves.'"

"Yes, yes, hump-backed and ruined!" muttered Marie, in a bantering tone.

"Poor young man!" said Margaret, and she adds, "my cousin, I am refused, and you pay no attention to it."

"And by whom refused?" inquired her cousin.

"But to your cost, by you, since you have preferred my sister to me."

"Eh, bien!" said the cousin, "will you accept me, if I ask you in marriage from my uncle?"

"I will engage my father to let my cousin live."

"What!" exclaimed the hump-backed, "you consent, my lovely Margaret, to—"

"Save the life of a relative! Indeed, I will not waver a minute."

"This is very well, my daughter," said the uncle, affected by the scene. "Romances have not spoiled you. I have a very small income, but I ought not to abandon the son of my brother in misfortune. I will keep him here as kindred, for where there is enough for three there is enough for four."

The cousin threw himself at Margaret's feet, saying:

"You have saved an unfortunate man from destruction and death."

At a little distance, Marie muttered to herself:

"My sister has courage. As for me, I would let all hump-backed cousins die."

"Uncle," said the young man, "allow me to make a slight toilet before breakfast."

He pressed Margaret's hand, bowed to Marie, and left to change his travelling attire.

The uncle and his daughters were at the table and awaited their fourth guest.

The servant announced the cousin of Hyder Abad.

The two girls uttered two screams, but on different keys.

They see enter a charming young man, tall, without any hump-back, who embraces Margaret, and placing before her a basket, he says to her:

"Behold your marriage portion."

It was a basket full of diamonds. It was, moreover, the hump, which thus arrived free of duties.

"See what I have carried on my shoulder," said the cousin, "from Bombay to Havre, to offer it to that one of my cousins who would accept me with my false poverty and my feigned deformity."

There was great joy in the house, which was, astonishing as it may seem, participated in by Marie. It is true, that Marie loved her sister dearly without detesting the diamonds.

## THE LOWLY AND THE LOVING.

"The alms most precious man can give to man
Are kind and loveful words. Nor come amiss
Warm sympathizing tears to eyes that scan
The world aright; the only error is
Neglect to do the little good we can."

LOVE has often more influence than talent. The last appeals to the reason, the first to the affections: the last speaks to the intellect, but the first goes straight to the heart. "It is beautiful," exclaims a Swedish author, "to believe ourselves loved, especially by those whom we love and value." Yes, it is beautiful, certainly; but woe to us if we neglect the responsibility attached to it.

It has been truly said, the loving, and the unselfish almost insensibly dissuade from evil, and persuade to good, all who come within reach of their soothing power; that no one can advance alone towards the happiness or misery of another world; and little can the most insignificant of beings conjecture how extensive may have been the beneficial or evil effects which have attended their own apparently unimportant conduct.

"In the heraldry of heaven," writes Bishop Horne, "goodness precedes greatness;" so on earth it is often far more powerful. The lowly and the loving may frequently do more in their limited sphere, than the gifted. To yield constantly, in little things begets the same yielding spirit in others, and renders life the happier. We must never forget that we are all appointed to some station which we will fill in this life by the wise Disposer of events, who knows what is suited to our various capacities and talents much better than we do ourselves: and who would not have placed us there if He had not something for us to do. How few there are who live up to their own power of being useful! Earth is our dwelling place, where each has his or her appointed sphere of usefulness, their mission of love and duty, as they pass homeward to heaven.

A gentleman travelling through a part of Wiltshire, where he had not been before for many years, could not help observing the peculiar neatness and even beauty of the little cottage gardens which he passed, and which he did not remember having noticed when he was there last.

"No," replied the friend who had accompanied him; it has only been so within the last few years, since Lucy D—— came to reside in the village. It is all owing to her."

"But how can one person keep all these gardens so scrupulously neat?"

"You must ask her," replied his friend Mr. L——, with a smile and pausing as he spoke to shake hands with a young and delicate-looking girl, plainly attired and carrying in her hand a nosegay of flowers.

"Are they not beautiful?" asked she, holding them up. "Widow Green gave them to me, and she has plenty more. I was sure they would grow if she only tried. You cannot imagine how pretty they make her garden look."

"She had no garden, I think, when first you know her," said Mr. ——.

"No, I believe not. I do not know what she would do without one now: she was saying so herself this very morning; and that it was her greatest comfort."

"My friend is very anxious to understand how you have managed to introduce so many gardens into the village, and to keep them in such good order. He thinks that it must be a great deal of trouble for one person."

"It is no trouble to me," replied Lucy, simply, and with a modest blush. "I have nothing to do but to appear pleased, and to speak a word of praise now and then, and accept all their little flower offerings. I was always fond of flowers."

"But how did you contrive at first?"

"I almost forget. I do not think I did much. I only admired Mrs. Brown's flowers, and then she planted more to please me; and by and by others began to notice how pretty her garden looked, and to long to plant some also, and to come to me for some seeds and cuttings. I do not think I did much besides telling them the proper season for planting, and where I thought they would thrive the best. The little school children weed, hoping that I shall be pleased to see the garden look neat and nice; and so I am. The gardens of the poor are a great comfort to them."

"Yes," said Mr. L——, "it keeps them out of mischief. Many a poor man may now be seen working in his little garden, with his children around him, and his wife sewing peacefully in the cottage porch, who used to go to the public house. Many a happy home has sprung from the love of flowers."

Just then an old man came tottering towards us, holding a stick in one hand, and a flower-pot in the other.

"I have been looking out for you all day," said he to Lucy. "If you could spare a moment, I have so many things to ask and show you."

"To be sure I can," replied the girl, with a kind smile; and dropping a modest courtesy, she went away with the old man, and left the two friends together.

"Well," said Mr. L——, after a pause, "what do you think of our Lucy?"

"She appears to be very young, and does not look strong; but I was thinking of the power which one individual may exert for good over those around her."

"But Lucy not only teaches and encourages the poor people and the little children to love flowers," continued Mr. L——, "but tries to win them to Christ, and to make them love him. Many a simple homily have I heard her preach from the lily of the valley, or the flower of the field. Her influence is not only exerted for good—it is exerted for God, who has deigned to bless it in more than one instance."

Lucy D—— is neither gifted nor beautiful. Few know her even by name. It can only be said of her that she loves God, and loves flowers. Contented and cheerful, she passes through life, making it seem all the brighter and better for her brief sojourning. It has been well said of a kindred spirit, that, "looking to heaven as her rest, and to Christ as her Saviour, she seemed to have caught something of the calm serenity of her great Master, something of his purity and love. In the world, but not of it, she was like one going cheerfully homeward, and singing as she went; while she scattered around her, in passing, holy counsels and instructions—kind words and actions—the bright sunshine of a lowly and loving spirit."

There are some who assert that, in their isolated position, they have influence on none. But there is no such thing as a thoroughly detached and isolated individual; we are all inextricably tied up and interlaced with each other; so that no man can live or act without affecting others in some degree or some purpose. If they have no power to do good, we would say that it is because they seek it not, and would beseech them to arouse their dormant energies in that search which alone can bring happiness.

## PUTNAM'S MONUMENT.

BELOW is a copy of the inscription on General Putnam's monument in Brooklyn, Conn. The stone is greatly defaced by visitors cutting their names and taking away little chips:

Sacred be this monument
To the Memory
of
ISRAEL PUTNAM, ESQUIRE,
Senior Major General in the Armies
of
The United States of America,
who
Was born at Salem,
In the Province of Massachusetts,
On the seventh day of January,
A. D. 1718,
And died
On the twenty-ninth of May,
A. D. 1790.
Passenger,
If thou art a soldier,
Drop a tear over the dust of a hero,
who,
Ever attentive
To the lives and happinses of his men,
Dared to lead
Where any dared to follow.
If a patriot,
Remember the distinguished and gallant
Services rendered thy country
By the patriot who sleeps beneath this
Marble.
If thou art honest, generous, and worthy,
Render a cheerful tribute of respect
to a man
Whose generosity was singular,
Whose honesty was proverbial;
who
Raised himself to universal esteem,
And offices of general distinction,
By honest worth,
And a
Useful life.

THE LAST PROPOSITION.—A gentleman in Iowa, proposes to keep cities free from thunder storms "for so much a year." To most people this offer would be looked upon as preposterous, and yet it is not. We have no doubt whatever that an outlay of ten thousand dollars would keep New York as insulated as a glass table, with sealing-wax legs. What a gentleman in Iowa proposes to do for us, has already been done for the vine-growers of the south of France. By means of a well arranged system of lightning-rods, a whole district has been rendered inaccessible to those destructive hail storms which so frequently follow in the train of thunder showers. What has been done in France, can be done elsewhere. If we can teach lightning to write, we can teach it to behave itself.

## IS IT ANYBODY'S BUSINESS?

[The following is submitted, for the consideration of all whom it may concern, by a member of the "Mind Your Own Business Society," with hope that it may be productive of good results.]

Is it any body's business
If a gentleman should choose
To wait upon a lady,
If the lady don't refuse?
Or—to speak a little plainer,
That the meaning all may know—
Is it anybody's business
If a lady has a beau?

If a person's on the sidewalk,
Whether great or whether small,
Is it anybody's business
Where that person means to call?
Or, if you see a person
As he's calling anywhere,
Is it any of your business
What his business may be there?

The substance of our query,
Simply stated, would be this:
Is it everybody's business
What another's business is?
If it is, or if it isn't,
We would really like to know,
For we're certain if it isn't,
There are some who make it so.

If it is, we'll join the rabble,
And act the noble part
Of the tattlers and defamers
Who throng the public mart;
But if not, we'll act the teacher,
Until each medler learns
It were better in the future
To mind his own concerns.

## WHAT IS HAPPINESS?

I ASK again what is happiness? It aint bein' idle, that's a fact—no idle man or woman ever was happy since the world began. Eve was idle and that's the way she got tempted, poor critter; employment gives appetite and digestion. Duty makes pleasure doubly sweet by contrast. When the harness is off, if the work aint too hard, a critter likes to kick up his heels. When pleasure is the business of life, it ceases to be pleasure; and when it's all labor and no play, work, like an unstuffed saddle, cuts into the very bone. Neither labor nor idleness has a road that leads to happiness—one has no room for the heart, and the other corrupts it. Hard work is the best of the two, for that has, at all events, sound sleep—the other has restless pillows and unrefreshing sleep—one is misfortune, the other is a curse, and money aint happiness, that's as clear as mud.—*Sam Slick's Wise Saws.*

BOTH WEARIED OUT.—"I have brought you this bill until I am sick and tired of it," said a collector to a debtor, upon whom he had called at least forty times.

"You are, eh?" coolly replied the debtor.

"Yes, I am!" was the response.

"Well then, you had better not present it again. There will be two of us pleased if you do not; for to tell the truth, I'm sick and tired of seeing that identical bill myself."

A WORTHY minister noted for his wit, on being asked what kind of a person the wife of Mr.——was, replied, "I will give you her *grammatical character*. She is a noun substantive,—*seen, felt*, and *heard*."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## CHEMICAL ENIGMA.

I am composed of 24 letters.

My 6, 11, 8, 9, 1, 7, 4 is an essential ingredient of gun powder.

My 10, 21, 18, 12, 19, 22, 23, 24 is a non-metalic element.

My 14, 1, 15, 12, 16, 5, 15, 8 is one of the two forms of carbon.

My 15, 4, 6, 23, 24, 17, 14 is a metalic poison.

My 16, 5, 9, 9, 23, 12 is an element, the suphate of which is blue vitriol.

My 6, 5, 18, 15 is produced by the combination of sodium and oxygen.

My 8, 23, 15, 3 is metalic, the protoxyd of which is litharage.

My 14, 1, 8, 5, 4, 13, 24, 23 is a gas—characterized for its remarkable bleaching property.

My 5, 20, 2, 22, 23, 24 is remarkable for the energy with which it supports combustion.

My 22, 5, 8, 3 is a very valuable substance, distinguished for its freedom from oxydation.

My 9, 1, 19, 6, 9, 10, 5, 4, 11, 6 is an element exceedingly inflammable.

My first eighteen is an acid of the most disgusting and offensive odor; my last six is a gaseous element noted for its universal affinity.

Sheldrake, N. Y., Aug., 1853. DAR. S. C.

☞Answer in two weeks.

## ANSWER TO ENIGMA, &c., IN NO. 33.

Answer to Miscellaneous Enigma—*Old Folks at Home.*

Answer to Paradoxical Example—The first day A sold 49 eggs at 7 for a cent, and received 7 cents. B sold 28 eggs at 7 for a cent, and received 4 cents. C sold 7 eggs and received 1 cent. The next day eggs being worth more in market, A sold 1 egg for 3 cents, which with the 7 cents received the first day, made 10. B having 2 eggs left sold them for 6 cents, which, with the 4 received first day, made 10. C having 3 eggs left sold them for 9 cents, which, with the 1 cent received first day made 10 cents. Hence the price on first day was 1·7 cents per piece; on the second day the price was 3 cents per piece, and each received 10 cents.

*HALLOCK'S*

**AG'L WAREHOUSE AND SEED STORE.**

*No. 24 Exchange St., Rochester, N. Y.*

THE subscriber, late from the Establishment of Emery & Co., Manufacturers at Albany, where he has been engaged for the past six years, has been appointed their SOLE AGENT in Rochester and Western New York, for the sale of

*Emery's Celebrated Railroad Horse Powers and Threshing Machines; Circular and Cross-cut Saw Mills, Feed Mills, Corn-stalk and Hay-Cutters, &c.,*

adapted to the Power, and now offers them at manufacturer's prices, with the transportation added, and subject to the warrantee, as follows:—"To work to the satisfaction of purchasers as represented in Circulars and Catalogues, or to be returned within three months, and full purchase money to be refunded." The attention of Farmers is solicited, and a careful investigation into the construction of this Power, and its comparative merits, as well as price requested, before purchasing elsewhere. He is also agent for their

**Combined Reaper and Mower.**

and keeps constantly on hand, Plows, Hay Cutters, Corn Shellers, Seed Planters, &c., &c., comprising a complete and extensive stock of Agricultural and Horticultural Implements generally, together with a full assortment of Field and Garden Seeds, of the best Imported and Shaker growth.

He is also agent for the sale of Seymour and Morgan's New York Reaper, Pierpont Seymour's Grain Drills and Broad-cast Sowers, Wheel Cultivators, Gang Plows, Clover Hullers, Cider Mills, Clover Gatherers, Horse Rakes, Scythes and Snaths, Hand Rakes, Grind Stones, &c.

He will be prepared to furnish dealers with Dunn and Taylor's well-known Scythes; also Manure, Straw, and Hay Forks, Snaths, Rifles, and other haying tools at manufacturers' prices, wholesale and retail.

Particular attention is called to a NEW PLOW, which is believed to be the best cast iron Plow ever offered, and which is warranted to do better work, with less expense of team, than any Plow heretofore sold in Rochester—while the price is less than any other equally well finished.

The "uniform one-price cash system" will be adopted, with prices as low as the cost of articles, and just compensation for labor and time, will allow.

Farmers and others are invited to call and examine the stock of Machines and Implements, and are assured no effort shall be wanting to meet promptly the wants of a discriminating public.

☞Circulars and Catalogues furnished gratis on application personally or by mail. E. D. HALLOCK,
177tf No. 24 Exchange st., Rochester.

**GARDEN OR FIRE ENGINE.**

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N. B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.

Seneca Falls, N. Y., June, 1853. 183w10

**THE JUVENILE INSTRUCTOR,**

BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 1cts on each paper.

Price per year—single copies, 25c.; Five to one address, $1; Ten do, $1,70; Twenty do, $3; Thirty do, $4,20; Fifty do, $6,50; One hundred do, $12.

Address LUCIUS C. MATLACK,
183m3. Syracuse, N. Y.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

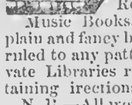
Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, June, 1853.

**MARSHALL'S BOOK BINDERY,**



BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.

April, 1852. [122tf] F. H. MARSHALL.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

**For both Country and Town Residents.**

PUBLICATION OFFICE,

BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,

ROCHESTER, N. Y.

**TERMS, IN ADVANCE:**

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

**Terms of Advertising**

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

**THE WOOL GROWER AND STOCK REGISTER.**

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 35. ROCHESTER, N. Y.—SATURDAY, AUGUST 27, 1853. WHOLE NO. 191.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

## Rural New-Yorker.

### Progress and Improvement.

### HARVESTING CORN.

As the season is nearly arrived at which this very important crop of the farmer is secured, a few hints on the topic may not be inappropriate. Whatever course may be pursued, it is quite certain that there is one way which is better or more profitable than any other. It used to be a very common practice—is now occasionally practiced by a few,—to cut the stalks above the ears just after the corn is glazed, or begins to harden. The corn was then husked on the hill, or snapped from the stalk and carted to the barn, where it was not unusual to invite the neighbors of an evening to have a good time at a husking bee. Cattle were generally turned in to eat down the butts left in the field. The tops secured in fine condition made excellent fodder, and it was thought the method had the advantage of lightening the labors of the harvest. There certainly is an objection of waste to it. The lower part of the stalks left in the field, cannot be as nutritious when so much exposed to the weather, and though the cattle may browse them off, yet the same bulk of fodder well secured, would go farther and give more sustenance if fed from the barn. Early frosts, too, would not only injure the fodder but the grain in this method, as the latter was longer in arriving at maturity.

A better plan, and one that is now pretty generally followed, is that of cutting the whole corn up close at the roots, and placing it in stooks to cure. This method, well performed, not only saves the *whole* fodder, but gives a greater weight of corn in the measure. The reason for this is obviously the same as for cutting wheat as soon as it is well out the milk. One example in proof may suffice. We quote from Mr. J. F. OSBORN'S statement of his premium crop, as published in the Transactions of our State Ag. Society for 1844, at page 174. He says:—"About the last of August I topped four rows; and on the 9th of Sept. cut up four rows adjoining, and left four rows standing; each four rows kept separate, and shelled and weighed. That cut up at the roots weighed 60 lbs. per bushel; that topped weighed 58 lbs. per bushel; and that left standing weighed 54 lbs. per bushel."

In this method the corn should be cut up as soon as it is well glazed, and before it is fully hardened. The mode of doing it is this. With a sharp-ground hoe having a short handle, or with a piece of an old scythe fitted to a handle, a hill may be grasped in the left hand by the tops, and severed at a blow. Then, without laying it down, set up firmly against some stout hill selected for the purpose. Having placed some six or eight hills around the standing one, put a band tightly around the whole just above the ears. This will make them stand the firmer, whilst the workman is finishing the "stook." So soon as the desired number of hills are cut and placed, the whole should be well secured by at least two bands—the lower a little above the ears, and the upper near the summit. These will keep the stook in good shape, and prevent the rains from penetrating the middle. Five rows are a very convenient number to cut at one "work," placing the stooks on the central row. In having the stooks stand upright against winds and storms, much depends not only in banding them strongly, but in placing the stalks firmly and uprightly together, and then so soon as they have cured somewhat and have shrunken, attention should be given to see that the bands are tightened, and such as are loose replaced. Stooks put up thus, and looked to, will if necessary stand well through the winter, and preserve both corn and fodder bright and sound. When desired they may be husked in the field, the stalks bound in bundles, placed again in large stooks, well banded at the top, and thus remain till wanted for foddering, or they may be carted and placed in small round stacks, the tops all centering around a pole. It is difficult to keep stalks from moulding in a mow, owing to the large amount of moisture contained in the stalk. Corn cut up and stooked in this manner may be very readily taken to shelter for husking, if desired.

The stook, without loosing the bands, is pushed to one side and the standing hill severed by a knife, when the whole is placed at once on a sled or a low wagon with a rack. If husked in the barn, the whole fodder is saved, husks, blades and all, of which some is necessarily wasted when husked in the field. We are satisfied that this method of harvesting corn not only saves weight in the corn, but saves labor in harvesting it, as well as fodder for the stock, and we therefore can but recommend its observance upon all our readers.

And this is the time to look out for the seed for the future crop, and to *save* it too. If you will go through your field first and cut out those stalks that have the most and largest ears on, and those that ripen earliest, you will be very sure to have the best that can be got, and which will give you a perceptible improvement in your next crop. But this method requires some time, and may not be adopted save by the most thorough-going and wide-awake. The next best way is to secure the best ears, and from those, if possible, where two or more grow on one stalk, as you husk, leaving a few husks on by which to braid them in traces, which done, hang it in a *dry* and airy place, and you will be sure of seed that will vegetate and give you increasing returns. Mr. CUBB, of Michigan, from whose essay we quoted some time since, says:—"By following this mode of selecting seed from the most productive spears a series of years, the increase of the crop may be greatly enlarged, as I have proven by actual experiment." Vigor of constitution is as well transmitted by species in the vegetable as in the animal kingdom. Then look to see what seed you plant.

### PASTURING MEADOWS.

A GREAT many farmers make it a practice to turn their whole stock into meadows as soon as the bottoms have got a good start, and frequently before if crowded for the want of feed. It is an impoverishing process, materially and entirely wrong. Meadows, however well laid down, receive nothing except from the process of top dressing, which does not prevail in this country, but are continually shorn to the very earth of all their produce; none of which is ever returned in any shape, until it is again broken up. Now, is not this as great a draft on the bank as the deposits will warrant, without depleting by pasturing? The droppings of the animals are no compensation, with the exception of sheep, and do more injury than good, if not very thoroughly distributed in the spring.

The way to extirpate and thoroughly destroy Canada Thistles, and all noxious and vicious pests and weeds, is, to keep the leaves cut down,—leaving the roots bare and without the ability to increase or extend, and wherein does the process vary? Instead of the hoe or scythe, the sharp noses and keen scissors of the hungry animals keep down every spear of fresh vegetation. Every new leaf that expands on shrub, tree or plant has a new root, fibre and spongioles, and if continually despoiled of its leaves, the provision for next year's produce is materially curtailed. The cutting of *rowen*, or after-math—every mouthful taken by an animal—lessens its ability to produce the next crop.

Farmers are continually complaining that their meadows run out; the timothy and clover disappear, and foul grasses usurp their places, and this must be the inevitable result of a constant clipping and feeding system. This effect is not so sensibly felt in a wheat-growing country, where a constant rotation is necessary, and no land fit for plowing is allowed to lay long in permanent meadow; yet in all countries there is more or less land not adapted to wheat, that should remain in meadow, and may be kept in good heart as such for twenty or forty years by proper management.

Timothy grass is a perrenial, long enduring grass on moderately dry land,—a little liable to be thrown out and killed on wet and heavy land. It is of the nature of wheat, increasing only by offsets, and the seed magnified appears exactly like the wheat kernel, and makes a flour hardly distinguishable in taste or composition. If the offsets are eaten off at their first starting after the hay clip, the whole stock is weakened, and perhaps is winter-killed. Clover is equally affected, and even June grass, and the whole class of plants that increase by snake-heads, or runners, are rendered weak, and the next year's production feeble and light.

No one can have his cake and eat it too;—all take out and no put back, soon empties the meal chest. The result is as palpable as *law suits*. *

### POTATO ONIONS.—CULTURE, &c.

FRIEND MOORE:—The large potato onion is beginning to attract notice among farmers as well as market gardeners. There are three kinds of potato or hill onions—one small; an old variety known by various names as the Bunch Onion, Hill, Cluster, and Multipliers; and a later kind known as the Egg Onion, from its resemblance in form to an egg—all of which are propagated only from bulbs or setts. The two latter sorts are worthless compared with the large "English Potato Onion" when it can be obtained—but the scarcity and high price of the seed has prevented its extensive cultivation. Being very early, and for this reason commanding as good or a better price in June and July as they would the following spring for seed, the stock is kept down to the wants of the market gardeners; hence but few find their way into the market for seed, and the demand as far as I have known, has never been supplied. They are very easily cultivated and a sure crop; increase about four or five fold, i. e., five or six bushels for one, and the expense of cultivation is a mere trifle, as the ground may be occupied with various summer crops, with little or no detriment to the onions or the other crops.

My method of cultivation, which has been perfectly satisfactory for three years, is to plant them in the fall or as early in spring as practicable, in rows about two and a-half feet apart, and set them from four to eight inches apart in the row, according to the size of the onion, giving the large setts the wider berth. Planted in this way they are as easily tended as corn or potatoes in drills. In cultivating, hoeing or raking to kill weeds you prepare the ground for almost any spring crop you choose to put in, and by 1st to 10th of July the onions may be harvested, when, by proper management, the whole surface will present a second crop as vigorous as if it had been the sole occupant for the season. I have now (Aug. 8,) upon the onion beds (in rows, planted between the rows of onions in the proper planting season,) cabbage, beets, carrots, melons, squashes, corn, beans, tobacco, and sweet potatoes—all of as fine a growth apparently as if no onions had been there.

Very many farmers buy their onions in preference to cultivating them from the black seed, and there may be economy in that. But if they will plant the English Potato Onion, they cannot fail of raising a crop, even if they give them no attention after planting; yet they will as well repay for good culture as any other crop—and then you have a luxury indeed, of your own production. The best method of keeping them through the winter, according to my experience, is to pack them in dry sand in boxes or barrels, in any out house or barn—and in any quantity, so that the *dry* sand fills up all the interstices between the onions. I have kept them in this way, perfectly sound, with a loss of less than one per cent.

I. W. BRIGGS.

West Macedon, N. Y., Aug., 1853.

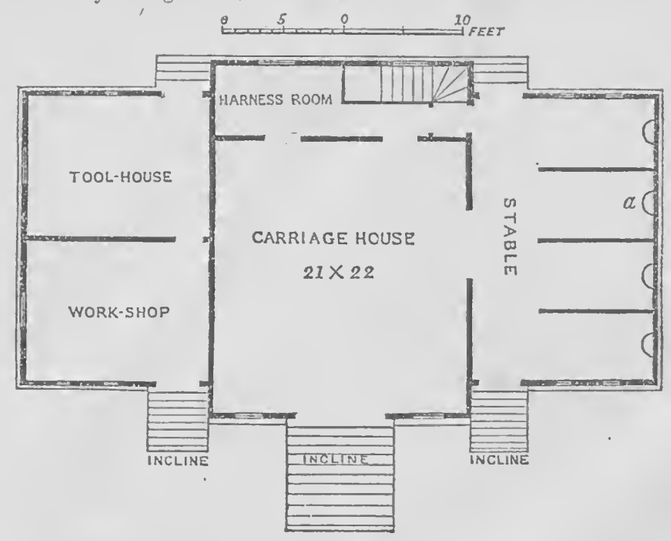
CARRIAGE-HOUSE AND STABLE.

HERE is a plan for a carriage-house and stable, with *fancy externals*—presenting a unique appearance. Though it may be too limited, as well as too expensive and "fancy," for ordinary farmers, some may perhaps derive from the plan valuable suggestions in regard to internal arrangement, by the aid of which similar but less showy and costly buildings can be advantageously constructed. Notwithstanding the extra finish indicated in the design, we think it may suit the taste of many residing in the suburbs of cities, or in villages, as it is evidently a good one for the location for which it is intended—a suburban residence. The design is from the *Horticulturist*, to which it was contributed by the lamented DOWNING:

"This stable is intended to produce a picturesque effect externally, and to contain internally all the convenience demanded in a building of this class. The central portion contains the carriage-house, with space for four vehicles, and a harness-room at the end of it. On one side of this is the stable—the stalls 5½ feet wide, with racks supplied with hay through wells, over each rack, in the floor of the hay-loft above. A flight of stairs leads from the end of the stable to the hay-loft above, and is placed here, (and not in the carriage-house, as we frequently see it,) in order to prevent any dust from the hay-loft from finding its way into the carriage-house. On the other side of the carriage-house are a tool-house and a work-shop.

All the doors in this stable slide upon iron rollers running upon a piece of plain bar iron above the the door. These iron rollers are attached firmly to the door by iron straps; and the door, being thus suspended, not only runs much more easily and freely than if the track were at the bottom, as is usually the case, but the track is not liable to get clogged by dust or other matters falling upon the floor. Besides this, a sliding door in a stable, when opened, gives the largest possible egress in a given space, and can never stand in the way to the injury of horses or carriages passing in or out on either side.

The high roof of this building gives a good deal of room in the hay loft, and the ventilation on the top keeps this space cool and airy at all seasons. The whole is built of wood, the vertical boarding battened in the ordinary manner."



GROUND PLAN.

### NEW AND GOOD CHURN.

FYLER'S BUTTER-MAKING CHURN.—We embraced the opportunity a few days since, to observe the operation, and learn the experience of two families who have used this article two summers, and find that it performes with entire success—converting the cream readily—gathering—working free from milk—salting, and leaving the butter in rolls fit for market. It is a barrel churn with revolving paddles, compact and simple as a grindstone, and costs no more than the common patent churn of the same capacity.

It would be the perfection of churning, if it had the thermometer attached; but that being a patent-right can be avoided by using a hand thermometer, which can be purchased of the manufacturer, W. KENDALL, in this city, for 31 cts.—the use of which, to accelerate the process of bringing butter, is all important, temperature having more to do with the operation, than any other condition of the butyraceous compound. Churning is one of the interdicted labors of the boy who said there was three things he hated to do—turn grindstone, churn and work—and for our part we could never see much fun or speculation in the operation, especially when it was a six hours seige, and all for the want of a little tell-tale glass to say whether it was too hot or too cold.

We observe that this churn is for sale at Mr. FOGG'S Seed store, and that nothing is said to bring so deserving a machine before the public, is an oversight we wonder at—as he is so intensely engaged in the *abolition of slavery*, of which old-fashioned churning is the most tantalizing. The woman's rights convention should attend to this, and have a more attentive consignee appointed, for the churning process is one of the feminine drudgeries that they have an undoubted right to curtail. *

### SCIENTIFIC FARMING.—ANALYSIS OF SOILS.

One of the strong arguments urged in favor of Scientific farming, and an Agricultural College, has been the great necessity of knowing the composition of the soil, or by an analysis of it being enabled to judge correctly what application of special manures were necessary to supply the deficiency made apparent by the test, so the manure used might be the best to prepare the soil for the crop it was desirable to grow. It has over and again been urged that a better, a more thorough and scientific education was necessary to enable farmers to form correct conclusions, and know how best to treat their soils that they may render the largest return for the expenditure. That a knowledge of the Science of Agriculture would materially aid the farmer is not to be questioned, but to look to that as "the one thing needed" for the advancement of the great farming interest, may lead to serious disappointment.

That the Analyses now made cannot always be relied upon as a guide to cropping has been clearly shown in a communication from John Johnston, near Geneva, N. Y., published in the *Cultivator*, from which we make the subjoined extract:

About three years since, a number of the best farmers in this county, were having their soils analyzed, and I thought I would do the same. I selected my sample of soil from a forty acre field, from which I had taken a crop of Indian corn two years in succession, it having been highly manured with barn-yard manure, the fall previous to the first crop. Both corn crops were good—the first the largest. I thought the whole field almost too rich for wheat, after fallow, and I had no doubt the analysis would make the field stand A. No. 1. But I was surprised, when I received the analysis, to find that it was deficient in many things, and almost destitute of other necessary constituents of a fertile soil. The chemist, however, sent me a prescription, which I was to apply, and which he said "would remedy the difficulty it was laboring under."

Now I knew it was not laboring under any difficulty. I tilled the field well, sowed it to wheat, and it produced one of the best crops in all this wheat-growing district. I sold about 800 bushels of it to G. Markel & Co., of Waterloo, and Gen. Markel told many men, farmers and others, that he had not ground such good wheat in many years, and that he never saw a better quality of flour than was made from it. Neither Gen. M. nor any one else but myself knew anything of the analysis of my soil, but he attributed the large crop and fine quality of the wheat, to the fact that the field was under-drained.

Every farmer knows, or ought to know, that barn-yard manure furnishes all the elements of nutrition that are needful for any grass or grain that is grown in the northern latitudes, and I presume in southern also.—It is true that if you manure highly with barn-yard manure for a number of successive years, that the straw will grow soft and weak, and the grain shrink; but this may be remedied by the application of lime, at the rate of 40 to 80 or 100 bushels per acre. This will give a more elastic straw, and a brighter and plumper seed. But to apply only three to six bushels per acre, as recommended by some chemists, would be like giving a horse or an ox a gill of corn for a feed—its effect could not be perceived. The application of a barrel of salt per acre, to lands thus highly manured for years, will produce a similar effect, rendering the grain plump, and the straw bright and elastic.

If these chemists will come among the farmers of Western New York, and show us by the practical operation of their proscriptions, that they can raise better crops than we do, I doubt not they would find plenty of employment; but until they can do this, or at least distinguish between a highly fertile and nearly barren soil, I would advise farmers to rely more upon their own judgment and observation, than upon the results of their analysis.

### FOWL PREMIUMS—ONCE MORE.

[Advertisement.]

I believe it is conceded that when a person is driven to the necessity to resort to such vascillating language as Mr. Van Deusen used in the Rural of August 6, that he is in close quarters, to say the least. It appears that Mr. V. D. refuses to exhibit his lot of poultry with me for $1,000, and the manner of doing this is quite laughable.—"Why does Mr. N. flutter like a shot bird? I did not propose to exhibit any myself." This is certainly rich—decidedly so after his coming out with his first article in the Rural. If he has the ability to harmonize both statements, he is certainly fortunate and blest above ordinary men. Comment on the above is not necessary.

Mr. V. D. says that his fowls are not like mine. So the State Fair committee tho't when they awarded me the first premium on my fowls and him the second. To borrow Mr. V. D.'s language, he has "fluttered" ever since. "Mr. N. says he has ten different kinds," (I suppose he means colors.") In answer to which I would say that Mr. Dixon, one of the judges on poultry at the State Fair at Utica, recently informed me that he saw Mr. V. D.'s fowls, and some of them were like the Cantons that I had at the State Fair, which were as black as your hat—others quite buff—while some were spotted, &c., and that they did not breed like the parent stock.

If I understand Mr. V. D. in his last, he will exhibit five pairs of his fowls with me for $125 on a side—if so I accept of the proposal, and will exhibit any day he may name by having 10 days notice. I will select for one of the judges, I. Haight, of this county; he may name one from his county, and we will add Mr. Dixon (who was one of the judges on poultry at the State Fair at Utica,) as the other, if Mr. V. D. wishes to do so; if not we will let the puplic decide who "flutters." D. P. Newell.

A Good Day's Work.—On the 29th day of July, Mr. James Hagan cradled upon the farm of Mr. Parsons, in Ogden, ten acres of wheat in thirteen hours, breakfast and dinner time out. One acre was cut in less than sixty minutes. The wheat, as has been ascertained, yielded about twenty-two bushels to the acre. Mr. Hagan was born in England, but Yankee grown, having been in this country since he was two years old. The gentleman who furnishes the statement reccommends the Monroe Co. Ag'l. Society to award Mr. Hagan a premium.

### CULTURE AND VALUE OF PARSNIP.

As one who has lived twenty years upon at farm, searching all the while for *reliable* information, both from his own experience and from that of others, ought to be in possession of some "fixed facts" and settled opinions; and as duty, proprioty, and fraternity require that we should allow others the opportunity of benefiting by our experience, I feel moved to give you a few items of information which I think very satisfactorily settled by evidence within my own observation.

Disliking long prefaces, and trusting that all your correspondents will dispense with them, I commence the brief summary of my experience and observations of twenty years, by a statement in regard to the value of parsnips.

Parsnips for Hogs.—One of the things which I consider well settled, and a reliable and useful item of knowledge, is this—that parsnips, either raw or cooked, but preferable cooked, with the addition of apples, potatoes, &c., occasionally, were it only to prevent the appetite from being cloyed by "eternal sameness," constitute the best kind of food whereon to fatten a hog. They are, also the best kind of roots for milch cows. Both hogs and cows eat them with avidity, and to the milk and butter they communicate a good, a delicious flavor. I have seen it stated some years ago, that beef made from parsnips brings the highest price in the London market. I think, though I may be deceived by imagination, that pork made from feed chiefly composed of parsnips, is sweeter than when made from anything else.

This is not the only recommendation which may be justly bestowed on the parsnip. Among its other good qualities is this—that it requires no care or housing in the fall, as all other roots do. In all the middle, northern and western states, potatoes, carrots, and turnips, must be harvested and housed, or buried: and even when all this is done, and with good care and judgment too, a portion will frequently be ruined and lost by frosting, over heating or decay fom other causes. Parsnips, on the other hand, require no care in the fall, as they may be left without injury in the ground all winter. They may also be planted early in the spring, as the frost does not injure them, even at the earliest stage of their growth, so that this root crop interferes the least of any with employments which crowd upon the farmer in the spring and fall. It continues to grow through the whole season, until the ground freezes in wintor; it requires no expenditure to gather or store it; it may be taken up on several occasions during the winter, and the roots that stay in the ground *all* winter, are not injured, and probably improved, by the frost. Parsnips seem to be eaten with more relish than either turnips or potatoes, and yield in the raw state at least, a greater amount of nutriment.

Another advantage in cultivating parsnips is, that on a suitable soil—sand or loam, rich or well manured, and deep plowed—a large growth may be secured. At the rate of 1,200 bushels have been gathered from one acre of ground.

Parsnips may be planted either in spring, or in the latter part of summer, say in August or September. The ground should be well manured, mellow, and deeply plowed, and the seed sown in drills, so as to have plants to thin out, while preserving them at about eight inches apart. This will probably require at about the rate of two pounds of seed to the acre. The drills should be two feet apart and the space between well cultivated and kept clean of weeds. If sown in spring, the earlier the better. A large growth may be secured, however, by sowing the seed in September. There will be some considerable growth before the ground freezes up, and the growth will commence again as soon as the frost leaves the ground in the spring, which will continue throughout the whole season, of about twelve months; whereas, when sown in the spring they can grow only eight or nine months.

All the advantages of this root crop have not yet been named. Among them are these—that they seem uninjured by either a wet or dry season, and that no insect nor bug attacks them at any stage of their growth.—*Working Farmer.*

The Fair of the Richmond Town Ag. Society is to be held at Honeoye, Oct. 12.

### TAKING SUCKERS FROM CORN.

We regard it is an unsettled question whether taking suckers from Indian corn is a benefit or an injury to the crop. Formerly the practice of taking them off has been nearly universal; but some experiments which have been made, show that under certain circumstances, at least, the practice is of doubtful expediency. Still we do not think a sufficient number of results have been obtained, to justify a positive conclusion, one way or another, in reference to the subject. For this reason we would advise further experiments by cutting through fields the suckers from alternate rows—or two rows together—and measuring the corn from each at harvest.

Many points are involved in the question which may effect the result. Much depends on the kind of corn. The Northern varieties frequently have ears on the suckers, especially where from any cause there were not as many main stalks as might have stood on the ground, and of course, taking away the suckers in such cases would lessen the yield. The tall Southern varieties on the other hand, seldom produce ears on any but the main stalk, and hence suckers are regarded as appropriating moisture and nutriment to the sacrifice of the grain. In some instances Northern corn may be too thick—the suckers increase the difficulty—they are not likely to produce ears under such circumstances, and their growth, by excluding sun and air, and by their draught on the soil, may on the whole be injurious to the crop.

The writer can only refer to one experiment of his own on this subject. Several years ago, he cut the suckers from alternate rows through a part of a field of corn. The soil was rich, and the growth large. The rows left untouched produced most corn—but as the minutes of the experiment are not at hand, we cannot state the precise difference. It was a variety of corn in which the suckers were inclined to produce ears. The rows from which the suckers were taken, did not ripen as rapidly as the others; the stalks and leaves kept green longer, and at harvest there was evidently more moisture in the cob.

But this only shows the result in a single case. It is to be hoped that experiment will be multiplied, and that they will be so conducted that the results may enlighten us on many obscure points.—*Boston Cult.*

### ADVICE TO FARMERS

Dr. Kennicott, of Illinois, one of the most agreeable Agricultural and Horticultural writers in the North-west thus advises his brother farmers on the subject of writing for the press:

Though necessity and a love of science made me a physician, I was born a farmer, and remain a farmer still—but I am not content to "do as my father did before me," plow, and sow, and reap in the old fashion, for I have learned that there are better ways, and I like to tell others so; and I have written a good deal in my day, just as I talk, and without the least reference to grammar, of which I know little, or the learning of school men, of which I know nothing at all.

Now, if you are satisfied with what I write, why not write a little yourselves?—You *can* write, if not so glibly, yet more sensibly, and more to the purpose than I do—and for one, I think it is about time for some of you to rest from hand-labor, on rainy days, and take up this little implement of head-labor—the pen—for your own benefit, and the benefit of your own paper and and its many thousand readers. You need not say that you cannot write, for I know better, and so do you.

Remember one truth—every article written on a scientific or practical subject does some good—to the writer, by causing him to investigate the subject, and to the reader, by conveying instruction or exciting thought. Even a badly written article, with wrong facts and false deductions, will do good by causing inquiry and end by throwing more light on a dark subject, or placing an old one in a better light.

The great fault of most of us who labor with our hands is, that we do not think enough—we allow others to do our thinking, when we could do it much better ourselves, if we would only try; and depend upon it, there is a way by which one can get at the true merits of a subject in which he is interested, so effectually, as to attempt to show others by *writing* about it. A writer must think, and very few who write for the press are willing to risk a mistake, and therefore they read and observe. So, you see, the thoughtful writer benefits himself as well as his readers.

### PROVE ALL THINGS.

The following excellent remarks from the *Mark Lane Express* are as well adapted to other meridians as to that for which they were originally designed:

"The assumption of any extraordinary success in the pursuits of agriculture can scarcely be tested too severely. The effect of a well planned puff may be to do incalculable injury, far beyond the limit of its own immediate failure, and stay him who has been persuaded to put his trust in it from perhaps ever trusting it again.—Whether it be the invention of an instrument, the application of a manure, or the perfection of a breed, the same caution is necessary. We have still to estimate the real value of a thing by the practice of an experienced man. Progression here may be comparatively slow; but the advance thus made is achieved with a character and certainty that must in the end tell equally to the benefit of the one who introduces, as of him who follows up, the improvement offered for his use."

### N. Y. STATE AG. SOCIETY.

**Judges for Annual Fair at Saratoga, Sept. 20, 21, 22, 23,—1853.**

CLASS I.—Cattle.

No. 1 *Short-horns—Bulls.*—C. B. Calvert, Riversdale, Md.; Ira S. Hitchcock, Oneda, N. Y.; Geo. J. Pumpelly, Owego.

*Short-horns — Cows.*—John Johnston, Fayette (Geneva P. O.); Daniel B. Haight Dover Plains; L. Chandler Ball, Hoosic Falls.

No. 2. *Devons—Bulls.*—Sanford Howard, Boston, Mass.; E. C. Dibble, Batavia; Jacob Brown Kirby, Brownville.

*Devons—Cows.*—W. R. Sanford, Orwell, Vt.; J. Brodie, Rural Hill, Jeff. Co.; R. C. Gapper, Thornhill, C. W.

No. 3. *Herefords.*—Thomas Bell, Mott-Haven, Westchester Co.; Jehiel Freeman, Geneseo; Hon. Z. A. Leland, Mechanicsville.

No. 4. *Ayrshires.*—Hon. A. Ferguson, Woodhill, C. W.; Stephen Hyde, Palmyra; A. Frazer, Glengary, C. W.

No. 5. *Grade Cattle.*—Hon. M. H. Clarke, Canandaigua; A. Clarke, Canton; A. Barber, Avon.

No. 6. *Natives.*—J. R. Paige, Sennett; N. J. Brown, Oppenheim Center; John A. Wakeman, Ballston Spa.

No. 7. *Working Oxen.*—H. Morrison, Montgomery, Orange Co.; D. Bundy, Morris, Otsego Co.; G. B. Powell, Ballston Spa.

No. 8. *Steers, 3 years old.*—D. Crocker, Jr., Five Corners; Elisha Bushnell, Hillsdale; Levi Shaw, Rensselaerville.

No. 9. *Steers, 2 years.*—J. H. Sherrill, New Hartford; L. Hubbard, Homer; J. W. Jolley, Cocymans, Albany.

No. 10. *Steers, 1 year.*—B. McNeil, Schoharie; William Bullock, New Scotland; Lewis Brown, Somerstown.

No. 11. *Milch Cows.*—Wm. Johnson, Geneva, H. Olmstead, Walton, Del. Co.; Hon. Wm. Cary, Crescent, Saratoga.

No. 12. *Fat Cattle.*—Hon. G. V. Sackett, Seneca Falls; Hiram Slocum, Troy; Hon. A. B. Dickinson, Hornby, Steuben; R. Hardenburgh, Tuthill, Ulster; J. Doty, Clinton Corners, Dutchess.

No. 13. *Foreign Cattle.*—E. W. Shelden, Sennett; N. Woodworth, Covert, Seneca; E. L. B. Curtis, Danby, Tompkins.

CLASS II.—Horses and Mules.

No. 14. *For All-work—Stallions.*—H. Rhodes, South Trenton; Burr Gilbert, Ephrata, Fulton; Col. H. Sloan, Guilderland, Albany.

*All-work—Mares and Colts.*—N. Gowdy, West Martinsburgh, Lewis; Joseph McGraw, Jr., Dryden; Gerrit Ives, Watertown, Jeff. Co.

No. 15. *Draught.*—Col. D. H. Abell, Geneseo, Livingston; B. Hendrickson, Hempstead, L. I.; Capt. Wm. Fonda, Medina, Orleans.

No 16. *Thorough-bred.*—Hon. John A. King, Jamaica, L. I.; Chas. Robinson, Fishkill, Dutchess; L. H. Yates, Darien, Genesee.

No. 17. *Three years old Stallions and Mares.*—R. R. Morris, Westchester, N. Y.; Wm. Briggs, Ogdensburgh, St. Lawrence; C. Hayt, Aurora.

No. 18. *Two years old, do.*—F. J. Swaby, Seneca Falls; Wm. A. Bent, Medina; N. Boomer, Ellisburgh, Jeff. Co.

No. 19. *One year old.*—C. Garner, Ghent; John D. Thorpe, Schodack, Rens. Co.; Chas. B. Roosa, Bethel, Sullivan Co.

No. 20. *Matched for Road and Carriage.*—Dr. F. Y. Porcher, Charleston, S. C.; G. D. Wheeler, Deposit; A. B. Morse, Hammond.

No. 21. *Matched for Draught and Farm.*—Hon. Benj. N. Huntington, Rome; C. W. Van De Bogert, Batavia; J. R. Defreest, Defreestville.

No. 22. *Geldings.*—J. D. Wasson, Albany; J. D. Milbank, Herkimer; J. Patten, New Windsor.

No. 23. *Single Mares.*—Le Roy Mowry, Greenwich; E. Skinner, Bethlehem; J. V. B. Teller, Greenbush.

No. 24. *Foreign Horses.*—T. Motely, Jr., Jamaica Plains, Mass.; J. Crocker, Kings Ferry; S. D. Harris, Columbus, Ohio.

No. 25. *Jacks and Mules.*—J. C. Stoothoff, Jamaica, L. I.; Ira Partridge, Edinburgh, Sar. Co.; B. F. Jackson, Saranac, Clinton Co.

CLASS III.—Sheep, Swine and Poultry.

No. 26. *Fat Sheep.*—J. McD. McIntire, Albany; J. Farr, Fort Ann, Washington; D. Carter, Darien.

No. 27. *Long Wooled.*—R. Pim, Downington, Chester Co., Penn.; Benj. Carter, Darien; A. Vail, Stanfordville.

No. 28. *Middle Wooled.*—R. Hadfield, Buffalo; C. B. Meek, Canandaigua; Andrew Heermance, Rhinebeck.

No. 29. *Merinos.*—J. R. Speed, Caroline, Tompkins; Henry Brown, South Hartford; James W. Hyde, Darien.

No. 30. *Saxons.*—Col. E. B. Morgan, Aurora; J. S. McDonald, Salem; M. Cameron, Wolf's Island, C. W.

No. 31. *Cross Breed.*—W. C. Watson, Port-Kent, Essex; E. L. Gage, De Ruyter; John H. Willcox, Rome.

No. 32. *Foreign—Long and Middle Wooled.*—S. D. Hungerford, Adams; Daniel S. Baker, West Bloomfield; Hon. Stephen Haight, Washington, Dutchess.

No. 33. *Foreign—Saxon and Merino.*—Daniel S. Curtis, Canaan Centre; Hon. S. S. Beman, Hampton, Washington; L. Q. Sherwood, Auburn.

No. 34. *Swine.*—A. Mann, Frankfort; J. W. Collins, Smyrna; E. Chesebro, Guilderland.

No. 35. *Poultry.*—J. M. Lovett, Albany; R. S. Stevens, Attica; I. T. Grant, Schaghticoke.

CLASS IV—Plowing, Implements and Machinery.

No. 36. *Plowing Match.*—F. P. Root, Sweden, Monroe; J. M. Stevenson, Coila, Washington; Noah Hitchcock, jr., Homer; Hon. Peter Crispell, jr., Hurly.

No. 37. *Farm Implements, No. 1.*—A. Doubleday, M. D., Binghamton; Howell Cooper, Watertown; Henry Keeler, South Salem.

No. 38. *Farm Implements, No. 2.*—Hon. Lorenzo Rouse, Paris; David Callanan, Albany; Duncan McGregor, Doe's Corners.

No. 39. *Farm Implements, No. 3.*—Martin Springer, Brunswick, Rensselaer; Philip Kinney, Bethlehem Center; John Keese, Peru.

No. 40. 41. *Machinery.*—J. Stanton Gould, Hudson; Abel Downs, Seneca Falls; A. M. Sherman, Newburgh.

CLASS V—Dairy, Sugar and Honey, Flour, Grain, Seeds and Vegetables.

No. 42. *Butter.*—C. G. Harger, Pamelia, Jefferson; L. T. Marshall, Vernon Center; Joseph Cary, Albany.

No. 43. *Cheese.*—Alonzo L. Fish, Cedarville Herkimer; Pliment Mattoon, Vienna, Oneida; D. Goff, New York.

No. 44. *Sugar and Honey.*—Thomas McElroy, Albany; Samuel L. Thompson, Setauket, L. I.; P. V. Fort, Albany.

No. 45. *Grain and Seeds.*—Samuel Dixon, M. D., New Scotland, Albany; Israel S. Parker, Rome; G. N. Durant, Rensselaerville.

No. 46. *Vegetables.*—Christopher Batterman, Guilderland; L. B. Arnold, Fairfield, Herk. co., Percival Seaman, Newburgh.

No. 47. *Flour, &c.*—C. N. Bement, Albany; Col. C. A. Hamilton, Flushing, L. I.; Peter H. Brink, Saugerties.

CLASS VI—Domestic Manufactures.

No. 48. *Silk and Domestic Manufactures, No. 1*—Hon. John Benedict, Lowville; Hon. Henry, Holmes, Coveville; A. H. Beach, Wilmington.

No. 49. *Domestic Manufactures, No. 2.*—E. S. Massey, Watertown; John Nellis, St. Johnsville; Augustus Thompson, Bullsville, Orange.

No. 50. *Domestic Manufactures, No. 3.*—Henry Churchill, Gloversville, Fulton co.; E. Selden, Amherst, Erie co.; Wm. McElroy, Albany.

No. 51. *Manufactures other than Domestic.*—Col. E. D. Avery, Ithaca; Hon. James M. Cook, Ballston Spa; Richard P. Hunt, Waterloo.

No. 52. *Needle Work, &c.*—Mrs. R. H. Walworth, Sar. Springs; Mrs. L. T. Marshall, Vernon; Mrs. L. E. Smith, Mechanicsville; Mrs. H. W. Taylor, Canandaigua; Mrs. James M. Cook, Ballston Spa; Mrs. Henry Holmes, Greenwich; Mrs. Amos Briggs, Schaghticoke; John Knickerbocker, jr., Esq., Sec. to committee.

CLASS VII—Flowers, Fruits and Paintings.

No. 53. *Flowers.*—V. P. Douw, Greenbush; Dr. C. H. Payn, Saratoga Springs; Joseph Frost, Rochester; Roswell Reed, Coxsackie; Alfred Richards, West Troy; Mrs. Washington Putnam, Sar. Springs; Mrs. E. T. T. Martin, Auburn; Mrs. Roswell Reed, Coxsackie; Mrs. V. P. Douw, Mrs. B. B. Kirtland, Greenbush; Mrs. G. W. Wilcox, Sar. Springs, Mrs. Dr. Payn, Sar. Springs; Mrs. James Thompson, Ballston Spa; Miss Mary Steele, Miss Mary Clemens, Miss A. E. Wayland, Miss Harriet Reed, Miss Eliza Palmer, Miss Maria A. Close, Saratoga Springs.

No. 54. *Fruit—Amateur List—Apples Pears and Peaches.*—Hon. E. W. Leavenworth, Syracuse; A. Saul, Newburgh; John N. Wilder, Albany.

No. 55. *Plums, Nectarines, Quinces, Grapes, Melons, Cranberries.*—P. Barry, Rochester; Lindley M. Ferris, Coldenham; Jonathan Battey, Keeseville.

No. 56. *Professional List—Apples, Pears and Peaches.*—Herman Wendell, M. D., Albany; Hon. Orlando Allen, Buffalo; Amos Briggs, Schaghticoke.

No. 57. *Plums, &c.*—C. W. Hovey, Boston, Mass; J. M. Ward, M. D., Newark, N. J.; John H. Cole, M. D., Claverack, Columbia.

No. 58. *Foreign Fruits.*—J. J. Thomas, Macedon, Hon. A. H. McLean, Caledonia; Townsend Glover, Fishkill Landing.

No. 59. *Paintings, &c.*—Hon. Thomas R. Walker, Utica; Noel J. Becar, New York; Hon. T. G. Yeomans, Walworth.

CLASS VIII—Stoves, Silver Ware and Discretionary.

No. 60. *Cooking Stoves.*—Hon. Samuel Cheever, Bemis's Heights; William Beebe, New York; Chauncey Kirkham, jr., Batavia.

No. 61. *Stoves—Parlor.*—S. W. Tallmadge, Castleton; Abner H. McArthur, Hudson; Sanford Adams, Rome.

No. 62. *Silvere Ware.*—Benjamin R. Norton, Syracuse; William Wendell, Albany; George Waterman, Albany.

No. 63. *Discretionary No. 1.*—Samuel A. Law, Meredith; M. R. Patrick, Sacket's-Harbor; John H. Tower, Clinton.

No. 64. *Discretionary No. 2.*—R. S. Doty, Rome; Dr. Wm. Noble, Albion; Marcus Beach, Williamsburgh, L. I.

No. 65. *Discretionrry No. 3.*—John Harold, Hempstead, L. I.; Milo Ingalsbee, South Hartford; Robert L. Hale, Elizabethtown.

### TO PREVENT COWS FROM SHEDDING MILK.

Collodion (liquid cuticle) is a somewhat recent discovery, and has been applied to useful purposes by surgeons, but I am not aware that it has ever been used to prevent the loss of milk by leakage from the udder of the cow. The mode of applying is as follows:—After milking, take a thin piece of muslin, the size of a three cent piece, wet it in the collodion and apply it quickly to the end of the teat. It dries immediately and adhering firmly, prevents the escape of milk from the orifice. It can readily be removed at the next milking.

On first making use of this means I did not anticipate anything more than temporarily to prevent the evil. After making a few applications it was discontinued, and I was somewhat surprised to find that it had permanently lessened the fault. Upon reflection, the *modus operandi* appeared as follows: First the collodion contracts the orifice and then prevents the escape of milk; and second, the bag becoming distended, its capacity is permanently enlarged. Try it.

Another useful purpose of this article may be mentioned. Cows teats often become tender from chaps and deep fissures in them. They may readily be cured by moistening a piece of muslin in this liliquid and applying it smoothly to the parts affected. It adheres so firmly that it will not be loosened, even if the calf is allowed to draw the milk.

Mr. Editor:—The above recipe I cut from a Harrisburg paper. As it gives no credit, it may be original. Please publish it in the Stock Register, and add, that *molasses* is "the sovereignest remedy" for the chapped teats of a cow—to be applied after milking. Of course the udder sho'd be washed with cold water, which of itself will frequently cure slight cases.

My observation and experience, tho' limited, go to prove the better plan to be letting the calf have free access to the dam, for twenty-four hours after birth. The sucking and butting it administers, is just the right treatment for the swollen udder; and cases of "Garget" are extremely rare, where this plan is practiced. It is also much easier to separate the mother from the calf, the next day, the maternal instinct being then partially quieted.

Also, it should *never* be permitted to kill a calf, in any place which the cow can have access to.—Their piteous lowings in such cases leave no room to doubt that they recognize the blood of their offspring. The writer has known of *actual tears* pouring down the face of a cow, on being shown the bloody hide of her calf. These may be thought matters too trifling for the consideration of "men of mark"—but it is not so; the beautiful humanities must all combine, to form the perfect character. S.

# Orchard and Garden.

## THE CURL, A DISEASE OF THE PEACH LEAF.

VARIOUS conjectures and surmises have for several years been put forth, as the cause of this disease, if disease it may be called. Insects, fungii, temperature, and the late doctrine of periodic vitality, that all the old varieties have passed the vigorous age of tree-hood and are hastening to the tomb of the capulets; and there is some justification of the latter view in the fact, that one of the oldest varieties known—the Kensington—is one of the kinds most fatally affected; while the new variety of Crawford's Early, escapes;—yet we are not believers in that doctrine, but hold that varieties can be renewed and carried on from old stocks to new ones for any period consonant with the durability of this little world of ours.

Pomologists have classed the Peach into a system depending upon the color of the flesh, and free or cling stones, and the peculiarity of the leaves and their glandular accompaniments and the size of their flowers. The *Curl* is not confined to any one of these classes, and is entirely adventitious, attacking more or less all varieties, with the exception of clings, which more generally escape than the free-stones. Seedlings are not exceptions, and some of the earliest and most tender kinds measurably escape.

The law that governs this peculiar affection of the tree, seems to depend upon the *structure of the cellular tissue of the under side of the leaf.* The *modus operandi* of the disease, seems to be a failure in the lining of the leaf of the under side to carry on and eliminate the sap, while the upper side grows and expands, causing a great thickening of the pulpy part, and a twisting and corruscation of the entire structure, a fermentation and decomposition takes place, eremacausis and mildew commence, the leaves fall, the wood and fruit stem is naked, gummy excresences are produced, and the fruit falls. A part of the twigs possess sufficient vitality to throw out the terminal bud, but never the dormant ones.

Now what change or event can rationally be assigned as the cause of this disease, which is of not more than five or six years' introduction. There are no new exhalations from the earth, or variation in the constitution of the atmosphere, that affect any other organization that learned and observing men are advised of—nor any particular change of climate, except a tendency to assimulate into *rainy and dry seasons*, like California and the tropical regions.—Our springs have been uniformly wet and cold—for several years past, and the summers dry and without the usual accompaniment of refreshing showers.

As far our observation has gone, the *curl* has invariably followed a cold night, and particularly with easterly winds, and this view coincides with the fact that protected trees are less affected, and strong growing, young trees escape, while feeble, old ones of the same variety are affected.—The heat, repulsion, and resistance of the youth of vitality, resists many diseases, and the attacks of insects on vegetable life.—After the two cold mornings about the middle of July last, we observed the curl in perfection on the Hill's Madeira, and the Kensington; they were distinctly marked with the disease.

We have long held that we were on the very border of the ability to grow peaches—that this most delicious fruit was but a probationer, and that a little tilt would send us into the non-bearing Peachiferous region. With nurserymen and amateurs, the important question will be, *Do they curl*, and how severely affected by this disease? *

## NEW APPLE-TREE DESTROYER.

IN several journals, I have noticed articles in reference to a singular worm, which, it is said, destroys apple-trees down in Maine.—In this vicinity, apple-trees bear marks of having been disturbed by a like destroyer. Whether the ends of the limbs of the trees are stung or poisoned by an insect, or injured by a worm, I know not; but suffice it to say that many of the thrifty shoots, and even quite large limbs, have been killed upon many of the apple-trees in this town.—In June, I noticed that the terminal bud of the shoot bore the appearance of having been eaten or materially damaged, by some living thing; but I never have been so fortunate as to discover any worm, with parallel stripes running longitudinally upon its back, on any trees which I have examined.

Now, what remedy can we apply to the trees to prevent the appearance of the phenomenon referred to? Any information respecting this new phenomenon would be gratefully received by friends in this quarter. Quince, apple, and cherry-trees are affected by the disease. W. TAPPAN.

Baldwinsville, N. Y., August, 1853.

## LETTER FROM DR. KENNICOTT.

MR. MOORE:—My object in writing you, at this time, is to request a notice of the meeting of our "North-Western Fruit-Growing Association," to be held in the city of Chicago, October 4th to 7th. But, at the outset, I must be permitted to say that I am delighted with the weekly visits of the RURAL NEW-YORKER—there is a joyous freshness, and home-like character in the work, which make way to the heart of a home-bred enthusiast. The greater variety of reading matter—including the current news of the day—and the more timely information which the weekly sheet permits, renders it much more agreeable, and when one paper only is taken, more useful than the monthly issue. I trust the time is not distant, when we shall be able to sustain a publication like the Rural and Country Gentleman, in Illinois, to aid the wholesome and efficient labors of our excellent old Prairie Farmer. At this time, I believe, we have no agricultural weekly in the west—the Ohio Farmer excepted.

But I am not saying what I intended.—There are several reasons why some of your Western New York readers should attend our Fruit Growers' Meeting. The nurseries of your region have supplied many of the orchard trees of the upper Lake country, and the propagators ought to see the heritage of their old favorites, in this new locality. And, in order to keep up their western trade, the nurserymen are bound to be with us, and learn the varieties best suited to our varying soil and climate. We look forward to a most interesting gathering of fruits and fruit men, in Chicago—for this is a wonderfully productive season, and there is no other meeting of pomologists this year; and western men begin to feel the positive necessity of a Western Fruit List apart from the general one, which the United States Society is establishing. And, by the way, let it be remembered that our Association is an adjunct—*not a rival*—of the great parent Society.

I have yet another inducement to offer your readers, who have never seen the interior of Illinois, and who are wise enough to know that a little time and money may be profitably, as well as pleasantly expended, in looking upon the lands and the labors of others. Our first State Fair is to follow on the heels of our Chicago meeting; and on the way to Springfield lies some of the richest and loveliest prairie land that ever blest the farmer's sight; and one day, or a little more, will take the visitor over it, and to our State Capital, where our farmers intend to show samples of our prairie products, well worty of the notice of our eastern brethren.

For myself, I greatly miss the crowning hills and the clear spring-brooks of my old home, in Western New York—and I have to return to them now and then, for a renewal of the ideas of the romantic and the picturesque, in the hilly grandeur of the old woodlands—yet, if one wants a clear sense of solid immensity—of ocean, and heaven-like vastness—he must traverse our prairies to find it. But a writer in your paper has described the feelings and the ideas they beget, much better than I can hope to do it; and so I will only say to your readers (if you deem this worth their reading.) COME AND SEE.

Cordially yours,
JOHN A. KENNICOTT.

The Grove, West Northfield, Ill., Aug. 12, 1853.

## A DOLLAR FOR FLOWER SEEDS.

A CORRESPONDENT of the *Ohio Cultivator*, one who has quite a passion for posies and variegated gardens, and who boasts one of the prettiest farm cottages, and handsomest door yards in Ohio, defends himself and his handsome home, in the following very sensible manner. He says:

"I am sending you the first dollar that ever went from our town for flower seeds, and I am the only one who would venture to do so. I have been endeavoring to create a taste for flowers among my neighbors, and have succeeded a little, but if *some* of our farming friends here were to know I had spent a dollar for flower seeds, they would think it an act of madness. Had some of them been in being the morn of Creation, and admitted to counsel with Deity, they would surely have recommended the creation of nothing but corn and hogs. For this reason I request you to make for me a selection of the finest, as I wish to convince them yet, that God created the beautiful as food for the soul, and the useful for the body, though to the intellectual mind the beautiful and useful are always combined."

GROWING FOREST TREES.—If you wish to grow trees, don't permit cattle or sheep to feed upon their leaves and young twigs.—Nor should the leaves that fall in the autumn be removed from a forest which one wishes to increase in the growth of young trees.

PEACHES, grown in this vicinity, are in market, though yet scarce, inferior and expensive. In a few days they will be delicious and abundant.

## CULTURE OF CHICORY.

It is well known, probably, to most of our readers, that the root of Chicory (*Cichonium*, Linn, usually called succory) is extensively used as a substitute for coffee, and to mix with coffee. The flavor of the chicory in the mixture, is thought by many to be an improvement on the coffee, and the prepared chicory root is sold to a considerable extent in this country, as "Essence of Coffee," and under other names, for the purpose of mixture.

The Mark Lane Express of July 5th, 1852, contained the following notice of the value of this plant:

"Chicory will turn out to be one of the most important agricultural, as well horticultural roots that, perhaps, nature has ever given us. Every part of it is of great value—top and bottom. Bleached for salads; green for cattle, sheep and lambs; the roots for cattle, as well as a substitute for coffee. Immediate attention ought to be paid to it. Every seed-merchant possesses the seed of it, and it is exceedingly cheap. If chicory was largely grown by the cattle and sheep farmers, much less disease would prevail, and more milk and butter would be produced, and more healthy meat, as it is so fine a bitter, and purifier of the blood.—The root is largely grown in Yorkshire, to mix with coffee. One fault is, that by trying to get a large crop, we injure the flavor."

Why will not some of our enterprising cultivators procure some of the seed, and try the culture of chicory, here? It, undoubtedly, would be quite as profitable as in England, where it is said that the root can be afforded at about half the cost of coffee, and it is affirmed to be much more wholesome. Whether the common *Chicorum*, frequently found growing wild by the roadsides, is the true chicory of commerce, or not, we are not informed, but have supposed that it is. Can any of our friends enlighten us on this subject?—*West. Hort. Review.*

# Domestic Economy.

## TOMATOES AND GREEN CORN.—RECIPES.

BAKED TOMATOES.—Wash them, and cut them in two parts, round the tomato, that is, so as the cells can be divested of the pulp and seed which they contain. To six tomatoes take half a pint of bread crumbs, one large onion finely chopped, one ounce of butter, pepper and salt to the taste. Fill the cells of each piece with the dressing, put two halves together, and tie them with a piece of thread. Put them in a pan with an ounce of butter and a gill of water, set them in a moderate oven, and cook them till they are soft. When done, cut off the threads and serve them.

SCALLOPED TOMATOES.—Peel fine ripe tomatoes, cut them up in small pieces, and put in a pan, a layer of bread crumbs, then a layer of tomatoes, with pepper, salt and some pieces of butter; then put another layer of bread crumbs and tomatoes, and so on till the dish is full. Spread some beaten egg over the top, and set it in the oven and bake it.

FRIED TOMATOES.—Wash them, cut them in half, take out the seeds, and season them with pepper and salt. Have ready some melted butter in a pan, put them into it, and fry them slowly till very soft.

DRIED TOMATOES.—Take fruit fully ripe, strain through a sieve, cook slowly half an hour, spread on clean plates, and dry in an oven twelve hours.

BOILED GREEN CORN.—Green corn should always be boiled on the cob, with the inner husks on it. To prepare it, turn down the inner husks, cut off the upper end, wash the corn, and replace the husks. Boil it about half-an-hour in water salted to taste. It should be cooked in just enough water to cover it.

CORN FRITTERS.—One tea-cup-full of milk three eggs, one pint of green corn grated, a little salt, as much flour as will form a batter. Beat the eggs, the yolks and whites separate. To the yolks of the eggs add the corn, salt, milk, and flour enough to form a batter, beat the whole very hard, then stir in the whites, and drop the batter, a spoonful at a time, into hot lard, and fry them on both sides of a light brown color.

CORN OYSTERS.—One pint of grated green corn, two eggs, as much wheat flour as will make it adhere together. Beat the eggs, mix them with the grated green corn, and add enough flour to form the whole into a paste. Fry them of a light brown in hot lard.—*National Cook Book.*

## HOW TO DRY PEACHES.

How shall we dry the peahes? Some one in another paper, has asked the same question, and has been kind enough to answer it himself, so we clap down here what he has said for the benefit of all who desire a good supply of this delicious fruit:

"Do your readers know how to dry peaches? Take those of the best quality, just as they are ripe enough to eat, halve them, remove the stones, and sprinkle over them, in the hollow from which the pit was taken, a little nice sugar; dry them in a brick oven after the bread, &c., is withdrawn.

They are far better than if dried in the sun, retaining their aroma and flavor, and besides are totally free from insects. Prepared in this way, from peaches fully ripe, they need no cooking, but are simply soaked out in cold water. All the sugar they require (ranging of course with the variety) is added while drying. Peaches thus dried and prepared, are only inferior to the fresh fruit, of which they retain the flavor in a remarkable degree. If you prefer, take not quite so ripe, and peel the fruit, but the flavor is not so good as when fully ripe, and is dissipated more in the process of drying."

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE
For the week ending Aug. 9, 1853.

Samuel Canby, of Ellicott's Mills, Md., for improvement in winnowers of grain.

Frank Dibbon and Lewis Bollman, of New York, N. Y., for improvement in multiplying gearing.

Daniel Dodge, of New York, N. Y., and Phineas Burgess, of East Boston, Mass., for improvement in life boats.

George W. Eichell, of New York, N. Y., for improvement in setting-up ten pins and returning balls.

Benjamin H. Green, of Princeton, N. J., for improvement in carpenter's clamps.

John Hartin, of New York, N. Y., for improved mode of drying paper.

Samuel Hickok, of Buffalo, N. Y., for improvement in railroad car seats.

Lewis S. Ingraham, of Cuyhoga Falls, Ohio, for improvement in winnowers.

John W. Jenkins, of Greenport, N. Y., for improvement in iron posts for fences.

George Leonard, of Shrewsbury, Mass., for improvement in fire-arms.

John Lewis, of Buffalo, N. Y., for improvement in printing presses.

Eben L. Millis, of Rochester Depot, Ohio, for improvement in corn-shellers.

Joel G. Northrop, of Syracuse, N. Y., for improvement in printing presses.

James Patterson, of Franklinville, N. Y., for improvement in friction rollers.

Alfred B. Seymour, of Hudson, N. Y., for improvement in rolling railroad and other iron.

Joshua Stevens, of Chicopee, Mass., assignor to the Massachusetts Arms Company, of same place, for improvement in repeating fire arms.

DESIGN.

Thomas Ball, of Boston, Mass., assignor to Geo. W. Nichols, of same place, for design for a statute of Daniel Webster.

## CONDENSED HISTORY OF STEAM.

ABOUT 280 years B. C., Hiero of Alexandria formed a toy which exhibited some of the powers of steam, and was moved by its power.

A. D. 450, Anthemius, an architect, arranged several caldrons of water, each covered with the wide bottom of a leathern tube, which rose to a narrow top, with pipes extended to the rafters of the adjoining building. A fire was kindled beneath the caldrons, and the house was shaken by the efforts of the steam ascending the tubes.—This is the first notice of the power of steam recorded.

In 1543, June 17, Blasco D. Garoy tried a steamboat of 200 tons, with tolerable success, at Barcelona, Spain. It consisted of a caldron of boiling water, and a movable wheel on each side of the ship. It was laid aside as impracticable. A present, however, was made to Garoy.

In 1660, the first railroad was constructed at Newcastle-on-Tyne.

The first idea of steam engines in England was in the Marquis of Worcester's "History of Inventions," A. D. 1663.

In 1710, Newcommon made the first steam engine in England.

In 1718, patents were granted to Savary for the first application of the steam engine.

In 1764, James Watt made the first perfect steam engine in England.

In 1736, Jonathan Hulls set forth the idea of steam navigation.

In 1778, Thomas Paine first proposed this application in America.

In 1781, Marquis Jouffry constructed one on the Saone.

In 1785, two Americans published a work on it.

In 1789, Willian Symington made a voyage in one on the Forth and Clyde Canal.

In 1802, this experiment was repeated.

In 1782, Ramsey propelled a boat by steam at New York.

In 1787, John Fitch, of Philadelphia, navigated a boat by a steam engine on the Delaware.

In 1763, Robert Fulton first began to apply his attention to steam.

In 1793, Oliver Evans, a native of Philadelphia, constructed a locomotive steam engine to travel on a turnpike road.

The first steam-vessel that crossed the Atlantic was the Savannah, in the month of June, 1819, from Charleston to Liverpool.—*Hunt's Merchants' Magazine.*

## THE STEAM FIRE ENGINE.

MR. STIMPSON, the Secretary of the Massachusetts Charitable Association, arrived here a few days since, having been sent by that Society to borrow the steam fire engine for the purpose of exhibiting it at the great Fair of that Society in September next. On making application to Mr. Greenwood, he was told that the machine could not go, but that he should have an opportunity to see it operate. Day before yesterday the machine was taken out. After it had gone through a series of exporiments in the way of throwing water and steam, to the satisfaction of Mr. Stimpson, the engine returned to the house and had backed in, when the alarm of fire was given. Mr. Stimpson had here an opportunity of witnessing this machinery put on fires; the engine ran to the fire, and had water on before any of the other apparatus came on the ground, and the fire was knocked into "pi" in less than no time. The steam fire engine is no longer an experiment. Its utility exceeds the expectations of its most sanguine friends.—*Cincinnati Times.*

## THE SAFEST SEAT.

THE frequency of collisions on railroads has raised the question, which is the place of the greatest security in a railroad train. The Railroad Journal gives the following as an answer:

It is very well known that the car nearest the engine is exposed to the least dust, and that the rear car of a train is generally safer than the front car. The safest is probably the last car but one, in a train of more than two cars; that is, there are fewer chances of accidents to this than any other.

If it is a way train at moderate speed, or any train standing still, a collision is possible from another train in the rear; in which case the last car receives the first shock.—Again, an engine and the front cars of a train will often go over a broken rail, a cow or a stone, without derangement, while the last car, having nothing to draw it into the line of the train, is free to leave the track. Next to the forward car, the rear car is probably the most unsafe in a train. The safest seat is probably near the centre of the last car but one, and in a very long train, in the centres of the two or three cars next to the last.

## NEW CORN CRUSHER.

THOMAS DURDEN, of Montgomery, Ala., has taken measures to secure a patent for a new corn crusher, which is exceedingly well adapted for cracking and crushing corn in the ear, also various other vegetables.—The hopper for the reception of the corn is peculiar; it receives the ears of corn by various small openings; they pass down and are first cut by a revolving S-shaped knife on a vertical spindle, and after that they pass down and are crushed between grooves and projections on the revolving spindle, and grooves and projections on the inner face of the machine. The grinding parts are of cast-iron, the inside of the case being a hollow cone, its bottom where it discharges being the apex, and the grinding spindle or muller acting with its outer on the inner surface of the case. The apparatus is simple and good.—*Sci. Am.*

## IMPROVED METALLIC HUB.

AN improvement has been made in metallic hubs for wheels of vehicles, by J. B. Hayden, of Easton, N. Y. The improvement effectually prevents spokes from working in the mortices of the hub, by any lateral movement—an important consideration. In the hub these spoke mortices are cast in two separate parts, forming two sections; and there is a thin ring plate secured in the hub between them. The lower ends or shoulders of the spokes have thin grooves (one in each) cut into them which the thin plate ring fits, and the tennons of the spokes pass into the mortices on each side of the plate, in such a manner as if one spoke fitted into two mortices in the hub, with a binding ring or key between them, rivetted to the spokes, thus effectually preventing them from working loose in the hub.—Measures have been taken to secure a patent.—*Sci. Am.*

## IMPROVEMENT IN PIANOS.

AN ingenious invention has lately been exhibited in Paris which promises to be the precursor of a new era in the manufacture of piano fortes. La France Musicale announces that one Mons. Sax has transformed the piano by a process very simple indeed, but which, like all simple things, required a man of genius. The fact that the violin is an instrument of small volume, yet its sounding power is very great, while the guitar, much larger in size, produces but thin and meagre sounds, induced Mons. Sax to inquire into the reason of this difference, and he has come to the conclusion that the difference in sound is occasioned by the relative height of the bridge of the instrument. This idea Mons. Sax has availed himself of, and constructed a piano on this principle. And an experiment which has been made in the presence of artists and professors of mark before the Court of France has been successful in the highest degree.

## PERCUSSION CAPS SUPERSEDED.

A NEW composition has lately been invented by Messrs. Winniwarter and Gersheim, of Vienna, for the purpose of superseding the ordinary percussion caps, and, in many instances, the gunpowder charge also. The most prominent features of these gun primers, as the composition is called, are the absence of a metallic coat or cover, and their uniform explosive power, the materials being of such a nature that, after a detonation, no residue whatever is left behind. The materials which form the new composition are fulminating mercury, chlorate of potash, and sulphate of antimony, the dangerous properties of which ingredients are diminished by the application of collodion, which is used as a cement, and it is the ingonious employment of this substance which constitutes the chief peculiarity of the invention.

IMPROVED SLEIGH BELLS.—The Scientific American states that an improvement in bells for horses has been made by Jason Barton, of Middle Haddam, Ct., who has taken measures to secure a patent for the same. The invention relates to a peculiar manner of suspending the tongues within the bells whereby the position of the tongues may be varied according to the inclination of the sides of the pad to which the bells are attached. The positions of the sides of the pad vary according to the transverse side of the body of the animal, and by this improvement the tongues of the bells may be adjusted so as to act on the bells whatever position the pad or belt and bells may have when attached to the animal.

# Educational.

## EDUCATION OF THE FARMRR.—No. 2.

Ens. Rural New-Yorker:—I am not quite ready to endorse the doctrine of Goldsmith, who says:

"For just experience tells in every soil,
That those that think must govern those that toil."

With a little modification, however, it will illustrate the idea I wish to enforce:

For just experience proves in every soil,
To learn to *think* will teach us how to toil.

I can see nothing in the nature of labor to impair the *thinking powers*. Nor can I see why a laboring man should not be a *thinking man*. Whether we regard him as a man of buisness, or a social or a civil being, there is no reason why the *farmer* should not be a thinking man. It is dangerous to trust others to think for us. We had better trust them with our *money*, than with our *thoughts*.

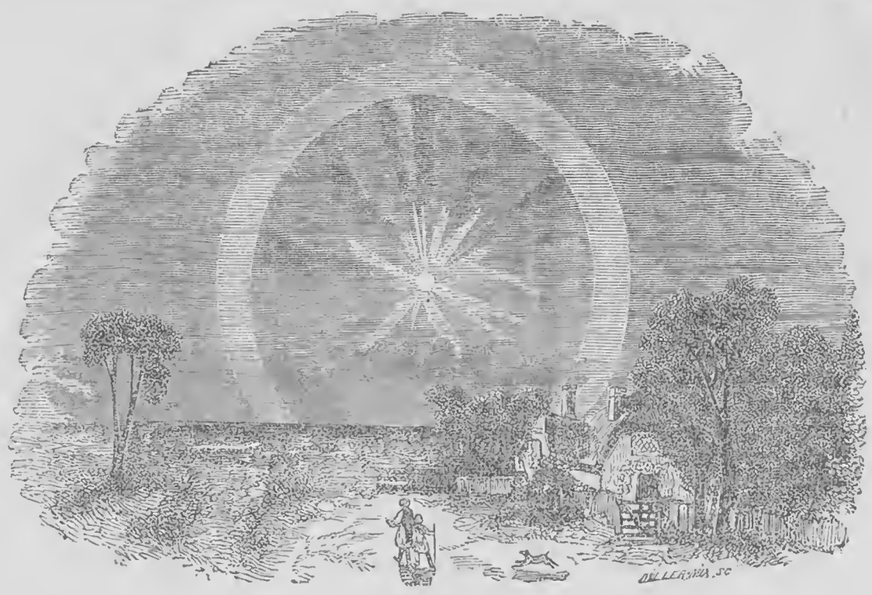
Take the farmer in his business, and are there not many reasons why he should be trained in habits of busy, profitable thought? Place a man in the midst of a tract of land, every way inviting the hand of industrious toil, and is there no call upon the energies of his mind as well as body? How shall he make the earth yield him pleasure as well as profit? With this alone, he can be satisfied in his business. If his mind has never been taught to philosophize, to trace between cause and effect, to measure one by the magnitude and circumstances of the other, he will be likely to form wrong conclusions, and make many great mistakes in regard to his business. A "light crop" is never the result of mere incidence, neither s the cause veiled in an impenetrable mystery. True, it is not in the power of education to control the elements in nature, how to govern the "wind or weather," but it can enable us to explain away many things otherwise dark and mysterious. The laws of nature move steadily and harmoniously on, where there are no impediments in the way, but the works of man, when properly and seasonably applied, can bring out more clearly and beautifully the perfection of nature's laws. Why there is a "light crop" this year and a heavy one next, is not because there has been the least change in the laws of nature, but because our efforts do not bear the same relation to them.

Many a young farmer becomes impatient, grows weary by repeated "failures," and finally quits farming for a more lucrative and less laborious business, which he generally fails to find, and finally is forced to toil with scanty pay, and poor courage. Now all this arises from an imperfect view of the nature of his business; or, from a want of proper education. A mind, thoroughly educated and trained to diligent habits of thought, can stand erect amid the commotion and storm, amid the dashing billows of disappointment and "adverse fortune."

I have sometimes beheld with admiration and almost surprise, the succession of heavy crops, and the fine appearance of some farms. Why is this? Why does this man seem to have such uninterrupted prosperity? "Why he has such good luck." "Providence seems to favor him." Now, the "dealings of Providence" are very nearly resolved on the general principles of cause and effect. "All we behold is miracle when dimly seen." What was seen as miracle some years ago, now is clear as sunlight. There are many laws belonging to the material universe, which are yet seen as in the twilight. We can see but the reflection of a greater light, yet to be revealed. And yet it will do for us to deal with those laws which are familiar in the department of common literature. Let the young man go about farming, with proper views of the importance of his business, or in other words, let him be *properly educated*, and he will seldom have occasion to regret the choice he had made.

"The most profit with the least labor," should be the farmer's motto. Now, many have little care about economy in regard to the amount or method of labor. All the time must be employed,—every moment of the long sultry day must be devoted to hard labor in the field. Our time should be well improved—every moment of it. Everybody admits this doctrine to be correct. But the question to decide is, "How shall our time be improved?" Many say, "by constant employment." This is true, when well understood. There is no moment of time without some specific duty, and we have not one moment to waste. But there is another fact just as apparent—we have no efforts to waste in a wrong direction or by misapplication. Much time is spent in the most unpardonable idleness. But it is equally true much work amounts to just nothing at all, by not being done right or in the right time or place. Better save your labor, than to toil to no purpose. You will need all your strength, in this "work-a-day world." So use both time and labor economically.

Kendall Mills, N. Y. J. W. BARKER.



HALOES AROUND THE SUN AND MOON.

The simplest form of the halo is that of a white concentric ring surrounding the sun or moon, a very common appearance in our climate in relation to the moon, occasioned by very thin vapor, or minute particles of ice and snow, diffused through the atmosphere, deflecting the rays of light. Double rings are occasionally seen, displaying the brightest hues of the rainbow. The colored ring is produced by globules of visible vapor, the resulting halo exhibiting a character of density, and appearing contiguous to the luminous body, according as the atmosphere is surcharged with humidity. Hence a dense halo close to the moon is universally and justly regarded as an indication of coming rain. It has been stated as an approximation, that the globules which occasion the appearance of colored circles, vary from the 5,000th to the 50,000th part of an inch in diameter. Though seldom apparent around the sun in our climate, yet it is only necessary to remove that glare of light which makes delicate colors appear white, to perceive segments of beautifully tinted haloes on most days when light fleecy clouds are present. The illustration shows a nearly complete and slightly elipitical ring around the sun, the lower portion hidden by the horizon, which was distinctly observed during the past summer in the neighborhood of Ipswich, of an extremely pale pink and blue tint. When Humboldt was at Cumana, a large double halo around the moon fixed the attention of the inhabitants, who considered it as the presage of a violent earthquake. The hygrometer denoted great humidity, yet the vapors appeared so perfectly in solution, or rather so elastic and uniformly disseminated, that they did not alter the transparency of the atmosphere. The moon arose after a storm of rain behind the Castle of St. Antonio. As soon as she appeared on the horizon, two circles were distinguished, one large and whitish, forty-four degrees in diameter, the other smaller, displaying all the colors of the rainbow. The space between the two circles was of the deepest azure. At the altitude of four degrees they disappeared, while the meteorological instruments indicated not the slightest change in the lower regions of the air. The phenomenon was chiefly remarkable for the great brilliancy of its colors, and for the circumstance that, according to the measures taken with Ramden's sextant, the lunar disc was not exactly in the centre of the haloes. Humboldt mentions likewise having seen at Mexico in extremely fine weather, large bands spread along the vault of the sky, converging toward the lunar disc, displaying beautiful prismatic colors; and he remarks, that within the torrid zone, similar appearances are the common phenomena of the night, sometimes vanishing and returning in the space of a few minutes, which he assigns to the superior currents of air changing the state of the floating vapors, by which the light is refracted. Between latitude fifteen degrees of the equator, he records having observed small tinted haloes around the planet Venus, the purple, orange and violet being distinctly perceptible, which was never the case with Sirius, Canopus, or Acherner. In the northern regions solar and lunar haloes are very common appearances, owing to the abundance of minute and highly crystallized spicula of ice floating in the atmosphere.—The Arctic adventurers frequently mention the fall of icy particles during a clear sky and a bright sun, so small as scarcely to be visible to the naked eye, and most readily detected by their melting upon the skin.

## RULES FOR HOME EDUCATION.

The following are worthy of being printed in letters of gold, and being placed in a conspicuous position in every household:

1. From your child's earliest infancy, you must inculcate the necessity of instant obedience.

2. Unite firmness with gentleness. Let your children always understand that you mean exactly what you say.

3. Never promise them anything, unless you are sure that you can give them what you promise.

4. If you tell a child to do something, show him how to do it, and see that it is done.

5. Always punish your children for wilfully disobeying you, but never punish in anger.

6. Never let them perceive that they can vex you or make you lose your self command.

7. If they give way to petulance and temper, wait till they are calm, and then gently reason with them on the impropriety of their conduct.

8. Remember that a little present punishment when the occasion arises, is much more effectual than the threatening of a great punishment should the fault be renewed.

9. Never give your children anything because they cry for it.

10. On no account allow them to do at one time what you have forbidden, under the like circumstances, at another.

11. Teach them that the only sure and easy way to appear good, is to be good.

12. Accustom them to make their recitals with perfect truth.

13. Never allow of talo bearing.

## NEWSPAPER COMPOSITION.

This is a distinct and difficult art. Its principles must be somewhat carefully studied by those who would succeed in it. The disregard of these principles is the cause of the prosiness which characterizes so much of our newspaper literature. The newspaper is not a thing to be studied. The articles, then, must be so written as to attract and hold attention. Processes of thought and reasoning are to be shut out—rosults only are to appear. Argument is to be suggested, rather than stated. Usually one point is enough for an article. Some single nail should be struck fair upon the head, and then left at once. Introductions are a nuisance. Inferences are always skipped. The sentences should be short. Every word should leap with life. Condensation should be extreme. Subordinate thoughts should be thrown away. The object is not to treat a subject in full, but to produce a certain effect. All that is not necessary to the effect should be discarded. He who has the nerve to do this, with a soul that fires with a great thought, and the manliness to utter it freely, may wield a power with the pen which no sceptre can rival.

The tendencies in professional life are to deterioration of style. The constant didactism of the pulpits often degenerates into diffusiveness. The reiteration of points at the bar, and the precision of legal style, tend to produce dryness and repetition. In no way can the professional man more effectively make his words instinct with life and power, than by weekly practice in the columns of a newspaper.—*Examiner.*

## TO MAKE MONEY FAST AND HONESTLY.

Enter into a business of which you have a perfect knowledge. In your own right, or by the aid of friends on long time, have a cash capital sufficient to do, at least, a cash business. Never venture on a credit business on commencement. Buy all your goods or materials for cash; you can take every advantage of the market, and pick and choose where you will. Be careful not to overstock yourself. Rise and fall with the market, on short stocks. Always stick to those whom you prove to be strictly just in their transactions, and shun all others, even at a temporary disadvantage. Never take advantage of a customer's ignorance, nor equivocate, nor misrepresent. Have but one price and a small profit, and you will find all the most profitable customers—the cash ones—or they will find you.

If ever deceived in business transactions, never attempt to save yourself by putting the deception upon others; but submit to the loss, and be more cautious in future.—According to the character or extent of your business, set aside a liberal per centage for printing and advertising, and do not hesitate. Never let an article, parcel, or package, go out from you without a handsomely printed wrapper, card or circular, and dispense them continually. Choose the newspaper for your purpose, and keep yourself unceasingly before the public; and it matters not what business of utility you make choice of, for if intelligently and industriously pursued, a fortune will be the result.

A College for Females.—The corner stone of the Dubuque Female College was laid a few weeks since. This institution has been commenced under the patronage of Miss Catharine Beecher, who has engaged to secure for it one thousand dollars' worth of apparatus and library, and an endowment of twenty thousand dollars towards the support of the teachers, the citizens erecting a suitable edifice. The course of studies will not be the same identically with those of most colleges, but equivalent, and the government will be conducted on the same plan, with a President and Faculty of co-ordinate Professors.

The Boston Times says that Europe is "a very respectable quarter of the world; no doubt, but antiquated, and not so influential as formerly."

# Sketches of Travel.

## UTAH.—THE MORMONS.

The *Farmers' Advocate*, published at Bath, Steuben county, contains a long letter from Judge L. H Read, the recently appointed Chief Justice of Utah. He gives an account of his journey out, of his being sworn into office, and of his acquaintance with governor Brigham Young, whom he found to be a native, like himself, of Steuben county, N. Y. The following extracts may interest some of our readers:

SALT LAKE—THE PEOPLE—GOV. YOUNG.

Salt Lake City is a wonder. It is not quite six years since the first pioneer entered this valley. There was not then one civilized inhabitant within five hundred miles, nor the least vestige of civilization or improvement. The people had nothing in the world, except what they brought with them in their wagons, across the plains from the States. The soil is naturally hard and dry, and very little is produced without irrigation. For the first year or two the settlers suffered very severely from want of provisions and proper shelters. They subsisted mainly upon roots, and were sometimes compelled to eat horses and dogs.—At present, however, the people raise abundance of all kinds of vegetables, a large surplus of wheat and coarse grain, and some of the finest beef I ever saw.

The city is laid out in squares, and the whole number of acres in the corporate limits is not less than two thousand; each lot contains about one acre. Any person of good character and industrous habits can have a lot for a very small sum, provided he will settle on it and build a house. Every lot in the city can be irrigated without much expense or trouble. The city proper contains about seven thousand permanent inhabitants. I have noticed a large number of very well-built and comfortable dwelling houses, some excellent, well-cultivated gardens. The public buildings already completed are convenient, well constructed, and present a very creditable outside appearance. The city and country are well provided with ingenious mechanics of every branch and trade.

The people all appear to be doing well.—They are very industrious and orderly, and I see no reason why they cannot enjoy themselves as well as their fellow-citizens in any other part of the Union. I have attended church twice. The mode of public worship is very much like that of other denominations. The sermons I heard were well delivered, and creditable; the music excellent, being vocal and instrumental.—The house of worship is very commodious, and the congregation usually numbers about one thousand.

The principal men are New Yorkers and New Englanders, but a majority of Western New Yorkers. I have got acquainted with most of them, and find them all courteous, kind and gentlemanly. We have here a few Steuben people. Gov. Young and his brothers, Phineas, John, Joseph and Lorenzo, formerly resided in Tyrone. Their father settled there about 1810, and owned a farm there for some time. Phineas is a printer, and formerly worked in Bath. I find also, a large number from right around Steuben, Yates, Alleghany, Ontario, Tompkins, Chemung and Livingston. These are all New Yorkers still, and make my residence much more pleasant that it otherwise would be. We get together occasionally, and talk about "the old country" and old frends.

Nearly the whole population of Salt Lake City and Utah territory, are Mormons. I doubt whether more than two hundred outsiders can be found. The state of society is different from anything we have been accustomed to. All matters, or nearly so, pertaining to religion and domestic affairs, are regulated by the church; controversies of every kind are settled by the ecclesiastical councils.

In manners and conversation, Gov. Young is a polished gentleman. Very neat and tasty in dress, easy and pleasant in conversation, and, I think, a man of decided talent and strong intellectual qualities. I have heard him address the people once, on the subject of man's free agency. He is a very excellent speaker. His private business is extensive; he owns several grist and saw-mills; is extensively engaged in farming operations, all of which he superintends personally. I have made up my mind that no man has been more grossly misrepresented than Gov. Young; and that he is a man who will reciprocate kindness and good intentions as heartily and as freely as any one; but if abused or crowded hard, I think he may be found exceedingly hard to handle.

THE OPERATION OF POLYGAMY.

The plurality system, as it is called here, (or polygamy in fact,) prevails extensively; but those who suppose that licentiousness, or looseness of manners or morals, prevails to any extent, are very much mistaken.—The woman are exceedingly modest and circumspect in their deportment. I have had the pleasure of an introduction to a number who are very sensible and agreeable, and, I think, compare fully with the well-bred ladies of the States.

They are from New York and New England (those I am speaking of) and differ in nothing, from their sisters in the Eastern States. From all I can see and learn, there is far less licentiousnes and vulgarity in this city and territory, than any other place of equal population in the United States. The men are jealous of all interference in their domestic affairs, and seduction and adultry, if discovered, are apt to be punished by death of the offender. Some cases of this kind have happened here.

# Sunday Reading.

## HUMILITY.

The bird that soars on highest wing
Builds on the ground her lowly nest,
And she that doth most sweetly sing,
Sings in the shade when all things rest.
In lark and nightingale we see
What honor hath humility.

Written for the Rural New-Yorker.

## THE MOON.

Who does not observe with pleasure that beautiful crescent which has made its appearance in the sky? We call it new, but we may look in vain for any thing older.—It has been a witness of all that we have done from our earliest moments. Indeed what has it not witnessed? Placed there at the creation as one of the lights to divide day from night, for signs and seasons, for days and years. But, notwithstanding its age, it changes not, like things on our earth. Time has marked no wrinkles on its face.—We watch it as it daily waxes reunder, till we see it bright and full, wearing the same pleasant face, and seeming to say, "I am yet, as ever, your friend."

Can we not learn to be cheerful too, and not let our passions disturb us? Surely we should be the happier, if we always saw such pleasant faces. What causes the ebb and the flow of the sea?—and what would night be to us without its mild rays? We find none of God's works useless. Many are the happy hours we have spent in childhood, beneath its gentle rays, watching its course, and as the clouds passed rapidly by have thought it moved exceedingly swift, when indeed its motion was scarcely perceptible. Often have we gazed on it and imagined it like our earth, peopled with sentient beings. But this is not for us to know. Astronomy has done much to aid our knowledge of it, and we must be content with what we can gather from her teachings, and leave alone what we cannot find out.

Though worshipped by the heathen, as the Queen of Heaven, we can see its uses, and admire its beauties without enshrining it as a God. Who can say that this universe came through chance? We cannot help seeing the goodness of God, that so abundantly surrounds us, even in the very atmosphere we breathe. No marvel the Psalmist should exclaim,

"Lord what is man that thou art mindful of him."

E. H. W.

## SORROW IN HIGH PLACES.

We talk much of the anguish of poverty when death or any great trouble comes. But let us pause for a moment by those whose griefs are hidden under golden sorrow.—Theirs is the want of liberty to weep—to be alone; and theirs the inability to meet this want, especially if they are in public stations of great honor and trust. They must drag a broken heart through scenes of joyless pleasure, and bear till the repetition gives almost disgust, the empty condolence of interested friends.

They know not in the midst of trouble whether they are surrounded with true hearts or enemies, and often they bare that saddest of trials, the calumny of the public; for

"No might nor greatness in mortality
Can censure 'scape; back wounding calumny,
The whitest virtue strikes."

True, they have gold, but they cannot make of it a casket in which they may lock up their griefs—for that very reason they are more crowded, more harrassed, and less really sympathised with.

And for months they are distressed with allusions to what they would fain banish from their uneasy mind, by the public press. The wound is freshly opened too often to heal, and the soul goes mourning under purple and fine linen, while the world, taking the surface of things, says that all is peace, or else forgetfulness and indifference. Let us remember that in the high places of the world may be found the keenest sorrow. —*Olive Branch.*

## DIMENSIONS OF HEAVEN.

The following calculations, based on a text of Revelations, is contributed to the Charlottesville (N. Y.) Jeffersonian:

A Description of Heaven.—Revelations, xxi, 16. "And he measured the city with the reed, twelve thousand furlongs. The length, and the breadth, and the height of it are equal."

Twelve thousand furlongs—7,920,000 feet—which being cubed, is 842,088,000,000,000,000 cubical feet; the half of which we will reserve for the Throne of God and the Court of Heaven, half of the balance for streets, and the remainder by 3,096, the cubical feet in a room 16 feet square and 16 high, will be 20,844,750,000,000.

We will now suppose the world always did and always will contain 900,000,000 inhabitants, and a generation will last thirty-three and a third years, 2,700,000,000,000 persons. Then suppose there are 11,240 such worlds, equal to this number of inhabitants and duration of years, then there would be a room 16 feet long, 16 feet wide, and 16 feet high for each person, and yet there would be room.

Be charitable—religion has charity for its basis, and they who are not charitable cannot be christians.

# Miscellaneous.

## MIDSUMMER.

BY WM. C. BRYANT.

A POWER is on the earth and in the air,
From which the vital spirit shrinks afraid,
And shelters him in the nooks of deepest shade,
From the hot steam, and from the fiery glare.
Look forth upon the earth—her thousand plants
Are smitten; even the dark, sun-loving maize
Faints in the field beneath the torrid blaze;
The herd beneath the shaded fountain pants.
For life is driven from all the landscape brown;
The bird has sought his tree, the snake his den,
The trout floats dead in the hot stream, and men
Drop by the sun-stroke in the populous town;
As if the day of fire had dawned, and sent
Its deadly breath into the firmament.

Written for Moore's Rural New-Yorker.

## GLIMPSES IN THE "OLD COLONY."

BY MRS. M. W. H.

### Number I.

PERHAPS we should find it difficult, at first thought, to believe that a very marked difference of character could exist in the inhabitants of different towns and States.—Observation during a recent visit among

"New-England's rocks and hills,"

has convinced me of the truth of an assertion frequently made, that there is no section of the Union which has established and maintains a character so peculiarly her own as Massachusetts. How far this may be attributable to the circumstances of its early settlement and subsequent struggle, I will not now stop to inquire. Those times and seasons stamped an impress of energy and preseverance, that prosperity and luxury has failed to oradicate. Massachusetts has her Aristocracy of Wealth, and her Aristocracy of Fashion, but above these she has her Aristocracy of Labor and Intellect, which elevates the worthy and intelligent sons and daughters of Industry to stations inaccessible to the mere votaries of Wealth and Fashion.

It is a fact that cannot fail to strike a visitor, especially in country places, that there are no *very poor* people. This is doubtless attributable to the fact that there is remunerative employment for every individual who can and will work. I do not think I am arrogating too much to my own sex to say that a large share of the unparalleled prosperity of the State is owing to the energy and industry of her females. When we see the hamlets that have sprung up in all directions, we involuntary ask, How are such homes reared and supported in locations where land is poor and nothing appears in the neighborhood to attract population? In all these hamlets we find the hand of female industry and taste constantly and actively employed. These locations are selected by mechanics of small means, where land is cheap, and yet so near some place of busines, that they can not only turn their own labor, but that of their families to the best account.

There are more avenues to employment open to females in Massachusetts than in most of the other States, and all, with scarcely an exception, are disposed to avail themselves of their advantages. I do not think this disposition in general arises so much from a love of *gain*, as a love of independence. A country girl would feel quite ashamed to call on her father for a new dress, yet you will always find them well, and often expensively, dressed. Where *all* work, and all can be maintained by work, there is no feeling of degradation attached to the employment of the hands in any labor that will secure the means of indulging the taste, or procuring the actual necessaries of life.

The manufacture of bonnets and shoes, affords to those who prefer staying at home an opportunity to earn whatever they wish to do, without the sacrifice of any of the domestic comforts. To illustrate this, I will mention the operations of one firm, that of D. & E. P. CARPENTER, Esqs., proprietors of the "Union Straw Works, Foxborough, Mass." The building is a large and commodious one, in which are employed in the various departments of bleaching, pressing, wiring, &c., about one hundred and fifty males, and three hundred and fifty females. Many of the latter work at wiring, whereby they can earn from 75 cents to $1,-25 per day, according to the capacity and industry applied to the work. Board in good families can be had for $1,75 per week. This firm employs fifteen hundred straw sewers outside the factory. These are scattered over a wide extent; and though very little is paid for sowing a straw bonnet, some being sewed as low as seven cents a piece, hundreds of children from nine to thirteen years of age, earn from twenty-five to thirty-five cents a day when out of school. This matter of attending school is never neglected for work, unless the necessities of the family require the sacrifice, and this is seldom the case. Children in families of small means will frequently be seen striving to lay by money to enable them to go to some higher school than the free district school,—exerting all their energies to qualify themselves for teaching, which is no small matter when we consider the requirements of the present time.

It is pleasing to observe that a taste for beautifying the home has increased in proportion as intelligence and prosperity enables the inhabitants to indulge in it. Almost ever house is surrounded by

"The bright mosaics, that with storied beauty
The floor of Nature's temple tesselate,
What numerous emblems of instinctive duty
Their forms create!"

These "ephemeral sages" are cultivated more or less extensively, from the little knot of the commonest blossoms, to the expensive exotics of the more pretending amateur. This taste is becoming developed in every direction; even the old burying grounds are beginning to give evidence of its existence, and it is to be hoped that it will reach and rescue from destruction and oblivion some of the earliest homes of the dead, that are fast becoming obliterated.

To return to the subject from which I have wandered. I presume I do not overestimate the number, when I say that from two to three thousand females are employed in the cotton and calico factories of Bristol county. In conversing with a girl in a thread factory which I visited, I learned that she could earn about two dollars a week, on an average, beside board. This I remarked was good wages. "Yes," said she, "but I have to be on my feet from 12 to 14 hours in a day." But she preferred that kind of work to any other by which she could earn as much. There is likewise the closing and binding of shoes, and putting up of tacks, to which many females resort for maintenance.

It may be asked by a city lady, how they find time to accomplish so much, for Yankee women are justly celebrated for neat housewifery. It is by "rising up early, and eating the bread of carefulness." This is literally true. Many families of females prefer hiring an Irish girl at a dollar and a half a week, to doing the rough work themselves. They find it pleasanter to work in straw than to cook and wash dishes.

It would seem from the general health, longevity and intelligence that prevades all classes of society, that this unceasing industry keeps both mind and body active. I was frequently surprised to observe so large a proportion of aged people in the public assemblies, and at their homes to find them so active. There are no old people or children in New England, if years may be measured by usefulness.

In order to form a just appreciation of any subject, it should be examined in all its bearings. I think while we admit that all this industry and thrift in females is very praiseworthy, it must likewise be admitted that it makes precocious women, and leads husbands, while contracting the too early marriages that prevail, to expect too much from their wives—allowing profit to enter into the matrimonial calculation. I have as much sympathy for the man who has too many unproductive female hands to support as any one should have; yet a sordid mind, in my view, is the bane of any family. I venture to assert that a love of independence, and a laudable ambition, will prompt any affectionate wife and mother to do all she can for her loved ones,—but I am far from thinking that the earning of money is always the best way she can promote their interest.

## GREENOUGH'S GROUP OF STATUES.

WE are indebted to the kindness of Mr. Mills, who is intrusted with the putting up of Mr. Greenough's group of marble statues lately received at the Navy Yard, for the following descriptive information as to the group. This group is the workmanship of the celebrated American sculptor, Greenough, and is to be placed on the basis of the Capitol at Washington.

The group is composed of the civilized man and the savage, of the woman with her son in her arms, and a dog. It represents the civilized man, strong in moral and physical power, surprising and seizing a savage, and, by inspiring in him a sentiment of humanity, hinders him from committing the barbarity of killing the son of a poor woman. An irregular mass of rock forms the pedestal of the group.

The civilized man and the savage are to be placed in the centre of the pedestal. On the right will stand the mother and her son; and on the left will be placed the dog.

It was the intention of the illustrious artist to superintend, in person, the erection of the group, in order to retouch and give a last hand to the mother and the dog on the spot, and then set the rock and pieces of marble, enclosed in boxes for the purpose, so as to form only one group, inducing the beholder to believe that the whole was formed of one piece. Next to the great artist, the most appropriate person to superintend the erection, was Mr. Mills, and we have no doubt that he will carry out successfully the design which Mr. Greenough was prevented from executing by the hand of death.—*Washington Union.*

## NAPOLEON'S PREDICTION.

IN Dr. O'Meara's work, published some thirty years since, entitled "a voice from St. Helena," the following is given as Napoleon's prediction, uttered shortly before his death, respecting the ultimate fate of Turkey:

In the course of a few years Russia will have Constantinople, the greatest part of Turkey and all Greece. This I hold to be as certain as if it had already taken place. Almost all the cajoling and flattering which Alexander practiced towards me, was to gain my consent to effect this object. I would not consent, seeing that the equilibrium of Europe would be destroyed. In the natural course of things Turkey must fall to Russia. The greater part of her population are Greeks, who you may say are Russians. The powers it would injure, and who could oppose it are England, France, Austria, and Prussia. Now as for Austria, it will be very easy for Russia to engage her assistance, by giving her Servia and other provinces, bordering on the Austrian dominions, reaching near to Constantinople. The only hypothesis, that France and England may ever be allied with sincerity, will be in order to prevent this. But even this alliance would not not do it; France, England and Prussia united cannot prevent it. Russia and Austria can at any time effect it.

It may not be out of place to mention in this connection, as confirmatory of what Napoleon said regarding the designs of Russia upon Turkey, that by the articles of a secret treaty, entered into by Napoleon and Alexander at Tilsit, July 7th, 1807, it was agreed that Russia should take possession of Turkey in Europe, and pursue her conquests in Asia as far as she thought fit. It was also made part of the same arrangement, that Russia should assist France in obtaining possession of Egypt, the Island of Malta, and the fortress of Gibraltar; and all other vessels except French, Russian, Spanish, and Italian were to be excluded from the Mediterranean. It is quite probable that the evident unwillingness on the part of Napoleon to comply with the wishes of his imperial brother, dissolved their mutual agreement, and hastened the downfall of the former, by arraying against him the gigantic power of Russia, in conjunction with that of England.

## THE SUSPICIOUS MAN.

THIS kind of individual is always smelling a continuous line of rats. He sees, hears, nor dreams of anything, in which he does not "smell a rat." The most harmless action of his neighbors, under his suspicious and inquisitorial disposition, is made a matter of serious investigation, because he knows there is something in the wind, for he saw his neighbor, Mr. B., speaking very confidently to Mrs. S., that very morning in the market. He puts that and that together, as he calls it, and connects this whispering in the morning with something he heard in the barber shop, some weeks before, and he is satisfied his neighbor B. is either going to fail in business or abscond without giving his creditors due notice.

The most terrible part of such a man's character is that he places such faith upon the corrollaries he draws from his false premises, that he does not hesitate to give wing to the base supicions of his mind, and frequently is the means of bringing about a disaster which never would have happened but for him.

Many happy friends have been rendered desolate — many a prospereus young man brought to ruin—many a virtuous and amiable girl been driven to despair by the fiendish innendoes of the Suspicious Man. No man, however upright and honest — no woman, however irreproachable — no maiden, however pure, is safe in the neighborhood of the Suspicious Man. He has all the curiosity of Paul Pry, without his good nature, and the malignity of the devil without his talent.

If ever Lynch law is justifiable in a community, it is when exercised on the Suspicious Man. Rotten to the core of his heart himself, he has no faith in the virtue and honesty of others. He exists in a state of continual doubt of the motives and actions of others, and in consequence his life is, at the best, but a prolonged misery.—*Delta.*

## AN INTERESTING MARRIAGE.

MARRIED at Derby, Conn., Aug. 4th, in the Methodist Episcopal Church, by Rev. Wm. W. Turner, of the Deaf and Dumb Asylum, at Hartford, Mr. James L. Wheeler, of New York city, to Miss Harriet, daughter of Isaac Gilbert, Esq., of Derby. After reminding the audience that the persons who stood before them were possessed of the same social instincts with themselves, and alluding to the value of that institution in our midst, which supplies even the deaf and dumb with the means of social intercourse, furnishes them food for thought, prepares them to sympathize with the great heart of the world, makes them good, intelligent, refined, and useful members of the commuunity, and even qualifies them for the peculiar responsibilities of wedded life—the minister proceeded with the solomn, impressive marriage ceremony, in the customary form of the deaf and dumb language. He then declared them man and wife, in accordance with the law of the State. After a very appropriate vocal prayer by the Rev. Mr. Fletcher, the parties retired to receive the congratulations of their friends, and in a few hours to commence their wedding tour. Mr. Wheeler is an instructor in the Deaf and Dumb Asylum, at Hartford, of which his bride is a graduate pupil.—*New Haven Journal.*

"How do you accomplish so much in so short a time?" said a friend to Sir Walter Raleigh. "When I have anything to do, I go and do it," was the reply.

# For the Ladies.

## THE WIFE'S SONG.

As the tears of the even
Illumined at morn
By the sweet light of heaven,
Seem gems on each spray;
So gladness to-morrow
Shall shine on thy brow,
The more bright for the sorrow
That darkens it now.

Yet if fortune, believe me,
Have evil in store,
Though each other deceive thee,
I'll love thee the more,—
As ivy-leaves cluster
More greenly and fair,
When winter winds bluster
Round trees that are bare.

Written for Moore's Rural New-Yorker.

## THE RETURN HOME.

WILL they be glad to see you? Will their hearts be joyous and the smile of affection beam on the countenance as they gaze on your features and grasp your hand! You have been long away. Months and years have rolled from the dial-plate of time since you were last in that small home, standing amid that loved circle. Their hearts were warm then; they spoke kindly, for they loved you. They looked fondly on that youthful face, touched the glossy locks with love's fingers, and imprinted on your cheek the warm kiss of affection. Will they do so now? Will they greet you as when a child? or has time chilled the feelings and closed with his icy breath the streams of love and goodness that flow from the pure fountain of the heart? No: such thought you cannot for a moment indulge. They were gentle and regardful in your girlhood, and surely they must be so now.

You have confidence in them. Your feelings have never experienced the torturing and bitter effects of deception, and the withering influences of a long life of care. It is a pleasant dream, and the bright visions calm your spirit. You look not at the present. The heart, the mind, yes your very self go back into the past. You love over again those innocent and golden hours of girlhood. You recall, however, only the sunny spots in life's pathway. The gloomy cloud that floated over youth's horizon, and perchance left for a time the tint of grief upon the cheek, is not seen now. Memory loves to linger only around what was pleasing. One by one, every little incident arises vividly and assumes a charm magical and potent.

But time wears on—the day is drawing to a close. Slowly the coach pursues its way; now ascending the long hill; now winding around the curve in the road; now leisurely rolling along the smiling vale through which flows a rivulet gurgling from the hill-side. Its waters are clear and cool and your soul is charmed by the soft melody of its purling flow. Now old familiar objects greet your view.

On the right you see a farm-house. You know it well. Often have you been there. The lane, leading to it, seems familiar. Here on the other side at a short distance from the road, almost covered up with shrubbery, is a cottage where you have passed many an agreeable hour. The flower garden looks as fresh and fair as ever. The pink and geranium adorn the border of the walk. Here and there, peep up little flowers vying with each other in the delicacy of their coloring and the exquisiteness of their fragrance.

The sun is now going down. You see its departing rays touching the clouds in gorgeous beauty. The light plays and flickers there and weaves its golden tissue in their fleecy forms. The simple tracery is beautiful, but the rich hue soon dies away and the soft pencilings vanish into nothingness. The gloom of night comes on. The evening dew begins to fall, and soon the moon appears shedding her cold and pure beams on stream, and tree, and rustling leaf. The coach stops; the door opens; you descend—you are at home.

You open the gate. How it creaks upon its hinges. It is sweet to hear that sound, there is so much of child-life connected with it; so many almost forgotten incidents does it recall. You walk up the path leading to the house. As you approach the centre of the yard, you stand a moment and look around. A life-time seems to be crowded into that moment. There stand the old elm and poplars, hoary sentinels of a century's growth. The wind moans through their tops like the sighing of some departing spirit. Here you see the garden with its well-arranged walks and the sweet brier and vine hanging over the wall. There is the orchard in which at autumn's time you have gathered the delicious fruit, while away in the distance stretches out the smooth meadow-land over which you have so often rambled while your step was elastic and your heart light.

You pass on and ascend the steps. Again you pause; it seems as if your heart would fail you. You tremble; a thrill passes through your very soul. Gathering your flagging courage, you raise the latch and pass in. Kind voices greet you and the hand is extended to welcome you. The hopes hardly dared to be cherished are now beginning to be realized. You feel more quiet, more as in other days. Presently your father comes in. He ever loved you; but he now greets you more cordially than usual. He retains your hand in his and fixes his mild, steady gaze upon your face. He appears to be tracing some resemblance he has never seen before. He is a calm, impassive man, and though sometimes you may have thought him cold, you always knew his heart was warm. He seems dearer to you now than he ever did before. That tremulous voice awakens a sympathizing chord in your soul. He goes to his accustomed seat, and after gazing steadfastly at you awhile, buries his face in his hands.

But you have no mother there. She died long ago, when you were a little girl. You may have remembered her, so kind, so good; but your tender infancy could not appreciate that mother's love. The world may have used you harshly since that time, and often you may have longed for a mother's kind word and gentle care, yet that mother watched you from her seat in heaven, and guardian angels circle around your pathway.

And there is another void in that place and in your heart. Your little brother has died since you have been away. How closely he clung to you,—how warmly he pressed your cheek when last you parted! His lisping accents, his last words, you will remember. But he was called away from earth, to be an angel in the bright spirit-land.

Thus are you welcomed home! The living receive you gladly, but many, the dearest, are not there. E.

## A TRUE WIFE.

SHE is no true wife who sustains not her husband in the day of calamity, who is not when the world's great frown makes the heart chill with anguish, his guardian angel, growing brighter and more beautiful as misfortunes crowd along his path. Then is the time for the trial of her gentleness, then is the time for testing whether the sweetness of her temper beams only with a transient light, or like the steady glory of the morning star, shines just as brightly under the clouds. Has she then smiles just as charming? Does she say "affliction cannot touch our purity, and should not quench our love?" Does she try by happy little inventions to lift from his sensitive spirit the burden of thought?

There are wives—nay, there beings, who, when dark hours come, fall to repining and upbraiding—thus adding to outside anxiety, the harrowing scenes of domestic strife—as if all the blame in the world would make one hair white or black, or change the decree gone immutably forth. Such know not that our darkness is heaven's light; our trials but steps in the golden ladder, by which if we rightly ascend, we may at last gain that eternal light, and bathe forever in its fulness and beauty.

"Is *that* all?" and the gentle face of the wife beamed with joy. Her husband had been on the verge of distraction—all his earthly possessions were gone, and he feared the result of *her* knowledge, she had been so tenderly cared for all her life. But, says Irving's beautiful story, "a friend advised him not to give sleep to his eyes, nor slumber to his eyelids until he had unfolded to her all his hapless ease.

And that was her answer with the smile of an angel—*Is that all?* I feared by your sadness it was worse. Let these beautiful things be taken—all this splendor, let it go, I care not for it—I only care for my husband's love and confidence. You shall forget in my affection, that you were ever in prosperity—only still love me, and I will aid you to bear these little reverses with cheerfulness."

Still love her!—a man must reverence, aye, liken her to the very angels, for such a woman is a living revelation of heaven."—*Mrs. Denison.*

HISTORICAL ACCOUNT OF HYMEN.—Hymen was a beautiful youth of Athens, who, for the love of a young virgin, disguised himself, and assisted at the Elusinian rites; and at this time, he, together with his beloved, and divers other young ladies of that city, were surprised and carried off by pirates, who supposing him to be what he appeared, was lodged with his mistress. In the dead of night, when the robbers were all asleep, he cut their throats. Thence making hasty way back to Athens, he bargained with the parents that he would restore them their daughter and all her companions, if they would consent to their marriage; which proving very happy, it became the custom to invoke the name of Hymen at all nuptials.

BEAUTY, as the flowering blossom, soon fades; but the divine excellency of the mind, like the medicinal virtues of the plant, remain in it when all those charms are withered.

THE difference between those whom the world esteems as good, and those whom it condemns as bad, is in many cases that the former have been better sheltered from temptation.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, AUGUST 27, 1853.

**PUBLISHER'S NOTICES.**

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ FOR TERMS, &c., see last page.

TO CORRESPONDENTS.—Contributors, business correspondents, and personal friends, will please exercise a little patience in regard to our shortcomings in the way of letter writing, &c. We have been pretty much alone in the sanctum for some two months, with the editorial and business affairs of both the RURAL and W. G. & S. R. on our hands, and of course unable to discharge other duties.

"GLIMPSES IN THE OLD COLONY," commenced in this number, will repay an attentive perusal. The writer is one of our most valued contributors. Lest some of our readers might not discover the fact, we will state that Mrs. M. W. H. contributed the excellent articles and sketches heretofore given in the RURAL over the signature of "A Farmer's Wife," and dated at "Willowdell Farm." One or two articles, by another correspondent, were published over a similar signature—by oversight on our part—hence the change.

### The Country Press.—Editorial Convention at Elmira.

THAT thousand-tongued institution, the Country Press, is so frequently cajoled by city papers, that we generally expect to discover a dull ax in the rear of every article on the subject—especially in cases of special eulogium of the journals which represent the Rural Districts. These panegyrics and benevolent appeals in behalf of the "poorly supported but meritorious journals so admirably managed by their brethren in the country" are certainly gratifying and philanthropic—and it is not surprising that the objects of such tender regard and profound sympathy should appreciate and reciprocate the apparent kindness by complying with the trifling and modest requests of the Great Moguls—the holders of dull implements.—It is wonderful how far a very little honey will sometimes go in awakening the generosity, and starting the pens, of some of our contemporaries. We have so often observed its effects that we have almost been persuaded to follow suit, but it was so much against the "grain," that we have invariably left the field to the occupancy of wiser and more experienced "brethren." Indeed we suppose we are not entitled to ask favors, as we may properly rank with the Country Press ourselves. We think our claim to the honor is pretty good, so far as favors asked of us are concerned: for we have been, and continue to be, solicited to notice, commend, mention favorably, and so on, almost every conceivable enterprise or ware—from the stupendous Crystal Palace Exhibition (a *private* speculation, with *public* principles!) down to trashy and vulgar publications, Locock's Lozenges, *et id omne genus*. These smooth-tongued wiseacres understand their business, having taken all the degrees in the "science" of human nature. They are veritable Howards, feel bound to sacrifice their own interests in order to vastly benefit the people and country—and of course expect the hearty and gratuitous co-operation of all connected with that much-vaunted and really Herculean institution—the Press.

Now so far as these requests are concerned, we have no objection to offer—but we demur to an indiscriminate compliance therewith on the part of those who control the avenues of communication to the public. The truth is a great many editors, in both city and country, are either altogether too benevolent or verdant for their own interest. We speak from experience as well as observation—and as we usually call things by their right names, must be permitted to speak plainly. Our friends are given to extravagant commendation, and when addicted to the practice, little discrimination is exercised in regard to the article noticed. In too many instances, the purest books and most trashy yellow-covered novels, valuable inventions and veritable humbugs, genuine elixirs and the most worthless nostrums, are alike placed in the editorial hopper, and produce a fair-appearing product, without reference to the toll received. The columns of many papers are also open to the admission of advertisements of obscene books and worse nostrums, deceptive advertisements, &c., &c. Hence they are becoming, to a great extent, the "mediums" of the great mass of cormorants who desire to "rap" at and enter the public's well-lined pocket.

But we are digressing. Our design in the outset, was to allude to some matters which might properly be reformed, and to direct thereto the attention of those Editors and Publishers who propose to meet in Convention at Elmira on the 8th proximo. The points above crudely suggested, or hinted at,—and many others of importance which need not be enumerated in this connection,—are worthy the consideration of the Convention, and the action of its individual members. The primary objects of said Convention are, or should be, the elevation of the Editorial profession, and the promotion of the pecuniary interests of the craft generally. Such objects are perfectly legitimate and most desirable. We trust the Convention will be numerously attended, and that its deliberations and action will result in permanent benefit to all interested in its proceedings.

## Correspondence.

### Notes from Court.

ALBANY, Aug. 22, 1853.

EDITORS RURAL:—My visit to the country was cut short by the re-assembling of the Court for the Trial of Impeachments. This body commenced its "grand inquest" on Tuesday last, by taking the prescribed constitutional oath, after which a motion was made by the counsel of the Respondent, to strike out the first five articles of Impeachment as presented by the Assembly. This motion was argued ably on both sides, and the Court held a secret consultation of two days, after which a vote was taken and decided in the negative,—Ayes, 13; Noes, 18.

Mr. LOOMIS, on the part of the managers, then opened the case by a synopsis of the charges made, and a statement of what they designed to prove. This was an able argument, but very *dry*, although the learned counsel did *sweat* profusely. The case is very much mixed up, as Mr. MATHER acted in concert with others in most of the transactions enumerated. The counsel for the defence propose a significant question during the debate, which was, "Why are not the other officers enumerated in these articles also impeached?" The learned manager evaded the question, by remarking that it *might* appear in the evidence. It does seem hard that Mr. MATHER must be held to answer for the high course of all his associates, as well as his own individual deliuquencies; but such appears to be the fact. There may be some consolation in the statement that Mr. MATHER has the protection of a hard "shell" while his associates are at the best rather "soft." Whatever may be the result in his case, by the aid of this appendage he will be able to say, "I got out of it better than the rest would had they been in my boots."

Well, they have finally commenced the testimony. Mr. CUYLER, Deputy Sec'y of State, and Canal Commissioner FOLLET, were called on the stand this forenoon, and duly examined and cross-examined. Their answers, as well as the questions proposed, were well studied and carefully guarded, especially those of Commissioner FOLLET, who was an associate of Mr. MATHER.

I shall notify you of any important steps in the progress of the case, but will not impose upon the good sense of your readers by sending any thing so long and dry as the details of the trial. It will without doubt, all end in *smoke*, but it will cost the people $100,000. "Never mind; they are rich and can afford it."

Quite an excitement prevails here in regard to the case of EDYMOIN, who recently obtained a pardon from State Prison on forged evidence, but was re-arrested by the State officers because he had so done. This is supposed to be contrary to law as the moment he received his pardon, he became entitled to his liberty, no matter how he obtained it. The general opinion is that the Governor and his associates acted too hastily in re-arresting him, and are in the wrong. To get out of it, the records in the State office were altered, which only makes the matter worse. The whole thing is now being sifted at Auburn, by an application for a writ of *habeas corpus*.

Hendreckson who was to be hung on Friday next, will be respited in order to have an argument for a new trial presented in the Supreme Court.

I must not forget the children. The Public Schools opened to-day, with a fair attendance.

*OWE.*

### An Odd Letter from the West.

DETROIT, August, 1853.

MESSRS. EDS.—The morning sun shone gloriously down on land and lake, as we left Chicago for this commercial emporium of the Wolverine State. Our route lay through Northern Indiana and Central Michigan. The scenery was beautiful, and crops seemed promising; but if physiognomy denotes inner sanctity and intelligence, one can but infer that the light of Gospel truth and Education, has illuminated to a very limited extent, this part of the "mighty west." Unless a marked advance is soon made in their moral state and political condition, we are seriously afraid that a day of retribution will find a majority of the people wanting in theory and practice. The Hoosiers are strangers to the day of grace; their portion is among the Gentiles. In many regions of the State, they are so *industrious* that the memory of the oldest settler runneth not back to the time when Sabbath day, Fourth of July, or any other holiday mentionable in the English language, was observed.

GOV. SLADE'S philanthropic mission of sending from the East, into this habitation of darkness, female teachers, does not work out the promised glorious result,—for in six cases out of ten matrimonial offers are soon made, and the young ladies set up school on their own hook. We hope, however, for the advent of better times. "Let us learn to labor and to wait."

The resources of the country are in a state of rapid development. Internal improvements will always transform a wilderness to a prosperous and influential State. We venture to predict for Michigan, bounded in as she is on three sides by our majestic inland lakes, with unrivalled facilities for commercial pursuits, a position of particular importance, which will yet tell on the destiny of Liberty in America.

Detroit is the head-quarters of Old Fogies. Here is the habitation of LEWIS CASS, leader and champion of the embattled hosts which go out to war with "Young America." CASS has long had a princely revenue from the spoils of office; and like a lazy ox feeding on the sweet grass of a luxurious pasture, he dislikes to be turned out and left to political starvation in his old age. Young DOUGLASS, however, is more than a match for him. The difference between the doctrines of an enlightened radicalism and conservatism, cannot long be postponed. The next Presidential canvass will demonstrate the hold which each party has in the belief and affections of the People. If I mistake not the spirit of the Western country, Young America will be enabled to say with the Roman, "*veni, vidi, vici.*"

Detroit is well laid out. It has a number of splendid hotels. For good accommodations the Biddle House is not excelled west of New York. The 'Wolverines' are fast getting to be a reading people,—for evidence of which the fact that Detroit abounds in publishers, bookstores, and newspapers, is sufficient. The most extensive publishing house is that of KERR, DOUGHTY & LAPHAM. Mr. KERR is from Rochester,—late partner in the firm of WANZER, BEARDSLEY & Co.

Many associations of lasting historical interest cluster around Detroit. It was first settled by the French, and is one of the oldest towns in the United States. It was often a scene of carnage during the last war with England, and was more than once in the possession of the enemy. The minions of her majesty would now find more hot work than would prove healthy, in order to take it. If we ever have another war the matter will undoubtedly be settled. Whoever holds Detroit commands the Western Lakes. W. M. H.

### Wisconsin.—Streams, Lakes, Fish, Game.

COURTLAND, Wis., Aug., 1853.

EDITORS RURAL:—Wisconsin boasts of as fine, clear, cold streams of water as any State in the Union, affording many very valuable mill seats. The streams are also well stocked with fish. There are an abundance of pickerel, bass, suckers, &c., and in some streams an abundance of perch and speckled trout. I was one of a party, last spring, that caught with a net, in a small stream, over half a ton of fish, in four hours.

The Fox River below lake Winnebago, through which it runs, is said to be unsurpassed in valuable mill seats. The improvement of this river, to render it navigable from lake Winnebago to Green Bay, has just been given to a company, by the Legislature. The Wisconsin river rises in the northern part of the State and taking a great bend to the east runs S. W. and empties into the Mississippi. The Fox rises in about the middle of the State, and runs northwest in a bend to within ¾ of a mile of the Wis., the low ground between overflowed at high water, then N. E. and empties into Green Bay. Thus the two rivers, often communing their waters, find widely separated outlets into the great reservoir. These streams afford admirable facilities for rafting pine lumber from the north to the middle and southern parts of the State and other States. One mill on Wolf river, emptying into Fox, carries 64 saws, in gangs, turning out vast quantities of lumber annually.

Of Lakes, there are a vast number of as pure, beautiful sheets of water, as man's eye ever rested upon; and generally well stocked with fish.

The wild animals are numerous. Deer are plenty. Bears and wolves are few and far between, confining themselves mostly to the heavy timber of the N. and N. E. Foxes, badgers, and muskrats are plenty; also raccoons and wood-chucks. The gopher is the worst little pest the farmer has, except the black-bird. This little animal is about the size of the chipping squirrel and burrows in the ground alike upon the prairies and in the openings. They will often dig up whole fields of corn, if not attended to. I killed one, which had three hundred kernels of wheat in little sacks in the inside of its mouth. Wild bees are numerous. A party of three men, went out bee-hunting, and after an absence of four weeks, returned with two and a half tons of wild honey.

There are vast numbers of varieties of birds but I am not Ornithologist enough to give you their technical names, or their habits. The largest in size are the sand-hill cranes, measuring 3 to 4 feet in height, when standing erect. Their song resembles the music of a new, ungreased wagon. They live upon frogs, snakes, &c., and their food passes from the front to the back of the neck, and can plainly be seen winding its way down their long slender necks. They are said to be good eating. Hawks are numerous. Crows are scarce, and not the corn-pulling, thievish outcast of the east. Prairie hens are very plenty and excellent eating. Curlews, plovers, pigeons, partridges and quails are very numerous. There are myriads of blackbirds—the large crow blackbird and the red winged swamp blackbird—and *here* they are *terrible corn and oat pullers*, and nothing will frighten them.

Yours, F. G. R.

THE PEOPLE'S COLLEGE.—*A Suggestion.*—I would suggest that at each of our County Fairs, to be held this fall, if not at our State Festival,—addresses be delivered upon the subject of endowing and sustaining the People's College—illustrating its proposed manner of operation, &c. Many may thus learn of this institution, and be enlisted as its friends and supporters, who would never have done so had no such means for its advancement been resorted to. Opportunities should also be given for subscription to the capital stock, contributions, &c.

What think you of my plan Messrs. Trustees, President and Agent? Does the plan meet with your approbation? W. H. GARDNER.

Hornby, Steuben Co., 1853.

CAUGHT.—The article entitled "It pays to use manure," given in our last number, and credited to the Country Gentleman, was written by one of our associates, and first published in the RURAL. Some one appropriated it, giving our Albany neighbor credit. In this shape it was sent us by a friend of excellent judgment, and thus published without particular examination.

### Great Fire in Penn Yan!

AN Extra from the office of the Yates Co. Whig, states that the most terrible and destructive fire which ever occurred in Penn Yan, broke out on Monday morning last, (22d,) on the corner of Canal and Main sts., and consumed nearly the entire square—the only building left being a large fire-proof store. The fire originated in a clothing store, on Canal st., and spread as far as the line of buildings extended, and on Main st., until checked by the fire-proof building. Several other buildings of considerable value caught fire, and narrowly escaped destruction.

The amount of property destroyed is estimated at $100,000. We observe, however, on examining the list of losses, that a great proportion of the property specified, was wholly or partially covered by insurance. The Whig says—"It is seldom that a fire is more destructive and injurious in its effects. But we trust that most of the best establishments now broken up will soon be able to resume business. It is believed that the fire is the result of incendiarism."

### The Prospect of War.

If the recent advices from Europe are to be relied upon, the difficulties between Russia, Turkey, and other great powers, are far from being in a train of amicable adjustment. The Tribune of Friday last thus comments upon the subject:

The statements in our London letters, which we publish this morning, show that there remains hardly any chance for the preservation of peace in Europe. Louis Napoleon has determined that Russia shall either immediately evacuate the Danubian Principalities or that war shall ensue, and has even brought the British Ministry to join in an ultimatum to the Czar conceived in that sense. The Sultan has also demanded the same thing, declaring that though he does not desire war he will accept it. But there is no probability that the Principalities will be abandoned, and allowing the utmost time for diplomatic procrastination and formalities, we may expect in the course of a month to receive the official Declaration of War.

How that war will be waged, where its battles will be fought, what nations it will involve, how deep it will plow into the boundaries of countries and the foundations of thrones, and what will be its upshot, are questions of which no clear solution can now be had. But we do not think it can fail to be a terrible and wide-reaching struggle, and leave more permanent marks in history than any other war of modern times.

## News Paragraphs.

☞ The Rome Sentinel says a gentleman of an adjoining town was so badly bitten in the hand by a grasshopper that he came near losing his arm, and in truth his life. He was seen a few days ago with his arm in a sling, slowly recovering, and it was rather ludicrous to hear him reply to the inquiry, what ailed him—"bitten by a grasshopper." They evidently believe that all flesh is grass.

☞ The Independence, Mo., Messenger publishes the following account of the emigration over the Western plains this season, as copied from the record kept at Fort Laramie:

| | | | |
|---|---|---|---|
| Men | 9,668 | Mules | 2,136 |
| Women | 3,243 | Cattle | 102,823 |
| Children | 3,058 | Sheep | 40,125 |
| Horses | 6,416 | Wagons | 3,500 |

☞ Two ladies walking under the Telegraph wires, in Cornwall, Orange county, were struck by lightning on Sunday week. Miss Gillmore was instantly killed, the other is recovering. A gentleman in their company had just crossed the road when the crash came: at the time there was no appearance of a thunder storm in the immediate neighborhood.

☞ The regiment stationed in Montreal, portions of which fired upon the populace during the disturbance at Gavazzi's lecture in that city, are in such bad odor, and so frequently come in collision with the citizens, that the Montreal Gazette recommends that they be removed from the city. Their Band was hissed from the theatre a few evenings since. This feeling is not sectarian.

☞ A writer in the Picayune traces the yellow fever, that now desolates New Orleans, to the men who discharged the cargo of the ship Adelaide, from Rio Janeiro. He says three successive gangs employed upon that job, sickened. He contends that every epidemic of the sort recorded, can be traced to importation.

☞ The locomotive attached to the passenger train on the Michigan Southern Railroad, run into a drove of deer near Pine Station a few nights since, killing several of them, which were found lying near the track the next morning. They were probably attracted by the light of the locomotive.

☞ The woollen mills on James River near Richmond, Va., were burned on Thursday night. Loss about $200,000. Insured only $70,000. Haxan's Flour Mills near by were damaged to the amount of about $5,000. Between 200 and 300 operatives were thrown out of employment.

☞ Following the dedicatory exercises of the First Congregational Church in San Francisco, on the 16th of July, a collection was taken up, at which there was contributed the sum of *sixteen hundred and seventy dollars*. The premiums for the choice of pews amounted to $3,800.

☞ The New York Times is very severe on the Crystal Palace managers for charging four shillings admission—allowing no checks to pass out, and permitting the individual who has the sale of refreshments within the Palace to charge extortionate prices.

☞ During July, the contractor removed from New York city to Barren Island, seven hundred and seventy-three dead dogs, 425 horses, 147 cats, 19 swine, 81 cows, and other dead animals, in all numbering 1459, and 442 tons of other street offal.

☞ Santa Anna, according to the latest accounts, is raising an army of 92,000 men. To do it, a mortgage of the Church property to the amount of $17,000,000 is proposed. What is he going to do with so many men when raised?

☞ Much agitation prevails in the Roman States from fear of famine. There has been a short wheat harvest in Tuscany, and much uneasiness at Ravenna, Faenza and Imola. The exportation of corn has been forbidden.

## News Brevities.

—— The yellow fever is reported to be on the increase at Mobile.

—— Stamped envelopes with Nes-bit off, have been issued by the Department.

—— A State Convention of Universalists was held at Lockport, on the 23d inst.

—— Twelve and half millions of specie have been exported during the present year.

—— The Impeachment Trial is now fairly entered upon. It will be dry and protracted.

—— A white shark, weighing about 300 pounds, was captured in New Haven harbor, recently.

—— The third volume of Macauley's History of England, is to appear soon in England.

—— A Mr. Trotter was married to a Miss Gallop, at Saratoga Springs last week. A full team.

—— Mr. Joseph Proude has become a co-proprietor with Mr. Cleveland, of the Yates County Whig.

—— A Miss Antisdel, of Middlefield, Otsego county, was drowned in Otsego lake on Tuesday, week.

—— John B. Gough, is giving temperance lectures in London at Exeter Hall and the Whittington Club.

—— The apothecaries are to hold a National Convention in Boston, for what purpose is not stated.

—— The number of deaths in New Orleans from May 28 to Aug. 13, was 6,674, of which 3,836 were from yellow fever.

—— The number of deaths in New York for the week ending August 20, was 969, of which 214 were from sun stroke.

—— Mr. Henry Chilson, of Mt. Morris, was killed by a stroke of lightning on Saturday week, while at work in the field.

—— Alexander Dumas says that, during the last twenty-two years, he has written seven hundred volumes, and fifty dramas.

—— A Chinese pirate fleet, with an aggregate of 84 guns, was cut up and destroyed on the 5th of May, by a British War Steamer.

—— Mr. Barnum has offered seven prizes for the best displays of female equestrian skill at the Fairfield County Agricultural Fair.

—— A steamboat explosion occurred on Wednesday night last, on Lake Erie, whereby one man was killed and two badly scalded.

—— It was said by Mr. Steer, in a lecture a month since in San Francisco, that the Chinese intended to erect an altar for idol worship.

—— Four editors in New Orleans have died victims to the yellow fever—two of the Picayune, one of the Delta, and one of the Crescent.

—— The Herald's London correspondent says that "a war is fully expected in England, and that the people, at least, wish for it."

—— Amount of salt inspected at the Onondaga Works since January, 2,502,878 bushels, an increase of 502,878 bushels over last year.

—— Powers' statue of Eve, recently unpacked at the Crystal Palace, is pronounced by many who have seen it, to be superior to his Greek Slave.

—— A woman residing at Bradbury, Vt., not yet thirteen years old, has recently became a mother. She was married before she was eleven.

—— The Mt. Clemens (Mich.) Gazette presents the name of Rob't McClelland, Postmaster General, as a candidate for the Presidency in 1856.

—— The Cholera has broken out at Cumberland, Md.,—15 deaths occurred on the 18th and 19th insts. The disease was abating at last accounts.

—— Mr. Everett has declined the invitation to deliver an address before the Kentucky Agricultural Society this fall. Mr. Seward ditto in Wisconsin.

—— Wm. Westcott, the three cent counterfeiter, of this city, has been convicted and sentenced in the U. S. District Court at Auburn to 7 years in State Prison.

—— The town of Lynn Mass., contains one hundred and fifty-five shoe factories, which give employment to 10,186 persons of both sexes, in the manufacture of shoes.

—— The proprietors of the mammoth tree, California, have been offered $30,000 for it. Fifty feet of the bark, and one block to be taken off, is valued at $10,000.

—— Gov. Seymour, while in Buffalo, had an interview with what is left of the warriors of the Tuscarora tribe of Indians. They were highly pleased with the interview.

—— The Brockport Journal speaks in high terms of the Collegiate Institute in that village, which well established and popular school was never on a better footing than now.

—— A correspondent of the National Intelligencer furnishes an account of Table Moving eighty years ago, with interesting variations, quite as startling as modern examples.

—— There are in the United States 36,000 houses of public worship, capable of accommodating 13,349,896 persons, (only half the actual population,) and valued at $86,416,639.

—— It is now a "fixed fact," that unless some unlooked for event shall transpire, the Canada Railroad from Hamilton, the Falls, &c., to Detroit, will be completed early next spring.

—— Superscription on a letter that lately passed through the Hartford post office:—"Mr. Dan. Lysaght, Indiana Post Office, State of Connecticut, New Orleans, America, from Ireland."

—— Edmund Marcy, son of the Secretary of State, died on the sloop-of-war Preble on his way to the Azores. He was 23 years of age, and had been for some time affected with a pulmonary complaint.

—— An immense deposit of guano has been discovered in the Indian Ocean, between Mauritius and Calcutta, the island being twenty miles long by seven broad, and thus forty times the size of Ichaboe.

—— The New York papers give an account of the sudden death of a student in the Union Theological Seminary, in that city, from having taken an over-dose of paregoric, advised by an ignorant druggist.

—— Lyman Robinson and Ellen Oswell, two of a party of six who started from Cromwell for Middletown on the Connecticut river, on Sunday week, were drowned by the upsetting of the boat in which they embarked.

—— A Mr. Connell was married at Cincinnati, a few days since, and brutally murdered on the afternoon of the same day, leaving his partner, who was a maid in the morning, and a wife at noon—a widow at night.

—— The Secretary of the Navy has modified the regulations in relation to whiskers. The officers of the Navy and Marine corps are now permitted to wear their beards at pleasure, but when worn they are to be kept short, and neatly trimmed.

# Foreign Intelligence.

## Arrival of the Arabia.

The Cunard steamer Arabia arrived at New York on Tuesday morning, the 23d. She left Liverpool Aug. 13, and made the passage in nine days and seventeen hours.

She reports seeing a large steamship ashore on Nantucket Shoals, supposed to be the Pacific.

The Franklin arrived out off Cowes on the night of the 10th.

The Great Britain sailed for Australia on the 11th. Bets are pending on her passage and of the clipper "Sovereign of the Seas."

Nothing definite has transpired on the Turkish question, but the belief is that it will terminate peacefully. Definite news from St. Petersburgh was expected to reach London on the 15th.

The London Morning Post says the Principalities will be evacuated the first week in September by the Russians, and soon after the British and French fleets will leave the Turkish waters.

The funds have improved, and the market continues dull.

A great Naval Review at Portsmouth, by Queen Victoria, had taken place.

Nothing important from France.

The wheat crops were mostly in, and averaged about two-thirds the usual crop.

The steamship Monument City was wrecked on her passage from Port Philip to Sidney, and 35 passengers were lost.

The Arab ship, with the Bombay mail on board, foundered, and 175 passengers were drowned.

The King of Ava was more peaceably disposed towards the British.

The Chinese Imperialists were preparing to take Amoy. The insurgents force was within four days march of Pekin. A private telegraph says they had beaten back one imperial fleet from Nankin, and had concluded not to attack Canton until September.

Liverpool Larkets.—Cotton dull, and holders anxious to realize. Prices declined about 1-16 pence. Sales for the week 41,000 bales.

The following is from Richardson Brothers' Circular, Aug. 12:—At this day's market there was a slim attendance. Wheat was freely offered at the reduction of Tuesday, without finding purchasers. Flour at former prices. Indian corn on the spot or afloat, was less inquired for.

Our quotations for American grades at this day's market, are:—White wheat, 7s 6d, 7s 8d@7s 9d; red, 7s 4d@7s 6d for 70 lbs. Philadelphia and Baltimore flour, 27s; Western, 26s@26s 6d; heated, 24s@25s ₱ bbl.

Provisions—In Beef and Pork almost nothing has been done. Bacon in better demand, 47s being the top price in small parcels. Lard dearer. Sales at 56@57s, and a few bbls. of fine at 59s, to make a place, but the supply is in a few hands. 60s may be obtained, for fine supplies do not come in. Tallow has declined 6d@1s per 100. Cheese market bare. Canadian Butter much wanted.

London Market.—From Baring's Circular:—Funds have improved considerably. Consuls closed at 98@98¼. Money in great demand.

American Stocks—The demand has been limited this week to an investment in Pennsylvania 5 per cent. bonds. U. S. 6's still scarce, and buyers at 111. Quotations generally without change.

### Latest by Telegraph.

London, Aug. 13.—Despatches from St. Petersburgh have been received in Paris, dated the 5th. They state that the Emperor has definitely accepted the proposals of the Four Powers.

A despatch from Trieste states that the Porte accepted of the proposals drawn up at Vienna, without modification.

A special ambassador will leave Turkey as soon as the Russians evacuate the Principalities.

A letter from Constantinople says there is intense excitement there in consequence of the refusal of the Haspidians of Maldavia and Mallacha, to obey the summons to repair to Constantinople.

The old Turkish party were so indignant that fears were entertained for the safety of the city.

Revolution was expected.

## Niagara Ship Canal Celebration.

On Wednesday last a celebration took place at Fort Gray on Lewiston Heights, in honor of the proposed Ship Canal around Niagara Falls. A detachment of U. S. Troops from Fort Niagara fired one hundred and fifty guns from a battery of 18 pounders. Speeches highly commendatory of the work, were made by gentlemen present, among whom were Gov. Seymour, Hon. Geo. W. Clinton of Buffalo, Hon. H. J. Stow of Lewiston, and Col. John Fisk of Bellevue.

The concourse then formed in procession to the music of a Band from Fort Niagara, and marched to the International Hotel, where upwards of one hundred gentlemen sat down to dinner. After the cloth was removed, remarks were made by a number of the guests, including Gov. Seymour, Hon. G. W. Clinton, Hon. G. W. Holley, O. Turner, Esq., and Rev. Mr. Peet.

The celebration was marked with confidence and enthusiasm in regard to the great National enterprise, which is to connect Ontario with the upper lakes, and pasted off in the most satisfactory manner.—*Boch. American.*

Death of the Rev. Levi Tucker, D. D.—It becomes our painful task, says the Buffalo Express, to record the sudden death of the Rev. Levi Tucker, D. D., for several years pastor of the Washington Street Baptist Church of this city, and more recently in charge of the Bowdoin Square Baptist Church of the city of Boston.—He died on Saturday last at the residence of Mr. W. G. Lee, his brother-in-law, at Cincinnatus, Cortland co., in this State, aged 49 years. He had just returned from a sojourn in Europe, where he had spent nearly a year past, traveling to recover impaired health, and was on his way to this city, when a renewed attack of his disease closed his earthly career. The deceased was one of the brightest ornaments of the American pulpit, and his death will be sensibly felt, not only by his pastoral charge, but by the denomination with which he was connected. During the few years that he was settled in this city he accumulated troops of warm friends, whose most active sympathies will be awakened by this announcement.

The Indian Fight.—Gentlemen from Fort Laramie inform us, that the battle between the Pawnees and the Cheyennes, the principal tribes engaged in it, was a very inconsiderable affair, though a great number of Indians participated. The Cheyennes were whipped, losing some twenty of their warriors; the Pawness lost five or six of their warriors and two or three of their women.—*St. Louis Rep., 16th.*

☞ The rumors recently in circulation, with reference to an alliance between the Governments of Mexico, England and Spain, and the placing of the Mexican Republic beneath the yoke of Spain, are officially and explicitly denied.

## Crops in England.

The London Mercantile Gazette of August 5th, speaking of the wheat crop, says, that "It is certainly not promising in appearance; and however much it may be favored by the weather, the yield must inevitably be short. There are reports of blight from several parts of the Kingdom, and fears are entertained of a disease similar to the potato rot." The potato crop is also spoken of as in a precarious condition not only in the British Islands, but in France, Holland, Belgium and some parts of Germany likewise; and there can be little doubt that a large portion will be lost.

The opinion is expressed, that under this state of affairs, coupled with the unfavorable aspect of matters at the East, breadstuffs can hardly be expected to recede in price, though at the present moment there is some languor in the market. In consequence of the spread of the potato disease, corn afloat has advanced in price.

Peach Trade.—The Buffalo Commercial Advertiser learns from a gentleman recently from Ohio, that the crop of peaches this year promises to be exceedingly heavy and fine, and indeed, that there is a prospect of a good supply of fruit of all descriptions. The N. Y. Journal of Commerce says peaches are now coming forward in enormous quantities, chiefly from New Jersey, and the quality is improving.

The Genesee Conference.—This body, embracing more than one hundred ministers of the M. E. Church, together with fifty or more from other Conferences, will hold its next annual session in St. John's Church, Batavia, commencing Sept. 7, 1853. These sessions continue about ten days. The morning of each day is devoted to business; the afternoon to meeting of committees, and the evening to preaching and the anniversary of various benevolent societies.

New Orleans, Aug. 19.—The total number of deaths reported for the past twenty-four hours, is 292, of which 227 were from yellow fever—a large increase. The distress is great, and the Howard Association are opening four new hospitals, and appealing for further assistance.

# Marriages.

At the Unitarian Church, in this city, on the 16th inst., by Rev. Mr. Channing, E. D. HALLOCK, of Rochester, and Miss MARY ELIZABETH LATTING, of Henrietta.

In Hornby, Aug. 4th, by Rev. James Parker, JOSIAH UNDERWOOD and Miss ADALINE GAYLORD, eldest daughter of Willis H. Gaylord, all of Hornby. That high hopes, bright prospects, and happiness undiminished unto the close of life, may be theirs, is the wish of a youthful friend and schoolmate.

# Market Intelligence.

Rural New-Yorker Office,
Rochester, Aug. 24, 1853.

Trade has been more lively during the week. Heavy rains have swollen the river so that all the mills can be put in operation. There has been an increased inquiry for wheat, and prices, without an advance, are somewhat firmer. The market continues to fluctuate with the foreign advices, though it must be apparent to all, the European price can have little or no effect upon our home trade, in consequence of the small amount exported.

Flour—This staple still maintains its price, with a steady demand for market supplies and city demand.

Grain—Wheat continues to sell from teams and by cargo at $1,15@1,16, according to quality. Sales of the week have been large. Corn comes in slowly, as very few farmers have prime old on hand. Supplies from the great west are not steady; prices remain unchanged at 63@68c.—Oats are rather scarce; new 40c., prime old 42c. Barley commands 63@65c.

Seeds—There is some inquiry for Timothy, which is retailed at $2,50@3,00. The supply is not large. No inquiry for Clover—though we learn of some prospective speculative movements, which will be likely to result unfavorably to the trade, and in the end depress the price.

Provisions—There is something doing in Pork at our quotations. Prime corn fed, of Monroe Co., would command more. Cut meats are not plenty, and generally in not very good order. Little trade in barreled beef. Butter is wanted at 15@17c. Eggs in full supply at 9@10c.—Potatoes, large and good, 50@56c. Other vegetables abundant.

Sheep and Lamb Skins—We notice quite an active trade going on, mostly with the butchers, under season contract. Prices are unsettled, and we can make no reliable quotations; 25@27½c. will embrace the range for lambs, and 50@75c. to $1,00 for sheep.

Hops—We hear better accounts from the hop districts. The recent rains have revived prospects of a fair crop, though the yield will fall much below that of 1852. The late news from England promise a better crop than had been anticipated. Sales are making in this State at 30c., and we hear a dealer in Albany has contracted a large amount of English at that price.

### Rochester Wholesale Prices.

## NEW YORK MARKET.

NEW YORK, August 22.

Flour—Low grades of State and Western firmer and prices 6¼ better, closing buoyant, with little to be had at our inside figures. Better grades firm and in fair request for home and eastern trade. Canadian scarce and nominal. Sales Western Canal 9,000 bbls. at $5,12½@5,31¼ for mixed to fancy Michigan and Indiana, $5,18@5,31 for good Ohio.

Grain—Wheat quite active but without change. Little prime here. Sales mostly to arrive. Sales 40,000 bus. of fair to good Michigan at $1,29@1,31, 3,000 bus. white Genesee $1,36½; 5,600 bus. good white Canadian $1,27; 1,600 red Genesee $1,20; 4,000 bus. red N. C. $1,23. Oats in fair demand at 49@50c for State and Western. Corn easier, inquiry good. Sales 21,500 bus at 71½@72½ for unsound, 73@73½ for Western mixed, 74@75 for Southern yellow.

Provisions—Pork in good demaud and buoyant—prime easier and dull; mess steady but quiet. Sales 450 bbls. at $15,37@15,50 for mess; $12,75@13 for prime; $17,25 for clear. Lard in good request and not plenty at 10½@11c. Butter less plenty and market tends upward; sales 12@16 for Ohio; State 15@19. Cheese sells at 8@8½.

## ALBANY MARKET.

Albany, Aug. 22.—There was but little property offered on change, but there was a good attendance of the trade, and a fair inquiry for all the leading articles.

Flour and Meal—The demand is moderate and prices are steady. The non-arrival of the steamer now due at New York tends to check sales. The sales of the morning aggregate 800 bbls., at $4,75@5 for common to good State; $5@5,25 for good to fancy Michigan, Ohio and Indiana; $5,37@5,50 for fancy Genesee and extra Western; $5,62@6 for extra Genesee, and $6@6,25 for do. new wheat. Corn Meal is firm and in good shipping request at $1,44@1,50.

Grain—The demand for Wheat is fair for milling; the supply is light, and the market slightly favors the buyer. Sales 3,500 bus good Genesee to arrive soon at $1,30.—Corn is quiet with but little offering. Sales 700 bus. round yellow at 75c, and 1,200 bus. Western mixed, on Saturday afternoon, at 72½c. Barley is in good demand, and the market is as yet unsettled, owing to the small receipts.—Sellers, as it might be inferred, have the entire control of the market. Sales 1,500 bus. good two-rowed, near at hand, on private terms. Oats are in small supply and the market is better. Sales 600 bus. good State at 49c.

## BUFFALO MARKET.

Buffalo, Aug. 22.—The market for flour continues quiet, with only a moderate demand. Receipts by lake light. Sales 1,000 bbls. at $4,70@4,75 for fair to choice Ohio, Indiana and Michigan.

Grain—Prime Wheat in fair demand—buyers waiting steamer's news. Sales 7,000 bus. white Michigan from store, at $1,10; and 10,000 bus. do. to arrive, at same figures. Corn—market continues dull and inactive. Sales 2,600 bus. at 62½c.

## NEW YORK CATTLE MARKET.

NEW YORK, Aug. 15.—At Washington Drove Yard—2,100 Cattle in market. Prices range at from 7@9½c per lb, as in quality.

At Browning's—Offered 55 Cows and Calves. All sold at prices ranging at from $22,50@37,50 to 47,50.

Sheep and Lambs—4,742 on sale. The former brought $2,50@5. Lambs, $1,50 to $3. All sold.

At Chamberlain's—Offered 200 Beef Cattle; prices ranging from 7@9½c.

Cows and Calves—65 on sale, and sold at prices ranging from $25@35 to 52.

Also 3,300 Sheep and Lambs offered; Sheep $2,50@3,50 to $5,00@6,50; and $1,65@2,50 to $3,50 for Lambs.

## ALBANY CATTLE MARKET.

ALBANY, Aug. 22.—W. W. Woolford's, Bulls' Head, Washington street.

Beef Cattle—475 at market. Prices—Extra, $7,00; 1st quality, $6,50; 2d do. 6; 3d do, $5,50.

Cows and Calves—18 in market. Prices from $27@30, 35 to $40.

Sheep and Lambs—650 in market. Prices—Sheep at from $2,75, 3, 3,50@4. Lambs $2,50@2,75, 3, 3,25.

Swine—50 in market. Prices from $5,50, 5,75@6.

## CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, Aug 17.—At market, 1,210 Cattle, about 900 Beeves, and 310 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7,50 per cwt.; 1st. quality, $7,25; 2d do, $6,50@7,00; 3d do, $6@6,25; ordinary, $4,00@5,00.

Hides—$6 per cwt.

Tallow—$7@7.50 per cwt.

Pelts—75c@1,00.

Calf Skins 11c per lb.

Barreling Cattle—None.

Veal Calves—$6, 8 12@18; at market 215.

Stores—Working Oxen—$86, 95, 102, 8, 12, 25, 32 to 150.

Cows and Calves—$25, 28, 31, 35, 46, to 51.

Yearlings—$8, 8,50, 9 to 10—164.

Two years old—$15, 18, 21, 25, 32 to 40.

Three years old—$31, 34, 36, 41@51.

Sheep and Lambs—4,190 at market.

Extra, $5, 5¼, 6 to 6½.

By lot—$2. 3 to 4½.

Swine—167 at market, private contract.

## BRIGHTON CATTLE MARKET.

BRIGHTON, Aug 18.—At market 1,150 Beef Cattle, 375 Stores, 6,500 Sheep, and 750 Swine.

Prices—Beef Cattle—Extra, $7@7.50; 1st quality $6,50@6,75; 2d do, $6@6.25; 3d do. $4.75@5,75.

Working Oxen—Sales $80, 85, 90, 92, 100, and 145.

Steers—4 years old $60, 68@75.

Cows and Calves—Sales $22, 23, 28, 31, 40, 42@48.

Sheep and Lambs—Sales of lots at $2,50, 2,88, 3,25, 3,38, 3,75, 4,50 and $5,25.

Swine—Prices have a downward tendency. Spring pigs to peddle 7@7½, Shoats 6½@7. Still hogs to slaughter 5¾. At retail from 6½@8½.

## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, August 19.—The offerings at Washington Drove Yard during the past week comprised 1,000 head of Beef Cattle, of which 500 to 600 were driven to New York,—300 Cows, 700 Hogs. The hot weather has had a tendency to depress the market.

Prices—Beef Cattle—Sales were made at $7,50 to $9,25 per 100 lbs.

Cows ranged from $10@52.

Hogs—We quote at $7@7,50 ₱ cwt.

Sheep and Lambs continue scarce and in demand.—Prices range from $2,50 to $6,50.

Sale to commence at 10 o'clock, A. M.

JESSE WATSON, President.
J. T. Lacy, Secretary. 191-2w-1m
London, Madison County, Ohio, August 20, 1853.

FOURTEENTH THOUSAND NOW READY.
**TWELVE YEARS A SLAVE!**
*"Truth Stranger than Fiction."*

"It is a singular coincidence, that Solomon Northup was carried to a plantation in the Red River country—that same region where the scene of Uncle Tom's captivity was laid—and his account of this plantation, and the mode of life there, and some incidents which he describes form a striking parallel to that history."—Mrs. Stowe, in her "Key," p. 174.

THE NARRATIVE OF SOLOMON NORTHUP, a citizen of New York, kidnapped in Washington City in 1831, and Rescued in 1853, from a Cotton Plantation near the Red River, in Louisiana.

**LIST OF ILLUSTRATIONS.**

Portrait of Solomon in his Plantation Suit.
Scene in a Slave Pen at Washington.
Separation of Eliza and her Last Child.
Chapin rescues Solomon from Hanging.
The Staking-out and Flogging of the girl Patsey.
Scene in the Cotton Field.
Arrival Home, and first Meeting with his Wife and Children.

*One handsome 12mo. volume, 350 pages,*.... Price $1,00

Read what the Reviewers say.

The narrative will be read with interest by every one who can sympathise with a human being struggling for freedom.—[Buffalo Courier.

The volume cannot fail to gain a wide circulation. It will be read extensively both at the North and South.—No one can contemplate the scenes which are here so naturally set forth, without a new conviction of the hideousness of the institution from which the subject of the narrative has happily escaped.—[N. Y. Tribune.

What a tale it tells; what inexpressible reproofs against Slavery; what occasion for shame and tears on the part of all. We think the story as affecting as any tale of sorrow could be. We believe its perusal will not only excite an absorbing interest, but minister powerfully to the sound, intelligent anti-slavery sentiment of the country.—[N. Y. Evangelist.

Next to Uncle Tom's Cabin, the extraordinary Narrative of Solomon Northup, is the most remarkable book that was ever issued from the American Press. Indeed it is even a more extraordinary work than that, because it is only a simple unvarnished tale of the experience of an American freeman of the "blessings" of slavery, while Mrs. Stowe's Uncle Tom is only an ingenious and powerfully wrought novel, intended to illustrate what Solomon saw and experienced—Southern Slavery in its various phases.—[Detroit Tribune.

We hope it will be universally read. If we do not sadly err, it will prove of vast service in the great cause of Freedom. If there are those who can peruse it unmoved we pity them. That it will create as great a sensation, and be regarded equally as interesting as "Uncle Tom's Cabin," is not a question for argument. In our opinion it will lead that wonderful work in the popular opinion, and in the aggregate of sales.—[Buff. Express.

This is one of the most exciting narratives, full of thrilling incidents artlessly told, with all the marks of truth. Such a tale is more powerful than any fiction which can be conceived and elaborated. There are no depicted scenes in "Uncle Tom" more tragic, horrible, and pathetic, than the incidents compassed in the twelve years of this man's life in slavery.—[Cin. Jour.

He who with an unbiased mind sits down to the perusal of this book, will rise perfectly satisfied that American Slavery is a hell of torments yet untold, and feel like devoting the energies of his life to its extirpation from the face of God's beautiful earth.—[Evening Chron.

It is one of the most effective books against slavery that was ever written. "Archy Moore" and "Uncle Tom" are discredited by many as "romances;" but how the apologists for the institution can dispose of Northup we are curious to see.—[Syr. Jour.

It is well told and bears internal evidence of being a clear statement of facts. There is no attempt to display but the events are so graphically portrayed, that the interest in the perusal is deep and unabated to the last. Some of the scenes have a fearful and exciting power in their delineation. The sunshine of kind treatment sheds a few broad beams athwart the dark canvass of twelve years of bondage; but in the main, the darker cruelty and wickedness of oppression is still more revolting by the contrast.—[Cayuga Chief.

It is a strange history, its truth is far stranger than fiction. Think of it! For thirty years a man, with all a man's hopes, fears and aspirations—with a wife and children to call him by the endearing names of husband and father—with a home, humble it may be, but still a home, beneath the shelter of whose roof none had a right to molest or make him afraid—then for twelve years a thing, a chattel personal, classed with mules and horses and treated with less consideration than they, torn from his home and family, and the free labor by which he earned their bread, and driven to unremitting, unrequited toil in a cotton field, under a burning southern sun, by the lash of an inhuman master. Oh! it is horrible. It chills the blood to think that such are.—[Fred. Douglass' Paper.

It comes before us with highly respectable vouchers, and is a plain and simple statement of what happened to the author while in bondage to southern masters. While we concede to the south all the privileges in respect to slavery which are guaranteed to them by the constitution we are free to speak of its evils; and when particular instances of inhuman treatment of slaves come to our notice we shall remark upon them as we please. It is a well told story, full of interest, and may be said to be the reality of "life among the lowly."—[Buff. Com. Adv.

Let it be read by all those good easy souls, who think slavery is, on the whole a good thing. Let it be read by all who think that although slavery is politically and economically a bad thing, it is not very bad for the slaves. Let it be read by all those M. C.'s and supporters who are always ready to give their votes, in aid of slavery and the slave trade with all the kidnapping inseparable from it. Let it be read, too, by our southern friends, who pity with so much christian sensibility, the wretched condition of the free negroes at the north, and rejoice at the enviable condition of their own slaves.—[N. Y. Independent.

191-1t DERBY & MILLER, Auburn, N. Y.

**ACADEMY AT OVID.**

THE Fall term of this Institution will commence on Wednesday, September 14th, and continue fourteen weeks. This School is open to youth of both sexes.

Instruction is given in both the ancient and modern languages; in General Agricultural Chemistry; in Civil Engineering, in Music, and in all branches of study pursued in the most approved Schools in the country.

Lectures are given on Chemistry, in all its branches; Physiology, Natural Philosophy, the science and art of Teaching, and on Morals.

The Board of Instruction consists of Rev. Amos Brown, Edwin Pierce, William H. Brewer, George B. Vose, and Misses Isabella Mead and Angelina Jameson. The Gentlemen are all of them graduates of some of the best New England Colleges, and the Ladies have proved themselves entirely competent to their stations.

Charge for instruction on the Piano Forte is $10 per quarter, and $4 per quarter for French, Painting, or Drawing, &c.

Pupils boarding themselves, or with their particular friends, are charged $4, $6 and $7 per term of fourteen weeks for tuition, according to the studies pursued.

The Trustees beg leave to assure the public, that no measures on their part will be spared to make this a FIRST CLASS INSTITUTION. They will immediately erect additional buildings to be used as a boarding house for Young Ladies, Chapel, &c., at a cost of $10,000 or more, and will make all other necessary improvements.

Catalogues with an appendix, affording all requisite knowledge of the School, will be sent to persons requesting it, on application to Rev. A. Brown, Principal.

HALSEY SANFORD, Sec'y.
Ovid, August 10th, 1853. 190–4w

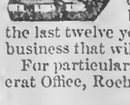
**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address

JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.
Boston, August, 1853. 190–13w–1m

**Hickok's Patent Improved Cider Mill and Press.**

WE have been appointed sole agents for the sale of this Mill and Press in the city of New York. This is the most approved mill now in use. Catalogues, with description and drawing will be forwarded by addressing us post-paid. Price $40. LONGETT & GRIFFING,
187-8t 25 Cliff St., New York



**TO BOOKBINDERS.**—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,

F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

**N. Y. State Agricultural College.**

This Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
Hon. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

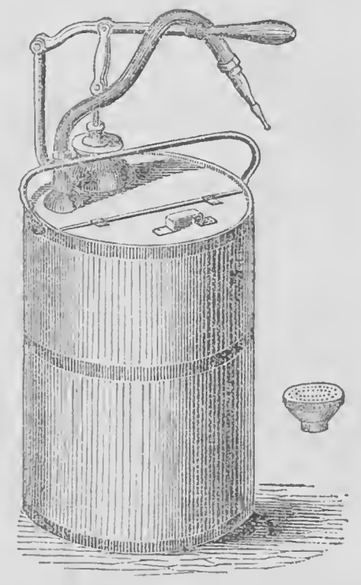
The Trustees may be addressed (post-paid) at their respective residences, as follows:

Hon. John A. King, Jamaica, Queens County.
Henry Wager, Westernville, Oneida "
B. P. Johnson, Agricultural Rooms, Albany.
Wm. Kelly, Rhinebeck, Duchess Co.
N. B. Kidder, Geneva, Ontario Co.
Joel W. Bacon, Waterloo, Seneca Co.
Tallmadge Delafield, Geneva, Ontario Co.
Wm. Beel, Rochester, Monroe Co.
John Delafield, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*



WE offer for sale, the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union. WM. G. CREAMER & CO.,
Plumbers and Hydraulic Engineers, 64 State street, New Haven, Conn., and 4th Avenue cor. 9th St., New York.
185-8t.

**SUPERPHOSPHATE OF LIME.**

THE undersigned continue sole agents for the sale of Deburgs Superphosphate of Lime, which has proven Superior to all other brands, now in the market. Having sold nearly Three Hundred Tons this spring, and heard from a majority who have used it, they pronounce it equal to Guano in its effects, and is more lasting in the soil. As there are many substances called Superphosphate of Lime now offering in this market, which are of a different nature, to avoid impositions purchasers would do well by applying direct to the agency for their supply.

LONGETT & GRIFFING,
184-8w. No. 25 Cliff Street, New York.

**GARDEN OR FIRE ENGINE.**

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N. B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.
Seneca Falls, N. Y., June, 1853. 183w10

**THE JUVENILE INSTRUCTOR,**
BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to infuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 1 cts on each paper.

Price per year—single copies, 25c.; Five to one address, $1; Ten do, $1,70; Twenty do, $3; Thirty do, $4,20; Fifty do, $6,50; One hundred do, $12.

Address LUCIUS C. MATLACK,
183m3. Syracuse, N. Y.

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

## A MITHER'S BLETHER ABOUT HER BAIRN.

That wean o' mine'll drive me daft,
I solemnly declare;
If I had bedlam in the house,
It couldna plague me mair.
He waukens up at shreigh o' day,
Then rest wi' him there's nane,
But rumblin', tumblin', up an' down—
It's no a common wean!

He's never out o' mischief, an
He never seems to tire;
See! there he's on the fender's edge,
He'll tumble in the fire.
He's at the door now! catch him, or
He'll whomle down the stair;
He's got the puir cat now, the wretch
Is ruggin' out it's hair!

Losh! now he's got his father's book
Wide open on his knee,
And just observe the solemn look
That's in his bonnie e'e.
He canna read, yet looks as grave
As chiel in gown and bawn;
But mair than he looks wise on things
They dinna understan'.

An unco wean; yet flyte on him,
He only laughs an' craws,
Like his father when he's teasing me;
An' when I tak the taws
An gie'm a skelp, I'm vex'd, an' wish
I'd let the bairn alane,
For he looks sae strange-like in my face,
I coulda do't again.

Gude keep us a'! the bairn's asleep,
His wee head on his arm;
Now, wha could look in that sweet face
An' think o' doin't harm,
Although its fashous whyles?—eh me!
His wee cheek's like the rose,
Or the crimson on the far hill-tap
When gloamin's gaun to close.

Sleep sound, wee pet! ye're but a type
O' busy warldly man,
Whose hands are thrang, whose head is fu'
Wi' mony a scheme an' plan:
He rests nae day nor night, until
His bustlin' life is past,
An' sleep—Death's sleep—upon him creeps,
As on my bairn at last!

# Rural Sketch Book.

## THE THREE WIVES.

BY F. H. COOK.

Mr. Jeduthun Spike was an eccentric bachelor of fifty. His mother died in giving him birth, and it would seem that the mother-heart died with her, for from that hour the hapless Jeduthun seemed to have no perception of feminine excellence, and diverted himself with ridiculing the foibles of the sex, whose true character was to him a despised enigma. As a babe, he was fed and tended by an invalid brother many years his senior; and he afterwards grew in stature, and a hard, ungenial kind of wisdom, without much matronizing from anybody. As years and possessions increased, he boarded at a fashionable hotel, where the cook and attendants were of his own sex, and ignored the address of his laundress.—His predispositions against matrimony were confirmed and strengthened by the fate of the brother alluded to, who married somewhat late in life, and after an unhappy connexion of seven years' duration, left his widow, a permanent inmate of an insane asylum, and his three boys to the guardianship of their uncle. The recipient of this unexpected legacy, who had till then loved nothing in the whole of his miserable life, felt a strange pleasure in the duties of this new and unsolicited relation. The docility with which the little fellows accommodated themselves to the oddities of the eccentric humorist, their unquestioning faith in his most startling dogmas, and their artless exhibitions of personal attachment, won upon his isolated nature to a degree that surprised himself. It seemed that these helpless children were destined to fulfil to the lonely old man that feminine mission without which human life is a failure, and happiness a myth. With a devotion and patience hardly to be expected of him, he reared the fragile boys to manhood, gave them all the needful advantages of books, and schools, and pocket money, and at last saw them all established in business, and in a way to do credit to themselves and their connexions. Judge then of his painful astonishment when all three waited upon him in a body, to announce that they had jointly and severally formed the audacious resolution of committing matrimony. Neither would have dared to approach the subject alone, and though countenanced by each other, they felt so much gratitude, reverence and compassion for the prejudiced old man, that they fairly trembled for the result.

When the confession was made to Mr. Jeduthun Spike, he turned his back on the agitated young men, and walked quickly to the window. After standing silently for some minutes, he turned and said very calmly:

"Well, boys, I have nursed you through the measles, and the scarlet fever, and the whooping cough, and I did my best to alleviate what I could not prevent. You are now the victims of a disorder quite as general as the other, and for which there is no remedy but experience. Neither precept nor example,"—here his lips quivered slightly—"have been of any avail in your case. Go then and marry if you will. I give my full consent, on one condition only. It is that you all present yourselves in three years from this day and hour, and declare solemnly, upon the worth of your remaining manhood, whether you are unhappy, and why. The causes of misery in wedlock are very various, but the result is uniform. I will excuse you now, boys, as I have an appointment with my tailor."

It is needless to say that the three nephews availed themselves of the permission thus unwillingly given, and that any self-reproaches they might feel at defeating the cherished wishes of their kindest benefactor did not seriously embitter the honey moon. The three years that followed stole a handful of grey hairs from the bald forehead of Jeduthun Spike, and, as if ashamed of the theft, secretly restored them hidden among the chestnut locks of his young relations. And, as a farther restitution, the same silent agents transferred unnoticed a portion of the hopeful tenderness of the youthful Benedicts to refresh the withered heart of the disappointed bachelor. The time for the interview so long anticipated, arrived at last. In the luxurious rooms of the lonely uncle, Henry and Charles, the two elder nephews, waited impatiently the arrival of the younger.

"It is useless looking for Edward," said Charles, at last. "We shan't see him before evening. His wife is now looking for a needle to darn his stockings, and replace the missing buttons upon his coat."

Yet, as he spoke, a cheerful step was heard without, and the tardy brother entered the room, breathing quickly, and with a smiling apology for his delay. The two first arrived exchanged meaning glances but the merciless uncle cut short their merriment, by saying gravely:

"Henry, my boy, you are the oldest. It is just that you should lead upon this occasion. Tell us frankly, how do you enjoy married life?"

The young man paused for a moment, then, with a comical grimace that but ill-concealed his reluctance, he replied:

"It is a bitter dose to swallow, I confess. Uncle, you are revenged."

There was a slight movement of surprise, for Mrs. Henry Spike was recognized as decidedly notable.

"I thought," said the uncle, drily, that yours was a pattern wife."

"Only too much so," returned the nephew. "It is my belief that she was modelled upon the most approved patterns and made up to order. If ever there was a machine for performing mechanically every outward virtue, it is Mrs. Henry Spike. She never loses her temper, indeed I doubt if she has any to lose. She never betrays any flutter of vanity or wounded feeling. To the calmness of a statue, she adds an instinctive perception of decorum, a rigid adherence to rectitude, which leaves nothing to hope or fear, and very little to enjoy. Nothing can disturb her. When our infant was dangerously ill, she moved about his cradle with the same unperturbed composure, and dropped his last cordial, as we thought, into the cup with an untrembling hand."

"I hardly see how you came to marry her," remarked Edward, *par parenthese.*

"She was pretty, and I mistook her natural roses for blushes, and her silence for delicate reserve. I was much moved when she once left me in tears; I have since learned she had the tooth-ache. I can never find in her deportment anything to forgive, and I am tired of praising where correctness seems inevitable. Besides, she don't care for praise. She was wound up at birth, and her heart pulsates with the regularity of a pendulum If I should hang myself of pure *ennui*. I know she would arrange everything for a respectable burial. My condition is desperate. In passing through New York last winter, I religiously avoided seeing Lola Montes, for I knew I should be smitten at a glance. The slightest touch of human frailty seems absolutely refreshing. Speak, brother, he added after a brief pause, and in mercy point out some defect in Mrs. Charley Spike."

"Mrs. Charley Spike," responded the person addressed, "is not absolutely stupid, nor entirely indifferent in matters of feeling. She gives some variety to life in point of temper, and permits me to hope to please, as well as fear to offend. But like your Rectina, she has, alas! one paramount idea.—'Order is Heaven's first law,' and it is not the less that of my immaculate Vesta. Especially does she insist upon the most spotless neatness, at the expense of all other considerations. I discovered soon after my marriage that the world was a little too good to live in. The parlors were shut up to exclude the flies; the chambers, to avoid the dust. The dining-room furniture was robed in Holland covers, and ugly mats deformed every square yard of carpeting. Canaries were banished because they littered their cage, and my pet spaniel dismissed for neglecting to wipe his feet. Then pickles spoil the cutlery, and eggs corrode the silver; coffee is liable to stain the linen, and even butter, if incautiously used, may be the parent of a grease-spot. Cigars I have long since abjured, because spittoons are an abomination. If I sit, it is, 'Mr. Spike, your chair mars the wall, or 'Charles, you are rocking upon the rug.' If I walk, it is, 'Pray leave your boots at the door, Mr. Spike, and let me bring you your slippers.' I sometimes think I will remove to a hotel, and send home my compliments daily in a perfumed note. I shall expect soon after to see the whole establishment modelled in wax, and reposing under glass, like a collection of fanciful wonders. Come, Edward, your wife is no paragon. Confess your misery, and don't detain us long."

"Mine is not a pattern wife, certainly," was the response of the younger brother. "She is not distinguished for order, nor faultless in neatness, nor unerring in discretion. She is very far from being a piece of clock-work, and there is a great uncertainty, sometimes delightful, sometimes painful, as to what she will attempt, and whether the result will be success or failure. There is room for doubt as to particulars; none at all as to the general tendency of her conduct. She is as true-hearted a woman as lives, 'and that which she delights in must be happy.' You may smile if you choose, but I do most frankly assure you that I *am* happy. I know not what Beatrice is doing at this moment, but I feel sure that, in aims and efforts, she is true to herself, to me, and to her Maker. I am sure that she loves me more than all the world beside, but not so much as she loves truth and duty and self-respect. Her errors are all mistakes. They are the redundancy of a loving, generous, richly-gifted nature.—She is no model housewife, but she has made great improvement, and she has the strongest incentive to improvement, a sincere and unselfish affection. It is true that I was delayed to-day by waiting for a few last stitches from her practised needle, not however upon my clothing, as I see you imagine, but upon a pair of slippers she has just wrought for uncle Jeduthun. Let me see them tried, my dear sir. I have an idea they will fit you."

"Why, yes, tolerably," said the good man, who seemed more gratified than he cared to acknowledge. "The truth is," he added, speaking with hesitation, as if he felt the need of an apology. "The truth is, I am going to live with Edward, and give lessons to Beatrice in housekeeping."—*Home Gaz.*

## COURTSHIP AFTER MARRIAGE.

[Translated from the German.]

One evening, in a gay party at Herr Kretchman's the subject turned upon female beauty; and a gentleman of the company asserted that the youngest daughter of the Kamerath Ammon—a blonde, born in April, 1776—was the most beautiful girl in the city. I instantly resolved to satisfy myself upon the subject, without loss of time, and slipping out of the room, I went straight to the Kamerath's house and rang the bell.

The door was opened by the youngest daughter herself, who explained the unusual circumstance by saying that it happened that no one was in the house except her parents and herself.

I looked earnestly at the maiden and found her beautiful beyond description; so without hesitation, I asked her, there upon the threshold, if she would be my wife.

"Why not?" answered she, "but come in and speak to my parents."

We parted late in the evening with a tender embrace—all was settled between us.

In the village of Truppach, on the 18th of January, 1796, we were married, in a good, simple country fashion, and late in the evening the bride stepped into my carriage at her father's door, and went with me to my old home.

I soon found that it was easier for a man to become a bridegroom than a wise husband.

We plagued each other constantly in the beginning, out of pure love, till from continual vexation a coldness ensued, which we both felt but could not account for.

Yesterday my little lady would not suffer me to leave her side, and to day she found it good to visit her brother, ten miles in the country, without bidding me adieu, or naming the time of her return.

Two days after this, hasty messengers came one after another—I must come—I should come—without me she could have no peace.

I went, and the joy of the re-union seemed as if it never could end. On the following day I was again a burden. I left with a cold parting, and that self-same night came the repentance by an extra post—she could not live without me I must hasten back.

This certainly would not do—in this way all my identity would be destroyed.

Since the day of my marriage with my beautiful wife, I had been the submissive slave of her will, but now that it was plain she had a will of her own, I must follow some other plan. I sat down to consider, and after some reflection determined what to do.

Since my marriage my old employments and pursuits had been altogether neglected, but I now resumed them, and as much as possible returned to my bachelor life.

My wife sent every day letters full of tears, but I paid no attention to them outwardly although they touched my heart sorely. At length I wrote her a long, serious letter, in which I said that as we had been married without previous courtship, it was not at all strange that, being unacquainted with each others character, we could not harmonize together, and I proposed that she should remain at her father's house at present, and that with her permission, I would visit her two or three times a week, and spend an evening with her in conversation, until we were acquainted with each other, and after that, if she should like me well enough, I would take her home to be my wife—but if she found she could not be satisfied with my habits, manners and character, I would leave her under her father's roof, giving up all claims upon her.

This plan did not please her much; but she appeared to think it would not be becoming in her to bring up any objection.

Well—to cut a long story short, after a formal courtship of no very great length I once more took her her home, and she made one of the best little wives in the world.

The noblest contribution any man can make for the benefit of posterity is that of a good character. The richest bequest which any man can leave to the youth of his native land is that of a shining and spotless example.

You may depend upon it that he is a good man whose intimate friends are good, and whose enemies are of a character decidedly bad.

# Wit and Humor.

## WESTERN MUSIC.

A Western chap went to New York to purchase goods, &c., and was invited to one of those fashionable parties so common in large cities. He was clearly a western original, but said very little until he saw that the party was not to close without an attempt to corner him. At length a bevy of laughing girls, by the merest accident in the world, found themselves groped about western green one, in a most animated discourse upon music, and city playing.

When all this had progressed just far enough, one of the damsels with head more adorned without than within, and in that peculiar parlor drawl, which fortunately no type can represent, accosted the observed of all with—

"Do the ladies play music at the west, sir?"

Original saw the game, and resolved to win.

"Oh very universally, Miss;" was the cool reply.

"Indeed, I was not aware of that: pray, do they use the piano, mostly?"

"Never, Miss; the instrument that we have out our way is the *Swinette*, and the girls all play it."

"Oh, dear. I am sure, positively, that I never heard of that before: do tell what it is, and how they play."

"Well: the instrument is a small pig, and each girl takes one of these under her arm, and *chews the end of his long tail*, and that brings the music!"

The preconcerted "come" made no farther progress; and for the balance of the evening our western "green" was the only lion of the show.

Bad Spelling.—A gentleman wrote Dr. Francis the following note:

"Dear Doctor:—I caught cold yesterday, and have got a little horse. Pleas write what I shall do for them."

The following was the answer:

"Dear P.:—For the cold take a pound of butter candy. For the little horse, buy a saddle and bridle, and ride him out the first time we have fair weather.

Yours, Dr. F."

A Reason.—"I say Sambo, does yo know what makes de corn grow so fast when you puts de manure on it?" "No, I don' know hardly, 'cept it makes the groun' stronger for de corn." "Now I jist tell ye. When de corn 'gins to smell de manure it dont like de 'fumory, so it hurries out ob de groun' and gits up as high as possible, so's not to breathe the bad air."

"What's that horse out of?" said a fellow, with a view to quiz a farmer's boy, who was riding an old horse, which showed less blood than bone. "Out of?" "Yes, what's he out of—do you know?" "Yes, I do."—"Well, what?" "Out of oats!"

Hats worn on the heads of a discourse—the bucket that hung in "All's well," and fragments of the man that burst into tears, are said to be the last curiosities found.

"Mike, and is it yerself that can be afther tilling me how they make ice crame?" "In truth I can—don't they bake them in cowld ovens, to be shure."

The substance of the verdict of a recent coroner's jury on a man who died in a state of inebriation, was—"Death by hanging—round a rum-shop."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

For the Rural New-Yorker.

## HISTORICAL ENIGMA.

I am composed of 24 letters.

My 23, 17, 4, 7, 12, 11, 17, 7, 5 was a wise man of Greece.

My 12, 20, 11, 16, 11, 5 was the founder of the Roman Republic.

My 23, 10, 16, 7 was an inveterate enemy of Ceasar.

My 12, 7, 22, 8, 14, 20 was a bishop of London.

My 6, 4, 22, 7, 8 was a Grecian General.

My 3, 10, 15, 23, 11, 5 was one of the perpetrators of Ceasar's death.

My 13, 7, 22, 13, 23 was a Grecian dialect.

My 4, 17, 13, 5, 10 was a Tyrian Princess, and foundress of Carthage.

My 10, 3, 18, 5, 13, 5 was an Egyptian King.

My 2, 3, 2, 12, 13, 20, 13 was a Grecian deity.

My 20, 14, 10, 15 is a desirable place in battle.

My 5, 2, 17, 17, 11, 5, 16 was one of best Historians of antiquity.

My 2, 20, 13, 5, 16, 7, 9, 17, 4 was the most remarkable Retrocian.

My 23, 13, 23, 21, 15, 17 was a famous Roman Orator.

My 1, 2, 6, 24, 5 is a celebrated name found in history.

My whole is the name of a brave and heroic naval commander.

## POETICAL ENIGMA.

If ten from ten you take, you'll find
That ten will still remain behind;
If, sir, you think this is not true,
You'll find it plainly shown to you.

Media, Pa., 1853. J. S. G.

☞ Answer next week.

☞ PEOPLE'S COLLEGE OF THE STATE OF New York, Incorporated April 12, 1853.—This institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. McCallum, of Owego, President of the Board of Trustees.

A. I. Wynkoop, of Chemung, Vice President.

Tracy Morgan, of Binghamton, Treasurer.

Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H. HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

GREAT STOCK SALE.

Short-horn and Durham Cattle, and South-down Sheep.

On Wednesday, the 7th day of September next, at one o'clock, P. M., I will sell, at my farm on Grand Island, six miles below Buffalo, about 30 full bred Short-horns, a few Devons, and about 30 high grade Short-horn and Devon Cattle, consisting of Cows, Heifers and Young Bulls.

The young Short-horns are chiefly the get of my imported bull Duke of Exeter (10,152)—a bull not exceeded, as a fine stock getter, by any other in the U. States.

The young Devons are the get of the bulls Candy and Quartley, both imported by Mr. Stevens. The superior of these bulls in blood, style and breeding, is not to be found. Quartley is my present stock bull.

I will offer at the same time 50 pure bred South-Down Sheep-rams and ewes. Also a few Middlesex pigs—both sheep and pigs the direct get of imported sires, from dams descended from late importations.

Catalogues will be ready by the first of August, and will be sent on application to me, by mail.

Terms:—All sums of $100, and less, cash. For larger sums, approved notes at four months, with interest, payable at Bank, will be received, if preferred.

A steamboat will carry all persons wishing to attend, across the ferry from Lower Black Rock to the farm, at 10 o'clock on the morning of the day of sale. The stock can be viewed at any time previous, by calling on me at my residence in this place. LEWIS F. ALLEN.

Black Rock, N. Y., June 15, 1853. 182-10t

Improved Portable Cider Mill and Press.

Hickok's Improved Portable Cider Mill and Press, received the following premiums in 1852, viz:—A Silver Medal at the Fair of the American Institute, N. York. Diploma at the Franklin Institute, Philadelphia. First premiums at the State Fair at Utica, and at the Columbia and Rensselaer County Fairs, and diploma at the Westchester County Fair.

Descriptive circulars sent free to all post-paid applications. See page 254 of this paper, for engraving. Price, $10,—and all persons living near Rochester or away from any agency, may order of me, and when they get the mill they may deduct the freight and remit the balance to me.

Manufactured by W. O. HICKOK, Harrisburg, Pa.

Sold by LONGETT & GRIFFING, 25 Cliff-st., N. Y.
EMERY & CO., Albany.
DANA BROTHERS, Utica.
PROUTY & CHEW, Geneva.
HIGGINS & CALKINS, Castile, Wyoming Co.
C. E. YOUNG Main-st., Buffalo.
O. GREGORY, Binghamton.
CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 183-8tw1m

Springfield, Ohio, May 1, 1852.

Mr. W. O. Hickok: *Dear Sir,*—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It surpasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

MARSHALL'S BOOK BINDERY,

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound; Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.

April, 1852. [122tf] F. H. MARSHALL.

SUFFOLK PIGS FOR SALE.

Twenty pairs of pure bred Suffolk Pigs for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,

June, 1853. [186m3] Walpole, N. H.

MOORE'S RURAL NEW-YORKER:
A WEEKLY HOME JOURNAL,
For both Country and Town Residents.

PUBLICATION OFFICE,
Burns' Block, corner State and Buffalo Sts.,
Rochester, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 36. ROCHESTER, N. Y.—SATURDAY, SEPTEMBER 3, 1853. WHOLE NO. 192.

MOORE'S RURAL NEW-YORKER:
A QUARTO WEEKLY
Agricultural, Literary and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—Interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

## Rural New-Yorker.

### Progress and Improvement.

### EXAMPLE IN AGRICULTURE.

THERE has been no period in the history of Agriculture without its examples of productive, and hence profitable farming, but no era has occurred, when, on the broad acres tilled by American industry, so many bright spots have shone out to gladden the hearts and encourage the hands of the friends of improvement. The time has been when nearly every farm which had been in cultivation for fifteen or twenty years, seemed rapidly deteriorating in fertility and value, but at present many old farms are more productive than ever before. This has been accomplished by the introduction of radical improvements at various points, and the influence of their example.

When a thorough practical agriculturist goes into a neighborhood of well-worn farms, and engages in the work of reclaiming and improving his new purchase, his success is sure to awaken a spirit of inquiry, and his example can but exert a beneficial influence upon all who witness or hear it. He does not grow crop after crop of wheat or corn upon the same field, but he grows good crops of these grains, upon different fields in a series of years. He introduces new and improved varieties of grains and seeds—the products of which are seen at a glance to be better than those commonly grown—at least they command a better price in market. The same is true of his cattle, sheep and horses. With improved plows and other implements of tillage, he accomplishes a deeper and more thorough cultivation of the soil, resulting in good crops and insuring them against the excess of drouth or moisture. He is particularly careful in saving and making manure, and seeks in every way to enrich his farm; and its products show with what good result.—Perhaps he affords them an example of the effects of underdraining in the radical improvement of the soil, or introduces the wheat-drill and mowing or reaping machines.

These improvements, as we remarked before, exert an influence upon the farmers who witness or hear of them. They may cavil for awhile, but the unmistakable signs of prosperity—of the profit of such a course—will generally influence the most incredulous into some sort of an imitation, which is nearly always followed by better returns, and thus the work goes on until the whole neighborhood shows the influence of the example. In this way and by the constantly recurring lessons which experience teaches, a better system of cultivation has been in part introduced and thus also diffused and extended.

—Those who learn by hearsay are also influenced. These form the larger portion of community, and here the agricultural newspaper shows its power for good. It brings home the practice of the best farmers to thousands of interested listeners and they can but give hints of much value from the perusal. The improvements of one part of the country are diffused over the whole, and benefit the whole. But it was not our intention to write of newspaper example; our only thought was to hint at the influence which one thorough farmer exerts over those near him.

### HINTS FOR THE MONTH.

Now for your best efforts preparatory to sowing your winter wheat. Drive your business, and don't let it drive you. Better be a week too soon, rather than a day too late, especially if you wish to escape the ravages of the weevil—as early sowing, of early varieties, is the only security. Look now to the surface draining; a day or two spent with the round-pointed shovel, in ditches after the plow, may save a hundred bushels of grain.

If you want a good Timothy grass meadow to follow, it must be sown in the fall, as there is no certainty of succeeding when sown in the spring, especially if early or long drouths follow. Three-quarters of the entire seeding is lost this year from that cause.

We predict that the day is coming, and even now is, when we shall have to pay more attention to the grasses in meadows and pastures, and to the dairy and stock business, and place less dependence upon the wheat crop. The Weevil, the Hoosiers, the Badgers and the Wolverines are after us, and so we must do the next best thing within our power and means. We have got to keep our eyes skinned and our wits sharpened.

The first part of this month is in good time to cut bushes and clean out old hedge rows. To kill elders you may dig them out, root and branch, every day in the year, except Sunday; this is effectual.

Indian corn that is late and obnoxious to frosts, had better be tapped to save the fodder and expedite its ripening, though it is a process that depreciates the crop fully ten per cent in its entire weight. Our word is good for that.

The potato rot is showing itself in some districts pretty severely. As soon as the vine shows decay from that cause, and has ceased to perform its functions, they had better be dug and spread to dry—as moisture is one of the absolute conditions of rot, mildew and fungus, as the dry state is antagonistic.

Clean out old and dig new wells this month,—and the Prompter don't think it will hurt any of us to look to our *ills* about these days.

Begin to think about putting up swine for fattening, in all of this month certain—for one month during mild weather, is worth more than two in cold weather. It costs more for wood to keep a room warm in winter than in the fall months. Food is fuel that keeps up animal heat, and the less expended for that purpose, more is assimulated for fat and muscle; that's the doctrine on that point. Cook all their food, and save so much labor of the animal economy. It has got to be cooked in the stomach; therefore, if you wish to expedite the fattening process, keep them warm, dry and quiet, with good cooked food.

Ditch and clean low land; get home wood and rails before the fall rains; and if you are particularly smart, you can go to the State Fair at Saratoga, and the Crystal Palace at New York, and yet be ahead of the procrastinators and Friday-in-the-afternoon chaps. And so may you prosper as you do well. Earn and save—give to the needy—down with the *bars* and up with the *gates*—for such are those that conquer in the battle of life. PROMPTER.

EXPERIMENTS WITH SWAMP MUCK, &c.—The Albany Cultivator speaks of some experiments making with stable manure, swamp muck, and muck mixed with ashes as an application for wheat, by Dr. Sylvester, of Lyons, N. Y. That treated with stable manure had much the largest growth of straw, a part was badly "lodged,"—that where muck was applied was quite inferior—the muck and ashes produced a fine, uniform, thick growth—that without any amendment was poorest of all. The manure and the muck and the ashes were applied at the rate of 30 loads per acre, and the crop was thought to be about double that of the untreated land. Lime produces no effect on these soils.

### ANIMAL PHYSIOLOGY.

IT is remarkable at this age of general information and popular diffusion of useful knowledge, that so little interest is felt in the subject of Animal Physiology, among the people at large. Here and there, one out of the medical profession, prompted by curiosity perhaps, may have exhibited some hungerings and thirstings for that knowledge which shall discover to his understanding, how this most extraordinary piece of mechanism, the human body, performs its wonderful actions; and to know and understand the laws of health, so as to obey them.

One reason why so little interest is felt in this subject is because of its great commonness. Any thing that is uncommon usually excites interest in the mind of the observer. Let a comet, a sort of heavenly vagabond, but make its apperrance in the stellar universo, and all eyes, even those that seldom behold the jewelled dome under which they live and toil, are turned toward the wandering stranger—just because a new visitor, and of far less attraction one would suppose, than the beautiful morning stars which every early riser during the past few weeks has had the pleasure of looking upon, provided he has a taste for the beautiful in nature.—To be born, to eat, to grow, to decline, to die—why these are the common lot of all men. Truly, it is so. But this should not deaden the desire to know man physiologically. If his physical health and enjoyment depend, as they most assuredly do, upon either the conscious or unconscious obedience to the laws of nutrition, growth, and health, then it would seem to follow as a very natural conclusion, that if one desires to enjoy the life that now is, he must be prepared to live in obedience to those laws which secure to him the much-coveted boon.

Millions of the human family hourly die from the neglect of the conditions requisite for the preservation of health and life.—Other millions are dragging out a wretched and miserable existence, which might have been joyous, and happy, and useful, but for the ignorance of that knowledge which Physiology furnishes. Millions of infants perish soon after birth, through the ignorance of parents and nurses, of the laws of temperature;—others again perish from inattention to the subjects of diet, ventilation, cleanliness, &c.

Says England's sweetest poet—"The child is father to the man." This is as true of body as of mind—so that the child must be properly nursed and cared for, in addition to possessing a healthful body from birth, in order that he may have any expectation of living to do good and impart good until he attains to man's allotted time on earth. In order to attain the age of "three score and ten" man must be temperate in all things.

This is not mere theory. Facts speak trumpet-tongued on this subject. Says Dr. A. COMBE, "The average mortality of infants in England, and with little variation in Europe, is about 1 in every 4½ before the end of the first year of existence. So directly, however, is infant life influenced by good or bad management, that about a century ago the workhouse of London presented the astounding result of 23 deaths in every 24 infants, under the age of one year. For a long time, this frightful devastation was allowed to go on as beyond the reach of human remedy. But when, at last, an improved system of management was adopted, in consequence of a parliamentary inquiry having been made, the proportion of deaths was speedily reduced from 2,600 to 450 in a year. Here, then, was a total of 2,150 instances of loss of life, occurring *yearly* in a single institution, chargable, not against any unalterable decrees of Providence as some are disposed to contend as an excuse for their own negligence; but against the ignorance, indifference, or cruelty of man. What a lesson of vigilance and inquiry ought not such occurrences to convey, when, even now, with all our boasted improvements, *every tenth infant still perishes within a month of its birth.*"

Facts of a similar kind might be greatly multiplied to show how soon capital punishment is executed upon such as utterly disregard Nature's unalterable code. The ignorance and neglect of parents is visited upon their children, even unto the third and fourth generation, physically, as well as morally.

There is no class, if we except physicians, that has a deeper interest in this subject, than the agricultural. For Animal Physiology relates not only to man directly and most intimately, but to all the lower order of animals which he seeks to multiply and improve. He must, therefore, not only know how to nurse, protect and nourish the infant of his own species, but the young of every other sort of animals that he desires to perfect, after its kind. Every farmer should become deeply interested in the subject of Animal Physiology.—W.

### CLEAN SEED WHEAT.

"HIEL'S" compliments to his friend LINUS CONE, and he is pleased to have "amused" him by relating his "Experiences,"—altho' H.'s object in so doing was not merely to furnish "amusement" to himself, or others. If, however, it has no more *profitable* effect than furnishing *amusement*, he may, perhaps, continue to give "more of the same sort," for the entertainment of those whose minds are capable of no higher gratification, as well as for the instruction of those who can properly appreciate *facts* in regard to natural history. But to those who are not personally acquainted with him, he will say that the seed sown upon the land, as mentioned in his fourth number, was *literally* "*clean.*" H.'s father was very particular to sow none but clean seed; and many days has H., while yet too young and small to hold the weight of the hand seive, (made expressly for that purpose, and still in H.'s possession,) sat upon an old board bee-hive, and, with the seive upon two rake handles, sifted 10 bushels of seed wheat per day, (that was his "stint,") so as to thoroughly clean it from all *cockle, chess*, &c.

Having been thus early trained to the practice of sowing *clean seed, and none other*, H. has the vanity to suppose himself to be capable, at nearly "three score and ten" years, of understanding what seed is *clean*, &c. It is, however, not worth while to waste words or time, in regard to the doubts or sneers of the incredulous. And H. will, once for all, assure those who seek for *truth* and *instruction*, as well as *amusement*, that *every syllable of what he has stated in his "Experiences,"* is the "truth and *nothing but the truth,*" whatever theorizing gentlemen may say or *imagine* to the contrary.

Seneca Co., N. Y., July 15, 1853.

### ABOUT POLAND OATS.

EDS. RURAL:—In your paper of Aug 20, you speak of a crop of Poland Oats grown by MR. DRYER, of Brighton, and desire further information concerning that variety.—I have grown them for three years past, and my experience is that the same amount of seed is necessary per acre, that is needed for common oats. The yield in the bulk of grain is not materially different, though I think it is *quite as good*; but the great advantage in raising them consists in their weighing from 10 to 12 pounds per bushel more than other oats.

The straw is of good size, and they ripen about ten days earlier than any other variety. Particular care should be used by those who grow them for seed, not to sow them by the side of other oats or allow them to become mixed in any way after harvesting.

I have sold for seed all I have raised during the two preceding years, and could have sold a very large quantity beyond my supply last spring. I think those who have a knowledge of them will not fail to cultivate them hereafter. I presume those who have grown them this season, and kept them entirely unmixed from other oats, will readily sell what they have to spare for seed; and after another crop shall be grown, I presume an extensive demand for seed can be supplied. T. G. YEOMANS.

Walworth, Wayne Co. N. Y., Aug., 1853.

### OUR FORESTS.—USE AND SUPPLY OF FUEL.

EDS. RURAL:—In No. 22 of your present volume, is an article from the pen of S. B. ROCKWELL, on the "Use and Supply of Fuel in the U. S.," in which he severely censures the "woodman," that sturdy pioneer of civilization, for destroying our forests. Now, I fear we are not so ready, even in our own State, to part with the services of the kind-hearted woodman, and give him such an unceermonious discharge. There is many a tangled wood-land we would first wish to see converted into fruitful fields; his bone and sinew are needed to clear up many a dismal swamp, now engendering and poisoning the atmosphere with noxious effluvia—the prolific source of many evils.

Most heartily do we rejoice to see the forest recede before the march of improvement, and we hail the robust woodman as foremost in that noble cause—for we consider every acre of land reclaimed from nature's wilds, and brought under cultivation, as so much added to the productive capacity of our country. By this I would not be understood as desiring an indiscriminate or needless destruction of our valuable timber—by no means; besides this is not necessary,—for our villages and cities, steamboats and railroads, afford an ample market at which the farmer can dispose of his surplus wood at remunerating and often at extravagant prices, which in many places must rather decline than advance, under the widely extended and constantly increasing influence of the coal trade.

That many (and among them your correspondent) entertain "fears for themselves and posterity," should our country be shorn to any greater extent of its timber, there can be no doubt: but are those fears well-grounded? Is it the will of Providence that so large a portion of our productive land should remain an uncultivated wild, merely to supply ourselves with fuel?—Hath the bountiful and all-wise Creator—ever mindful and always provident, even for the most insignificant of our wants—left us no other resource?

What mean those vast beds of mineral coal, which are scattered throughout our country in unknown and inexhaustible quantities? Why was this earth suffered to remain for ages before man entered upon his career as "lord of creation," producing merely a mighty growth of forest, the remains of which may be seen in our invaluable coal fields, with which our country is so abundantly blessed? Why, if it were not that all things needful might be provided for him, so that after fulfilling his mission by converting this wilderness into a garden, he should not be left destitute of fuel?

Indeed it cannot be that we are long to depend upon our forests for a supply of fuel; and although it may be well to have an eye to the wants of posterity, and provide for coming "evil," yet we would choose rather to abide by the Apostle's injunction, and "be careful for nothing." We cannot feel ourselves in duty bound to undergo present inconvenience, for the sake of avoiding an evil which we have no good ground for supposing will ever occur. In point of economy, wood in many localities is even now the most expensive fuel used; and as the value of land increases, and the modes of transportation become more easy, rendering coal more available, the disparity between wood and coal must proportionally increase. It is true that with most farmers, who are constantly making aggressions upon primitive forests, the cost of their fuel is comparatively trifling, as they can supply their own fires with such as would not sell readily in market; but when no invasion is made, and wood-land is left merely to supply fuel and replenish itself, the expense must greatly increase.

Mr. ROCKWELL says, "twenty-five acres of thrifty wood-land will support a family of two fires and replenish itself, provided the lands are fenced against cattle." Surely this is encouraging, that a farmer who has fifty acres of fertile land, (and there are

many good farmers who have but that,) can supply himself with fuel by allowing one-half of it to remain covered with timber, provided he keeps it well fenced. At this rate the State of Massachusetts with a population of 132 individuals to the square mile (allowing five persons to a family, and each family to keep two fires,) has not territory enough within her borders, provided it was covered with forests, to supply herself with fuel for household purposes, to say nothing of the vast amount used for railways, steamboats, factories, &c.

Allowing ten cords a year to be sufficient to supply one fire, the produce of twenty-five acres of land would be only twenty cords of wood or four-fifths of a cord per acre. The cost of this wood, reckoning the interest on the land and timber,—calling them worth $80 per acre—would be worth $6 per acre, or $7,50 a cord in the woods; while the cost of cutting, hauling, and preparing for the stove, would make it exceed $9, or $180 for the twenty cords—quite an item in the expenses of a family. Allowing a ton of good anthracite to be equal to two cords of wood, and that when our present system of railroads is completed, such coal can be afforded at our principal depots at $3 a ton, the expense of carting from thence $1, making $4, or $40 for ten tons, sufficient to supply one family with two fires.

Surely if this all that twenty-five acres of woodland is capable of producing, "we would summon the winds and the waves to utter in an earthquake voice, 'Woodman, spare that tree.'" Yes, spare it from longer cumbering the young man's rightful heritage.

The man can be called neither wise nor prudent who could allow half of his farm to remain covered with a stinted growth of beech and basswood, for fear his grand children might freeze their fingers around a cold stove. Indeed, the reproductive power of the earth is so great that, had no kind Providence stored away in the bowels of the earth coal amply sufficient for all future generations, we might well afford to laugh at the idea of cold firesides, when we can look upon a tall and luxuriant growth of oak and chestnut, standing where twenty-five years ago gracefully waved a field of buckwheat.

It is true a feeling of sadness sometimes steals over the mind when we see those noble forests, like the red man who inhabited them, vanish away before the onward march of improvement; but such are the results of human progress: nor is it to be regretted—for while the red man was obliged to roam through the interminable forests from the rising to the setting sun, to obtain a meagre subsistence, our humblest peasant, by cultivating a few acres of ground, can supply his family in abundance with luxuries which the Indian chieftain never knew. Such timber as is really needed for building and mechanical purposes should be cultivated. Our forests, noble as they are, are but the spontaneous production of nature; and if nature unaided by human cultivation, can produce such magnificent forests, what might she not do were all the improvements of modern cultivation brought to her aid? Indeed, what has she not done?—Unaided she produced a crab orchard; aided by cultivation she produced those noble orchards that every where adorn and beautify our cultivated districts. Were our valuable kinds of timber cultivated and improved in propertion to other products, the modern cultivator would cut down the wild and tangled forests with no more regret than he would feel in clearing up a crab orchard. And why should it not be so?—Why should we continue to grow a poor and inferior quality of timber, when, by a judicious selection, aided by cultivation, we might just as well produce a superior quality of the most valuable kinds? Surely we are not merely to enjoy, but to improve what we receive from the hands of our Creator. It is not enough that we transmit our inheritance to postority unimpaired, but we ought to leave it better than when we received it, that it may not be said of us that we have lived in vain. J. A. R.

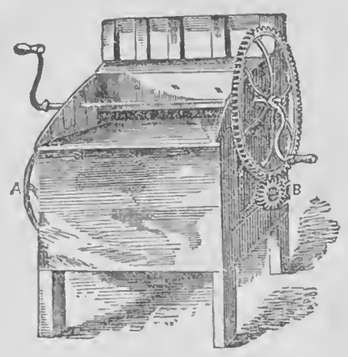
Skaneateles, N. Y., Aug., 1853.

LARGE CROPS OR LARGE FARMS.—"If our farmers, instead of laboring to double their acres, would endeavor to double their crops, they would find it a vast saving of time and toil, and an increase of profits." This statement needs little argument to sustain it.—If ten acres of wheat can be made to yield four hundred bushels, instead of two hundred,—the tillage, seed, rent and taxes of the additional ten acres required to produce the first named quantity, will be saved and added to the profits. The expenses of tillage will of course be increased, as it is by thorough culture, manuring, and drainage, that such increase of crops is secured.

TOWN FAIRS.—East Bloomfield, Oct. 6.—Richmond, at Honeoye village, Oct. 12.

## MUMMA'S CORN SHELLER.

WE have heretofore noticed this sheller after having witnessed its very perfect operation. It is a superior article, and as such we again commend it to manufacturers and corn growers.



The machine is thus described:—It is a frame 23 by 30 inches square and about 2½ feet high. The shelling apparatus consists of a horizontal, concave cylinder, 17 inches long, about 10 inches in diameter at the ends, and perhaps 7 in the centre, faced with thick plates of cast iron armed with spiral rows of teeth. Near to the cylinder, and immediately in front of it is a steeply inclined breast beam, on which the cobs pass out at the side of the machine, separated from the corn.(B.) Two springs play freely just above the breast beam, which holds the ears against the cylinder until shelled. The springs are independent of each other, thereby enabling it to shell large and small ears at the same moment—they can be regulated by means of a screw, to shell dry or damp corn, at pleasure. It is adapted to hand or horse power—one hand or two, and is said by those who use them, to run as light, with one man to turn, as the common hand shellers. One great and important advantage claimed for this sheller, is the fact that it will shell the ear perfectly clean at the ends. It is capable of shelling from 30 to 50 bushels per hour.

## SEEDING IN AUGUST AND SEPTEMBER.

A GREAT change has been introduced throughout New England in regard to laying down lands to grass. Fifteen years ago all the seedsmen will tell you, very little grass seed was sold in August and September,—but now as much is sold in these months as in the spring. What is the cause of this change?

It was the usual practice to sow grass seeds in the spring along with the spring grain. Some farmers, it is true, ventured to sow grass seed in the fall with their winter grain. But the practice of sowing grass seed alone in August or in autumn was unknown to farmers in general. A few might have practiced it privately, but no one could say that such a system prevailed in any part of the country till the time when we first commenced the publication of an agricultural paper in January, 1839.

We have often reasoned with farmers on this subject. Many thought it might do to sow grass seeds with winter grain, but we were not so fortunate in all our rambles as to find the individual who was bold enough to sow grass seeds alone, and much surprise was expressed at the recommendation to turn up green sward which had lain so long that its burthen was not worth harvesting, and sow it down again directly without going through the process of a two years planting, in order to rot the sod and fit it for grass.

How is it now? Do farmers fear to sow grass seed alone on their grounds in autumn? No, they venture to turn over the green sward and sow on the furrow. They find that they can do this to advantage without first rotting the sod. In this way a rotation system is practiced which brings more profit than where the ground was planted a year or two in order to fit it for grass.

There is much land in New England which has been plowed and tilled but is not suitable for planting. It is too wet in the spring and cannot be well pulverized for the seed. Many acres of such land are suffered to lie long and bind out, though they are often the best portion of the farm to yield hay, provided the same is properly managed.

We have annually urged the importance of seeding down some portions of every farm in September—or if practicable, in August. There is more leisure in August than in April and May. Teams are stronger and are kept at less cost than in spring, for ox teams may get their living in the very lot they work on, and they work more hours than in April.

Low and heavy plow lands are made lighter by leaving the sward unrotted. No harvest is lost, and a change from grass to grass is effected without an intermediate crop. Grass and hay are more profitable, generally speaking, than grain, particularly when we are working on lands which are adapted to grass, but not so suitable for grain.

But it is well to pursue both, the old method and the new, according to circumstances. Sow in the spring such lands as were planted the preceding year, and sow in the fall the land that is not suitable for planting.

It is our practice to sow one peck of herdsgrass and two ar three pecks of red top per acre—and in addition, where the soil is suitable, sow clover late in the fall, or on the snow in the spring. We like November or December best, because the seed is more likely to be buried.—*Mass. Ploughman.*

## TOP-DRESSING GRASS LAND.

WE are aware that there are objections to the application of manures in the form of top-dressing; but it cannot be denied that the system has its advantages, and the great object should be to understand the principles and circumstances which should govern practice.

We know the doctrine has been advocated that "manures never go down,"—that they ultimately pass off by exhalation. But in relation to this, we will now only call attention to the following extract from a late article in the Mark Lane Express:

"It is not true that most manures have a great tendency to wash downwards? Will not lime, for instance, escape downwards, despite every effort? and will not ammonia and phosphoric acid, and other applications on which we so much pride ourselves, escape through the soil, especially if an excess of sand exists in it, almost beyond calculation or conception? And surely, then, it seems to follow, without either straining of theory or possibility of mistake, that the nearer the surface, in most cases, a manure is applied, (without direct exposure to evaporation,) the better will it be for the land."

There is much land devoted to grass in New England which is comparatively unsuitable for other crops. In many instances it is so stony that it cannot be plowed readily, and from this and other causes, gives the best return when kept in grass. To obtain remunerating crops, it is necessary to apply manure to the surface. The question now to be considered is not, merely, whether there is no waste by this mode of applying manure, but whether the effect on the crop is such as makes the operation profitable. This is the main question, because as we have seen, it is the only method in which manures can be here applied. Experience in thousands of cases, has proved that the ordinary manure of the farm can be advantageously used as a top-dressing for grass.

But it may be well to notice the objection in reference to waste by top-dressing—to inquire what is wasted, and how. The most important element which is liable to be lost under these circumstances is ammonia. As it exists in common manures, it is combined with carbon. Water is a necessary medium in supporting this combination. This may be shown by various illustrations. Guano is valuable in proportion to the ammonia it contains. Exposed to the air in a dry state, the ammonia is soon made volatile, and is dissipated. Many persons have found by experience that if it is spread on the ground in a dry time, they never perceive any benefit from it. A similar effect takes place in reference to barn or yard manures. If exposed to the air and thoroughly dried, the ammonia is liberated. If kept in a moist state—not so drenched as to wash out the soluble portions—the carbonaceous matters of the manure, derived from the vegetable fibre, will retain the ammonia. In certain situations the decomposition of the manure might be effected in such a way that all its organic parts, including the carbon, might be carried into the air. For instance, if the manure was placed in a basin of solid rock, and it should be here alternately wet and dried, under a high temperature, the carbon itself would be gradually dissolved—the action of the oxygen would convert it into carbonic acid gas. But if the manure was in a situation where the soluble parts could descend into the soil, they might there unite with properties by which they would be retained and taken up by vegetation, as is the case when guano is carried into the soil by a light rain, immediately after it is applied.

It follows from this reasoning that the state in which manures can be best used, as a top-dressing, is that in which decomposition (which should always be slow) has proceeded to that degree necessary to effect the combination of the ammonia with the carbonaceous matter. Ammonia cannot unite with raw fibre. It is often advised to use peat or muck, and pulverized charcoal, as fixers for the retention of ammonia; but these substances have undergone a degree of decomposition. The fibrous matter of manure must be brought into a similar state to effect the same result. Of course if the manure has its carbonaceous matter increased by the admixture of peat or a similar substance, the power of retaining ammonia would be increased also. Hence one of the advantages of composting.

The time most favorable to the top-dressing of grass land, would be when the weather is such that there is the least loss by exhalation, and at the same time that the rains should not be so heavy as to wash away the soluble portions of the manure. When there are frequent light rains in August and September, top-dressings produce a good effect. The earth absorbs the moisture with the fertilizing elements derived from the manure. The roots of the grass feel its invigorating influence; they throw up new blades, spread and fill all the vacancies in the sward, so that when spring returns, every inch of ground is ready to send up its quota of stalks to swell the crop to its greatest bulk and weight.—*Boston Cultivator.*

CURING CORN FODDER.—At a late visit to the beautiful farm of Richard P. Waters, Esq., in Beverly, we observed that he had considerable corn designed for fodder. He gave us his mode of curing it, which may be beneficial to others. Last year, after giving the corn-fodder a tolerable drying in the air, he had it stowed away with salt hay—putting a thin layer of the hay and a layer of the fodder, alternately. When wanted for use, the whole was cut down together, passed through a straw cutter, mixed with bran, and fed to the stock. The fodder was found to be well cured, and the stock ate the mixture with avidity, and throve well on it.—*Boston Cultivator.*

## THE BEE MOTH.

THOSE of our readers who are interested in bees, and the number cannot be too large, may receive some benefit from the following method of destroying the bee moth which was first published in the Mobile Tribune. It may be difficult to obtain the cane but perhaps some other hollow stick, sweetened with molasses or sugar from the cane, will answer a good purpose. The Tribune says:

Such of our readers as are engaged in the bee culture will be glad to learn that a remedy has been discovered which will effectually prevent the ravages of the bee moth. The frequent and serious injury caused by this pestiferous insect, has deterred many persons from entering into the business of raising bees, more especially as in some localities the ravages have been so great as nearly to destroy both bees and honey.—The plan is this: Split joints of cane through the centre, and arrange them on the four sides of the hive, and the side resting on the platform. The moth instead of depositing its eggs under the edge of the hive will lay them under the split cane. From these depositories they may be removed and destroyed as often as necessary, with little trouble. A friend informs us that he knows the plan has been tried and found entirely successful.

## WEATHER PROPHECIES.

W. H. B. THOMAS, of Cincinnati, read before the American Sciontific Convention a paper concerning the possibility of foretelling weather from natural facts. He adduces various curious suggestions. For example:

"When a pair of migratory birds have arrived in the Spring, they immediately prepare to build their nest, and making a careful reconnoissance of the place, and observing the character of the season that is coming. If it be a windy one, they thatch the straw and leaves on the inside of the nest, between the twigs and the lining; and if it be very windy, they get pliant twigs and bind the nest firmly to the limbs, securing all the small twigs with their salivas. If they fear the approach of a rainy season, they build their nests so as to be sheltered from the weather. But if a pleasant one, they build in the fair, open place, without taking any of those extra precautions."

He also mentions a variety of indications of rain given by snails of different species; and adds:

"We can also foretell a change of weather by the wasps and other insects.

"The leaves of trees are even good barometers; most of them for a short light rain will turn up so as to receive their fill of water; but for a long rain, they are so doubled as to conduct the water away.

"The Rana, Bufo and Hyla, are also sure indications of rain, for as they do not drink water, but absorb it into their bodies, they are sure to be found out at the time they expect rain.

"The Locusts and Gryllus are also good indicators of a storm. A few hours before the rain they are to be found under the leaves of trees and in the hollow trunks.—We have many times found them thus, but we have never known the instinct of these little fellows to lead them to unnecessary caution."

RAT PROOF GRANARY.—A late paper gives the following mode of rendering granaries rat-proof, proved by a successful trial of ten years, and founded on the fact that *tar* is particularly offensive to all these little scoundrels. The studs of the outside walls of the granary are "set in," so that a cat may pass round between these walls and the outside boarding of the barn. The lining to the floor is first laid; then the first siding board round the bottom; then, for convenience the floor is finished, and afterwards the siding or walls completed.—Tar is placed along the edge of every board as it is fastened to its place, and a copious application of tar given at the corners, where rats are most apt to do their tunnelling. Let the door-sill be made of hard wood scantling, and the door be always kept shut, and rats will never see the inside.

WHITE DAISIES.—The only and effectual cure of the white daisy is comprehended in the two words—plow and manure. The mission of the white daisy seems to be, to force upon the attention of the farmer the necessity of immediately replenishing his earth. Its appearance indeed, is but the famishing cry of an impoverished soil for—*manure.*—Let him answer the call, promptly, earnestly, and I will guarantee that he need never entertain any fears of being "ousted" by any intervention on their part.—*Boston Cultivator.*

AN OX THAT GIVES MILK.—The Po'keepsie American is responsible for the following statement:—"Mr. James Thorn, of Clinton, has an Ox that has a bag with four teats, each one of which yields milk like that of the cow. The bag is divided into four sections, but unlike the cow's it has no udder. Each quarter of the bag has a cavity which supplies its teat, independent of the others. When milked out, it is readily supplied again, like that of the cow. The animal, a fine one, is worked every day on the farm of Mr. T."

PAINT YOUR TOOLS.—Every farmer should be provided with a small quantity of the coarser kinds of paint—a few pots and brushes and paint oil, and should keep his carts, wagons, sleds, plows, harrows, &c., well coated with paint.

THE Fair of the Chemung County Agricultural Society is to be held in the village of Horse Heads, October 6th and 7th.

## IS A CROSS OF THE FRENCH AN IMPROVEMENT ON THE SPANISH MERINO?

MR EDITOR:—As this is a question in which every one engaged in the production of fine wool is deeply interested, I send you a few facts and figures, the result of an experiment made to solve the problem, for the benefit of the readers of your useful publication.

In the fall of 1850 I selected ten ewes and two bucks, from a lot of Spanish Merinos bred with great care from the original importation of the late JONATHAN ALLEN, Esq., of Pittsfield, Berkshire Co., Mass., and disposed of the remainder of the flock. In May, 1852, four of these ewes brought lambs from a French Merino buck bred by Mons. VICTOR GILBERT, imported by S. W. JEWETT, Esq., of Middlebury, Vt., and now owned by Mr. G. W. HEATON, of Canton, in this county. The six remaining ewes brought lambs in the same month from my best Spanish buck. These four lambs of the French cross I propose to show by contrast, both as regards weight of carcass, and weight, quality, price per lb., and value of fleece, with an equal number of the best of my Spanish lambs; and that it may be seen at a glance whether either class has obtained any advantage over the other from their dams, I submit them to the same test.

As the experiment was not made to test the advantage of high keeping on the one part over short feed on the other, they have all been kept precisely in the same manner, viz., run with their dams in a pasture, that in consequence of the drouth of the season was most of the time destitute of water and some of the time nearly so of feed. For the first eight weeks of foddering these ten lambs had two quarts of oats per day—after that nothing but hay. The dams have been kept on hay and grass only, the past and present years. Any one at all conversant with the management of fine wooled sheep will see that higher feed would have produced much heavier fleeces, all around; but the point at issue is not whether increased feed, care and attention will improve our flocks, but whether the cross in question will. Neither was the experiment tried to ascertain how much the *weight* of the fleeces could be increased by the addition of oil, tar, lampblack, and sand—consequently no external application has been made to them, and they were all thoroughly washed.

I have sent my wool the present season to the Kinderhook Wool Depot, and the proprietors, Messrs. H. BLANCHARD & Co., who are considered as being amongst our best judges of wool, have very obligingly added to the following table the quality and price per lb. of each fleece in question, which were labeled to them for that purpose—for which kindness I return them my grateful acknowledgements:

| | Weight of Carcass. | Fleece. | Quality. | Value of wool pr lb. | pr fleece. |
|---|---|---|---|---|---|
| | lbs. | lbs. | | cts. | $ cts. |
| French lambs, | | | | | |
| No. 1, Buck, | 112 | 6 | Prime. | 60 | 3 60 |
| " 2, " | 104 | 5 | Extra. | 64 | 3 20 |
| " 3, Ewe, | 75 | 5.8 | No. 1. | 57½ | 3 11 |
| " 4, " | 80 | 4.8 | Prime. | 69 | 2 70 |
| | 371 | 21 | | | 12 61 |
| Spanish lambs, | | | | | |
| No. 1, Wether, | 66 | 3.8 | Prime. | 60 | 2 10 |
| " 2, Ewe, | 60 | 3 | Extra. | 64 | 1 92 |
| " 3, " | 58 | 3.12 | " | 64 | 2 40 |
| " 4, " | 63 | 3.4 | Super. | 70 | 2 27 |
| | 247 | 13.8 | | | 8 69 |
| Dam of French lamb, | | | | | |
| No. 1, | 77 | 4 | Extra. | 64 | 2 56 |
| " 2, | 60 | 4.6 | " | 64 | 2 80 |
| " 3, | 90 | 4.6 | No. 1. | 57½ | 2 41 |
| " 4, | 80 | 4.10 | Prime. | 60 | 2 77 |
| | 307 | 17.6 | | | 10 54 |
| Dam of Spanish lamb, | | | | | |
| No. 1, | 75 | 4.10 | Super. | 70 | 3 23 |
| " 2, | 90 | 4.6 | Extra. | 64 | 2 82 |
| " 3, | 81 | 3.12 | Super. | 70 | 2 64 |
| " 4, | 78 | 4 | " | 70 | 2 80 |
| | 324 | 16.12 | | | 11 46 |

By this table it will be seen that the French lambs have not only larger carcasses than the Spanish, but that they yield a larger per centage of wool according to the weight of carcass, and that while the fleece of but one of the French lambs has graded below its dam, two of the Spanish fleeces have. The French lambs have ever kept in the best order, while at the same time their fleeces are not as oily as the fleeces of the Spanish ones—consequently they will not waste as much in being cleansed.

This statement, for the correctness of which I hold myself responsible, is submitted to the candid consideration of all whom it may concern, in the full belief that, as far as my own flock is concerned, it will have a very strong tendency to settle the question in the affirmative; and judging from analogy it is fair to suppose the cross in question will have the same effect on all flocks of a similar description. My entire flock averaged 4¼ lbs. of wool per head, which sold at the average price of 65½ cents per lb.

W. G. NORTON.

*Gouverneur, St. Lawrence Co., N. Y., August, 1853.*

## MILK PANS.—SOILING COWS.

SOME experiments made in Germany for the purpose of ascertaining what kind of material is best for milk-pans, resulted as follows:

| | | |
|---|---|---|
| Tinned milk-pans | 7.07 | Hanover lbs. butter. |
| Glass " | 7.01 | " " " |
| Wooden " (not painted) | 6.96 | " " " |
| Earthen ware | 6.92 | " " " |
| Wooden " (painted) | 6.67 | " " " |

In connection with the above experiments others were made in relation to feeding cows, from which it appeared that there was required for one pound of butter—

| | | |
|---|---|---|
| Of milk produced by stall-feeding with green clover, | 15.00 | Hanover qts. milk. |
| With green tare and clover, | 15.67 | " " " |
| By pasturing, | 12.81 | " " " |

This shows that the cows gave the richest milk on pasture. But the difference in the quality was probably owing to a difference in the *kind of food* eaten by the cows, and not to the *manner of feeding.* The pastures, it is presumed, contained grasses instead of clover—the former, as many dairymen know, being best for the production of butter.—*Boston Cultivator.*

# Orchard and Garden.

## OSAGE ORANGE HEDGES.

Eds. Rural:—Having come to the determination last spring to plant some kind of a hedge around my Vineyard—something that would be likely to prove a little more formidable as a barrier against the assaults of not only quadrupeds but of bi-pods also, than an ordinary board fence,—I looked up all the information I could conveniently, in regard to the relative advantages of the various kinds of hedge plants usually recommended. I had long been satisfied that the Osage Orange would prove to be the very best hedge plant we could use in this latitude, if it would stand our severe winters.—On this point I was not fully satisfied, as I had never seen this plant of more than one year's growth.

While engaged in making inquiries on the subject, I happend to recollect that David Thomas informed me when at my house in the summer of 1846, that he had then recently planted a hedge of the Osage Orange; and thinking that some seven years experience with this plant would be likely to enable him to speak with a good degree of confidence in respect to it, I addressed him a letter asking for information and advice on the subject of hedges in general, and Osage Orange in particular. As his answer contains many valuable suggestions in regard to distance of planting, pruning, training &c., I take the responsibility of copying it entire, believeing he will excuse me for so doing:

Greatfield, 3d mo., 26, 1853.

My Dr. Friend:—Thy favor of the 23d came last evening. It is true that I planted out many of the Osage Orange, but wished to stretch them round an exposed quarter, and set them 5 feet apart. It was my intention at that time, to have cut them close to the ground, after they were well established (say the following spring,) and when the new shoots which would rise up were strong enough to bear bending down, I meant that one on each should be fixed or layered in the line of the hedge. If the layer had extended 2 feet on each side, 1 foot would have been left between every two plants, which the twigs round such bent stems would have filled so that no intruder could enter. A multitude of other cares, however, caused me to neglect them, and even at the distance of 5 feet they might have been made very formidable.

The Osage Orange is a thrifty *shrub* with us, although in its native wilds it is a well grown *tree*. Many Southern plants become dwarfed when taken into higher lattitudes; and this circumstance is favorble in the present case, because they bear crowding better; still I could not recommend setting them nearer together than 3 feet. This would require each plant to spread 2 feet on the line, or 1 foot on each side, but then to insure success, the *training* must not be omitted. Garden shears, which may cost 12 or 14 shillings, (I have such,) will be necessary, as the thorns are so formidable that I always have bloody hands when I draw my knife on them.

If I remember right, Cobbet recommended his garden fence to be 7 feet high and 3 feet broad at the base. This hight may not be too great, as it would prevent little pilferers from looking over; but a narrower base would do just as well, so far as intruders are concerned, for none would try the passage a second time. One thing however must not be forgotten; the face of the hedge must not be overshadowed.

In regard to its hardiness—the strongest upright shoots which continue to grow too late in the season, are liable to be winter-killed; but all the twigs on the lateral branches are free from such injury. Now, a hedge, after it has attained the proper hight, ought to be sheared, perhaps twice; and if the last time be at the Autumnal equinox, the wood would have time to harden and mature. If I were not so far advanced in years, and had no prospect of selling my farm, I should encircle my Fruit garden with an Osage Orange hedge, *in preference to any other hedge that I have seen.*

In selecting plants, I should be governed in some measure by their size, and might prefer 18 inches or 2 feet to smaller ones; still I think something might depend on the length of time they would remain unplanted. As they do not start early in the spring, they might be taken up later than many other shrubs. In regard the those matters, however, I have no experience to guide me.

Since writing the foregoing, I have examined the *Prairie Farmer*, to see if I could find anything to throw light on the subject. The Horticultural Editor, my old friend Dr. Kennicott, says in reference to pruning the Osage Orange:—"We have cut down to the ground plant 5 years old, and 4 or 5 strong shoots was the result."—Again it is said—"Mr. Shaw mentions several *perfect fences* which he examined.—He says the hedge can be constructed at 25 cents a rod. The elements do not injure it; insects never trouble it; cattle will not browse it." He winds up with saying—"It only remains to be decided whether the *annual clipping* of the mature fence will be too inconvenient or expensive for common use. For one I am satisfied that it will not. I should be glad to train all the hedges in Illinois for the next hundred years at the rate of *five dollars* a mile, annually." The The Editor rather objects to the contract as being too long and too large!

Very truly, David Thomas.

Upon receiving this letter, I decided at once to plant the Osage Orange; and accordingly procured two year old plants and set them 3 feet apart. I cut them down to within 6 inches of the ground when I planted them, and have allowed but two shoots to grow this season. They have made a very fine growth, although I did not plant them till the last of May. Many of the shoots are over 3 feet long and very stocky, and completely covered with *very "formidable" thorns.* I shall trim them and train them as advised by Friend Thomas, and have no doubt but that, by so doing, I shall have a fence in 3 or 4 years that will amount to something. In the fall I shall drive short stakes into the ground half way between the plants—cut in the shoots to 18 inches each—bend them down horizontally, and tie them to the stakes. That next season, the lateral branches springing from these base shoots will grow upright, and close enough together to form a good fence, I have no doubt.

I planted about 100 rods last spring. I prepared the ground for planting 25 rods, by digging a ditch 18 inches deep and filling it again, with the surface soil placed at the bottom, and mixing some well rotted manure with the subsoil which was left at the surface. About 75 rods I trenched as well as I could with the plow, and I can see no essential difference in the thriftiness of the plants, for they are all doing very well. Of course I keep them all free from weeds and grass. This is indispensable. Soon after planting I placed about a pint of beech ashes around each plant, and I am satisfied it has done them much good. Strong 2 year old plants can be procured at any of the Nurseries in Rochester at $10 per 1,000. When I could procure good plants at this price, I should not think of raising the plants from seed, unless I desired to plant a very large quantity and was in no hurry for my fence. I understand the seed can be obtained at some of the seed stores at about one dollar a quart. I am much better pleased with my hedge thus far than I anticipated, and would confidently advise your West Bloomfield subscriber, "E. G.," to plant the Osage Orange.

E. A. McKay.

Naples, N. Y., August, 1853.

## PRESERVATION OF GRAPES.

We find the following translation of an article in a German paper, in the Agriculturist, which contains an account of the preservation of grapes in Russia:—A traveler who lived at St. Petersburg during the winter season states that he ate there the freshest and most beautiful grapes he had ever seen. To preserve them they should be cut before being entirely ripe. Do not handle the berries; reject all damaged ones, then lay the grapes in a large stone jar holding about thirty gallons. The mouth should be narrow so that the grapes will not touch each other. Fill the spaces between them with millet. Cover closely with a stone cover well fitted and cemented. Over this paste a thick paper, and let it be hermetically sealed so as entirely to exclude the air. In this air-tight jar the grapes ripen fully, and acquire a flavor seldom attained by any other method, and are preserved for two years in the best condition.

Raisins.—Everybody is fond of raisins, especially if they are of the finest quality, but every body, we suspect, does not know they are successfully prepared in this State, and we believe also in other parts of this country. The Horticulturist says:

"We have just received a box of nice raisins prepared from the Isabella grape, by Mr. E. A. McKay, of Naples, Ontario Co, who has one of the most complete little vineyards in Western N. Y. We have passed these raisins around among our friends, and they have invariably pronounced them *excellent*, some preferring them to the imported article. Mr. McKay informs us that they keep well, they certainly appear as though they would. Why may not this become an important branch of fruit culture? A very large amount of money is annually sent abroad for raisins. The matter demands attention."

A gentleman in New Haven, says the Union, has caught in his garden, since the 10th day of June, with twenty-four widemouth bottles partly filled with molasses and vinegar, *three bushels of bugs, flies, and millers, &c.* The bottles were hung upon his garden fence. During the first seven days, the amount of flies, &c. caught, was forty-two solid quarts.

## INSTANTANEOUS BLOSSOMING.

On Saturday afternoon a few ladies and gentleman assembled, on the invitation of Mons. Herbert, at Onslow House, Brompton, for a private view of an experiment in the instantaneous blossoming of flowers—The flowers selected for a trial were a rose and a geranium, both of which were entirely destitute of blossoms. Some buds were discernible a distance of about two yards on the rose tree. As soon as the company had taken their seats in the room where the experiment took place, the flowers were both covered with circular glass and some liquids, apparently chemical substances, were applied at the side to the interior.—In two or three minutes after, the glass bowls became dim with vapor; and within a quarter of an hour the geranium was uncovered and several full-sized blossoms of the ordinary appearance and scent were cut from it, and distributed among the company. The experiment with the rose tree failed, in consequence, as was stated, of the soil having been prepared too late. Various conjectures were formed as to the mode in which the effect was produced, but the prevalent opinion attributed it mainly to the application of artificial heat, however generated, to the root of the plant, combined with a careful preparation of the soil.—No explanation was offered by the exhibitor, nor were the company allowed to inspect minutely.—*Liverpool paper.*

# Domestic Economy.

## TO SHAVE WITHOUT SOAP.

Eds. Rural:—There has existed in the mind of man since the days of Noah, a lurking suspicion that cold water had power to effect some of the mightiest revolutions.—This suspicion has from time to time sprung to the surface,—and, as in the case of Pressnitz and others in the Old, and Shew with those of like faith in the New World, has produced some practical results, which, if these champions of the cleansing element are to be believed, are of such importance that no one is excusable, unless, like a young duck, he at once takes to the water. Without pretending to decide upon a matter of such consequence, I wish in this communication to suggest a use of cold water which, whether known to others or not, was until recently unknown to myself.

And here let me say to the lady readers of the Rural, that they need not tremble, thinking that they are to be inflicted with a plunge, sitz or douch bath, or with the wet sheet, bandage, pack or anything of the sort. No, gentle dames and misses, the prescription in this instance, whilst it is for your comfort, and will result we doubt not in your happiness, has no personal application to yourselves. Your sex, this time happily escapes—unless perchance it be such occasional ogre specimens of womanhood as friend Barnum can pick up for exhibition.

But to return. We hereby, in all sincerity and good faith, recommend cold water as a substitute for soap in shaving. It ought to be understood by all men—and by all women, too, who love to see a well shorn countenance—that the great object in using any substance upon the beard prior to the application of the razor, is to *soften* the hair. This object can be *fully* attained by the use of pure *cold water alone.* The plan I pursue is to apply cold water to the beard with the hand, rub briskly for a few minutes, let the water remain upon the face while sharpning the razor, and generally the beard will be sufficiently softened to cut readily when I am prepared to commence the operation. Try this and see if it does not answer *as well,* if not better, than the old plan. It will at all events "deliver you" from the poisonous compounds too often applied to your face as the "best shaving soap."

Having received the above from a friend, I have no patent; neither do I expect a pension or life annuity for making it public.—"Freely you have received, freely give."

Hanover, Ill., August, 1853. A. B.

To Preserve Eggs.—Place a half dozen at a time into boiling water, or as many as you can lift out at once with a skimmer, and leave them in the water from five to six seconds, and they will keep fresh for any length of time. This process coagulates a thin film of the white next the shell, and renders it imporvious to the air, which is the cause of the putrefactive stage,—the shell being porous, and by laying a short time in one position, the yolk displaces the white and comes in contact with it, and spoils.

To Pickle Onions.—When gathering your onions in the fall, save all the small ones for pickling. Peel them carefully, and soak them in strong brine three weeks.—This takes out the strong taste and smell. Then take them out of the brine and soak them twenty-four hours in weak vinegar.—When taken out from this, insert a clove in the top of each onion, and lay them carefully in a stone jar, and cover with cold vinegar. They will be fit for use in a few days.—*Germantown Telegraph.*

Never use ley to clean tin; it will spoil it soon. Make it clean with suds, and rub with whiting, and it will look well, and last long.

# Mechanic Arts, &c.

## LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending Aug. 16, 1853.

G. W. Baynes, Thomas Hinty and Minter Jackson, of Glenville, Va., for improvement in bedstead fastenings.

Wm. Beach, of Philadelphia, Pa., for improvement in meat tenderers.

John Binder, of Chelsea, Mass., for improvement in hinges for folding bedsteads.

P. F. Charpie, of Mount Vernon, Ohio, for improvement in gun locks.

Thomas Crossley, of Roxbury, Mass., for improvement in printed carpets.

B. F. Delano, of Chelsea, Mass., for improvement in rudder brace.

M. B. Dyott, of Philadelphia, Pa., for improvement in facing buildings.

A. W. Graheart, of Beallsville, Ohio, for improvement in machines for preparing spoke timber.

A. H. McKinley, of Higginsport, Ohio, for improvement in socket for auger handles and braces.

Jacob Mumma, of Mount Joy, Pa., for improvement in draught apparatus of seed planters.

E. K. Root, of Hartford, Ct., for improvement in drop hammers.

Wm. Van Anden, of Poughkeepsie, N. Y., for improvement in trip hammers.

J. P. Schenkl, (assignor to J. P. Schenkl & A. S. Saroni,) of Boston, Mass., for improvement in breech-loading fire-arms.

W. H. Babbit, of Waynesburgh, Pa., for improvement in hill-side plows.

A. G. Coes, of Worcester, Mass., for improvement in screw wrench.

Wm. & S. G. Coleman, of Providence, R. I., for improvement in ship blocks.

A. C. Gallahue, of Alleghany City, Pa., for improvement in machinery for pegging boots and shoes. Ante-dated Feb. 18, 1853.

Gibson North, of Philadelphia, Pa., for improvement in oven doors of cooking stoves and ranges.

A. R. Tewksbury, of Boston, Mass., for improvement in boat or scow.

Henry Stanton, U. S. A., for improvement in discharging breech-loading fire-arms.

DESIGN.

J. W. Van Cleve, (assignor to James Greer & Co.,) of Dayton, O., design for a cooking stove.

## NEW BRICK MAKING MACHINE.

The progress of civilization, population, wealth, and increased prices of the productions of the forest, warrant the presumption that the leading and prominent article for building is henceforth to be Bricks, the immense demand and consumption of which has set in motion the inventive genius of which this country is so prolific, to simplify and reduce the labor and expense of producing that article. The introduction of the process of mixing with the clay a portion of pulverized anthracito coal, has already reduced the cost of burning more than one-half, and the brick machine lately introduced, greatly expedites and reduces the expense of moulding.

There is an important difficulty still to be met and overcome before the operation is perfect. The difficulty of drying, baking, and securing against rains previous to setting in the kiln, renders the process an entire failure. Sometimes for weeks, in wet spring months, not a brick can be made, and builders and laborers lose their time and are seriously incommoded.

Out of this diffiencly arose the attempt to press dry clay into form, ready for the kiln, when they come out of the mould. Several ingenious attempts have failed, owing to their want of tenacity; though of beautiful form and a perfect outside to look at, the cohesion of particles was not sufficiently adhesive to warrant their handling safely, much less to lay a good wall. It is said that with a peculiar unctious clay at Boston, this process has succeeded in producing a very fair article.

Col. Drummond, of this city, is now about finishing a machine for this purpose, in which after the clay and coal are ground in a dry state, and its regular combination secured by bolting, at the instant before compression a sufficient jet of water is thrown in on all sides with great force, and the adhesion of the particles secured. The brick is then formed and carried on a chain elevator to a furnace kiln, from which they are returned burned brick in about two hours, at the rate of from 30,000 to 40,000 per day. If it succeeds as the inventor anticipates, it is *the* machine for brick making.

## ABOUT THAT CHEAP PAINT.

Eds. Rural:—Your correspondent, S., requests a more "definite article" in relation to "Cheap Paint," and adds—"I do not understand *how* to proportion white lead ground in oil with the hydraulic lime, in bulk." I stated in the article to which he refers, that the proportions should be, in bulk, one part lead ground in oil, to two parts water lime. That is plain. Is it not, S.? He also inquires, "how much surface would a barrel of lime suffice for?"—and "how much lead would be required for the same?" If he has a barrel of lime, let him get half a barrel of lead, and he has the proportions in bulk, *two to one;* and when prepared as directed in my first article, he will have a sufficient quantity to paint four buildings 40 by 50, two stories high.

August, 1853. Henrietta.

## PEGGING BOOTS AND SHOES BY MACHINERY.

We have now before us a pair of shoes which were pegged by a machine; they are the first and only pair we have seen that were not pegged by a son of St. Crispin with his awl and hammer. The work is well done, and as good as any hand work we ever saw. The machine which accomplished this feat was invented by Seth D. Tripp, patented on the 12th of last April, and assigned to Edward L. Norfolk, of Salem, Mass., the sole proprietor. We have learned that this machine will peg a No. 7 boot or shoe in half a minute, or 30 pairs an hour, if the shoes could be put in and taken out in the same time they are pegged. It can be altered to suit a different sized shoe or boot in two minutes, and it will peg any shape.

As the price of boots and shoes has greatly advanced within the past two months, and owing to the vast number of pegged boots and shoes made in our country, all by hand, the importance of a machine to accomplish the same object, is apparent to every body. In a single town of Mass., (Lynn) no less than 10,485 persons are employed in the 155 shoe factories there. The yearly value of women's and children's boots, shoes and gaiters made there, is $3,421,300. This is not all pegged work, nor have we the statistics of the amount of pegged boots and shoes manufactured annually, (when will the census be printed—oh how slow Uncle Sam is about such things!) but some idea can be formed by our readers from the foregoing statistics, of the magnitude of the feet clothing manufacture of our country. All attempts made by our countrymen to establish the pegged boot trade in Britain have signally failed. Although a great expense was incurred to try to establish it, we have been informed that, Uncle John and Cousin Sandy still cling to *hob, nails, tackets,* and stitched work in preference to pegs and cheaper brogans.—*Sci. Am.*

## THE AUTOMATON CHURN.

A Mr. Crane, of Illinois, has got up an apparatus for churning by machinery resembling clockwork. The machine is moved by a weight, and pendulum, which operates the dashers of two churns with a regular and sufficient motion. When it runs down, it is to be again wound up, and will then start forth and go on to the next stopping place. It will not only churn, but pound clothes, pump water, and other like operations, if there are any. Its motion may be slower or faster, but it is calculated with one winding to do one churning. The machine is all very simple and not liable to get out of repair, and will last a long time. There are three sizes of the power, costing respectively, $15, $20 and $25.

The Prairie Farmer recommends it very highly, and says:—"We do not see why it will not wash clothes, if it will churn; perhaps it will be made to get tea and spank the children. If so, housekeeping is likely to be 'made easy.'"

## NEW SPOKE MACHINE.

Anson Judson, Jr., of Unadilla, N. Y., has taken measures to secure a patent for useful improvements in machinery for cutting spokes for carriage wheels, and for articles of a similar nature. The nature of the improvements consist in cutting the stuff into the proper form for spokes by planing it longitudinally with a double set of revolving cutters which receive motion and cut with the grain of the wood. This machine is a spoke planer, as the stuff does not revolve. The cutters are so formed that as the stuff is fed in side guides, to direct the cutter stocks, that at one part the cutters by their form will plane nearly flat, and then as the work proceeds the rounding edges of the cutters are brought into action. The side guides to direct the cutters to act upon the stuff to be planed are of such a form that while the cutters revolve they are made to cut the several portions of the stuff to the required form. When one side of a spoke is finished, it is turned and the other side is submitted to the same action.—*Scientific American.*

Sawing Machine.—W. D. Carr, Senr., of Corning, N. Y., have invented an arrangement of the cross-cut saw, by which it may be operated by a single man. The saw-frame or carriage is placed upon horizontal ways, which rest upon the block or log to be cut. The saw is fed to its work by means of weighted rods at each extremity, passing loosely through the carriage. A reciprocating motion is given by a crank and rod. Measures have been taken to secure a patent.—*Ibid.*

A Locomotive Village.—The Illinois Journal says that a new plan of accommodating laborers on railroad improvements is practiced on the Chicago and Mississippi Railroad. The entire working force on this road is one hundred persons, who live in cars fitted up for the purpose of boarding the men, and are pushed along as the rails are laid—thus securing the advantage of always having the men near the work. This locomotive boarding house or village comprises fifteen large covered cars, with all the necessary conveniences for cooking, eating and sleeping. They carry cows, which graze alongside, and are put in their stalls when the locomotive village changes ground.

# Educational.

For the Rural New-Yorker.

## THE PEOPLE'S COLLEGE.

To place within the reach of every youth of our State, the means of obtaining an education, has long been a cherished object, and one toward which much has been done. But yet a want is felt, a vacancy exists, between where the instruction of the district school ends, and where the influence of the higher school begins. 'Tis a want felt by the son of the poor man, whose means not affording him the advantage of a Collegiate Education, have often forced him to occupy stations of less usefulness and trust, than his talents—had he learning—would have justified him in aspiring to.

This want, the People's College proposes to satisfy—this vacancy it promises to fill. It promises to the son of the poor man, the way by which he may obtain the education he desires—be that education wanted to aid him in practical mechanics, or agriculture, or in what is more sought after by students—the Professions. It promises means which have not heretofore existed, except under so heavy a tax that many who would, could not avail themselves of the offered, longed for, and needed privilege. The People's College, proposes to do away the necessity which has so long existed, for privations by parents, and aid from friends, that the son of the poor man may possess the advantages of a Collegiate education.

As we run our eye over the contemplated field of labor of this College, and see what vast benefits it offers, we think there can be little need of words, or argument, to induce the philanthropic, intelligent, enterprising citizens of our Empire State, to speedily avail themselves of the means offered. Why not have a People's College?—a school where the sons of Farmers may learn Mechanics, and Science conjointly?—and where the sons of the mechanic or merchant, who choose to be agriculturists, may learn in like manner of Agriculture and its practice?

If the want spoken of be imaginary—if there be no necessity for the school named—remain inactive; but if there is such a school needed, why longer be without it? If from the families of our poor, there had never risen, spite of obstacles to be surmounted, any earnest, ardent, successful seekers after knowledge—if we had never known of a FRANKLIN, a SHERMAN, a BURRITT; if we did not remember of poor youths endeavoring to acquire knowledge—in the night's time poring over the printed page by light gained from the blazing pine knot—at hours when the sons of the wealthy were courting repose or engaged in idle or vicious amusements; if we did not know this—and if poor boys, had never become men, the pride of our nation, and of use to the world—we might believe with others that action is premature and unnecessary, and without real cause. But knowing this as we do, and knowing that from the ranks of our youth, who, stinted in early life, learn to depend upon their own limited resources and to act nobly for themselves, rise many of our most distinguished men—we are led to inquire how their toils may be lessened, and how the field of science may be rendered more approachable, and inviting.

As circumstances now exist, nothing but a love of knowledge, and a determination strong as his love of life, to possess it, could sustain in his laborious pursuit the young man, unpossessed of means by which to avail himself of necessary aid. And when we reflect, that our most secluded mountain rills are the purest, sweetest, water, and that from 'neath the rock bursts the most invigorating fountain, we may see that 'tis our youth, who triumphing over greatest obstacles, finally attain the most enviable heights, and most enduring fame. 'Tis those who have felt the burthen of poverty and who from 'neath their load have looked to the stations accorded to wealth and education, as the Eden possessions of earth, from whom we may expect most and who will rise highest!

To-day scattered among the hills of our State, is a multitude of poverty-burthened youth who will yet be our first mechanics, statesmen, and jurists, and first in any occupation or profession which may gain their attention. Furnish them the means, and you will see them become the "beacon lights," of their generation. Furnish them the means!—and what means so adequate as the formation of one or more such schools as the People's College? Think of it, Farmer, as you follow your plow! Think of it Mechanic, as you ply your task—think of the means to be employed to carry out this phase of our State's progress, and ask not "Am I my brother's keeper?"

WM. H. GARDNER.

Hornby, Aug. 16th, 1853.

## ADDRESS

Adopted for General Circulation, by the New York State Teachers' Association, at their recent Convention, held at Rochester, N. Y.

TEACHERS OF NEW YORK:

WE would speak a few serious words to you. On every side of us we see evidences of progression. In agriculture, in mechanical inventions, in the accumulation of wealth, we see the fruits of the progressive spirit.

But is it not true, do you not *know*, that Education in this State is not proportionately advancing? We state what we believe to be a *fact*, which the general impression of the people of this State will *confirm*, that Education among us is on the point of *retrogression*.

We ask you, as Teachers of *New York*, to look about you! The great States of Massachusetts and Ohio have perfected a thorough and efficient system of public instruction and supervision; while Michigan and Iowa are doing something effectively in the same direction.

But our own State, which has hitherto led the way, and which even now is regarded as an example of perfection in education, is really in danger of falling into the rear.

Teachers of New York! these things ought not to be so. They *must* not thus remain. The patient's pulse is slow, but his malady is not incurable. He is not beyond the reach of proper remedies. Too much legislation and continual changes in educational enactments, have done much evil—But the case is really in *your hands*. Will you labor to effect a cure?

Teachers of New York! we believe in the necessity of the appointment of a State Superintendent of Common Schools. We believe that the *whole* time and strength of a strong man should be devoted to our Educational interests. This is almost universally conceded. Let us unite in the effort to secure the adoption of this salutary measure. Let us repeat our respectful petitions, and our earnest and convincing arguments, until we *have* a State Superintendent of public Instruction.

We earnestly urge you to organize Teachers' Associations in the various towns and counties of the State. In this way desirable acquaintance may be formed, reciprocal sympathies excited, and valuable information obtained. Let us labor to effect such organization during the coming year.

We would call your attention to another means of advancement. Political parties, religious sects, physicians, lawyers, and all large associations, have their established presses, their journals and published reports. One year ago, the State Association established a monthly paper entitled *The New York Teacher*. The success of the enterprise thus far has been beyond expectation, and its future prospects are encouraging; but there is still much to be done in order to accomplish the object proposed. Its circulation should be extended until its funds will support a weekly issue without an increase of price. Will not *every* teacher contribute *one dollar* a year for this purpose? All previous efforts to sustain an educational journal in our State have failed, and the periodical recently established will ere long *die* unless all the teachers can be induced to furnish liberal and continued contributions from their pens and purses for its support.

Teachers of New York! we ask you *all*, teachers of Colleges and Academies, and Common Schools, to *unite* with us in our State Association. We are altogether teachers upon the same platform. We are all engaged in elementary disciplinary education; and it will do us *good* to meet *together*. Let us not separate and go backward, but let us *unite* and *advance*.

Let us have a State Superintendent of Public Instruction; let us organize and sustain Town and County Associations: let us every one *pay* and *write* for the "New York Teacher:" and especially let us *all* meet together, and we know the true interests of thorough education in our State will be sustained and advanced.

AUGUST 8, 1853.

***Papers friendly to the interests of Education in our State, will please publish the above.

## THREE YEARS LABOR ON THE BIBLE.

THE following calculation of the number of books, verses, words, letters, &c, contained in the Old and New Testaments, are said to have cost the calculator three years' labor. They are therefore, supposed to be worth reading, and perhaps preserving:

OLD TESTAMENT.

| | | | |
|---|---|---|---|
| No. of Books... | 39 | No. of Words.. | 592,439 |
| No. of Chapters. | 929 | No. of Letters. | 2,728,100 |
| No. of Verses.. | 23,214 | | |

The middle Book is Proverbs.
The middle Chapter is Job xxix.
The middle Verse would be II Chronicles, xx, 17, if there was a verse more, and verse 18, if there was a verse less.
The word *and* occurs 35,543 times.
The word *Jehovah* occurs 6,855 times.
The shortest verse is I Chronicles, i, 25.
The 21st verse of the 7th chapter of Ezra contains all the letters of the alphabet.
The 19th of II Kings and the 37th chapter of Isaiah are alike.

NEW TESTAMENT.

| | | | |
|---|---|---|---|
| No. of Books... | 27 | No. of Words... | 181,258 |
| No. of Chapters. | 260 | No. of Letters.. | 823,580 |
| No. of Verses.. | 7,959 | | |

The middle Book is II Thessalonians.
The middle Chapter is Romans xiii, if there was a chapter less, and xiv if there was a chapter more.
The middle Verse is Acts xvii, 17.
The shortest Verse is John xi, 35.

OLD AND NEW TESTAMENTS.

| | | | |
|---|---|---|---|
| No. of Books.. | 66 | No. of Words.. | 773,697 |
| No. of Chapters | 1,189 | No. of Letters. | 3,566,480 |
| No. of Verses... | 31,173 | | |

The middle Chapter, and least in the Bible, is Psalms cxvii.
The middle Verse is Psalms cxviii, 8.

3 1 2

## FLORICULTURE OF THE TOILET.

THE accompanying illustration and description of the *Floral Fashions*, will prove interesting to many of our readers. Compared with the ever-changing, namby-pamby fashions presented in the Magazines, we think these a decided improvement—while the fastidious can make no objection on account of origin, for they are from European models. The engraving and description are taken from the London Magazine of Botany, as copied and translated from *La Belgique Horticole*. The Floriculture of the Toilet of course embraces the culture and general knowledge of all plants, &c., which are susceptible of ornamenting the human form.—But to the description:

ONE of the favorite amusements of infancy is to plait crowns with the wild flower of the woods and fields. The timid lover expresses his passion by the homage of a bequet; and the young belle naively abandons to her favorite the flowers which decked her brow or withered on her bosom. Old age itself smiles on flowers. Crowns and other garlands may be traced to the most remote antiquity. Among the Greeks and Romans the crown was, so to speak, the ordinary hair-dress of the great philosophers. Socrates had always his head encircled with flowers. Alcibiades changed his crown three times a day. At eighty years Anacreon mixed roses with his white hairs. Cæsar, who was bald at thirty years, was indebted for a long time to the crown of flowers to conceal this defect from the beauties of Rome. At Athens as at Rome, no one could present himself in public without his crown.

At the present day there is an evident inclination to return to the better customs of Greece and Rome. Let us hope that in a short time the crown and the boquet will be rigorously enforced in every reunion which has pleasure for its object. Why should not our ladies abandon the ungraceful cap for the elegant and odoriferous crown of flowers?

In order to render this part of horticulture directly realizable, we shall pass on to the descriptions of head-dresses in fashion, the first since 1847; the second during the present year; and the third, with some exceptions, at intermittent periods.

1. *Coiffure a la Flore* (Head-dress of Flowers.)—This is suitable for those persons whose proportions and forms are of the most perfect character, and which come nearest the Grecian type. The profile especially must be one of those which are commonly found represented on ancient *bas reliefs*. This head-dress is worn with the hair arranged in graceful, wavy locks, the back being tied in a bunch, merely with a narrow band, and the ends floating down. The crown of flowers does not in this case form a diadem, but is tied in a knot behind, and at the lowest part of the head, from which point it gradually enlarges till it reaches the front, or the point immediately above the brow. This form of crown is composed of high-colored flowers, as the Rose, Narcissus, Hyacinth, Camelia, Carnation, and sometimes an Orchid, and it is bordered with Ericas and distichous Cypress, terminating in leaves, with the more slender or fine parts of branches of flowers which take an upright, and, at the same time, a nodding form. The ancient ear-rings, and the string of pearls around the neck, harmonize admirably with this head-dress, which, invented more than a thousand years, is not the less handsome and in keeping with good taste. The figure (1) represents this form of head-dress taken from the *Flore de Canova*.

2. *Coiffure a la Ceres* (Head-dress of Cereals.)—"This kind of head-dress," says M. LACHAUHE, "is worn with either even or wavy locks. It is very graceful, but only suitable for those ladies who have the head well proportioned. It should always be made in the form of a diadem in front, from the top of the brow. It is best formed (plaited) of the small flowers of Roses, or of Camelias, mixed with Violets, Pinks, &c.—The Erica, or any very light foliage, is indispensable." We shall only add that nothing can be more graceful or appropriate than one or two spikes of Hordeum Zeocriton, H. hexastichon, Triticum monococcum, and other ornamental grains. They are used dry for this purpose, and decorated by means of gum with gold or silver in leaf.—Ladies make elegant boquets of these cereals, which last throughout the winter. Cereals for head-dresses should be sown in spring, and the golden-yellow spikes, when matured, have a charming effect among the flowers which have been already named. In winter the forced flowers of Pyrus japonica, as well as the Cœlestina, will be found very serviceable.

3. *Coiffure a la Pomone* (Head-dress of Fruit.—This form is chiefly suitable for those who have a large and robust figure, and a healthy high-colored complexion.—The crown is large, formed of fruits and leaves of the most select sorts. The top of the corset is also furnished with a garland formed in a similar manner. This style of ornament has many resources, which are much ignored by *artistes*. The pretty red berries of Ardisia crenulata have a fine effect, resembling bunches of coral beads, and which may be obtained during the whole winter in our stores. The short-fruited spikes of Chamærobs humilis, are equally desirable, and may be as readily obtained. Many of the Common Thorn or Crataegus, also furnish abundant resources. The white berries of the Mistletoe (Viscum album) with their leathery leaves, which do not soon fade, are excellent for this purpose, as well as the pearly berries of Rhipsalis. Besides many varieties of natural fruits, imitations in glass, especially small bunches of Grapes, are very effective.

## JAPAN AND THE JAPANESE.

A GERMAN traveller, Mr. Gerstcaker, who has published a volume of interesting travels, and whose power of observation and foresight, particularly as regards countries little visited, render him a desirable narrator, thus pronounces on the results of Commodore Perry's expedition to Japan:

By love and kindness neither America nor any other nation can expect to get any thing out of the Japanese. I have not the least doubt that the Emperor will refuse to receive the Ambassadors; or, if he does grant them an interview, he will dismiss them again without even promises; and yet the Emperor of Japan is not so ignorant of affairs as people commonly suspect. He has all kinds—and the best of them—of geographies and historical works, translated into his language; and interpreters for nearly every country; and he is wide awake by this time, as to what others are about and what he is to expect. It is not likely that he should be ignorant of the power of his antagonist; still I do not think that he will be persuaded to any thing, and then the question arises if other nations take what they cannot get with free will, will it not be necessary to frame a new order of laws, stating the certain sum or amount of property where stealing ends and justifiable possession commences?

It will not be such an easy war with the Japanese, though. The richest bees defend their hives the most fiercely, and the Japanese are far better soldiers than the Chinese; their coasts being guarded by cliffs and rocks, while the unsteady weather and sudden gales of those latitudes are also in their favor against an approaching or cruising enemy. The smaller islands may be taken I have no doubt—at least cut off from connection with the larger ones; but hostile nations will find the Japanese far better prepared for an attack than they now suspect. Another difficulty with the Japanese will be the impossibility of half measures. If the Americans do force an entrance at some point—and it is as likely as not that they may do so—and do not take the whole island, they will be walled in, in a very short time, and permitted to see little enough of their neighbors. Still the islands are too small to resist for any length of time renewed attacks; and his Majesty will have to yield, first his country and then his crown, about as willingly as the California Indians, or Sikhs, or Australian blacks, or, in fact, all other nations that have seen their countries overrun by strangers and enemies.

ADVICE GRATIS.—In walking, always turn your toes out, and your thoughts inward.—The former will prevent you from falling into cellars, the latter from falling into iniquity.

# Sunday Reading.

Written for Moore's Rural New-Yorker.

"We call, but they answer not again;
Oh! say, do they love us yet?"

ONE by one this world full of prodigal children are returning to the Father's house: sometimes weary of the more husks of happiness on which earth feeds her dependents as the best she can offer them; sometimes willing to depart, yet reluctant to sever the ties that have constituted one of the highest earthly enjoyments; but ever, I believe, more ready to enter on a solution of that sublime mystery each must unravel alone, than to repeat the life now so nearly spent.

I could never see the beauty of death till I looked on the calm, serene face of ——, in its last repose. Then the feeling something like horror, which I had always experienced in gazing on the inanimate remains of mortality, was gone, and in its room, came a holy awe inspired by the presence of what was once the home of a spirit, now clothed in the glorious drapery of immortality. Ah! we may lay our cheek to the clay-cold face of the loved one and strive to rekindle there, by our own warmth, the life that has gone out, and withdraw it again in bitter anguish; there is no animation in the touch—it is insensible to our yearning effort—and the contact instead of quickening the dear ashes, only sends a chill through our own frame.

And where are they? This question is constantly recurring to us; we cannot banish it from our minds; we say we believe they are in heaven; but where is that heaven? Nor are we satisfied with *believing*: we would *know* something as to the locality and the conditions surrounding the departed spirit; we would know whether or not its passage is instantaneous; we are curious as to the sensations experienced by the newly departed soul on finding itself loosed from its clay tenement, and made free from all earthly obstructions; the manner, too, of its transition is a theme for inquiry,—for, though fancy presents the scene with all the vividness of reality, yet we would give much to *know* that one who left this life undismayed by the prospect before him had entered on the higher with a calmness and a quiet self possession gained by long and earnest contemplation of the great future. But, alas! no such knowledge is vouchsafed us at present; we shall all learn in His own good time and that must suffice us: nevertheless, we cannot forbear the inquiry—and where are they?

Twelve years ago the spirit of a much-loved sister took its flight from earth to meet that of another sister earlier dead.—Eleven years later one one who had cared for them both in infancy and childhood, had taken them on his knee and so richly entertained their imaginations with the pleasing story, had been to the one of them longest a resident of earth and others who survived her the genial companion of riper years, and who, I remember held me, a child, in his arms to take a last look at my playmate sister quietly slumbering in the commencement of an endless rest—was added to the number. Though in my approaches to a calmer, more philosophical mood, distrusting the instinctive longing of a child that his parents shall know and love him in heaven as they have done on earth, and partially accepting a faith too coldly spiritual to be generally welcomed by earth's weak ones, I am persuaded we shall know no partialities in that upper world, it yet sends a thrill of gladness to my heart to think that trio sometimes hold sweet counsel over those left behind, and have them over in the watchful keeping of their sheltering arms.

How vast a number of streams unite to form the great Life River of the human race! Some glide noiselessly along, others flow with rushing force; but the weak and the mighty are equal at last—their destination is the bosom of God. A.

South Livonia, Aug. 1853.

A BEAUTIFUL THOUGHT.—Shortly after her first arrival in Ireland, where Mrs. Hemans died, she was extremely unwell.—When among the mountain scenery of the fine country of Wiclow, during a storm, she was struck by one effect in the hills. It was produced by a rainbow diving down into a gloomy mountain pass, which it seemed really to flood with its colored glory. "I could not help thinking," she remarked, "that it was like our religion, piercing and carrying brightness into the depths of sorrow and of the tomb. All the rest of the scene around that one illuminated spot was wrapt in the profound darkness."

I HAVE always preferred cheerfulness to mirth. The latter I consider as an art, the former as a habit of mind. Mirth is short and transient, cheerfulness fixed and permanent.—*Addison.*

THE wise fortify themselves by reason, and fools by despair.

# Miscellaneous.

Written for Moore's Rural New-Yorker.

## GLIMPSES IN THE "OLD COLONY."

BY MRS. M. W. H.

No. II.—A Day Among Pilgrim Relics.

On one of the delightful mornings in the latter end of "leafy June"—one that had been made doubly pleasant by the previous night's rain—we found ourselves on the "Old Colony Railroad," for the purpose of a visit to Plymouth; a place celebrated in the annals of our country's history, and hallowed ground to every American heart. A place which has furnished materials for the pen of the Historian, the Poet and the Painter; even the events that clustered around the May-Flower and Plymouth rock, belonging as they did to times of stern realities and sterner hearts, have not been sacred from the incursions of Fiction.

Our first visit was to Pilgrim Hall, a handsome, substantial granite building, seventy by forty feet, situated on Court street, and built by the Pilgrim Society about thirty years since. But before entering the Hall, let us linger a moment in the yard, to contemplate the names of the forty-one signers of that compact into which these hardy pioneers entered previous to landing on the rock, a part of which is surrounded by an iron railing on which those names are inscribed. This piece of the rock was severed from the main one in the year 1774, by an attempt to remove the whole rock to the town square. Wm. S. Randall, Esq., says, in his "Pilgrim Memorials," that in 1774 some ardent whigs, to render available the patriotic associations connected with the rock, undertook its removal to the town square, with the intention to place over it a liberty pole, as an incitement to vigorous effort in the approaching revolutionary struggle, and to quicken the zeal of such persons as hesitated to join the standard of independence. In this attempt at removal, the rock split asunder, which excited great surprise, and was construed into a favorable omen, indicating the final separation of the Colonies from the mother country. A part of the rock was drawn by twenty yoke of oxen to the town square; the far-famed liberty pole was speedily erected over it, on which an appropriate poetic effusion of some ardent son of liberty was placed, urging the citizens to renewed efforts in the cause of his country. Such an appeal could not fail of its legitimate effect.

But we will deposit the trifling fee with the gentlemanly curator, and enter the Hall: as we do so, the silence and our sensations are almost oppressive; we can even fancy that the echo of our footsteps brings back to our ears the injunction to Moses at the burning bush—"Put off thy shoes from off thy feet; for the place whereon thou standest is holy ground."

The first object on which the eye rests is a splendid painting, "The landing of the Pilgrims in 1620." It was painted and presented to the Pilgrim Society by late Henry Sargent, Esq., of Boston. It is thirteen by sixteen feet, and was valued at three thousand dollars. It is surrounded by a beautiful gilt frame, that cost four hundred dollars. In the fore-ground is represented Samoset, a friendly Indian Chief, advancing and holding out to Gov. Carver, who comes forward to meet him, some token of "welcome," an English word already known by the Indians. There are about twenty figures, large as life, representing the prominent persons who landed from the May-Flower; among them stands Mr. William White, bearing in his arms his ocean-born son Peregrine. While contemplating the groups on the canvass, one instinctively adopts Mrs. Sigourney's truthful words,—

> "Forth they come
> From their long prison,—hardy forms, that brave
> The world's unkindness,—men of hoary hair,
> And virgins of firm heart, and matrons grave,
> Who hush the wailing infant with a *glance*."

There are in the Hall some eight or ten portraits of different individuals. The three Winslows, and that of Penelope Pelham, the wife of Josiah Winslow, (the first native Gov. of the Colony,) are copies from originals by C. A. Foster. If that of Miss Pelham is a correct representation, she might well have been called a court beauty. A sculptor might grow enthusiastic at the sight of such a hand and arm. We were told that a copy of Weir's painting of the "Embarkation of the Pilgrims at Dolfthaven in 1620," which is now in one of the panels in the Rotunda of the Capitol at Washington, would be added to the collection as soon as funds could be obtained for that purpose.* The scene is laid on the deck of the vessel. Mr. Robinson, their pastor, is making the parting prayer just before their departure. Elder Brewster holds the open Bible; Gov. Carver and Mr. Bradford, with their wives, form the centre group of the picture. This painting must form a very interesting and valuable addition to the collection. Judging from its description, one must *study* not only the picture but the history of the originals, to appreciate its faithfulness and beauty.

From the many curiosities and antiquities, where all were interesting, I scarcely know what to name as being most so; I will therefore content myself with designating a few that most readily occur to my mind.

There were two chairs, one of which formerly belonged to Gov. Carver, the other to Elder Wm. Brewster. These have been much mutilated by persons from whose jack-knives the coffins of their fathers would not be secure, if they offered any temptations to acquisitiveness. A sword, a pewter dish, and an iron pot that belonged to Miles Standish. A cane and dressing-case which were the property of Mr. Wm. White. The gun-barrel with which King Philip was killed, and an original letter sent by him to Gov. Prince, written in 1662. A china mug and leather pocket-book which belonged to Thomas Clark. In the same case, I noticed a jar of preserved apples which grow on a tree planted by Peregrine White.

Ancient deeds, writings, instruments and signatures of various persons connected with the first establishment of the Colony. A commission from Oliver Cromwell to Gov. Edward Winslow, dated 1654. This commission bore the signature of Cromwell himself, but while it was unprotected by a glass, some vandal hand tore off the corner of the parchment containing the signature, which has since been replaced by a fac simile; thus the chief value of the instrument is *gone*. Verily, there is scarcely any punishment too severe for such desecration.

There is a highly ornamented clock, which formerly belonged to Gov. Hancock. It is supposed to be about one hundred and fifty years old. It has lately been repaired, is an excellent time-piece, and said to be "not half worn out." Could that old clock tell us of the scenes and events its hands have recorded in the book of time, it would afford volumes of great variety, and of the deepest import. The antique sofa or couch, which once belonged to the same individual, now stands near, and forms an appropriate companion piece to the old clock. The sofa is covered with brown leather, and in good preservation. Both that and the clock no doubt formed a part of the furniture of the library in the old "Hancock mansion."—Had not the ruthless touch of time impaired its elasticity, the old cushion might be puffed up with the importance of having given rest to the wearied limbs and throbbing brains of patriots and heroes. Oft, too, might it have been a silent listener to those mighty plans which, all unknown to their authors, were laying the foundation on which their posterity are rearing a superstructure whose pinnacle has already become the "star of hope" to throbbing hearts in every clime. Fitting indeed is it, to bring memorials of Liberty's infancy, and place them under the shadow of that tree whose first planting was watered with blood and tears.

In the language of the eloquent Chapin, "When a man would send out the organ-music of inspiring truth; when he would sweep the entire diapason of patriotic and christian sentiment; when he would wake the land with some old passage of the past, or some jubilant strain of the future; let him set his foot upon the pedal of Plymouth Rock, and strike the Keys of Faneuil Hall."

After dinner we visited Burying Hill, where, Pierpont says,

> "The earliest ray of the golden day
> On that hallowed spot is cast;
> And the evening Sun, as he leaves the world,
> Looks kindly on that spot last."

The precise spots where rests the remains of many of those who died in the first forty or fifty years after the landing, cannot be accurately ascertained. Those who died the first year, about fifty in number, were buried in what is now an open green space, near the foot of Middle street. It is walled up on the side next the water, to prevent the incursions of the tide. It is called Cole's Hill, and was the first burial place of the Pilgrims. Mr. Russell, to whom I am indebted for these facts, says—"In the year 1735 a severe storm occurred, and large quantities of water rushing through Middle street, washed away some portion of the banks, carrying in its current the remains of several bodies deposited there in the winter of 1621. In the year 1809 a human skull was disinterred, the teeth of which were in a perfect state of preservation." It is said that during the first winter the graves were carefully smoothed over to prevent the Indians from learning their number. It is contemplated by the Pilgrim Society to erect a suitable monument on this spot. When Fort Hill, as it was then called, was first used as a burying place is not known. The oldest stone we could find marks the grave of "Edward Gray, Gent," 1681.—There may be some of earlier date, as the inscriptions on some are quite obliterated. The descendants of Gov. Bradford have placed a white marble monument on the spot where he was buried. Many of the graves of the early settlers are rescued from oblivion by the well-directed efforts of the citizens. I was disappointed at not finding any of those singular epitaphs which are sometimes seen on ancient gravestones. Many of the inscriptions were very elaborate, and some of them rather obscure in their meaning, instance the following couplet from a stone bearing date 1703:

> "Thousands of years before blest Able's fall,
> 'Twas said of him, being dead he speaketh yet."

[Note.—We are obliged to divide this article, deferring a portion until next week.]

* A writer in the Boston Evening Traveller, of Aug. 1, says this painting has been deposited in the Hall.

### THE VILLAGE OF ZOAR, OHIO.

While in the interior of Ohio, a few days ago, I was persuaded to visit a little place called Zoar, the abode of a sort of Communist or Fourierite Society called Zoarites; and I found so much to admire, and so much of which I seemed the first discoverer, that I am tempted to give a description.

Zoar was settled about forty or fifty years ago by a few poor Germans. They have gradually increased in numbers and wealth, and now number two hundred and fifty souls, owning six thousand acres of choice land, are reputed to be worth a million of dollars. Around the dwellings, the grounds are laid out in squares of two or three acres each, and all their roads and lanes are deeply shaded by fruit and ornamental trees.—The houses are of the high-peaked Dutch style, covered with slate, over which the green moss has nearly crept. In the door of the "Zoar Hotel," (a very little Yankee-fied that "Hotel,") stood a man, apparently a century old. We soon found he was landlord, waiter, porter—all. It seemed as if the years had been contented to leave their snows and wrinkles on his brow, but had quite forgotten to bring death with them.—A walk around the grounds showed their neat cottages nestling amid the trees, with barns, outhouses, etc., etc., to match. A few old men were sitting dreamily in the shade, lazily brushing at the flies, or gathering, with the very spirit of economy, the few scattered wheat heads that had fallen about. Every now and then a high load of yellow wheat or new-mown hay went creaking by, on its way to the already bursting barns. The women labor in the field with the men, and their bronzed, wrinkled faces, and flat, bony forms, were very unlike the grace and delicacy we look for in woman; and I could not help contrasting those before me with the painted, flounced and *padded belles* of the city—both very far from the true character of woman—but which was the farthest, I could not decide. A view from the high grounds unrolled a beautiful panorama of cultivated fields, waving with yellow grain, and bright green pastures dotted with the lowing herds. On the west a high wood-crowned hill lifted its dark green against the clear summer sky, and at its foot rolled the bright river, sparkling and glistening in the broad sunlight.

A dim, dreamy haze, like that which hung over "Sleepy Hollow," was in the air, and I feel sure, had Rip Van Winkle strayed into this quaint place he would never have supposed his twenty years' sleep to be more than an afternoon's nap on the mountain. A sort of awe came over me, like that one feels amid crumbling ruins. There was no song of joyous birds—no laugh of happy childhood. Even the winds went carefully by, hardly daring to nestle the leaves or play through the open casements, while the sun looked down on the moss-covered roofs and quiet lanes as if wondering at the silence. The world has gone on with its whirling strife in the march of improvement, but progress had quite forgotten this little nook, and it lay like a sheltered lake in the bosom of the hills. The storms might roll around the summits, or sweep the plains beyond, but they never came down to disturb the quiet waters around me. No stranded wrecks of human hopes were on the grass-covered shore. Even death forgot to visit them. It is a fossil town, and let none who can, fail to see it. It should be guarded by the State as a curiosity.—*Cor. Home Jour.*

### NEWSPAPER LITERATURE.

The New York Tribune, alluding to the elaborate and highly finished oration by Mr. Everett at the recent Plymouth Celebration, says:—"It exhibited due elaboration, every word being written out and committed to memory beforehand. A success, therefore, is assured to Mr. Everett by such elaboration. We are due admirers of Mr. Everett, without being able to discover in him indisputable superiority over every other writer in America, either in thought or language. The superiority in style is due in a measure to the time allowed for elaboration, and we see no great wonder in a deliberately-prepared speech producing effect and exacting applause, when we look at the mass of good writing in the American Press, which is turned off, written up to twelve, one or two o'clock at night, after the toils and disturbances of editorial life during the day. If we take the scholarship and learning, and public experience now engaged in the Press of this country, it will not suffer in comparison with that of any other profession, the Senate of the United States added thereto. Indeed, in point of bold, generic ideas, thrown out devoid of fear or favor, not polished till their native force is rubbed away, but hurled on the paper glowing in freshness, the comparison is altogether in favor of the Press."

# For the Ladies.

### WOMAN'S RIGHTS.

BY MRS. R. HYNEMAN.

It is her right to bind with warmest ties,
The lordly spirit of aspiring man,
Making his home an earthly paradise,
Rich in all joy allotted to life's span:
Twining around each fibre of his heart,
With all the gentle influence of love's might,
Seeking no joy wherein he has no part—
This is undoubtedly—a woman's right!

It is her right to teach the infant mind,
Training it ever upward in its course,
To root out evil passions that would bind
The upward current of his reason's force!
To lead the erring spirit gently back,
When it has sunk in gloom of deepest night;
To point the shining path of virtue's track,
And urge him forward. This is woman's right.

It is her right to soothe the couch of pain;
There her true mission upon earth to prove,
To calm with gentle care the frenzied brain,
And keep her vigil there of holiest love;
To watch untiring by the lonely bed,
Through the bright day and in the solemn night,
'Till health ensues, or the loved form is laid
To rest forever. This is woman's right.

So is a flower, that blossoms best, unseen,
Sheltered within the precints of her home;
There, should no dark'ning storm cloud intervene,
There, the loud strife of Worldlings never come.
Let her not scorn to act *a woman's* part,
Nor strive to cope with manhood in its might,
But lay this maxim closely to her heart—
That that which God ordains is surely right.

For the Rural New-Yorker.

### ABOUT FARMERS' HOMES.

You would have the farmers reform, Fanny Fern,—nay, not reform but improve, that better expresses your meaning. Your desire is a laudable one, but too contracted; let it be as broad and free as the country you would assist.

You would hang curtains of snowy sunshine in the farmer's parlor; but to do this, instead of tearing down the green paper hangings, you would far too often have to cast aside rich damask: and that lounge "covered with a neat patch," which you would "show Zedekiah how to make," would monopolize the place now occupied by an elegant sofa.

You would know why "country people so universally persist in living in the rear of the house." It is because there they have it arranged for comfort; there, in a pleasant sitting room, is the neat lounge with snowy pillows; there is the vase of "wild flowers" not only, but the choicest varieties of cultivated plants—and what matter if "the detestable sunflower" does flaunt in the garden, one of the few memontos of the days that are gone, and gone forever? It is there that you will find all varieties of books, papers and magazines, the covers of which are not lifted "by degrees," but with the eagerness of an intellectual longing.

This is why they live in the rear of the house, because the home comforts are there and not in the elegantly furnished parlors, the closed blinds of which attract the scorn of the passer by. If you would only call, Fanny, at some of these cheerless abodes, (as you deem them,) when those blinds are thrown open and the sunlight allowed to play upon the tapestry carpet, you will imagine you are among people of "intelligence and refinement."

It is true our country people need to progress, as all mankind need to progress,—not in extravagance—not in folly—not in seeking after the luxuries of the fashionable world—but after the beauties of the intellectual and moral life, which are more easily discovered, more ardently worshipped and truly appreciated in the country than in the city. In the country one is alone with Nature, free to meditate and admire; but in the city one forgets himself in a world made by man, where all is outside glitter, and so little pure, free and truthful, that man forgets all that is really great and good and heeds not the end for which he was created.

Jessie.

### HINTS ABOUT FEMALE EDUCATION.

BY MRS. L. M. CHILD.

The difficulty is, education does not usually point the female heart to its only true resting place. That dear English word, "*home*," is not half so powerful a talisman as "*the world*." Instead of the salutary truth, that happiness is *in* duty, they are taught to consider the two things totally distinct; and that whoever seeks one must sacrifice the other.

The fact is, our girls have no *home education*. When quite young, they are sent to schools where no domestic habits can be learned; and there they continue till they "come out" into the world. After this, few find any time to arrange, and make use of, the mass of elementary knowledge they have acquired; and fewer still have either leisure or taste for the inelegant, every-day duties of life. Thus prepared, they enter upon matrimony. These early habits, which would have made domestic care a light and easy task, have never been taught, for fear it would interrupt their happiness; and the result is that, when cares come, as come they must, they find them misery.—I am convinced that indifference and dislike between husband and wife, are more frequently occasioned by this great error in education, than by any other cause.

The bride is awakened from her delightful dream, in which carpets, vases, sofas, white gloves, and pearl ear rings are oddly jumbled up with her lover's looks and promises. Perhaps she would be surprised if she know exactly how *much* of the fascination of being engaged was owing to the aforesaid inanimate concern. Be that as it may, she is awakened by the unpleasant conviction that cares devolve upon her. And what effect does this produce upon her character? Do the holy and tender influences of domestic love render self-denial and exertion a bliss? No! They would have done so had she been *properly educated*; but now she gives way to unavailing fretfullness and repining; and her husband is at first pained, and finally disgusted, by hearing, "I never knew what care was when I lived in my father's house." "If I were to live my life over again, I would remain single as long as I could, without the risk of being an old maid."

How injudicious, how short-sighted is the policy which thus mars the whole happiness of life, in order to make a few brief years more gay and brilliant! I have known many instances of domestic ruin and discord produced by this mistaken indulgence of mothers. *I never knew but one where the victim had moral courage enough to change all her early habits.* She was a young, pretty, and very amiable girl, but brought up to be perfectly useless; a rag-baby would to all intents and purposes, have been as efficient a partner. She married a young lawyer, without property, but with good and increasing practice. She meant to be a good wife, but she did not know how. Her wastefulness involved him in debt. He did not reproach, though he tried to convince and instruct her. She loved him; and, weeping, replied, "I try to do the best I can but, when I lived at home, mother always took care of every thing." Finally, poverty came upon him "like an armed man," and he went into a remote town in the Western States to teach school. His wife folded her arms and cried, while he, weary and discouraged, actually came home from school to cook his own supper. At last his patience and her real love for him, impelled her to exertion. She promised to learn to be useful, if he would teach her. And she did learn! And the change in her habits gradually wrought such a change in her husband's fortune, that she might bring her daughters up in idleness, had not experience taught her that economy, like grammer, is a very tiresome study, after we are twenty years old.

### BASIS OF UNHAPPY MARRIAGES.

> "Marriage is a matter of more worth,
> Than to be dealt in mere attorneyship."
> [*Shakspeare.*

But a single glance among one's married friends would serve to show that there are some unfortunate circumstances that generally prevent the attainment of that degree of happiness which either was or should have been expected. What can this be? From long study on the subject, I have come to the conclusion that the grand difficulty, or that which lies at the basis of all others, is a want of true and sincere love. Nor need this appear very wonderful when we look even for one moment at the *facts*. Misunderstandings and mistakes may happen between the truest lovers—married or single—but they are not likely to occur where there is a deep and earnest love on both sides.

Certainly the sacred writer knew of this relation, when he said, "Better is a dinner of herbs, where love is, than a stalled ox and hatred therewith." Consider for a moment how insensibly love lightens all our cares, and sooths all our sorrows. How truly the severest labor becomes pleasant when love is the inspirer of the task. By a truly loving heart, sacrifices, sufferings, toil, danger—everything—is endured, dared, suffered, and even coveted—so that the beloved one may be more blest.

Let us look at the marriages as they occur. Young people meet together, and naturally fall into a particular partiality for some of their companions over others. But ne very distinct idea of the duties or requirements of such a condition as marriage is or can be developed—and for this chief reason. As a general thing, all the idea of marriage which children and youth obtain from their parents and teachers, or from popular literature, is a mutual convenience, which, by some means or other, must be established. With woman this is more especially true; for woman being the passive party, has been led to suppose—and truly enough—that her choice cannot often be consulted; and therefore she must accept such conditions as present themselves. This is a heresy, let me say in passing, which no woman of a right mind and true heart would for a moment sanction. And thus, with a levity which the lady would throw aside for so much business as the choice of a new hat or feathers, or the gentleman for the consideration of putting himself into the hands of a new tailor, the parties assume the most solemn responsibilities, and rush into a state which, if unhappy, can only be retrieved by death, or the public disgrace of one or both. How could they have any conception of that sublime ideal of true affection, where

> "——each to the other is a *dearer self*,
> Supremely happy in the awakened power
> Of giving joy."

What wonder, then, that so many are ready to exclaim:

> "Oh! for a curse upon the cunning priest,
> Who conjured us together in a yoke
> That galls me now."

Knowledge, unemployed, may preserve us from vice; but knowledge beneficially employed is virtue.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, SEPTEMBER 3, 1853.

**PUBLISHER'S NOTICES.**

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ FOR TERMS, &c., see last page.

## Fall, and the Fairs.

ERE this paper falls under the eye of the reader, September will have been ushered in, and August and Summer numbered among the things that were. Though the subject admits of some flights of fancy, we leave the poetry that it naturally suggests to the imaginatious of those who have time and taste for the enjoyment of a luxury so innocent and seasonable. Indeed, while our field of observation is confined to crowded streets, stone pavements, and huge, five-story piles of brick and mortar, we can scarcely realize the changes in sky, air and scenery with which so large a portion of the "rest of mankind," and our country friends in particular, are blessed. Yet the Almanac, and certain other unmistakable evidences, assure us that September is at the threshhold. The Zero-ish indicatious of the themometer, and consequent demand for flannel, fuel, and necessary auxiliaries, are sufficient to convince even the fast-anchored city denizen of the approach of the season which matures the choicest of Pomona's gifts, and exhibits the sere and yellow leaf throughout a great portion of Nature's world-wide laboratory. But we *are* verging upon the poetical, and must turn to the practical.

With this change of season comes a change of labors and duties incumbent upon Ruralists.—Omitting mention of many matters pertinent to the season, we desire to offer a few suggestions relative to the approaching Agricultural Exhibitions—the Town, County and State Fairs. Most of these festivals are to be held during the ensuing six weeks, and now is the time to make preparation. A majority of our readers are personally engaged in Agricultural pursuits, and therefore directly interested in the success of organizations designed to promote the interests of the chief *producing* class in this country. It is too late to discuss the benefits that *may* or *should be* derived, by farmers, from the annual exhibitions of well conducted Agricultural Societies—for there is no need of argument on the subject. The main question is in regard to the extent of the benefit (and the best manner of securing it) which may accrue to individual members and the farming community, and that chiefly depends upon those most deeply interested—the cultivators themselves. In order to secure the objects desired, every member must assume some responsibility in the premises, and take an active interest in the affairs of the Society, by aiding its management and contributing his quota—his fee and presence, if nothing else—at its exhibitions. Each member should aim to become an exhibitor—and he is a poor farmer indeed who has nothing worthy of either notice or comparison with the productions of others. But if he cannot do this, he can certainly afford to allow himself, *and his family*, a holiday, for he (and they) may learn enough to render the investment profitable.

There is too little life and efficiency in many of our Societies—or rather among their members generally, leaving the burden of labor and management with a few, and not unfrequently in the hands of those unacquainted with practical agriculture. This is not as it should be. Every farmer should become an active, reliable member, and show by his energy and influence that he is imbued with the spirit of Improvement—that he realizes the importance and dignity of his calling, and feels a proper interest in measures calculated to benefit himself and his fellow producers.—When nominal members more generally act upon this principle, far more good than now is, will be accomplished. Let the paying members once realize, individually, the importance of personal exertion and attention, and we shall hear little complaint in regard to the influence and palaver of demagogues, and the too frequent contempt of Labor and Merit, at the annual exhibitions of the Skill and Industry of American Producers.

---

THE FALL ELECTION.—Besides the local officers to be elected this fall, there will be a full Legislature to choose; a Comptroller in place of JOHN C. WRIGHT; a Secretary of State in place of HENRY S. RANDALL; an Attorney General in place of LEVI S. CHATFIELD; an Engineer and Surveyor in place of WM. J. MCALPINE; a State Treasurer in place of BENJ. WELCH, JR.; a Canal Commissioner in place of JOHN C. MATHER; a State Prison Inspector in place of WM. P. ANGELL; a Judge of the Court of Appeals in place of HIRAM DENIO, who holds a seat in that Court by appointment of the Governor, to fill the vacancy occassioned by the resignation of Judge JEWETT, and for the term in place of CHAS. H. RUGGLES.

---

EDITORIAL CHANGE.—The Orleans American, published at Albion, Orleans county, which for some two years past has been conducted by B. C. BEEBE, Esq., has beeen purchased by Messrs. ANDREWS & GARDNER. The American is an old established paper, and was for many years under the editorial charge of the late T. C. STRONG, one of the veterans of the press. If the new proprietors obtain the measure of success their predecessors have deserved, theirs will be a rich reward.

## The Weather and the Crops.

AFTER the repeated complaints of continued dry weather, we have been at length favored with an abundance of rain. The Genesee river is higher than it has before been known to be in the mouth of August, since it has been bridged at this point. The wet has been most seasonable to many farmers who have not broken up their summer fallows, and to the parched pastures, which in many parts of the State would burn over as readily as would a field of stubble. In many places the rain has fallen in such torrents as to cause much damage to crops and other property.

Since the rains we hear from many places that the potato rot has exhibited itself in all its former virulence, rendering the crop worthless. This is described as being especially true in the New England States, and to some extent in the eastern counties of New York. There is serious apprehension of a short crop, a deprivation which will be sorely felt.

In some sections of the State, where the drouth has been severe, the country has been also overrun with innumerable quantities of grasshoppers, that have eaten up nearly all the vegetation which had been spared by the drouth. This is especially true in some parts of Jefferson and Lewis counties. An esteemed correspondent writes us from Watertown, that the drouth has destroyed all the young grass and clover, resulting in a loss of nearly all the clover and grass seed sown in the spring, and that many farmers were desirous of trying the experiment of fall seeding.

From the extreme western part of the State we have a like unfavorable account. A friend from Chautauque county, now sojourning with us, says, that with the drouth, and the swarms of grasshoppers they have little hope from any crops of spring grains. He has but a moderate sized farm, but computes the loss on his premises at not less than three hundred dollars. HORACE GREELEY, who has been spending some days in that county, writes to the *Tribune* that, the grasshoppers "took hold of the wheat before it ripened, trimmed it of leaves, and lopped some of the heads, but there was probably some two-thirds of a crop, nevertheless. The pastures and meadows they have since so thoroughly devoured that they show scarcely a speck of green, and many cattle are all but famishing for food. The dairy product will be greatly diminished in consequence. The oats were next attacked, and have been nearly annihilated. One friend who sowed forty bushels will not harvest twenty; even the straw is nearly shorn of leaves and often eaten through. The earliest sown were relatively tough and dry when the hoppers began to ravage in earnest, and for that reason have mainly escaped. Peas enjoyed a like immunity, while beans are devoured almost to the root. We saw acres that would not yield a peck. Turnips will be nowhere. One friend has sowed an acre and a half twice, and not one plant was allowed to form the second leaf. Cabbages, and indeed garden vegetables generally, are likewise annihilated; and when we left on Tuesday the Indian corn was being charged most ruthlessly. Acres together have been stripped of their tassels, then of their silk, and finally eaten through and through the growing ears, so that not a third of a crop can be expected. Heavy and cold rains may stay the plague, but the crop is nearly ruined, and there will be a great deficiency of grain throughout the county, as there is already of feed. Half the growing stock must be sold off, from sheer inability to keep it, though the county is none too well supplied. Potatoes have been trimmed up somewhat, but they are not essentially injured. Even the elders and other shrubs and weeds in the roads are stripped to the bark, and often below it." †

## Ohio State Stock Bank.

As a matter of interest to thousands of our readers at the west, it is proper to state, that at a meeting of those interested in the Bank named, a portion of the notes of which have been stolen, it has been determined to suspend the issue of bills of the old plate, and have prepared a new plate by which the bills can be readily distinguished from the old issue. The amount of fraudulent paper in circulation is not large, and may be detected, as the names of the officers, register, and filling up are forged, and the numbering badly executed.

Upon the following banks no frauds have been discovered, to wit:—The Union Bank of Sandusky City, Franklin Bank of Portage County, Bank of Commerce, Clevelaud, Merchants' Bank of Massilon, Stark Co. Bank, Pickaway County Bank, Iron Bank of Irouton. Bill holders are cautioned against sacrificing the bills, as they are fully secured. Eleven solvent banks have published a statement to the effect that they will continue to receive the issues of all the State Stock Banks on deposit.

---

MUSICAL CONVENTION.—Such of the readers of the RURAL as are interested in the science of music, and especially those desiring instruction, will be glad to learn that arrangements have been made for a Musical Convention, to be held in Rochester, on Tuesday, the 13th of September, and three following days, and that the services of the following gentleman have been secured, viz:—Mr. LOWELL MASON, Mr. WM. B. BRADBURY, and Mr. GEO. F. ROOT. The price of tickets, which has been fixed with reference to meeting the mere expenses, will be two dollars each, admitting a gentleman and two ladies.

---

STEAMSHIP BURNED.—The steamship Cherokee was destroyed by fire on Friday evening last, while lying at the foot of Warren st., New York. She had a full cargo of freight on board, being ready to sail for Havana and New Orleans on Saturday. The loss is estimated at about half a million of dollars.

## The Military Encampment at Syracuse.

EDS. RURAL:—"Camp Onondaga" is come and gone. Memory alone will paint again its brilliant pageant, though many a long hour will be spent in recalling its eventful scenes.

We have no time, nor need, to detail here and now the circumstances of the gathering, the parade, or the "dismissal." It was an occasion not only of unmixed satisfaction to those concerned, but one which called, seemingly, the world together. No arrangements could be more complete, comprising the whole detail, from "reveille" to "tattoo." On the 25th the military were Reviewed by His Excellency Gov. SEYMOUR and staff, and the number of spectators present was estimated by many to be upwards of 70,000, but we are of opinion the number could hardly reach 40,000. The review passed off in good style and to the entire satisfaction of both citizens and soldiers, as did also the sweet notes discoursed by Capt. SCOTT'S fine Cornet Band, on the occasion. No accident to name, no disturbance, no clashing of manœuvre, but every thing was perfected into system, and all parts well performed, from the chief to the file.

Gen. SWAN has shown before his skill in his department, but in this large field (there being 21 companies present,) with elements so confused and circumstances so adverse, he has met the fullest demand, and the highest expectation. His brilliant staff were most efficient co-adjutors.—Col. FAIRCHILD *commanded* his (Rochester) battalion, which seemed proud of their chief. Honors well earned were easily and nobly worn. The Rochester troops feared no competition and lost no laurels. The Dragoons, the Grays, the Light Guard, the Germans, and the Canaseragas were there. All did well. The brilliant uniform of the Light Guard, supported by excellent drill, might seem to win first honors, and the Canaseragas with the old rifle and perfect discipline,—the next instant, to eclipse even beautiful uniforms,—the field seemed to be divided between them, until the Grays *boomed* out to claim and hold their old fashioned supremacy. Where all did so well, there was a self-reliance in this corps, a sweeping step, an iron evenness, and a full swing of evolution peculiarly their own, and marked to every true eye. It might seem invidious to particularize, but it discredits none others to give the Grays their due.

The Cleveland Light Artillery is a noble corps, and attracted universal admiration. Our Dragoons showed their capabilities, and doing so well, displayed great promise for the future. As men and soldiers, they showed royal blood. Our own Germans too, the Greuadiers and Guards, as soldiers are unsurpassed by any foreign corps in the State—but all were beyond praise. The return home was pleasant, and the evening parade in our streets beautiful. We trust our city will honor its own sons, bearing our arms, and efficient as our executive force and the right arm of law.

CIVIC.

## Security Against Counterfeits.

WE see a notice in some of our exchanges that JOHN W. BENNETT, (of what place we do not learn,) has discovered a very effectual method of preserving writings, charts, bank bills and pictures not only from injury, but from alteration. The discovery is said to be most simple, and consists merely in putting a very delicate coating of gutta percha over the surface of the article. It being perfectly transparent, is said to improve the character of pictures. By coating both sides of an important document, it can be kept in the best preservation. It renders it water proof, and the plan would thus be a valuable one for ship charts. If used on bank bills it would be a most efficient means of preventing fraud, inasmuch as no alteration could be made on the face of the bill without removing the coating, which it would be impossible to do without removing the whole.

Something is certainly needed to protect the public from the large amount of counterfeit money with which the country is flooded. This protection should be afforded by the banks in the form of better executed bills in a uniform manner, so that any counterfeit or alteration could be detected at once. We hope the gutta percha protection will not turn out as do the boasted pens covered with the same material—a miserable humbug.

---

UNIVERSALIST CONVENTION.—The New York State Convention of Universalists held its annual session at Lockport, last week, commencing on Tuesday. Rev. D. SKINNER, of Utica, was chosen moderator, and Revs. B. B. HALLOCK and J. A. ASPINWALL, clerks. The occasional sermon was delivered by Rev. C. H. FAY, of New York. The sermon was directed to showing the necessity of preaching doctrines that are rational, liberal, and that are fully supported by divine authority, by an appeal to the laws and the testimony. The Convention expressed itself strongly in favor of the abolition of Capital Punishment, the Maine Law and the cause of freedom. The Educational Society of the denomination held its annual meeting at the same time and place. They are endeavoring to establish a fund of $30,000, to endow a Theological School in this State, as the demand for preachers exceeds the supply, there being a want of pastors to meet the increase of Societies. The Convention was characterized throughout by much ability, and was largely attended. †

---

RECKONING WITHOUT THEIR HOST.—The groggeries and puppet shows that spring up with the rapidity of the prophet's gourd, and as plentifully as Egyptian frogs, in the vicinity of the Crystal Palace, now present a mournful spectacle. Public sentiment struck them with blight and mildew, and about half of them have already disappeared. Buildings are left in an unfinished state, and the ominous words, "To Let," are conspicuously placarded. Their owners calculated too largely on the depravity of the race.

## East Genesee Conference.

THIS body held its late session at Elmira. The number present was very large, and the interesting meeting closed its labors on the 24th ult. Bishop JANES announced the following as the appointments for the ensuing year:

GENEVA DISTRICT.—F. G. Hibbard, P. E; Geneva, John Raines, Jr.; Junius, John Robinson; Waterloo, David Ferris; Seneca Falls, David Crow; Canoga, T. J. O. Wooden; Ovid and Sheldrake, Robert Hogeboom; Lodi, Elijah Wood; Townsendville and Covert, C. C. Goss; Trumansburgh, Thomas Tousey; Jacksonville, Ebenezer Colson; Vienna, Manly Tooker, Hiram Sandford, Sup.; Belloua and Dresden, A. E. Chubbuck, J. E. Hyde; Benton, Ransley Harrington, J. Durham, Sup.; Penn Yan, D. D. Buck; Milo, A. N Fillmore; Castleton and Emery, William Bradley, G. W. Paddock.

Wm. Hosmer, Editor of the Northern Christian Advocate.

David E. Blaiu, transferred to Oregon Conference.

Benj. Shipman, General Agent and Treasurer of Genesee College.

ROCHESTER DISTRICT.—John Dennis, P. E.; Rochester, St. John's, John Mandeville; North st., Alpha Wright; Alexander st., to be supplied; Frank st., S. B. Roonly; Penfield, C. L. Bown; Webster, T. B. Hudson; Poultneyville, O. Trowbridge; Sodus, John Spinks; South Sodus, Wm. Selby, John H. Blades; Fairville, W. W. Mandeville; Lyons, I. H. Kellogg; Newark, J. K. Tuttle; Port Gibson, S. L. Congdon; East Palmyra, John M. Bull; Clifton and Orleans, T. Stacy; Palmyra, Porter McKinstry; Walworth, E. H. Cranmer; Pittsford, to be supplied; Clyde, Luther Northway; Chapinville, D. S. Chase, S. Parker, Sup.

WEST ROCHESTER DISTRICT.—John Copeland, P. E.; Rochester, First Church, Henry Hickok; Cornhill, A. C. George; Third Church, to be supplied; Henrietta, J. K. Tinkham; Rush, Wesley Cochrane; Honeoye Falls, J. G. Gulick; Avon, Wm. A. Barber, J. Dodge, Sup.; Geneseo, Jonathan Watts; Groveland, Joseph Chapman; Livonia, Wm. H. Haskell; Conesus, to be supplied; Dansville, A. S. Baker; Mt. Morris, Ralph Clapp; Ridge, Wm. A. Runner; Nunda, F. Lattimer; West Sparta, J. Pearsol, Sup.; Victor, Albert Plumley; Bloomfield, Jonathan Benson; Coke's Chapel and Bristol, S. Nichols; Rogersville, C. Wheeler, D. Thompson; Canadice, J. L. S. Graudin.

Genesee College, B. F. Tefft, President. M. Crow, Prof. E. G. Townsend, Agents.

BATH DISTRICT.—Calvin S. Coats, P. E.; Bath, A. Southerland; Thurston, John H. Day; Kanona, H. Boardman; Avoca, Wm. E. Pinder; Hornellsville, Joseph Ashworth; Canisteo, R. M. Beach; Granger, A. Maker; Angelica, I. J. Mechem; Philip's Creek, V. Brownell; Conhocton, R. Parker; Naples, M. Wheeler; Riker Hollow, C. Gould; Middlessex, John Knapp; Canandaigua, S. W. Aldeu; Bethel, A. Parcel; Rushville, J. W. Wilson; Potter, J. L. Edson; Prattsburgh and Harmonyville, J. J. Brown; Jerusalem and Italy Hill, Wm. Potter; Hammondsport, S. Brown.

CORNING DISTRICT.—H. N. Seaver, P. E.; Corning, David Nutten; Knoxville and Gibson, to be supplied; Caton, Levi Wood; Addison, C. M. Garduer; West Addison, H. Wisner; Painted Post, C. J. Bradbury, A. Orcutt, Sup.; Jasper, L. L. Rogers, one to be supplied; Whitesville and Andover, W. C. Mattison, J. Jerolaman; Wellsville, John Shaw; Knoxville, Ct., R. D. Brooks; Chatham, to be supplied; Wellsboro', N. A. DePew; Brookville, W. Sheffer; Ulysses, to be supplied; Wellsboro', Ct., G. J. Dubois; Tioga, Wm. H. Knapp; Mansfield, Wm. Manning; Troy, one to be supplied, Edward Rosa; Orange, A. D. Edgar; Watkins, A. H. Shurtleff; Tyrone, Curtis Graham, Jr.; Starkey and Barrington, J. Laudreth; Dundee, J. N. Brown.

ELMIRA DISTRICT.—John Parker, P. E.; Elmira, First Church, T. McElheney; Hedding Church, Wm. H. Goodwin; Southport, Daniel Leisenring; Jackson, R. L. Stillwell; Springfield, John Powell; Canton, H. Lamkin; Loyalsock, W. A. Brouson; Laporte, S. P. Gurnsey; Cherry, G. W. Coolbaugh; Frenchtown, G E. Haven; Towanda, I McMahon; Burlington, Daniel Clark; Ulster, John Hutchins; Wellsburgh, I. J. B. McKinney; Chemung, E. Sweet; Erin, George Wilkinson; Enfield, A. M. Wightman; Mecklenburg, A. C. Huntley; Hector, D. Hutchins, and J. Odell; Catharine, N. N. Beers; Havana, A. G. Laman; Millport, H. Harris: Horse Heads, N. Fellows; Big Flats, I. J. Ketchum.

---

THE COMET.—In relation to the Comet to be seen 'about these days,' Mr. W. C. Bond, of the Cambridge Observatory, wrote to the Boston Traveller of the 20th ult., as follows:—"The Comet discovered on the 10th June by M. Kinkerfues, is now visible to the naked eye, in the West at about an hour after sunset. Its nucleus is of the brightness of a star of the third magnitude; a tail of one or two degrees in length can also be distinguished, extending upward. This interesting object has been observed by astronomers for one or two months past, during which time it has been gradually increasing in brightness. Its distance from the sun is now thirty millions of miles; but from the earth it is two or three times more remote."

---

CANADIAN WHEAT.—The Dundas *Warder* says: "In many parts of the country new wheat is rapidly being brought to market. In Dundas, immense quantities of wheat have been brought in, averaging about 5,000 bushels daily. The sample is very superior. Indeed we much doubt whether a finer lot of wheat was ever seen in this or any other country than now lies on the floors of the Wentworth Mills. At the storehouse, too, at the Canal Basin, a splended lot of wheat has been delivered."

---

A FEMALE SWINDLR.—It is stated that a female at Wheeling, Va., by representing herself as the daughter of a deceased Irish gentleman, and the sudden and unexpected heiress of a large legacy, has succeeded in procuring loans and endorsements from several of the citizens, amounting altogether to $9,000, and that she purchased goods from queensware and dry good stores to the amount of $3,200, which she paid with a portion of the loans and endorsements.

---

☞ The steamer Wisconsin was run into by the propeller Brunswick on Lake Erie last Wednesday night, and was almost immediatety sunk Fortunately there were but few passengers on board, who escaped on the propeller, which sustained no damage. The Wisconsin was an old boat.

---

☞ The Pearl Street House, New York, was entirely consumed by fire on Tuesday night week. There were about 300 persons in the house, and as the fire broke out about bed time, many of the inmates escaped in their nightclothes.

## News Brevities.

—— GOV. CLIFFORD, of Massachusetts, declines a reelection.

—— Lord Elgin sailed from Quebec on Monday week, for England.

—— The Presbytery of Long Island, (N. S.,) met at Southold, on the 30th ult.

—— The spirit rapping mania has broken out at Toronto, and begins to rage fiercely.

—— 400 Norwegian emigrants, en route for Wisconsin, reached Toronto on Saturday.

—— Thirty persons have recently joined the Baptist Church in Caton, Steuben County.

—— The Ohio Women's Temperence Society is to hold a meeting at Dayton on the 21st.

—— Gough, our Temperance Lecturer, is meeting with most astonishing success in England.

—— The Buffalo Baptist Association holds its Annual Meeting, in that city, on the 14th inst.

—— Fanny Fern's late husband, Mr. Farrington, lives in Chicago, and recently got a divorce from her.

—— 160 students have applied this year for admission to the Paris schools of acting and declamation.

—— John Gee, of Cobourg, C. W., was instantly killed on Saturday by the dicharge of a fowling piece.

—— Six thousand licenses to sell liquor have already been granted for the present year in New York city.

—— Soyer's Pantropheon is announced. It is a history of food and its preparation in every age of the world.

—— The Secretary of the Navy has ordered the sloops of war, Dale and St. Louis, to be fitted for sea immediately.

—— The Whig State Committee have called a State Convention of the party at Syracuse on the 5th of October.

—— A German grocer named John Shriner, committed suicide in Buffalo, on Sunday morning, by jumping into the creek.

—— A fellow named Charles Marsh shot A. H. Myers, an attorney of Trenton, C. W., on the 25th inst., and made his escape.

—— It was Horace Green, and not Horace Greely, upon whom the Vermont University conferred the honorary degree of LL. D.

—— The Washington Republic has been sold to Wm. M. Burnell & Co., who will hereafter conduct it as a weekly paper.

—— The Evening Journal says that Governor Seward "neither asks nor desires a re-election" to the Senate of the United States.

—— The total population of Quebec, according to the census of 1852, is 40,295, all of whom but 9,118 are included in the Catholic church.

—— By the return of the interpreter of the Gardiner commission, the non-existence of the alleged mines in San Luis Potosi, is confirmed.

—— The length of the days on Mount Washington, (at the top,) are about forty minutes longer than on the ocean level in the same latitude.

—— Rev. Mr. Garretson, of Seneca county, convicted of seducing Margaret Lott, a member of his congregation, died recently in New York.

—— Prof. M. B. Anderson, formerly editor of the N. Y. *Recorder*, and recently elected President of the University of Rochester, received, at the late Commencement of Waterville College, Me., the honorary degree of LL. D.

—— The Long Island Farmer says the potato rot is raging very extensively on the island with those planted late, in consequence of the heavy rains.

—— "Grace Greenwood" (Sarah Jane Clarke) has returned from her European tour and is now in Boston superintending the printing of her "Travels."

—— The Great Ship of 4,000 tons building at East Boston, by Mr. McKay, has been named the "Great Republic." She will be launched in about five weeks.

—— By an arrival from Nassau a great failure of the crops is reported at the grand Bahamas; and it was feared the inhabitants will suffer great privations.

—— The Washington Republic says that "two terrible plagues are ravaging our country, and spreading death and terror—the Yellow Fever and the Railroad."

—— A man named Paul Granger, was run over by the cars of the Buffalo and New York City Railroad, on Thursday last, in the town of Alden, and instantly killed.

—— A printer named William J. Wier, committed suicide in New York, on Saturday, by hanging himself. An unfortunate love attachment was the cause.

—— The Powder mill of Messrs. Fairbanks & Conoly, 4 miles east of this city, was blown up on Saturday evening. No lives were lost. Loss from $5,000 to $8,000.

—— Two young men, apparently French Canadians, went to sleep on the Providence & Worcester Railroad the other night, and as might be expected, were crushed to death.

—— The cattle train down on the Boston, Concord and Montreal Railroad, on Tuesday night, numbered one hundred and ten cars. It was drawn by three engines.

—— A contemplated insurrection of slaves in Nottoway county, Virginia, has been discovered and suppressed. Their intention was to murder all the white inhabitants.

—— The Oneida Valley Bank is drawing in its 3's so nearly have they been imitated by the counterfeiters. There are now but few of the genuine threes in circulation.

—— At a recent meeting of the Tract Society in New York, it was stated that 48,448 Germans arrived in that city in the six months from the first of January to the first of July.

—— For several evenings past, a comet has been seen in the north-west, about 20 degrees above the horizon. It has a well defined tail, and may be seen with the naked eye.

—— In the whole American Church, numbering now more than 1,700 clergymen, there have, in twelve months, been seven cases of deposition or degradation, and one of suspension.

—— A movement is on foot for a secession of the Southern New School Presbyterians, on account of the slavery agitation at the late meeting of the General Assembly at Buffalo.

—— The Canada crops to the northward of Montreal are very poor; the summer drought ripened the grain before the heads had filled; the hoppers have eaten the grass; and cattle have been turned into the oats.

—— The number of Americans in Europe this summer is immense. Parties returned from Italy and Switzerland say that it is not at all uncommon to find at the large hotel tables a majority of Americans over all others.

# Foreign Intelligence.

## Arrival of the Europa.

HALIFAX, Aug. 30.

THE steamship Europa from Liverpool the 20th, arrived here at 9½ this morning. She brings 106 passengers for Boston.

The Collins steamer Atlantic from New York, arrived at Liverpool on the 19th. The Herman sailed from Southampton for New York on the 17th with 200 passengers.

In Eastern affairs no change since the announcement already received, that the Porte accepted without modification the note prepared by the four powers, and already acceded to by the Czar.

A despatch from Jassy of the 3d, says a Divan was convoked, and solicited the Hospodars to remain, the Czar having given them permission to go to Constantinople, or remain at home unmolested.

A correspondent says that Reschid Pacha had informed Austria that any occupation of Servia by Austrian troops would be regarded as a declaration of war.

ENGLAND.—The long promised debate on Turkish affairs has taken place in Parliament, which was to be prorogued on the 20th.

The Select Committee had published their report on the slave trade treaty. It is a very long and important document. The principal stress is on the Cuban slave trade. The report does not say what is to be done; but adds, "from the abuse of the American flag trading to Havana, a more cordial co-operation on the part of the United States would materially assist the effort to abolish the trade in that quarter."

Lieut. Maury lectured in London on the 16th August, before a large company of shipping interests.

The deaths of the following distinguished persons are reported:—Dr. Bramsby; the celebrated Lady Sale—the latter at Cape Town.

The French news is concentrated on reports of the Grand Fete on the 15th.

Reliable accounts say it will be necessary to import grain only for one month's consumption.

Austria has addressed a memorandum to all European governments, showing that the recent affair at Smyrna was America's first step towards the realization of the Monroe doctrine.

A despatch from Trieste of the 13th, announces a considerable decline in the price of grain in that market.

LIVERPOOL MARKET.—Cotton dull and lower, say 1-16@⅛d in some descriptions.

Corn Market—A large speculative demand for Wheat at an advance of 2d. White being quoted at 7s 6d@7s 10d. Red 7s@7s 6d.

Flour has advanced 9d@1s. Western Canal 27s@27s 6d; Philadelphia, Baltimore and Ohio 28s@28s 3d.

Corn has undergone no change. Demand for good 31s@32; for white 30s 6d. The market declined somewhat at the close.

Provisions - Beef firm and unchanged. Small business in pork, and prices firm. Bacon unchanged. Lard firm — tendency upward. Sales 55s@59s.

Money Market—There is an increased pressure, but the ratio of interest is unchanged.

In American stocks and railroad bonds, a good business has been done at good prices. U. S. bonds of '63, 110½@111½.

# California News,

## Later From California.

THE Northern Light arrived at New York, on Wednesday last, with California dates to August 1st, and $1,124,000 in specie. She connected at San Juan with the steamer Cortes, which brought down $1,308,000 in specie. The steamer Northerner, from Panama, also left San Francisco on the 1st inst., with $1,154,000 in gold dust.

During the fortnight the most prominent local event is the attempted assasination of Deputy Sheriff John A. Freanor, by a squatter named McCarthy. Mr. F.'s wound was not dangerous, and he will be about in a few days. Squatting upon private and public property has been carried on to unparalleled extent.

Throughout the State the nominations of the different parties are being made, and the political war waxes warm in the party newspapers.

The permanent brick improvements in San Francisco, have increased in an unprecedented manner. The building of the U. S. Marine Hospital is rapidly progressing.

A great many artesian wells are being sunk in San Francisco; and in many of the interior towns water works are in course of erection, to supply those places with fresh water.

The store ship Manco was burnt in San Francisco harbor on the 24th of July, together with her cargo, valued at $10,000.

The brig Pilgrim, from Santa Cruz for San Francisco, was driven ashore near Santa Barbara, on the 1st of July, and went to pieces.

David Porter, a lawyer from Virginia, was murdered near the town of Los Angelos. A man was hung near Jackson, in Calveras county, by the people, for horse-stealing.

A sixteen pound lump of gold was recently taken out of the river near Moquelumne Hill.

Joaquin, the bandit has been captured and beheaded, and all his gang either taken or dispersed.

The rust is injuring the wheat crop. Barley, corn and potatoes promise a large yield.

The present season is highly favorable to mining operations in all the gold districts. The miners seem to be generally fortunate in possessing valuable claims, which are yielding abundantly by the use of improved means for extracting the metal. From present appearances, the total production of gold for the six months commencing with the first of June, will be larger than during any similar period since the opening of the mines. This result will be effected, too, at larger profits to the miners engaged than heretofore.

A decision was rendered in the Supreme Court a few days since, that will attract attention, and create some surprise in the Atlantic States. The Court decided that the mines of gold and other precious metals of California, are the exclusive property of the State: that the United States has no interest in them, and cannot exercise any jurisdiction over them. The decision does not include the lands containing the minerals, but only the minerals themselves.

The discovery of rich placers of gold at Santa Cruz, it is supposed will have an important bearing upon the affairs of the State. Santa Cruz is situated on the north side of Monterey Bay, and the river on which the gold is dug runs through the town.

Oregon dates are to July 25th. The mines in the vicinity of that territory are not doing well, owing to the scarcity of water. The weather has been very warm. The crops promise well.

☞ The merchants of Mercersburg, Franklin county, Pa., have signed a pledge not to sell ardent spirits after the present stock is disposed of.

## China and the Japan Expedition.

THE despatches received at the Navy Department from Commodore Perry, at Shanghai, are dated May 16. He expected to sail immediately for Japan, leaving one vessel of his squadron behind, for the use of the United States Minister.—He has heard from Japan, that the Japanese are preparing to receive him through the Dutch officials, in a friendly manner, although they are increasing and strengthening their fortifications on the coast.

The information received here tends to confirm the opinion that several distinct revolutions, independent of each other, are progressing in China, and that they are likely to result in a division of the Empire into numerous states. All the movements, however, are under Christian influence.

Ringgold's North Pacific Exploring Squadron was heard from at Madeira, July 18. All well.—They are about sailing for Table Bay, Cape of Good Hope.

Despatches are also received from Commodore Shubrick and the Fishing Ground Squadron.—Still all quiet. No new developments.

HEAVY TRADE IN PEACHES.—One of the principal peach dealers estimates the daily arrival of peaches in this market at 60,000 baskets, or even more! The peach trade has been maintained to this extent for the last five days, but must soon decline. Nine steamers a day come in loaded down with from 6,000 to 10,000 baskets. A few dealers charter boats exclusively for their business.—Two run to Amboy, five to Washington, N. J., and two to Brunswick. They arrive between 12 and 2 o'clock in the morning; and at the dead of night, when the city is wrapt in slumber, the wharves of the peach steamers present scenes of the greatest activity, confusion and excitement.—Probably twice as many peaches will be brought to market this season as were last, though not as many as during the famous season three years ago, when the fruit was generally not worth more than the baskets it filled. Prices take a wide range. From two to six shillings is a common price, though baskets of very choice fruit were sold yesterday for five dollars.—*N. Y. Journal of Com.*

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Aug. 31, 1853.

SINCE the late seasonable rains we have a recurrence of bright warm weather, which revives business and fills our streets with farmer's teams. Trade in all departments appears brisk.

FLOUR.—There has been no increased activity in flour. Prices remain unchanged. Large quantities are going forward towards New York.

GRAIN—Wheat is offered freely and sells at $1,15@1,16, and in some instances prime white has brought a trifle over. Millers are receiving large quantities by boats, purchased in the adjacent villages upon the railroad and canals. Oats are in demand at 40@42c and not plenty at those prices. Corn sells readily at 65@68c. Barley 67@70c.

PROVISIONS—The trade in pork and beef barrelled is limited and steady at quotations. Butter sells at 16@17c.—Eggs 10@11c. Potatoes 50@56c.

BEEF CATTLE.—Very few are slaughtered except grass fed, and these are purchased at $4,50@5,50.

SEEDS—Inquiry is made for Clover of which the market is nearly bare, especially of the large variety. Timothy seed sells at $2. 2,50@3,50 in accordance with quality.

HOPS—We observe sales of old in New York at 33@35c. Last year at this time old crops commanded 11@17c. The weather is favorable for the growing crop.

### Rochester Wholesale Prices.

| | | | |
|---|---|---|---|
| Flour, bbl. | $5,38@5,50 | Butter, lb | 16@17 |
| Pork, mess, | 15,00@16,00 | Cheese, | 6@7 |

| Lamb skins, | 50@75 | Flour barrels, | 36@37 |

## NEW YORK MARKET.

NEW YORK, August 29.

Flour—There is increased firmness in the low grade of State and Western flour; supply moderate; fair inquiry. Sales Western Canal in part to arrive at $5,25@5,31½ for common to straight State; $5 25@5,37½ for mixed to fancy Michigan and Indiana; $5,31@5,44 for common to good Ohio.

Grain—Market for Wheat better; demand more active; sales good to prime white Genesee at $1,32@1,34; fair to good old Canadian $1,25@1,26 on the spot; fair to choice red Ohio new $1,20; fair white do. $1,26@1,27; ordinary white Ohio to arrive $1,25@1,26; Ohio and Michigan to arrive $1,29@1,30. Oats better with fair request; State and Western 49@50c. Corn better and more active, supply moderate; 72@73½c for unsound; 74@74½c for Western mixed; 73½@74c for Southern white; 75c for Jersey yellow.

Provisions—In pork prices well sustained; there is little on the market; $15,37½@15,50 for mess; $12,75@13 for prime. Lard less firm; demand not so active; sales at 11@11¾. Butter in better supply; good demand at 12½@17c for Ohio; 17@20 for State. Cheese in demand at 8½@9c.

## ALBANY MARKET.

ALBANY, Aug. 29.—The attendance was large and the amount of property offered was much larger than at any previous meeting since the commencement of the Fall trade. The demand for all leading articles was quite active.

Flour and Meal—The market for the medium brands of Western and State Flour opened buoyant with a good demand and closed at 6@12½c better, with some speculative inquiry. Fresh ground is not plenty and for this description full prices are realized. Sales at $5,15@5 25 for common to good State; $5,12@5,37 for mixed to fancy Michigan, Ohio and Indiana; $5,63@6 for extra Genesee, and $6@6,25 for do. new wheat. ## PHILADELPHIA CATTLE MARKET.

PHILADELPHIA, August 25.—Beef Cattle—The offerings this week amounted to 2,500 head, of which 500 were driven to New York. There has been an increased demand, and the sales were large, being within the range of $7,75@9 ₱ cwt. Prices are firmly maintained.

Cows and Calves—About 260 were offered, all of which were disposed of at $40@35 each, as in quality.

Hogs—800 head offered, nearly all of which were sold to city butchers at $7@7,50 ₱ 100 lbs, principally at the former quotation.

Sheep and Lambs—The supply is inadequate to the demand There were only 800 head at the yards, which were sold at $2 to $6 each, according to quality.

### A RARE CHANCE.

PERSONS wishing to add an agreeable and lucrative business, to the pleasure of traveling can have the opportunity, by purchasing the Patent right for a State, for *Mumma's Premium Corn Sheller and Vegetable Grinder.* This Sheller is certainly better adapted to the wants of the farmer than any other, as it is simple, durable and easy to work with one hand, yet it has the advantage of two cranks, or horse power. It shells *large* and *small* ears perfectly clean at the same moment, and separates the cob. It is fed moderately by the shovel, or thrown promiscuously in by hand, and is capable of shelling from 30 to 40 bushels per hour. It is also adapted to grinding vegetables for feed for stock.

Extensive sales have been, and are being made for the right for this sheller, in different States. The Proprietor will wholesale the right for one or more States, at a rate the purchaser can make *large profits*, with proper exertion. His terms will be easy, so that the buyer can soon realize the most of his money from the proceeds of sales.

Address E. ROBINSON,
192-3t Greencastle, Franklin Co. Penn.

### ALBANY DRAIN TILE WORKS,

*No. 60 Lancaster St., Albany, West of Medical College.*

THE subscriber, successor to JOHN GOTT, formerly A. S. BABCOCK & CO., is prepared to furnish Draining Tile of both Horse Shoe and Sole patterns, at from $12 to $18 per 1000 pieces. The tile are more than a foot in length, and fully equal to any of American or Foreign manufacture. They are so formed as to admit water at every joint, and drain the land perfectly from 12 to 20 feet on each side, according to the nature of the soil.

Also, LARGE TILE for drains about dwellings, yards, &c., at from $4 to $8 per 100 pieces. These are cheaper and more durable than brick drains.

Full directions for preparing ditches, laying tile, &c., will be sent free to those addressing the subscriber, post-paid. The tiles can be sent safely any distance. Orders are respectfully solicited. DAVID CALLANAN,
192-3t Albany, N. Y.

### STRAWBERRY PLANTS.

R. G. PARDEE has on hand strong plants of McAvoy's Superior, McAvoy's Extra Seed, Walker's Seedling, Moyamensing Pine, Monroe Scarlet, Genesee Seedling, Lizzie Randolph, and Crescent Seedling Strawberries. The first $1 per dozen, the rest 75cts per dozen, except the Cresent Seedling which is $1,50 per dozen.—Hovey's, Burr's New Pine, Black Prince, Early Scarlet, Crimson Cone, &c., for 25 cts. per doz. Willey, Cornucopia, Jenny's Seedling, Alice Maud, &c., for 50 cents. per dozen.

Orders can be addressed to R. G. PARDEE, 30 Vesey St., New York, or to Messrs. W. E. & T. SMITH, Geneva, N. Y. 192-1t*
Sept. 1, 1853.

### FRUIT AND ORNAMENTAL TREES, &c.

THE Subscribers have the pleasure of announcing an immense stock of trees, &c., for the Autumn trade, embracing

**Standard Trees for Orchards.**
**Dwarf and Pyramidal Trees for Gardens.**
**Ornamental Trees** for streets, parks and pleasure grounds.
**Rare and beautiful Lawn Trees.**
**New and Rare Weeping Trees.**
**Evergreen Trees,** embracing the rarest species of Pines, Firs, Spruces, Yews, Cedars, Junipers, &c.
**Hardy Flowering Shrubs.**
**Roses,** of all classes and embracing the newest and best sorts.
**Dahlias,** the finest English prize sorts.
**Chrysanthemums,** including the finest of the new pompone varieties.
**Phloxes,** and Peonies, superb collections.
**Bedding Plants,** a complete assortment.
**Bulbous Roots,** just imported from Holland and of the first quality.
**Hedge Plants.**
**Box Edging.**
**Rhubarb, Asparagus, &c., &c.**

The favorable season has given everything a vigorous and fine growth.

All orders, whether for large or small quantities, executed with the greatest care and in strict compliance with the wishes of the purchaser.

Packing done in the most secure and skillful manner, so that parcels can be transmitted thousands of miles with safety.

Nurserymen and dealers in trees will be supplied on the most reasonable terms. The following Catalogues are sent gratis and pre-paid to all who apply and enclose one postage stamp for each. No. 1. Descriptive Catalogue of Fruits. No. 2. Descriptive Catalogue of Ornamental Trees, &c. No. 3, Descriptive Catalogue of Dahlias, Greenhouse Plants, &c. No. 4, Wholesale Catalogue.

ELLWANGER & BARRY,
Mount Hope Nurseries, Rochester, N. Y.
Sept. 1, 1853. 191-3t

### CLOVER STREET SEMINARY.

THE Fall Term of this Institution will commence Sept. 12th, and continue 15 weeks. After a vacation of the Holidays there will be another term of 15 weeks, closed by the Annual Examination.

TERMS.—Prices for board, room rent, furniture, fuel, washing and tuition in the common branches, $45,00 per term. Students are expected to furnish their own lights and table napkins.

Pupils expecting to join the Teacher's Class must enter the first week of the term, to ensure the payment of their tuition bills by the State. Circulars may be found at WANZER & Co.'s, 24 Buffalo street, Rochester.

J. H. COGSWELL,
191-4t Secretary of Board of Trustees.

**TO BOOKBINDERS.**—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,

F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

### THE NEW SINGING BOOK READY!
### THE SHAWM.

A COMPLETE LIBRARY OF CHURCH MUSIC, containing about ONE THOUSAND Tunes, Anthems, Chants, Set Pieces, &c., including a new and original Sacred Cantata or Oratorio, entire.

By WILLIAM B BRADBURY and GEORGE F. ROOT, assisted by THOMAS HASTINGS and T. B MASON.

Every teacher of music and leader of a choir, should examine this new work. The union of so many distinguished authors, has secured for it an unprecedented variety and richness of new as well as old material, with several important original features, which give it peculiar interest.

Any professional musician, desiring a copy for examination, can have it sent to him free of postage, by remitting 60 cents to the publishers. MASON BROTHERS,
191-3t 23 Park Row, New York.

### SALE OF IMPORTED STOCK.

"THE MADISON COUNTY IMPORTING COMPANY," will offer for sale to the highest bidder, on the 27th of September next, their entire herd of stock, which has been selected by the first judges from the best herds of England, and imported with great care. Their stock consists of 21 head of pure bred Short Horns—11 Bulls from 1 to 3 years old, 8 Cows and Heifers, and 2 Calves; 20 Leicester Sheep, and 12 Suffolk Hogs.

The stock can be seen and examined at this place at any time until the day of sale. Catalogues giving names and pedigree, can be had by addressing the Secretary, at this place, or at the office of the Ohio Cultivator, Columbus, after September 1st.

Sale to commence at 10 o'clock, A. M.

JESSE WATSON, President.
J. T. LACY, Secretary. 191-2w-1m
London, Madison County, Ohio, August 20, 1853.

*LABOR SAVED!*

### MUMMA'S PATENT CORN SHELLER.

THIS Sheller is pronounced by competent judges, to be superior to all others, as it is quite simple and durable in its construction, and shells the ear PERFECTLY CLEAN from end to end, with great rapidity and ease. It separates the cob from the corn, which is a very great advantage, and is adapted to either hand or horse power, and capable of shelling from 30 to 40 bushels per hour. It has shelled a bushel in a minute, by hand power. It runs as light, with one man to turn, as the common hand shellers. From the peculiar construction of the cylinder and springs, it will shell LARGE and SMALL ears perfectly clean at the same moment, of either new or old corn, an advantage not possessed by the multitude of shellers in general use.

This machine has met with the universal approbation of all classes of men wherever introduced. It was awarded the FIRST PREMIUM, a heavy SILVER MEDAL, at the great Fair of the Maryland Institute, held in Baltimore, October, 1850.

It also received the HIGHEST PREMIUM which was awarded at the great Agricultural State Fair of Pennsylvania, held at Harrisburg, October, 1851. Also, at the State Fair of Kentucky, in 1852.

From the great number of recommendations in its favor, we have room only for the following:

From the Hon. J. C. Dickey, Member of Congress, from Pennsylvania.

WASHINGTON CITY, March 3, 1851.

I take pleasure in certifying that I have on various occasions, seen in operation Mr. J. Mumma's Patent Corn Sheller, and that it appeared to me to shell much faster, and do the work CLEANER and better than any machine of which I have any knowledge. JESSE C. DICKEY.

From J. W. Davies, Corn Merchant.

BALTIMORE, November 5, 1850.

MR. E. ROBINSON—Sir: Having seen in operation Mr. J. Mumma's Patent Corn Sheller, I take pleasure in stating, that I consider it a superior sheller to any other now in use, as it leaves the corn *unbroken*, and consequently, more suitable for shipping or market. J. W. DAVIES.

From several Gentlemen, Practical Farmers of Pennsylvania, who have the machine in use.

We, the undersigned, after using Mumma's Patent Corn Sheller, can recommend it to the farming community as having been found equal in every respect to what it is represented to be. It is, indeed, a labor-saving invention, and therefore of incalculable benefit to those who may have use for such machines.

JOHN RUP, Dauphin County.
JOS. HUMMEL, " "
JOS. HERSHEY, " "
J. GARRET, Lebanon County.
G. MYERS, " "
BENJ. CHEW, Cumberland County.

From Messrs. Burk & Ovelman, Machinists.

GREENCASTLE, Pa., June 1, 1853.

MR. E. ROBINSON—Sir: We take pleasure in informing you that we have been making Mumma's Patent Corn Sheller, and find them ready sale. The farmers are better pleased with them than any other in use, and as for our part, we consider them much better than any we have ever made, and we have made almost all kinds.

BURK & OVELMAN.

From J. H. Hills, Esq., Practical Miller.

VERNON VILLAGE, N. Y., June 21, 1853.

This may certify, that I have seen in operation and examined a Corn Sheller, patented June 12, 1849, by Jacob Mumma, and that I consider it much the best of any with which I am acquainted. J. H. HILLS,
Vernon, Oneida Co., N. Y.

From Messrs. Cowing & Co., Garden Engine and Pump Manufacturers.

Seneca Falls, N. Y., July 2, 1853.

TO WHOM IT MAY CONCERN—We have made a brief examination of Mumma's Patent Corn Sheller, and we consider it better adapted for farmer's use than any machine of the kind we have ever seen. COWING & CO.

The subscriber having purchased the Patent right of the above Sheller for all the United States and Territories, will sell Township, County or State rights, on reasonable terms. E. ROBINSON.
Greencastle, Franklin Co., Pa., June, 1853.

### ACADEMY AT OVID.

THE Fall term of this Institution will commence on Wednesday, September 14th, and continue fourteen weeks. This School is open to youth of both sexes.

Instruction is given in both the ancient and modern languages; in General Agricultural Chemistry; in Civil Engineering, in Music, and in all branches of study pursued in the most approved Schools in the country.

Lectures are given on Chemistry, in all its branches; Physiology, Natural Philosophy, the science and art of Teaching, and on Morals.

The Board of Instruction consists of Rev. AMOS BROWN, EDWIN PIERCE, WILLIAM H. BREWER, GEORGE B. VOSE, and Misses ISABELLA MEAD and ANGELINA JAMESON. The Gentlemen are all of them graduates of some of the best New England Colleges, and the Ladies have proved themselves entirely competent to their stations.

Charge for instruction on the Piano Forte is $10 per quarter, and $1 per quarter for French, Painting, or Drawing, &c.

Pupils boarding themselves, or with their particular friends, are charged $4, $6 and $7 per term of fourteen weeks for tuition, according to the studies pursued.

The Trustees beg leave to assure the public, that no measures on their part will be spared to make this a FIRST CLASS INSTITUTION. They will immediately erect additional buildings to be used as a boarding house for Young Ladies, Chapel, &c., at a cost of $10,000 or more, and will make all other necessary improvements.

Catalogues with an appendix, affording all requisite knowledge of the School, will be sent to persons requesting it, on application to Rev. A. Brown, Principal.

HALSEY SANFORD, Sec'y.
Ovid, August 10th, 1853. 190-4w

### ATKINS' SELF-RAKING REAPER.

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.) J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

### SUFFOLK PIGS.

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address

JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.
Boston, August, 1853. 190–13w-1m

### Hickok's Patent Improved Cider Mill and Press.

WE have been appointed sole agents for the sale of this Mill and Press in the city of New York. This is the most approved mill now in use. Catalogues, with description and drawing will be forwarded by addressing us post-paid. Price $40. LONGETT & GRIFFING,
187-3t 25 Cliff St., New York

### N. Y. State Agricultural College.

THIS Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
HON. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

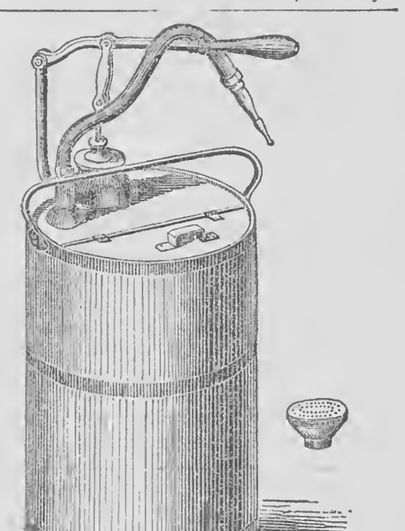
The Trustees may be addressed (post-paid) at their respective residences, as follows:

HON JOHN A. KING, Jamaica, Queens County.
HENRY WAGER, Westernville, Oneida "
B. P. JOHNSON, Agricultural Rooms, Albany.
WM. KELLY, Rhinebeck, Duchess Co.
N. B. KIDDER, Geneva, Ontario Co.
JOEL W. BACON, Waterloo, Seneca Co.
TALLMADGE DELAFIELD, Geneva, Ontario Co.
WM. BUEL, Rochester, Monroe Co.
JOHN DELAFIELD, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*



WE offer for sale, the most durable and efficient machine for watering Gardens, washing windows, &c., that has ever been made. The interior parts are made wholly of brass and copper, and not at all liable to rust or dry up. The price is $13, warranted. For sale by the subscribers, and at most of the Agricultural Warehouses in the Union. WM. G. CREAMER & CO.,
Plumbers and Hydraulic Engineers, 64 State street, New Haven, Conn., and 4th Aveuue cor. 9th St., New York.
185-8t.

### GARDEN OR FIRE ENGINE.

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.
Seneca Falls, N. Y., June, 1853. 183w10

### THE JUVENILE INSTRUCTOR,
BY UNCLE LUCIUS, Syracuse.

A SEMI-MONTHLY PAPER, expressly for children. It aims to attract their attention by simplicity and beauty of style, and to intuse into the young mind appropriate sentiments of piety and love for parents—sympathy for human suffering, and an abiding hatred of oppression in all its forms. It ought to be circulated over the entire Union, for this last reason. There is much at stake in the question of freedom, and but little said or done to effect favorably the youthful mind. Within the State of N. York, the postage is 6 cents per year, paid at the office where it is received. In all other States, 12 cents yearly. In packages of 24 or more the postage, if pre-paid at the office of publication, is about 4 cts on each paper.

Price per year—single copies, 25c.; Five to one address, $1; Ten do, $1,70; Twenty do, $3; Thirty do, $4,20; Fifty do, $6,50; One hundred do, $12.

Address LUCIUS C. MATLACK,
183m3. Syracuse, N. Y.

### ROCHESTER STEREOTYPE FOUNDRY.

THE undersigned would respectfully inform the public—and especially book and periodical publishers, authors, &c.—that he has established a STEREOTYPE FOUNDRY in Rochester. His establishment is furnished with every facility for Stereotyping, in the best manner, Books, Pamphlets, Periodicals, Cuts of all kinds, (including figures of animals, implements, etc.) Patent Medicine Advertisements, &c., &c. Plates blocked in a superior style on mahogany. All work executed with promptness and on reasonable terms, and equal in style and finish to that done at any other Foundry in the country.

An establishment of this kind has long been a desideratum in this city, and now that one is in operation, it is hoped a liberal share of patronage will be awarded to the enterprise.

☞ Foundry in Talman Block, Buffalo street. All orders from a distance may be addressed to

J. W. BROWN,
April, 1852. [122-1am-tf] Rochester, N. Y.
N. B.—Old type taken in exchange for work.

### DAGUERREOTYPES.

THE Subscriber continues the business of Dagnerreotyping, at his old stand in Chappell's Block, 82 State-st. Grateful for past favors, he will, as heretofore, adhere to the motto, that "whatever is worth doing at all, is worth doing well,"—trusting therein for a continuance of public patronage. Pictures copied, and all other work done in the highest style and finish known to the Art.

Rochester, Jan., 1853. [162-0am] S. B. SMITH.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

# Poetical.

## THE HUSBANDMAN.

Earth, of Man the beauteous Mother,
Feeds him still with corn and wine;
He who best would aid a brother,
Shares with him these gifts divine.

Many a power within her bosom,
Noiseless, hidden, works beneath;
Hence are seed, and leaf, and blossom,
Golden ear and clustered wreath.

These to swell with strength and beauty,
Is the royal task of Man;
Man's a king, his throne is duty,
Since his work on earth began.

Bud and harvest, bloom and vintage,
These, like man, are fruits of earth;
Stamped in clay a heavenly mintage,
All from dust receive their birth.

Barn and mill, and wine-vat's treasures,
Earthly goods for earthly lives;
These are nature's ancient pleasures,
Which her child from her derives.

What's the dream but vain rebellion,
If from earth we sought to rise?
'Tis our stored and ample dwelling,
'Tis from it we see the skies.

Wind and frost, and hour and season,
Land and water, sun and shade,
Work with these, as bids thy reason,
For they work thy toil to aid.

Sow thy seed and reap in gladness!
Man himself is all a seed;
Hope and hardship, joy and sadness,
Slow the plant to ripeness lead.

# Rural Sketch Book.

## THE PRINTER'S SECRET.

"You can take this case," said the foreman; "here is a stick—here is some copy; and if you would like a quiet and steady partner, you will find this gentleman still enough in all conscience."

The "partner" merely looked up and faintly smiled in acknowledgement of the foreman's compliment, and kept on with his work; while the foreman turned away to attend to something else.

We worked on steadily until dinner, as we were in a hurry to get the paper up, without exchanging a word, or even a look. In the afternoon I had more leisure to study the physiognomy of my neighbor. He was a young man of about three or four and-twenty, with handsome features and a rather intellectual cast of countenance. His face was quite pale, and the raven darkness of his hair, eyebrows and eyes, made me immediately come to the conclusion, after thoroughly studying his physiognomy, that he was a hard student during his leisure hours, or that, depriving himself of the recreation of books, or other sources of enjoyment, he spent all his waking hours at the case. The latter supposition time proved correct.

As day after day passed by I became more acquainted with him; and I found him to be a singular character. Beneath his stand he had constructed a kind of closet, which contained a spirit lamp, a mattress with bedding, a few cooking utensils, and a small stock of the plainest kind of food. When the hours for meals arrived, he would light his lamp, and putting some food over it to cook, would work until the rest of the hands had left the office, when he would sit down to his frugal repast. He worked incessantly during work hours, hardly leaving the office, unless to purchase food or upon some errand of that kind. Morning, noon and night, when I returned from my meals, I invariably found him at the case, working away with all his might, as if some great issue depended upon the improvement of every minute. I suppose he slept upon the cot which he kept in his closet; but as he was always at work when I left at night and when I returned in the morning, I could not positively assert that he did so. I am not very garrulous, especially when employed at the case, and as he would not first address me, I would not speak to him; so while the fun and joke were passing round the other cases, we were silent as the grave. I was not long in discovering that there was some mystery connected with him, and that his intense application to labor was not prompted merely by a desire to make money; for if there is anything in phrenology, judging from the formation of his head, he was the very one whom I would have selected from a score for a spendthrift. Occasionally his cheeks would flush, his eyes light up, and a happy smile overspread his countenance; then the smile would go away, his eyes would fill with tears, while an expression of sadness—almost despair—would seat itself upon his countenance. I have been tempted a thousand times to ask him the cause of this, but as he appeared so cold and insolated I refrained from doing so, as it is not pleasant proffering sympathy unasked.

"Well, how do you like your neighbor?" asked one of the journeymen of me as we were descending the stairs one evening.

"I can hardly make him out," said I; "he appears to be a strange sort of being. You are better acquainted with him than I; how do you like him?"

"For my part, I hate him, and what is more he has not a friend in the whole office. That fellow has been here for three months, and he has hardly spoken to any one. A man who makes such bills as he does, and hoards up his money like a miser I have very little friendship for. We wouldn't any of us care so much if he would be a little sociable and spend a dollar, or even a dime occasionally; but no—every five-cent piece he gets he hangs on to as if he was afraid the eagle on it would spread his wings and fly away with it, doing him out of a five cent piece. But he can't stay here long.—We have insulted him a dozen times; and he has less spunk than I think he has if he don't resent it some day. We'll get him into a quarrel then, and have him discharged."

"But," said I, "do you know anything about his history? He may have some all-absorbing end to accomplish, which is the cause of his untiring assiduity. You sho'd have a little charity for the fellow, and taking Crockett's motto, 'be sure you're right before you go ahead.'"

"No, we know nothing of him; and if circumstances are as you suppose, it will be his own fault, if they are discovered too late, for we have tried often enough to scrape an acquaintance with him. You had better not take up on his side if you do not wish to incur the displeasure of the whole office.—Good night."

I had some charity for the fellow and was resolved to see him righted should he get into difficulty. I soon saw that he was very unpopular, and that I, as I felt rather disposed to make allowances for him, was considered his friend. Many were the jokes cracked at our expense; whenever the "Quaker corner" (as the place occupied, by us had been dubbed) was mentioned, an universal titter ran round the office. Those little things irritated me some, but as I was not the principal object at whom these arrows were aimed, I resolved to forbear and let him be the first to speak.

"I say, fellows," said a rowdy looking customer who went by the name of Zeke; "do Quakers ever have camp-meetings?"

"Yes," answered another, "they have a camp-meeting over there in Quaker corner every night. That fellow camps out upon the floor every nap he takes."

"Well," said another, "I've heard of boarding at the market house and sleeping on the bridge, but I never saw an illustration of it before.

"Wonder if they wouldn't take in boarders?" asked the first speaker; "I'll see if they don't want the rules and regulations of the house printed; if they do I'll board out the bill."

I glanced at my neighbor to see how he bore this ridicule. His face was flushed and his lips firmly compressed, as if to choke down the rising indignation. But he said not a word; I fancied, however, that he picked up the type faster than usual.

Things could not go on in this way much longer, for as godlike a quality as forbearance is, it cannot hold out against everything. I saw that a storm was gathering and prepared to act my part as a man when it burst forth.

It was Saturday afternoon; the hands were ranged round the "stone," with their bills in their hands, waiting to be paid off. "Quaker" happened to be at one end of the "stone," and immediately opposite him stood "Zeke." As usual, "Quaker" was the "observed of all observers," and sly whispers, which were answered by a titter or a nudge of the elbow, passed round the group. As the foreman paid "Quaker" the amount due him, he gave him a new quarter dollar to make out the change. This did not escape "Zeke's" eye, and he said, in a tone to be heard by all—

"If the eagle on that quarter had life and I were a State prison convict, I would not swap places with it, for my confinement would be far preferable to being squeezed to death."

This was the hair that broke the camel's back. With the exclamation "you scoundrel!" he made one bound, and with a stunning blow brought "Zeke" to the floor.—Then jerking off his coat, and placing himself in a fighting attitude, he turned to the astonished group with "come on now you cowardly ruffians. If you cannot let me alone peacably I will make you do it by force. I have borne your insults long enough, and if you have any more to offer, come on with them!"

This challenge was sufficient. Coats came off and sleeves were rolled up in a minute. I saw my friend would be apt to get the worst of the fight, and forcing him into a corner, I exclaimed—

"Gentlemen, one word if you please! It would be cowardly for you all to attack this man; I will not see it done. And if you will attempt it I have something here (tapping my breast significantly) that will stop it. He is not to blame; he has only resented an insult, which any of you would have done. You have all insulted him because he has conducted himself strangely; let him explain his conduct, and perhaps we can make-up our quarrel. He owes you an explanation—if not to you, he certainly does to me. And, now, sir," said I, turning to him, "I demand it of you as a right."

He hesitated a moment. "Come, my friend," said I, "let us have it, whatever it is, and at once put an end to this quarrel."

"Well, gentlemen," he said, "I am not disposed to lay my private affairs open to public gaze, but I suppose I must do it for once. You must know, then, that from my earnings I must not only support myself, but my mother, two sisters and three small brothers, who reside in a distant State. I could earn enough at home to support them well, but my reason for coming here is this: One of my sisters who is now a beautiful girl of sixteen, and the pet of the family, has been blind from birth. We had no hope of her ever acquiring the faculty of sight, and were content to abide by what we thought a dispensation of Providence. But recently I have seen a case similar to hers—a young man—who was restored to sight by an eminent physician of Paris. I have corresponded with that physician, and he has high hopes that in my sister's case he can effect a cure. This, gentlemen, is what I have been laboring for since I have been here—to raise funds sufficient to take her to Paris. I love that sister as I do my own life; I have labored day and night—have deprived myself of many comforts, and borne your taunts and jeers for her sake. But I can bear it no longer. If you are men you will desist; if you do not, I warn you to beware of the consequences!"

"Zeke" had risen to his feet and heard all my friend had said. As he listened to the "Quaker," I could see the moisture coming to his eyes; and when he had finished he stepped forth, and grasping "Quaker's" hand, while the tears trickled down his face, he said, in a voice quivering with emotion—

"My noble fellow, we have wronged you deeply, and I for one ask your forgiveness. Had you but told us what your object was we would not have placed a single obstacle in your way."

"I forgive you freely, sir—I forgive you all," said the "Quaker."

"And how much have you to raise yet, I asked, "before you will have the requisite sum?"

"About one hundred and fifty dollars. If I have my health, and continue to make good bills, I shall be ready to start for Europe in about two months."

"You won't have to wait that long," said "Zeke," laying the money he held in his hand upon the stone, "if my week's wages, every cent of which you're welcome to, will help you along any. Come boys," he added, "how many of you will follow suit?"

"Well, there's mine," said Jim, laying an X upon the pile, "and mine," "and mine," "and mine," said a dozen voices, as each hand deposited an equal amount, until they had made quite a pile of bank bills.

"There, stranger, take that, and may God prosper you," said "Zeke," tendering him the money.

"No, gentlemen," answered the "Quaker," "I thank you for your liberality, but I can not take take your money. I am no beggar; all I ask is, that I may be allowed to do my work without being disturbed."

"But you must take it," urged "Zeke," growing warm; "we owe it to you, and you shall take it. We've done you a great wrong—we've abused you—and we have no other way of making amends. Beside, if you don't take it, it will be spent before Monday morning, and I know that for my part it will be much pleasanter to commence the week with the consciousness of having appropriated my money in a sensible way than with the foggy head, aching limbs, and empty pockets, which always follow a 'free and easy.'"

Still the stranger hesitated.

"Take it—take it for your sister's sake," said two or three voices.

"I accept it, gentlemen," said the "Quaker," "as you say, 'for my sister's sake,' and I hope to be able some day to return it, principal and interest."

"Quaker" left for Paris shortly after; and in a few months we had the satisfaction of hearing that his sister was completely restored to sight, and that they were on their way home.

I have heard from him several times since. His "lines have been drawn in pleasant places," and he is now a judicial functionary in a neighboring State—Kentucky.—*Aurora Standard.*

## STRANGE JEWISH CUSTOM.

From a recent work on the modern Jew, we extract a passage which shows the tenacity with which the Jews cling to the letter of the Mosaic law, and which throws light upon a well known requirement of that law:

The Jewish wife, as well as her Gentile neighbor, may become a widow. When such happens and she be without issue, it is the duty of the husband's brother to take her in marriage, or to set her free to marry any other person; this ceremony of giving her leave to marry another, is called Chalitzah, i. e. the taking off of the shoes, and is founded on Deut. xxv. 5, 10. Should the living brother be born after the decease of the dead brother, he is not under obligation to marry his sister in-law; or should he be already married, he is not only expected to put her free, for without this freedom she cannot marry a second time. This ceremony is performed in the following manner: The parties having informed the authorities of the fact, it is announced in the Synagogue in the evening that a Chalitzah will take place the following morning. After the morning service, according to the announcement, three Rabbies, the required witnesses, and the parties, meet; after hearing their statement, the Chief Rabbi questions the young man, and when he finds him determined not to marry his brother's widow, calls for the shoe. This shoe is of a peculiar make, and used for this purpose only. It is made of black cloth list, of pointed form, and two long laces attached thereto; it is always kept in the Synagogue.

When brought forward, the Rabbi commands the man to put it on, after doing which, he twists and ties the laces around his leg. The woman is then led up by the Rabbi to the man, and taught to repeat the following in Hebrew:—"My husband's brother refuseth to raise up unto his brother a name in Israel; he will not perform the duty of my husband's brother." In answer, he repeats:—"I like not to take her." The woman then unravels the knots, which is rather a troublesome affair, as she must do it with her right hand only,—takes off the shoe, throws it upon the ground, and spits before the man, repeating, after the Rabbi the following:—"So shall it be done unto that man that will not build up his brother's house: and his name shall be called in Israel, the house of him that hath his shoe loosed." All those present respond, "His shoe is loosed! his shoe is loosed! his shoe is loosed!" After this the Rabbi declares the woman free to marry whomsoever she may, and the secretary of the Synagogue gives her a writing to that effect, when the ceremony is over.

## GYNEOPATHY, OR WOMAN CURE.

BY JOHN G. SAXE.

I saw a lady yesterday,
A regular "M. D.,"
Who'd taken from the faculty
Her medical degree;
And I thought if ever I was sick,
My doctor she should be.

I pity the deluded man
Who foolishly consults
Another man, in hopes to find
Such magical results,
As when a pretty woman lays
Her hand upon his pulse.

I had a strange disorder once,
A kind of chronic chill,
That all the doctors in the town,
With all their vaunted skill,
Could never cure, I'm very sure,
With powder nor with pill.

I don't know what they called it
In their pompous terms of art,
Nor if they thought it mortal
In such a vital part—
I only knew 'twas reckoned
"Something icy round the heart."

A lady came—her presence brought
The blood into my ears;
She took my hand—and something like
A fever now appears!
Great Galen! I was all aglow,
Though I'd been cold for years!

Perhaps it isn't every case
That's fairly in her reach,
But should I ever be ill again,
I fervently beseech
That I may have for life or death,
A lady for my "leech."

Epigramatic Courtship.—A certain Mr. Page, rather an ancient beau, charmed by a youthful fair one, sent her a glove, with these lines:

"From Glove, cut off the initial letter G,
Then Glove is Love, and that I send to thee."

The lady, who doubtless considerd her youth and beauty too valuable to be bestowed on a suitor so antiquated, returned the glove with the couplet—

"From Page cut off the initial letter P,
Then Page is Age, and that won't do for me."

A Good One.—There is a lawyer in Dearborn county, Ia., known no less for his eccentricity than for his legal lore. Many are the anecdotes told of him. A man once went to him to be qualified for some petty office. Said he "hold up your hand, I'll swear you, but all creation couldn't qualify you."

Editor's Perquisites.—An editor in South Carolina returns his acknowledgments to a married pair for their remembrance of him upon the occasion of their wedding. The "remembrance" came in the shape of a bottle of ginger beer and two hard-boiled eggs.

Three Tests.—There are three things a woman cannot do—to pass a bonnet shop without looking in, to see a baby without kissing it, and to admire a piece of lace without inquiring how much it is a yard.

"Have you much fish in your bags!" asked a person of a fisherman, who was returning home. "Yes, a good *eel*," was the rather slippery reply.

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

## ENIGMA.

I am not seen, though often heard
With trembling and with fear;
Sometimes I'm gentle as the bird
That blithly skims thro' air.

At other times I'm fierce and wild,
And mischief's in my way;
Again, I would not hurt a child,
But help it in its play.

My aid to merchants oft has been
The means of greatest gain;
And yet, as oft, as may be seen,
Loss follows in my train.

North Ridgeway, N. Y. Hafiz.

## ANSWER TO ENIGMA, &c., IN NO. 35.

Answer to Historical Enigma—*James Montaubiert Lawrence.*

Answer to Poetical Enigma—XX—X=X.

Answer to Chemical Enigma in No. 34—My first eighteen is *Hydrosulpuric Acid.* My last six is *Oxygen.*

Answer to Enigma in No. 32:

Without that little fellow at the end of your first,
Do you mean to tell us that "Time can't exist?"
Perhaps you're mistaken, for if rightly I seek
There still would be left us, *four days* in each week;
And through the bright seasons, 'tis still very clear
We might yet enjoy *nine months* of the year.
Do you tell us your *Hero* is in every *battle?*
Perhaps so, where pistols and muskets do rattle,
But bring out a cannon, your *hero* has left,
Of all his vain glory and courage bereft—
He now heads the tyrant's and tory's bold band,
And with topers and tiplers has taken his stand.
He never was leader of the *wise* or the *good;*
He's at both ends of tophet, let him stay where he should.
Though always employed in the making of *toys,*
He's a *cross* looking fellow, awakening no joys;
He never was cheerful—and never will sing,
You'll find him with *pickpockets* in each *little thing:*
You'll find him engaged in every street fight,
But he comes like a thief at the end of the night.
Perhaps *you* would place him at the head of all *Thinkers,*
But then I would make him a captain of *Tinkers;*
Still let us remember, through all this sad fate,
Without him *these poets* could never be *great.*

South Butler, N. Y., August, 1853. Alonzo.

☞ PEOPLE'S COLLEGE OF THE STATE OF NEW YORK, INCORPORATED APRIL 12, 1853.—This institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. McCallum, of Owego, President of the Board of Trustees.

A. I. Wynkoop, of Chemung, Vice President.

Tracy Morgan, of Binghamton, Treasurer.

Harrison Howard, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

188-tf H. HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

**Improved Portable Cider Mill and Press.**

HICKOK'S Improved Portable Cider Mill and Press, received the following premiums in 1852, viz.:—A Silver Medal at the Fair of the American Institute, N. York. Diploma at the Franklin Institute, Philadelphia. First premiums at the State Fair at Utica, and at the Columbia and Rensselaer County Fairs, and diploma at the Westchester County Fair.

Descriptive circulars sent free to all post-paid applications. See page 251 of this paper, for engraving. Price, $40.—and all persons living near Rochester or away from any agency, may order of me, and when they get the mill they may deduct the freight and remit the balance to me.

Manufactured by W. O. HICKOK, Harrisburg, Pa.

Sold by LONGETT & GRIFFING, 25 Cliff-st., N. Y.
EMERY & CO., Albany.
DANA BROTHERS, Utica.
PROUTY & CHEW, Geneva.
HIGGINS & CALKINS, Castile, Wyoming Co.
C. E. YOUNG, Main-st., Buffalo.
O. GREGORY, Binghamton.
CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-8tw1m

SPRINGFIELD, Ohio, May 1, 1852.

Mr. W. O. Hickok: *Dear Sir,*—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses my machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It surpasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

**PROF. BROWN'S NEW STORE,**
**With New Goods, and Enlarged Accommodations**

CITIZENS OF ROCHESTER and Surrounding Country:—Grateful for past favors, I hope for a continuance and increase of the same. The front part of the store is exclusively for the sale of Goods; the rear for Shaving and Hair Cutting; the basement is a private room, divided into two, for the purpose of Coloring the Human Hair.

Gentlemen's Furnishing Goods.—Every article in this line. Collars of the latest make, and a larger stock than can be found elsewhere in this city.

Hair Work of every kind—the largest assortment made from the best materials, and shall be sold at the lowest prices. Perfumery, of my own and foreign make. Hair Oils that cannot be excelled. Brown's Antispassis and Hair Restorative, a well known article. Brown's Liquid Hair Dye, the best in the world.

A variety of Useful and Ornamental Articles too numerous to mention, at retail, but which I respectfully invite the public to examine.

Fishing Tackle.—Sportsmen, call and see.

To Ladies.—A lady will be in attendance in the front Store.

☞ Eight Chairs are kept in this establishment, giving that number of persons a chance to be shaved at once.—Nine persons are employed, showing the popularity and success of the proprietor. PROF. BROWN,

[129-tf] No. 26 Buffalo St., Rochester, N. Y.

**MARSHALL'S BOOK BINDERY,**

BURNS' BLOCK corner of State and Buffalo street, over Sage & Brother's Bookstore, Rochester, N. Y.

Music Books, Pamphlets, Periodicals, &c., bound in plain and fancy bindings; old books rebound. Blank Books ruled to any pattern, and bound to order; Public and Private Libraries repaired at short notice. Packages containing directions for binding, punctually attended to.

N. B.—All work warranted, and done at low prices.

April, 1852. [122tf] F. H. MARSHALL.

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred Suffolk Pigs for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,

June, 1853. [186m3] Walpole, N. H.

**MOORE'S RURAL NEW-YORKER:**
A WEEKLY HOME JOURNAL,
**For both Country and Town Residents.**

PUBLICATION OFFICE,
Burns' Block, corner State and Buffalo Sts.,
Rochester, N. Y.

TERMS, IN ADVANCE:

Two Dollars a Year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Terms of Advertising

One Dollar per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the New-Yorker is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the Wool and Cattle Markets, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

## Progress and Improvement.

### GUANO.—PROPERTIES AND APPLICATION.

WITHIN a few years the attention of farmers has been called to a new fertilizer which is claimed to possess properties of more than ordinary value, strongly commending it to popular favor. We are aware of no fertilizer that has been so readily introduced into use, none for which so much has been claimed, or one about which so little is really known by the mass of farmers. Consulting all the authorities to which we have access, we propose, at the risk of saying things which have been better said before, to offer such facts and suggestions as, to our apprehension, shall prove valuable to the readers of the RURAL.

Peruvian Guano has been most favorably known. The best is said to be obtained from the Chincha Islands, some twelve miles distant from the coast of Peru. The islands, three in number, five to six miles each in circumference, are covered in some places to the depth of two hundred feet, in successive layers of a few inches, varying in color. For centuries have the birds on the coast been depositing guano, only a few inches each year, until the mass has become almost inexhaustible. In many places no earthy matter is mixed with the deposit, and it has become so hard as to require blasting, like rocks, to effect its removal.

Guano is also obtained from the coast of Patagonia, from Africa, and from Mexico, as well as from other places. It has been extensively used in England, and in some parts of the United States, but its great cost has thus far deterred many, except gardeners, from testing its value by a practical application to their gardens or fields. The most that is known concerning it, is the knowledge of its constituent properties as shown by the analysis of different chemists, such men as LIEBIG, URE, JOHNSON, WAY, and others—from which we learn that Peruvian Guano is rich in ammonia, and in phosphates—combinations of lime, magnesia, potash or soda, with phosporic acid—substances which are essential as food for plants and grain, and without which soils would be shorn of most of their value.—Plants derive a large supply of ammonia from the atmosphere, being absorbed by soils. If the soil so absorbing the ammonia contains iron and clay, they combine and form a valuable salt, which is readily solvent and easily appropriated as food for plants. Several specimens of Peruvian Guano, in an undamaged and unadulterated state, were found to possess—of Ammonia, 17.41 per cent.; phosphate of lime, 24.12, and of potash, 3.50. It is sold in England and warranted to contain 16 per cent. of ammonia.

Patagonia Guano contains less ammonia, from the fact of its raining much of the time, causing decomposition, by which means the ammonia, being volatile, passes off into the air, leaving the phosphates in greater proportional quantities than would otherwise appear. In several analyses made of Patagonian Guano, the highest per cent. of ammonia was 4.68, and the lowest 1.60; while of phosphates the highest per centage was 65.5, and the lowest 29.3.—Mexican Guano has been ascertained to contain only *one* and *two* per cent. of ammonia, and an average of *sixty* per cent. of phosphates.

It will be apparent to even a casual observer, that Guano is a compound of different materials, differing in value. One kind would be valuable on a certain kind of soil, while upon a different soil it would not be worth the application. Its relative worth depends upon the ammonia, or compounds capable of forming that and the phosphates, to which may be added potash. Hence an indiscriminate use of Guano, without a knowledge of its value in ammonia and other useful properties, will be akin to wasting money for naught. Skill and knowledge are requisite to its proper application. If a soil has the capacity to absorb a good quantity of ammonia, and is deficient in phosphates, the Mexican or Patagonian Guano may be used to advantage, as they are rich in just the properties of which the soil contains the least. If any soil does not possess this absorbent capacity, and is also deficient in iron and clay, it cannot obtain ammonia from the usual source, the atmosphere, and will be benefited by the use of a fertilizer containing the largest amount of ammonia.

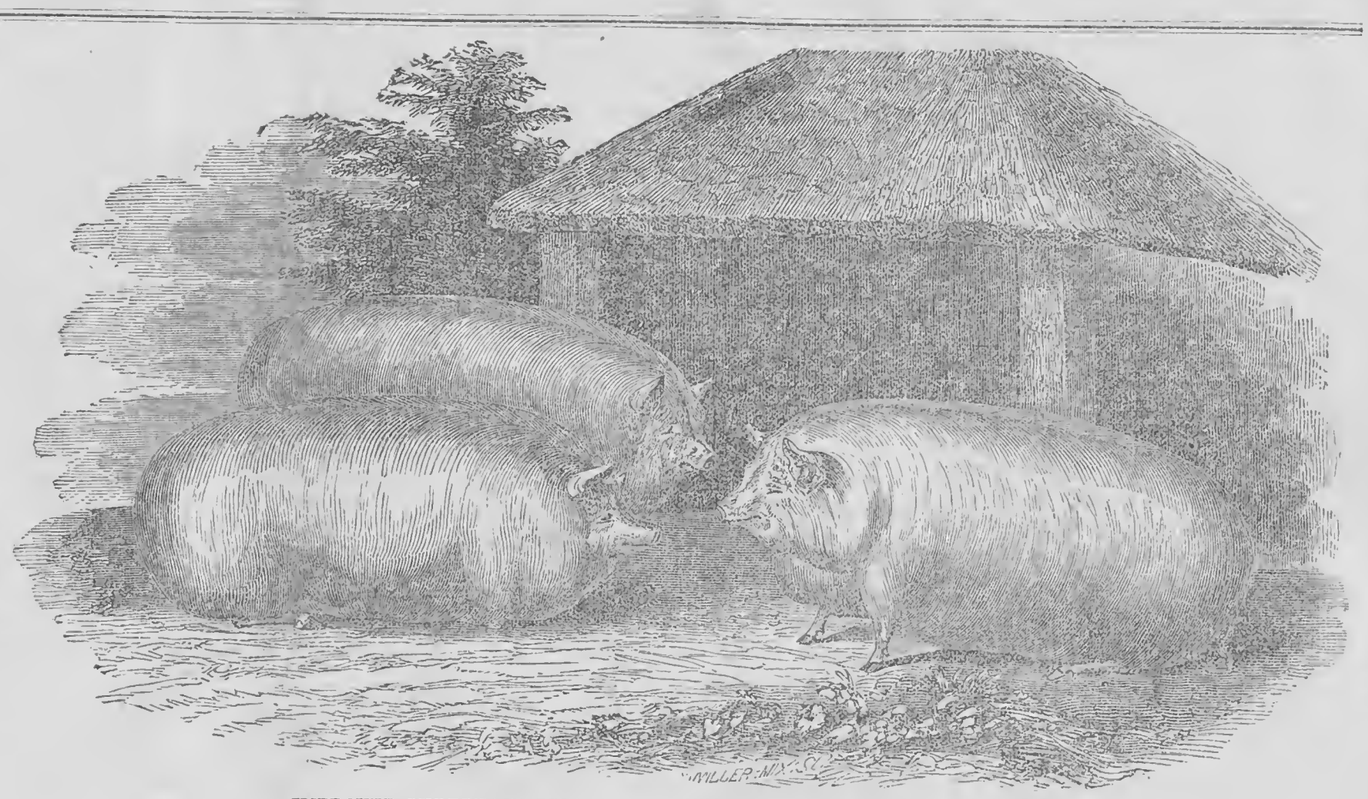
The application of Peruvian Guano may be made to stiff, heavy soils in a large quantity at a time, because into this kind of soil, water and air do not easily enter, consequently they will be deficient in ammonia, which will be supplied from the Guano. The rains will decompose the manure, and a portion of the ammonia and phosphates will be readily taken up by the growing crop, while the clay will absorb the remainder for future use. In gravelly, sandy, low and light soils, the air and water enter freely, but such soils lack the power to arrest a large portion of the ammonia, and to this class of soils the manure can be applied to advantage; but as the soil cannot retain the good qualities, and the growing crop will not consume them as fast as they are liberated by decomposition, it should be applied in small quantities, and repeated as occasion may require, for if a full quota be applied at once the plants will be burned and destroyed. Another consequence will be, the ammonia being liberated too fast to be used by the crop, passes into the air, or is filtered by the soil; the crop will be over fed at first, and as a consequence be starved afterward. It requires a knowledge of soils, and what is equally important, a knowledge of the richness and value of the Guano, to enable the husbandman to make a judicious and profitable use of such a powerful fertilizer. Every cargo of guano, even from the same bed, contains different proportions of valuable properties, so that no person can determine its value, or how much may be safely applied, without in some measure an analysis of the guano he buys and uses. While some Peruvian guano contains 18 per cent. of ammonia, other samples have been tested that did not contain over 10 per cent. This difference in value has led to the adoption of a system of inspection in England, and some places in the United States, which enables the purchaser to judge more correctly of the value of the guano he is using, and to know better how it should be applied.

It is important that a fertilizer that is so powerful, and so easily available to the growing grain, should be properly applied. Those who have given the subject most attention, adopt the rule of *placing it always as near the seed as possible.* With wheat it should be covered as deep as the wheat, and no deeper; so with other crops. The guano and the seed may be sown together or separately, the one after the other.—Where a drill is used to sow the grain, it has been recommended to sow the guano and harrow it in before drilling the wheat. On gravelly or light sandy soils it is beneficial to use plaster with the guano, as the gypsum has the power of absorbing the ammonia, to be afterwards given off for the benefit of the crop. Ammonia always benefits plants most in the early period of their growth, hence the propriety of placing the guano as near the seed as practicable. It aids it when aid is most needed, and thus enables it early to help itself.

Another important consideration in the application of a manure which is expensive, is to have it in a fine state of division, that it may the more easily reach every part of the soil. To give *one grain* to each square inch of surface, requires about 900 lbs. to the acre, and by the use of 200 lbs., if equally distributed, not more than one-fourth of a grain will be given to each square inch. If the guano is in lumps some places will receive 10 or 20 grains, more than can be used, while other places will be left destitute. It should be broken and sifted, and will be the better for being mixed with an equal weight of plaster, if to be sown on light soil; and less than equal weight, if to be used on land that is stiff and clayey.

For a crop of wheat, to be followed by clover or corn without other manure, if the farmer has no knowledge of the quantity of phosphates in the soil, it is recommended to take 50 to 100 pounds Peruvian Guano and 200 pounds of Mexican; lay it on a floor in a heap, and gradually add twenty-five to thirty pounds of sulphuric acid. Stir the mass well with the spade, and after it has laid for a week, add the Peruvian and mix them well together. This will prove an excellent top dressing for grass land, and if made still stronger, for turnips. Frequently other substances are added, so that no part of the fertilizing properties may be lost. It will be necessary fully to understand one other important requisite in the use of guano: it should never be applied to land that is not thoroughly drained, as wet soils destroy its value.

There are many other valuable hints which might be given. Very little attention has been bestowed upon the subject.—The State of Maryland has appointed a chemist, from whose labors and reports many of the views here given have been drawn. We may recur to the subject again, presenting other facts and phases deemed valuable to our readers. †



IMPROVED MIDDLESEX PIGS.—BRED BY MR. BARBER, UXBRIDGE, ENGLAND.
FOR WHICH THE FIRST PRIZE OF $50 WAS AWARDED, AND THE SILVER MEDAL, AT THE SMITHFIELD CATTLE SHOW.

WE are often asked respecting the advantage of keeping this or that particular breed of hogs.—Would that we could give a satisfactory answer. We are not only unable to decide, from conclusive experiments, which is the best breed, but we are unable to say which class of breeds yield most profit. Many suppose that the small breeds will yield more pork on a given amount of food than the large breeds. Yet this is mere assumption and is not supported by analogy; the *large* breeds of sheep and cattle yielding more increase on a given amount of food. Even if we were in possession of this desirable knowledge, we should not be able to decide which was the most profitable breed; for it is not the absolute, but the circumstantial value, determined by taste, fashion, and demand, that makes this or that kind of pork or pigs most sought for. Where bacon and large hams are required, the large breeds must be kept. In the vicinity of large cities, where fresh pork is in demand, the small breeds are most profitable.

In such circumstances we know of no breed that we should prefer to keep than the Middlesex—an admirable engraving of specimens of which is given on the opposite page. The writer saw the pigs here represented when they were on exhibition at the Smithfield Show, and can testify to the truth of the subjoined account of their enormous fatness, small bones and general beauty. There was nothing on exhibition that attracted more attention and admiration:

"They were farrowed on the 18th of June, and were fed, from 6 weeks old, on middlings, boiled potatoes, and peas, up to eleven weeks old, when they had barley and pea-meal, and boiled potatoes, mixed with water. They consumed in thirteen weeks, twenty-eight bushels of meal and four bushels of potatoes. They were tried on milk, but did not thrive so well on it as on water. In consequence of their great propensity to fatten, they were blind with fat at sixteen weeks old, and when exhibited their eyes were buried two inches in fat, which came over their forehead and lay on the top of their noses full three inches.

The following is a statement of their weight and age while fattening:

| Date. | Weeks old. | First. | Second. | Third. |
|---|---|---|---|---|
| July,..... 22 | 5 | 24 lbs. | 24 lbs. | 20 lbs. |
| August,... 13 | 8 | 52 " | 44 " | 42 " |
| September, 3 | 11 | 80 " | 72 " | 64 " |
| Ditto,.... 24 | 14 | 104 " | 96 " | 88 " |
| October,.. 15 | 17 | 152 " | 144 " | 132 " |
| November, 5 | 20 | 200 " | 192 " | 192 " |
| Ditto,.... 26 | 23 | 232 " | 224 " | 224 " |
| December, 6 | 24 and 3 days. | 232 " | 224 " | 224 " |

The mean increase per week was—1st week, 7½ lbs.; 2d, 8¾; 3d, 8; 4th, 15½; 5th, 17¼; 6th, 10¾.

This breed of pigs has been much improved by Mr. BARKER (the exibitor) in the last seven years. They are of a pure white color, of great substance and propensity to fatten. They keep in excellent condition while stores on grass, turnips, offal from the barns or garden, and when put up to fat, in two or three weeks make excellent porkers. They are fine in the bone and head; small, upright ears, which point a little forward. They are of a small size, have good litters, varying from seven to fourteen in number, being very fat while sucking, and thus making very good roasters."

### OXEN vs. HORSES.

ONE would be led to suppose, from being in the daily habit, as we are, of observing the large droves and the immense long trains loaded with oxen, that the entire farming population had abandoned their use, and such a thing as a bullock broke to the yoke was to become extinct—a contingency most essentially to be deprecated.—We are becoming a *fast* people; nothing short of a 2.40 horse can now be tolerated, and we shall soon require the steam horse and locomotive plow.

It is all wrong; we are getting ahead of sound and economical policy. Every farmer should have a span or three good horses, and if a large farm, double that number, but the balance of the labor sho'd be performed with oxen.

The horse is costly, of delicate constitution, subject to as many ills and diseases as the human animal,—expensive in its food, rigging, clothing and shoeing, and of no value when worn out; while the ox is easily kept, easily housed, his rigging and out-fit cost nothing—patient and enduring, and when old is worth as much for beef as at any other period of his life. Every horse costs the owner annually from $50 to $75 for his keep; while the ox may be carried round for less than half that sum, and will turn over as many cubic feet of earth with the plow, and draw as many heavy loads of grain, hay or wood, as the average of horses.

We admit that our girls, rigged out in city mockery, would not appear well toting about in an ox cart; but we do glory in seeing a befrocked farmer, walking beside an up-headed, quick-walking, sturdy-necked pair of oxen. We love to hear "who-haw gee-up," rather than "g'lang" on a spring seat with three-minute horses.

Perhaps while we are sitting plodding over the avalanche of papers that shower on us daily, we are getting behind the times. If so our readers must make proper allowances and take our cogitations for what they are worth.

### RED ROOT, AND HOW TO DESTROY IT.

THIS is the most troublesome weed that the wheat grower has to encountor, not even excepting the Canada thistle, as its seed remains for many years dormant in the soil, and is taken in the straw that is converted into manure to every field. Seed wheat grown on land infested with this pest cannot by any process of the fan be cleaned of it, as the stem almost invariably breaks above and below the seed, leaving a bulk that will not pass the last, or cockle screen, and therefore is deposited along with the wheat.

Fields now in stubble that are badly infested with this plant, should immediately be thoroughly harrowed both ways, that all the seed deposited on the surface may be covered with earth and grow this fall, as it is a biennial plant, and by turning it under in the spring it is entirely destroyed, except such seeds as have been deeply buried and not yet germinated. Two or three processes of this kind will thoroughly eradicate this plague.

Straw and chaff known to contain Red Root should be distributed about the fields in small heaps and burned; the ashes are worth nearly as much as the straw in a rotted state. It is the only cure for it, as the ordinary process of composting does not destroy it. Nothing short of the strong heating process of horse manure will effect its vitality, through the strong woody coriaceous covering that nature (the mischievous witch,) has endowed it with.

Farms that are overrun with the nuisance, must be subjected to this or some other process, or the owners had better load up some dark night, and cut their sticks for some other region, where thieves come not, and the wicked cease from troubling—for this pest truly belongs to that category.

### WHEAT ROOTS, &c.

Eds. Rural New-Yorker:—When I penned my short article in regard to what I deemed Mr. Redpath's *mistake* about the depth to which *wheat* roots would *strike down*, I did *not* intend it as an *attack* upon him, nor did I expect to produce a "tempest in a tea-pot," in the mind of your regular correspondent, Linus Cone. I had not the most distant idea that he, whom I supposed to be a good practical farmer (I judged only from what he had said of himself, which, I admit, is not always the most reliable source of information in such cases.) did, or could possibly, entertain such extravagant notions as it appears he does in regard to that matter. From his recent article, in No. 185 of the Rural, I find that I was entirely mistaken in my man, and that he advocates the absurd theories, and believes the extraordinary statements of Mr. R.

According to my understanding of Mr. C.'s article he believes that plants and trees do not receive their nourishment from those "long roots which run rambling off, near the surface;" but from those which "*strike down*" into the earth. If so, of what use are the *top dressings* of the various manures—those *surface cultivations, hand hoeings*, and *harrowings*, as practiced in the best wheat growing districts of England? Do they affect those roots which *strike down six to ten feet*, or to "an almost unlimited extent?" If the wheat plant does, as Mr. R. asserts, and Mr. C. believes, (I judge from his writings,) "*strike down ten feet into a stiff clay*," (without having the clay first converted into a loose soil by "deep tillage,") it would seem to be scarcely necessary to give it any assistance, after it once gets headway, *near the surface*. It will surely be able to take care of itself, without the aid of expensive and laborious *top-dressings, hoeings, harrowings, &c.*; and I suppose it would save the people of England, and probably other countries, much expense and labor, if the fact could be revealed, *with sufficient proof of its truth*.

Mr. C. says that "the natural tendency of the roots of trees and plants is *downward*, and they will penetrate the soil to almost an unlimited extent, if they meet no obstruction." I never denied, nor do I now deny, that in the early stages of the growth of plants and trees, the natural tendency of of the roots is *downward:* it is a truism which, I presume, no one will attempt to deny. The laws of nature oblige them to do so—and an "old digger, with his eyes open," has discovered it. Now, if he will *keep his eyes open*, I think he may, in a short time, without any extraordinary exertion, discover another equally well established truism, which is, that after *striking down* to a certain depth, (not to "*almost an unlimited extent*," but as low as *air* and *heat* are afforded,) they "run ramblingly off, near the surface," in seach of their proper nourishment, which they could not obtain by striking downward, to an "almost unlimited extent," whatever the nature of the soil. It might, with equal propriety, be said that because the *natural tendency* of the tops of trees and plants was to grow *upward*, they would grow upward to "almost an unlimited extent;"—but the laws of nature have limited them, according to their order, and the circumstances in which they are placed. And, although by "deep tillage" and proper pruning and training, they may be induced to "*strike down*" roots to a greater depth, and grow larger and taller tops than if not assisted by art, yet I cannot imagine how any one can possibly stultify himself to such a degree as to suppose that, by any exertion of man's ingenuity, a tree or plant could be made to "*strike*" *downward*, or grow upward, to "an almost unlimited extent."

Mr. C. says he "gathered wheat roots, by the handful, from the conduct and stones of a drain, more than three feet below the surface." (Some difference between *three feet* into the pulverized soil over a drain, and the *ten feet* in depth, through a *stiff clay*, as stated by Mr. R.) But how does Mr. C. *know* that the matter which he found was, in fact, "*wheat roots?*" Did he *carefully trace each one down from the surface?*—or, only, on finding a mass of matter there, *conjecture*, or *presume*, that it was *wheat roots?* Was he careful "not to pass by or omit noticing facts, which, if noticed, would have led him to entirely different conclusions?" If his *conjecture* (for I cannot suppose it to be any thing else,) was correct, and the matter which he found was, in fact, *wheat roots*, they might have been, (and I think it most probable that they were,) carried into the drain from some distant place; or, perhaps, washed down into it through some hole, or crevice in the drain, and its covering, instead of growing, or "*striking*" down into it, to a depth of more than three feet. I once found a handful, or more, of fibrous vegetable matter, very long and slender, like coarse horse hairs, about five rods from the entrance, in a lead pipe which I had some years previously put down to convoy water from a spring to my house.—It filled the pipe some four rods in length, and prevented the water from passing through it. By making an incision in the pipe I was enabled to thrust in a wire, with a crook at the end, and draw out that fibrous matter. It was evidently a mass of vegetable *roots*, but of what kind I could not, on the most scrutinizing examination, determine. It had, undoubtedly, been carried into the pipe by the water, although the end of the pipe was capped, and with very small holes for the admission of the water. It is possible that the matter which Mr. C. mentions may have been "*wheat roots;*" but from his vague description I am not satisfied that he *positively knew that such was the fact.*

His stereotyped phrases, "*surface scratching method*," and "*tickling the surface*," do not apply, and might better have been omitted. It needed but a small degree of candor to have led him to suppose that others were as capable as himself of giving reasons for the "faith that was in them"—and a little politeness might have prevented idle sneers at those who entertained views some what different from his own. Thel.

### LETTER FROM AND ABOUT NEW-ENGLAND.

Friend Moore:—That the "Yankee" people are a "great people," all must admit. The American youth makes but one "jump" from pantaletts to pants, and then he is a full grown man—lofty in aspirations—elevated in sentiment—true in principle—always ambitious to excel, and never willing to acknowledge defeat. The New England people are particularly noted for their perseverance in surmounting every difficulty, and removing every obstacle in the way of greatness and renown. If the farmers of Western New York, and their sons and daughters, would take time to visit the Eastern States, and witness the economy, sociability, and the thousand and one virtues of their inhabitants, they would return with enlarged views of usefulness, and some new "notions" of economy in which they are sadly deficient. I will write a few lines for the especial benefit of those farmers who are constantly in debt—never receiving one cent's interest for their money; hardly enough to pay the expenses of their farms—and their name is "legion"—and after I am through, if you do not say "much obliged," no matter.

Take the cars at Albany and you are soon among the hills of old Massachusetts. On yonder hill-side you see a beautiful cottage, made for comfort and convenience, and not exclusively for show—surrounded with outbuildings neatly painted, all bearing the marks of taste, and I might add refinement, for slovenliness is a sure indication of grossness. You wonder how that farmer lives—much more, how he accumulates property. His farm is broken and rocky; the soil light, and the climate not always the most temperate. The secret is, labor there is honorable—all work. The farmer's son is early taught to hold the plow, or tend the sheep—and thus habits of industry are formed which continue through life. The farmer's daughters are taught to believe that "idleness is the parent of vice and misery." If they have household duties to perform, it is done with their own hands.—If they wish to go a mile to see a friend, they walk, and scorn the idea of being too delicate to endure a little fatigue—and yet those same young ladies possess strong minds, tender hearts, and a refinement of manners much more engaging than our stiff, piano-playing, polka-waltzing, one-idea women.

Every thing here is husbanded—time is husbanded—crops are tended and taken care of in their season—manure is saved and judiciously applied; and last, though not least, every thing earned is saved, and not squandered. If the farmers of Massachusetts and Vermont were located upon our rich and fertile farms of Western New York, they would become rich—absolutely rich—while our extravagant farmers are borrowing money to pay their taxes.

Excuse me for extending this letter so long. In my next I will write you of Boston and its vicinity, and particularly of Brighton, the greatest Cattle Market in the United States. J. W. Dickinson.

Boston, August, 1853.

Domestic Guano.—A correspondent of the Ohio Farmer makes what he entitles as above, in the following manner:—To four bushels of leached ashes he puts one bushel of hen manure, mixing them well with a shovel, and then covering the heap with Plaster of Paris. In a few days the mass will be completely dry and is left undisturbed until it is wished for use, when it is mixed over. The best time to apply it is just before a rain. He is of the opinion that a small handful applied to a hill of corn will add one-third to the crop.

### CROPS, &c., IN NORTHERN PENNSYLVANIA.

We have frequently visited the counties of Bradford and Tioga, Penn., and noted the fine farms they contain. The surface is diversified by valleys and hills, and even with mountains. Much of the land is of an ordinary character, though some portions of it will vie with that of any in our State, if we except the choice wheat growing districts. Mr. A. L. Smith has communicated to the Owego Times the annexed description of the counties named, and the prospect of the crops:

These counties have been noted for fine timber but it has mostly disappeared, and where it grew the stump machine and plow are at work. This land is naturally a very good soil, for, as a general rule, the land that will grow the largest trees, will bring the largest crop of grain or grass, if the farmer does his duty to bring forth the same: but I must say that the land is a great deal better than the farmers that till it. As a general rule the farmers in this country expect too much from their land. What I wish to be understood by this is that they follow up in succession crops that exhaust the land, without paying anything back as a remuneration. Very little of plaster is sown, and there are but very few who know what bone dust or guano is when they see it.

The reason is farmers in this vicinity think as they did when they were in full blast at lumbering, viz, that there must not be much expense laid out in farming utensils, improvement, stock, &c., for there is not a three-quarter blooded bull, cow, sheep or hog, in the two counties. There is not a drove of cattle or sheep that passes through here to the market, but what are superior to those raised in this vicinity. However, there is an improvement visible, and if one-fourth of the farmers would take an agricultural paper, I think there would be a decided difference in crops, stock, buildings, fences, ditches or drains, &c.

About the crops, the wheat is good—a little above the average—which is from 10 to 25 bushels per acre. I shall put the average of this grain at 15 bushels. The hay is a little better than last year, but is below an average, which is one ton per acre. The oats promise above an average, which is 25 to 30 bushels. The corn promises the fairest of all the crops. If it escapes a drouth it will yield 35 or 40 bushels per acre. The buckwheat has got a good start. This crop is rather an uncertain one; we can hardly tell what it will amount to until it is ready to harvest. The fruit is almost a total failure. This land is not our first quality but rather the second.

### LAKE SUPERIOR WHEAT.

In all that has been said of the Lake Superior country, so much prominence has been given to the copper mines that its capacity as an agricultural district has been nearly overlooked. The increasing demand for the staff of life has led to the cultivation of the soil, and as a consequence good wheat has been raised. The largest amount has been spring wheat, but the present season a Mr. Oakes has grown some good winter wheat which is described as *plump and full*. The Lake Superior Journal thus speaks of the country:

Our more southern friends entertain the idea that the ground here must certainly freeze to a great depth—such is not the fact. Some of our people leave a part of their potato crop undisturbed in the hill all winter, and in the spring find them as fresh and fine as if dug in the fall. It is usually the case that, so soon as our cold weather has fairly set in, the snow commences to fall almost continuously,—soon covering the ground to such a depth as to prevent it from freezing, at the same time preserving all vegetation until spring, when it springs forth with unexampled vigor and freshness.

We venture the assertion that there is no better grass nor wheat land upon this continent than we have in the vicinity of Sault Ste Marie. All that is wanted, to prove the verity of our assertion, is for some practical farmers to come and settle among us. But equally important is the establishment of a good flouring mill at this place. Let any one but reflect upon the immense quantity of flour which is now consumed among the mines of Lake Superior, and still further upon the unquestioned increase in the demand for it, and any one with half an eye can see that there can be no better point in the wide country for the encouragement of an establishment of this kind.

Remedy for Smut in Wheat.—Steeping seed wheat four hours in a saturated solution of chloride of lime, has been found a preventive of smut, (*Uredo Caries.*) Wheat perfectly clean from smut will not produce it, but seed can be infected by contact.—Washing wheat in lime and skimming out all the light kernels, probably acts as a purifier, though the lime in which it is afterwards rolled may prove a remedy by destroying the fungus. Some such application should always be made. Smut injures the weight and value of the straw as well as that of the grain.

County Fairs.—In addition to the County Fairs heretofore announced, we learn that the Genesee Co. Fair is to be held at Batavia, Sept. 15 and 16—the Livingston Co., at Geneseo, Sept. 28 and 29—and the St. Lawrence Co. at ——, the 15th and 16th.

### AGRICULTURE OF MONROE COUNTY, N. Y.

Monroe county is entitled to the honor of producing more wheat than any other in the United States; and its soil and agricultural history furnish an instructive lesson to such as appreciate the true sources of national wealth. In 1845 its crop of wheat was 1,338 585 bushels; in 1850 it was 1,441,-653. Increase in five years, 103,068 bushels. We regret that the last census does not give the number of acres devoted to the several staples grown, the ratio of increase or decrease per acre of all the principal crops. To produce the wheat crop of this county in 1845, 68,383 acres were harvested; showing an average yield of a fraction less than twenty bushels per acre. Most farmers believe that this average has been considerably increased since, and the opinion appears to be well founded.

The corn crop of 1845 was 453,463 bushels; that of 1850 was 767,021. Increase in five years, 313 558. These figures show a gain of some seventy per cent. in the cultivation of the most useful cereal known to man, and we shall not be disappointed to see the crop harvested in 1855, as shown by the State census of that year, reach a million bushels. The oat crop of 1845, was 538 063; that of 1850, 449,150. Decrease, 88,913 bushels. Potatoes in 1845, 667,491: in 1850, 561,425. Decrease, 106 066 bushels. Barley, in 1845, 57,102; in 1850, 106,-049. Increase, 48 947 bushels. These show that the cultivation of barley had advanced nearly 100 per cent.

Rye in 1845, 3,198; in 1850, 8,148. Increase, 4 950 bushels.

Beans in 1845, 4,271; in 1850, 8,215. Increase, 3 944 bushels.

Peas in 1845, 66,341 bushels. [Number not given in the census of 1850.]

Buckwheat in 1845, 31,149; in 1850, 26,-306. Decrease, 4 843 bushels.

Hay in 1850, 62,602 tons. [Crop of 1845 not given.]

Milch cows in 1845, 19 590; in 1850, 14,-201. Decrease, 5 381. These figures show a remarkable falling off, which we regret to see. In 1845, the butter returned was 1,-504,397 pounds; of cheese, 366 782. In 1850, butter, 1,258 735; cheese, 286,653.

Sheep in 1845, 173 952; in 1850, 112 297. Decrease, 61 655. This is also a notable decrease in five years, taken in connection with that of 5 381 cows, and the increase of acres of improved land from 281,011, in 1845, to 302,102½, in 1850. These last figures show an increase of improved land of 21,092½ acres.

Horses in 1845, 16 811, in 1850, 13 576. Decrease, 3 235. With more tillage, with 21,000 acres more land under cultivation, and with more horses in this city, it is a curious fact that the number of horses in the county diminished over three thousand in five years.

Number of swine in 1845, 48,493; in 1850 it was 31 201. Decrease, 17,292. Taken in connection with the fact that the corn crop had increased more than three hundred bushels, this falling off of over seven thousand hogs in the county is unaccountable.

Number of neat cattle not cows, in 1845, 19 715; in 1850, the number was 18,168.—Decrease, 1,547; and total decrease of cows and other cattle, 6 928.

Value of farm implements and agricultural machinery in 1850, $782,833. This is a larger sum than any other county in the State returns at the last census.

Pounds of wool in 1845, 402 926; in 1850 365 084. Decrease, 37 842. It is worthy of notice that while the number of sheep has decreased 61 655, the decrease of wool bears no comparison to that of sheep.—*Roch. Amer.*

### ABOUT TURNIPS.

Turnips may remain in the field till late. They are far less injured by frost than many are inclined to believe. It is very often the case that turnips are frozen into the ground, and on the frosts breaking up again in the course of a few days, are removed as hard and crisp as before. The action of the soil neutralizes its effects, and sometimes a succession of several weeks of warm weather, after a freezing night, adds as much to the weight and value of the crop as they gained in twice the time before the advent of severe cold. A low temperature is favorable rather than adverse to the development of all the species of the turnip tribe. Cabbages grow rapidly in cold weather; hence the practice so prevalent at present of allowing them to remain out till snow falls. In packing turnips of all kinds, care should be taken to secure them effectually against the light and air. The more perfectly this is accomplished, the greater will be the certainty of their keeping well, and the more wholesome and nutritive will they be found, both for stock and for table use.—*N. E. Farmer.*

### PENNSYLVANIA STATE FAIR.

The Pennsylvania State Agricultural Society are making every arrangement to have a brilliant Show at Pittsburg, on the 27th, 28th, 29th and 30th of September. They have appropriated $5 000 to be awarded in premiums, and with great liberality have thrown open the doors of competition to the whole United States, so that anybody can have the benefit of it. In a circular and show bill which we have received, the Trustees say—"The Society make the field of competition co-extensive with the United States, and cordially invite the citizens therein to compete for the prizes. Guests, officers and delegates from other State Societies, are respectfully desired to enter their names at the Business Office. The Executive Committee will be happy to see guests and officers of other State Societies at their rooms, at the Perry Hotel, during the continuance of the Fair."

### GREAT SALE OF IMPORTED STOCK.

The Cincinnati Gazette gives the following account of an auction sale of pure blood Shorthorn and other stock belonging to the Northern Kentucky Importing Association, at the farm of Brutus Clay, in Bourbon Co., Ky., on the 18th ultimo. The stock sold was purchased in England during the present year. The Association put purchasers under obligations not to remove the stock from the State for one year. With this limitation the sale was well attended, and resulted as follows:

*Bulls*—1. Young Chilton, white, calved in May, 1850, cost in England, say $600, sold for $3,005; 2. Diamond, roan, calved in June, 1850, cost $630, sold for $6,001; 3. The Count, roan, calved in July, 1851, cost $525, sold for $2,515; 4. Orontos, red and white, calved September, 1851, cost $630, sold for $1,525; 5. Fusileer, roan, calved February, 1853, cost $375, sold for $1,475; 6. Senator, white, calved April, 1852, cost $630, sold for $2,000; 7. Belleville, roan, calved Jan., 1852, cost $1,550, sold for $1,500; 8. Challenger, roan, calved January, 1852, cost $150, sold for $1,858; 9. Fortunatus, roan, calved December, 1852, cost $275, sold for $1,500; 10. Yorkshire Manyard, dark roan, calved in March, 1852, cost $275, sold for $1,000.

*Cows and Heifers.*—1. Lady Stanhope, roan, calved in 1847, cost $375, sold for $1,500; 2. Lady Fairy, red, calved in June, 1848, cost $525, sold for $1,150; Roan Dutchess, roan, calved July, 1850, cost $275, sold for $900; 4. Goodness, red, calved September, 1847, cost $525, sold for $2,025; 5. Gem, roan, calved in April, 1851, cost $775, sold for $825; 6. Equity, deep red, calved March, 1852, cost $400, sold for $1,000; 7. Necklace, roan, calved April, 1852, cost $200, sold for $805; 8. Bracelet, roan, twin of Necklace, cost $260, sold $750; 9. Mazurka, dark roan, calved August, 1851, cost $600, sold for $3,050; 10. Lady Caroline, light roan, calved July, 1851, cost $400, sold for $2,825; 11. Duchess of Sutherland, red, calved December, 1850, cost $375, sold for $900; 12. Maid of Melrose, rich rose, calved October, 1851, cost $775, sold for $2,200; 13. Muffin, red, roan, calved June, 1852, cost $225, sold for $535; 14. Orphan Nell, roan, calved November, 1852, cost $325, sold for $1,000; 15. Flattery, white, calved November, 1852, cost, $225, sold for $05.

*Sheep*—South-Down—3 bucks sold for $775, $480, $340, and 3 ewes for $250, $180, $230. Cotswold—2 bucks, $1,010, $710, and 6 ewes, $270, $150, $221, $230, $200, $150, $200. Leicester—1 buck and 2 ewes, sold for $52 each.

*Horses*—Cleveland bay horse, (Young Lord,) cost $1,000, sold for $2,800.

We suspect this account is hardly reliable,—that there is something overrated, or kept in the background. The prices are too high for bona-fide transactions, even at a time when good stock is in great demand. If the figures are incorrect the managers of the Association will find their course not only detrimental to the cause of improvement, but ultimately injurious to themselves. We suspect it would be difficult to give the names and residences of purchasers at above prices,—as it has been in other cases where the pretended sales appeared far less extravagant. If not bought in by members of the Association, the prices named are certainly unwarrantable.

### REVIEW OF WOOL MARKET FOR AUG., 1853.

[From the Wool Grower and Stock Register.]

The market has been very quiet during the month, and there has been a decline from the extreme prices of the spring. Local dealers are compelled to realize, and as the manufacturers have a present supply, there is no competition among the large city operators. This state of things will continue for sometime, usually until October or November, when manufacturers begin to go into market, and prices brace up, and the demand becomes more active.

Foreign markets have been firm at an advance, and the demand is still in excess of the supply, notwithstanding the large supply from Australia. The present unsettled state of the relations between Russia and Turkey had some influence upon the last great trade sales at London, but still prices have not seriously declined. The tariff, if properly applied, would at this time so operate upon foreign wools as to make our own the cheapest at the current rates established this year.—Should a war spring up in Europe, as there is now a pretty sure prospect, wool must command a high price. At all events there is little prospect of a decline for some time to come. P.

### Foreign Wool Market.

It will be seen by the following that wool has been affected by the war question, and not by a super abundant supply, as has been intimated in certain quarters. It is also worthy of note that there has not as yet been any increase in the imports from Australia. P.

[From our own Correspondent.]

Liverpool, Aug. 1, 1853.

Prices current at Liverpool:

| | |
|---|---|
| Australian, average, | 1s. 8d. to 2s. 9d.—[40@66c.] |
| German, fleece, | 1s. 6d. to 4s. 0d.—[36@$1] |
| " lambs, | 1s. 6d. to 1s. 5d.—[36@,12] |
| United States fine Merino, clean washed, | 2s. 2d. to 2s. 4d.—[52@61c.] |

The transactions in Wool by private contract during the last month were again on a limited scale and considerably out of proportion with the present satisfactory rate of consumption. For some time past manufacturers have been working up stock, and keeping out of the market, so that business has been very flat, and prices 5 to 7½ per cent. lower than before the Rosso-Turkish affair.

The last ten days we have noticed a better feeling, and several sales have been made, in some cases at full rates, but generally at the above reduction.

The London Public Sales of 60,000 bales Australian, Cape, &c., progress with steadiness at about 1d. per lb. below the average rates of May and June; the best flocks suffering in a less degree than the inferior and ill-conditioned.

The imports into England from our Australian Colonies have been 88,608 bales in the first seven months of the present year, against 88,978 bales in the corresponding period of 1852.

A. Gartside & Co., *Wool Brokers.*

The Gorham Town Fair is to be held Sept. 20—Stafford, Sept. 29.

### BREEDING IN-AND-IN.

Mr. Editor: — Your correspondent, H. C. W., speaking of our native cattle, alluding to their inferior character, remarks: — "Every breeder well understands the ruinous effects of breeding in-and-in; and will at once comprehend the kind of stock which would be likely to spring from such origin. Thousands of idiots and lunatics are the effects of this practic in the human family." And he adds, "What is true of the human family must of necessity be true in the brute creation." By no means, I answer. There is no such affinity between the human family and the brute creation. What is true of the human family, and peculiar to them, is true of them only, and can apply to no other race. It would be a bold impeachment of the wisdom and intelligence of the great Creator, to charge that he had created races of sentient beings, with the express design to have them increase and fill the earth, and had at the same time placed them under precisely such circumstances, as that they should, necessarily, in the very fact of their increase, depreciate and decay — thus losing or impairing those distinctive characteristics, that influenced the mind of their great Architect, as they passed from his hands, in pronouncing them all very good.

The human family is an exception to all other created beings. He who sees the end from the beginning, in the exercise of his wisdom, has seen fit to restrict their intercourse. And we can now see the reason why. But no such cause exists to restrict the intercourse of birds and animals of the same race. If, in the nature of things, such restriction had been necessary, in order to perpetuate the races in their pristine excellence and perfection, it would have been established. Any other supposition involves imperfection on the part of the Creator. To assume therefore, that among the races, the law of whose nature is unrestricted intercourse, such intercourse is prejudicial, and will tend to deterioration, is unsound, — it is not true;—is not sustained by philosophy or fact.

There are unquestionably on the earth at the present moment, precisely those kinds of animals, birds, and reptiles, with all their original characteristics, that passed in review to receive their names, before their first lord and master, at the dawn of the creation. Some of them, from natural causes, may, not improbably, have undergone some minor changes, affecting form and constitution. It is not, in the nature of things, that all of a race or breed should, even under similar circumstances, be precisely alike. We know nothing of the laws that produce, and affect the blending of intelligence and matter in the reproduction of birds and animals. One fact we know, because we see it, that in the various races, in the production of increase, like is prone to produce its like. And this, often, so far as it relates even minutely to peculiarities of form, size, and traits of disposition and character. Hence, we select to breed from, those that are most desirable and perfect in these various particulars. But affinity of blood has nothing to do with these results, any more than remoteness of blood. And in crossing and blending strains of blood with which we are not familiar, we shall be more likely to embrace some traits of character that are not desirable, than if we confine ourselves to those with which we are familiar, and which we know possess inherent excellencies. The rule therefore should be, to select to breed from, those which we know to be most perfect and excellent in every desirable particular, irrespective of the degree of affinity subsisting between them. And this rule should obtain in regard to all birds and animals, where unrestricted intercourse is the law of their nature.

Farmer D.

*Monroe Co., N. Y., Aug.*, 1853.

### Expenses of Importing Jersey Cows.

In answer to many inquiries with regard to the expense of importing neat cattle, (says the Journal of Agriculture,) we give the following bill of expenses for two heifers, obtained from a gentleman who has made many importations:

| | £ | s | d |
|---|---|---|---|
| For hay and other provisions, | 9 | 9 | 3 |
| Expenses from Jersey to Liverpool, | 11 | 3 | 0 |
| Keeping in Liverpool (one week,) | 2 | 3 | 6 |
| House on board ship, | 6 | 10 | 0 |
| Commissions, &c., | | 17 | 8 |
| | £30 | 3 | 5 |
| Freight, £10, Primage, 10s., | 10 | 10 | 0 |
| | £10 | 13 | 5 |

This is a few pence short of $200. The freight on these two animals ($50) is about one-half the usual charge. *Primage* is an allowance made to the master or hands of a vessel for loading. Almost all the other charges it will be seen are extortionate.

There is no reason now, why any one except one owning a herd and desiring a fresh strain of blood, should import. We have here, already, animals of every English breed equal to any that are left behind. Besides, the remarks of Roswell L. Colt, that the animals *raised in this country* (from imported stock) are superior to the imported, is worthy of consideration. In the first place they are acclimated, and again, they are unstrained and uninjured by a sea voyage.

Apples for Milch Cows.—A gentleman who deals in facts and figures, as well as fine cattle, informed us that he had fed out last winter more than two hundred barrels of sweet apples to his milch cows, and that the increased quantity and richness in quality of the milk paid him better than any other use to which he could have applied them. He states that he is raising trees annually for the purpose of raising apples for stock.—Another important statement of his, is, that since he has fed apples to his cows, there has not been a case of milk fever among them.—*N. E. Farmer.*

Weighty Fleeces. — Last season Mr. C. A Green, of Rochester, Mich., sheared 30 lbs. of washed wool from *five* one year old ewes — 3/4 Spanish and 1/4 French Merino. This season the same animals yielded 40 lbs. 6 oz. wool, which sold for 54 cents per lb.

# Orchard and Garden.

### IMPORTANT DISCOVERY IN GRAFTING THE PEACH.

Prof. Page, of Washington City, has succeeded in grafting the peach, with as great certainty as the apple, or other trees. He states that the only requirement is, to reduce the production of sap; which is analagous to the stoppage of blood in a wound in the animal system, before granulation will commence and the *callus* form.

This operation can only be performed on small or nursery trees, which is done by a long knife, or narrow saw, inserted under the tree, and cutting off the tap roots; or, the tree may be entirely lifted from the earth — its tap root shortened, grafted and reset. In many cases the operation may be very advantageous, when trees stand where they are required and the budding has failed, or have got old and thick bark from age and slow growth. It saves one year over budding, as that process is performed in the fall; while the grafts set in the spring may have made a growth of two or three feet. It never can supersede budding, where nurserymen operate on a large scale, as it is ten times the labor, and has to be performed during the busy time of spring work.

If true, of which we have no reason to doubt, it is a pretty triumph over what has generally supposed to be an impossibility. We should like to see the experiment tried of grafting very early, during the absolute dormant state, before the sap moves, or the buds swell. The cherry, whose sap gums, as does the peach, can only be successfully grafted at early periods of the season.

### THE OSAGE ORANGE FOR HEDGES.

Eds. Rural New-Yorker:—A correspondent in your paper of August 13, inquires about the Osage Orange as a hedge, and expresses some doubt about its proving sufficiently hardy for Northern New York. I know very little about the severity of your winters, but doubt if they are colder than ours, or subject to greater changes. Here the thermometer was as low as 30° below zero in the winter of 1851–2, but the Osage Orange, which is extensively used in our vicinity for hedging purposes, was not injured in the least. It even bears a lower temperature with impunity, but the ground in which it grows must be drained and kept dry to save it.

This being a prairie country, and fencing timber consequently scarce, our farmers have been much interested in thoroughly testing the various plants in use for hedges. The preference is given to the Osage Orange over all. It neither winter-kills nor suckers—is free growing, and at the same time forms a dense bush from the ground up, that not even a rabbit could get through, while its fierce thorns almost forbids birds flying over. Chickens never attempt such a feat.

The Osage Orange is largely cultivated by our nurserymen, and is sold at prices ranging from $2,50 to $4 per 1,000 plants. These should be set out in a trench a foot wide, with a line, and should be 15 inches apart. The plants before being set, should be cut down within an inch of the ground. Some cultivators recommend closer planting, and double rows, alternately, but experience has proved that they do better in single rows, the plants not being liable to die out suddenly and leave gaps in the hedge.

The ground about the hedge should be well cultivated the first year,—keeping down all weeds, and encouraging it to become established. Next spring cut to within three inches of the ground, and cultivate as before. The third year it should be again cut to within six inches of the ground, and in the fall may be turned out for a fence, trimming each year in spring and in August.

The plant is remarkably thrifty and free growing, and the inexperienced cultivator is with difficulty persuaded to cut as remorselessly as necessity demands to make the lower branches dense and impenetrable. A failure to do this ruins the usefulness of the hedge, and is the cause of all the complaints I have known made against using this plant for this purpose.

A good hedge should be from two to three feet wide at the bottom, and should be trimmed to a cone about four feet high. The pruning in spring and summer should be confined to the taking of all straggling shoots beyond the body of the hedge, and to preserving uniformity of hight around the field. I think your correspondent cannot fail to like the Osage Orange as a hedge plant. Yours, T.

Burlington, Iowa, August, 1853.

Though we gave a somewhat lengthy article on the same subject last week, the above will prove valuable to many of our readers.—Ed.

### THE CURLED PEACH LEAF.

A few weeks since, I contributed an article, on the subject of the curled peach leaf, to the Onondaga Gazette, and at the conclusion of the communication asked for information on remedies for the disease. A gentleman who answered the inquiry says that the curled leaf can be effectually stopped by putting *lamp oil* around the trunks of the trees. At what season of the year, he does not state, but I think the right time to administer it would be in the spring, before the leaves make their appearance. The writer states that "factory waste," (I suppose he means mase oil, &c.,) is equally as good as lamp oil for the disease. I know not how the oil operates to stay the disease, unless it works wonders in the porous system of the tree. It is a pretty hard matter for any one to write with any kind of certainty about the curled peach leaf, and for any one to say what the real cause of the disease is, would be equally difficult. Probably it would not be safe to hold to the doctrine that certain varieties have run out, and are therefore subject to the disease for that reason,—for I am quite certain that some of the native kinds, which have been cultivated in this section of the country far more than fifty years, produce as fine fruit, and show as thrifty and healthy leaves, free from the curl, as some other newer varieties. The Old-Mixon Freestone suffers very much from the curl, while the Early Haynes does not seem to be affected by it. A gentleman who has observed the progress of the disease, states that he had a tree standing between two buildings, where the piercing winds could not blow upon it, which came bright and fair, no curled leaves appearing on it. The snow remained around the tree late in the spring.

I am therefore of the opinion, the state of our seasons, and the condition of the atmosphere, are the real causes of the curled peach leaf. Our seasons are different from what they were formerly; sudden changes, in the spring of the year, frequently take place, and hence the natural working of the sap in the peach tree is interrupted,—and, *ergo*, a diseased organization is the result.

W. Tappan.

Baldwinsville, N. Y., Sept. 1853.

### THE TRUE BEAUTY OF HOME.

The country is a true home of beauty, and horticulture is the free school of taste, in which all our readers may become apt pupils if they choose, and gratified and useful professors if they will it, and help to create as much beauty in their spare hours as the wealthy citizen can purchase with the gains of years to decorate his brick and mortar place in the metropolis.

There is no more ornament, in the house or out of it, so cheap and so tasteful as healthy plants and flowers, and you will hear ten persons of sense admiring your geraniums or fuchsias, where one will notice your rich curtains and tall mirrors. And out doors, the eye that would never be attracted by glaring paint, cornice or column, will be instantly arrested by the living arabesque of a native creeper, or the umbrageous outline of an American tree.

Do you not admire that simple little cottage, with its graceful trees from our native woods? The vines making beautiful while they conceal the rough out-buildings; the little "front yard," or more fitting lawn, gemmed with shrubbery and sparkling with bowers; the neat walks with a tinge of velvety turf, or natural ones over it, all in keeping, and all suited to the means of the tasteful owner. If you have been able to lift the veil that hides the life within, have you not found real comfort and true happiness there, and are not the inmates really deserving of what they enjoy?

And how much in time and money has all this cost? Perhaps less than a tithe of what your rich neighbor has expended to rear that great pile of boards and shingles, or more ambitious mountain of brick and mortar, with a countenance as blank as an overgrowing idiot's, and as barren of beauty as a lumber-yard or a brick-kiln, and not a thing — except weeds in the grounds or paints on the walls — either greener or brighter than the man who can deem his huge abortion the *ne plus ultra* of architectural taste.

Ten to one he who built that dwelling, if a farmer, is one of those who "would rather have a hill of potatoes than a rosebush," and would sooner raise a snarling cur than plant a beautiful tree.—*Prairie Farmer.*

The Cow Tree.—This is a native of Venezuela, South America. Baron Von Humboldt thus describes it:—On the bare flank of a rock grows a tree with dry and leathery leaves; its large woody roots can scarcely penetrate into the stony soil. For several months in the year not a single shower moistens its foliage. Its branches appear dead and dried; yet, so soon as the trunk is pierced, there flows from it a sweet and nourishing milk. It is at sunrise that this vegetable fountain is most abundant.—The natives are then to be seen hastening from all quarters, furnished with large wooden bowls to receive the milk, which grows yellow and thickens at the surface.—Some drain their bowls under the tree, while others carry home the milk to their children. It is obtained by making incisions in the trunk.

# Mechanic Arts, &c.

### LIST OF PATENT CLAIMS

ISSUED FROM THE UNITED STATES PATENT OFFICE

For the week ending Aug. 23, 1853.

Luther Atwood, of Boston, Mass., for improvement in processes for purifying alcohol.

Jean Baptiste Moinier and Pierre Hippolite Boutigny, Paris, for improved method of generating steam. Patented in France January 18, 1853.

J. B. Duff, New York, N. Y., improvement in soap cutting machines.

M. J. Gardner, York, Pa., improvement in oscillating steam engines.

P. Horn, Hagerstown, Md., improvement in seed planters.

F. B. Parker, Queensville, Ind., improvement in hay rakes.

M. Roberts, South Levant, Me., improvement in the arrangement of cutters for turning.

S. Vansychel, Little York, N. J., improvement in grate bars.

Lettie A. Smith, Pineville, Pa., improvement in butter workers.

Wm. M. Warren, Watertown, Conn., improvement in railroad car seats.

L. A. B. Walbach, deceased, late of the army of the U. S. of America, improvement in boring cannon.

Z. Allen, Providence, R. I., improvement in counterpanes.

H. Ritchie, of Newark, N. J., assignor to S. C. Thompson, Geo. W. Westfield, and H. Ritche, of same place, improved padlock.

S. Magoun, of Newton, Mass., assignor to E. N. Moore and C. H. Crosby, of Boston, Mass., improved machine for cutting and beveling printers' rules.

J. Foreman, of Boston, Mass., adm'r of E. W. Foreman, deceased, late of New Rochelle, N. Y., and assignor to H. W. Sears, of New York, N. Y., improvement in diving bells.

E. S. Snyder, of Charlestown, Va., additional improvement in machines for separating straw from grain. Original letters patent dated June 13, 1848.

DESIGN.

S. H. Sailor, of Philadelphia, Pa., assignor to J. G. Abbot and Archilus Lawrence, of the same place, design for a stove.

### PLASTERING MACHINE.

A Machine for the purpose of superseding manual labor, in the operation of plastering walls, has been invented by Isaac Hussey, of Harveysburgh, Ohio, who has taken measures to secure patent. It consists of a movable frame upon rollers that can be adjusted to suit any hight, and of a smaller frame sliding within it. The latter serves to support a mortar box containing the trowel, which is raised and lowered by means of a drum and endless chain. When in operation the trowel is supplied with mortar by a road and follower, which are worked by a lever, the quantity being regulated or shut off, as required, by a slide that covers the opening in the box. For plastering ceiling it is only requisite to raise the mortar box to the top of the frame, and for side walls it is adjusted accordingly by turning it to a proper position. For this last named operation the box is shifted by the sliding frame, which is moved back and forth for that purpose by means of the already-mentioned lever. There are also various cords and pulleys attached to the machine for facilitating the operation of the different parts, which are included in the invention and forming part of it.—*Sci. Am.*

### NAUTICAL LIFE BUCKET.

Nathan Thomson, Jr., of Williamsburg, N. Y., has introduced to the public an article bearing his name, which seems to be a very simple and valuable addition to the various life-preserving contrivances now used on ship board. It can be made of wood or metal, and consists simply of a small bucket inside a larger one, the space between them being filled with cork, which renders the bucket a life-preserver, and capable of sustaining in the water 400 pounds live weight. It is about the usual size of the ordinary pail, and holds about the same quantity of water. As a dock bucket on board of every craft, it will be a most desirable exchange for those now in use, as it combines the life-preserver with the bucket which would in the event of fire or accident be used as both. The bucket is so construted that it cannot be easily destroyed; and beneath a tropical sun there is no falling into staves, as is the case with the ordinary bucket.—*N. E. Farmer.*

Coal against Sinews.—Professor Henry, President of the Mechanics' Institute of Washington, says:—"It has been proved that, on an average, four ounces of coal are sufficient to draw, on a railroad, one ton a mile. It has also been found on experiment that a man working on a tread-mill continually for eight hours, will elevate one and one-half millions of pounds one foot high. Now good Cornish engines will perform the same work by the expenditure of a pound and a-half of coal. It follows from these data that about 5 tons of coal would evolve as much power during its combustion as would be equal to the continued labor of an able bodied man for 20 years, at the rate of eight hours per day; or, in other words, to the average power of a man during the active period of his life."

A Bostonian has invented a "chronometrical lock," which, fixed to a door cannot be opened before the time determined on beforehand. It operates by clockwork, and the absence of a keyhole precludes all attempts to pick it.

### HONOR TO ART AND INDUSTRY.

A late number of the Tribune has a scathing but just article in regard to the heathenish proceedings at the opening of the Crystal Palace of excluding Labor, Genius, and Science from all participation in the honors of the occasion. We give the closing remarks:

"We have no patience with such proceedings. Rhetoric is palsied in characterizing them as they deserve. Fejee islanders would honor a Robinson Crusoe who would give them a new string to their bow, but on the greatest occasion of Art and Industry this continent has ever known, we thrust both into the background—we wrench the claims from genius—we tell the makers of the treasures of the Exhibition to keep by their wares 'during the ceremonies,' as tho' they were not fit to sit alongside of cassocks and soldier-cloths—we follow out the uniform political fraud that prates of this or that speech in Congress saving the Republic, that omits on every public occasion to signalize Genius, that never mentions the Inventor, Painter, Compositor or Poet, that is circumfused in a sea of Roman and Norman lies!

The time has come when the Artists and Laborers of this country must seek to redeem themselves from the fardels of casts. They must make themselves represented on public occasions. They must not forget politics or the practice which overrides their claims. Politics have hitherto almost revolved in a circle. There is as much villainy in the government of the City as in either House of Parliament. But it is genius outside this that shapes the destiny of nations. It is a Columbus, a Newton, a Fulton, a Whitney, that reunites the history of Nations. Carolina, adoring Calhoun, forgets Whitney, whose contribution to her wealth and glory are as a million to one of Calhoun's, and so runs the parallel."

### CORN HARVESTER.

The New York Herald in enumerating various articles on exhibition in the Crystal Palace, has the following:

Reams' patent corn harvester is another implement of agricultural life which will be interesting to farmers This machine is very simple in its construction, and purports to cut, with the labor of one horse and boy, from sixteen to twenty acres of corn per day, and lay it in bundles of from two to ten hills, as desired. An ingenious part of this machine, is an appliance called a dropper, by which the boy riding on the back of the horse can drop the bundles of corn at suitable distances on the furrow, all ready for shooking. The cost of this machine is reasonable, ranging from fifteen to twenty dollars. The speed of this machine is very desirable, as farmers consider it the best time to cut corn when the dew is on the stalks, or immediately after a rain. In dry times, the corn is brittle and difficult to cut. If this is able to accomplish that for which it is recommended, it must be a great advantage to every farmer to possess it.

### NEW KIND OF PAPER.

A new invention for paper has recently been introduced in England, by which paper may be watered in a manner to make it very valuable for use as bonds, checks, &c., or as ornament, and which will prove an extra precaution against forgery. The process enables portraits, landscapes, or any other subjects to be given with the same effect as in the German porcelain pictures the graduated thickness of the paper at the various parts of the design creating, when it is held to the light, the requisite effects of light and shade. It was invented by the late engineer of the Bank of England, and much time has since been spent in bringing it to perfection for practical purposes.

Improved Gate.—W. T. Morritt, of Hart's Village, N. Y., has taken measures to secure a patent for an improved method of operating gates. This is an improvement relating to those gates which are raised up and down by a driver without leaving his seat in a carriage or wagon, and is adapted to make them work better, and also to prevent a casual movement in a gate of this kind. The improvement relates to certain devices for accomplishing the objects mentioned. Why are not such gates placed on all the railroad crossings? They appear to us to be the very kind required for such situations.—*Sci. Am.*

Improved Cultivator. — An improved Cultivator has been invented by Nathan Razey, of Perry, Ill. A series of knives or cutters are placed vertically in a shaft, the knives being parallel with the shaft and somewhat curved transversly, so that as the earth is plowed and pulverized and all the weeds are completely freed from the soil.—Measures have been taken to secure a patent.—*Ib.*

Improved Washing Machine.—J. R. Morrison, of Springfield, Ohio, has invented a new and improved washing machine for which he has taken measures to secure a patent. In this machine the wash-board has a reciprocating motion between spring roller frames arranged in a peculiar manner.—*Ib.*

A Thought for Young Men —No wreck is so shocking to behold, as that of a dissolute young man. On the person of the debauchee or inebriate, Infamy is written — How Nature hangs labels over him, to testify her disgust at his example! How she loosens all his joints, sends tremors along his muscles, and bends forward his frame! The wretch whose life-long pleasure it has been to debase himself and to debauch others, whose heart has been spotted with sin so that it is black all over, is an offence to the heart of the unblemished.

# Educational.

### DUTIES OF PARENTS.

Much, very much to, and from the necessity of the case, much must be required of teachers in the discharge of their arduous and responsible duties. It has never been, it never can be overrated. Discharge their obligations as well as they may, very few of them, if any, can come so near the standard of perfection, as to leave nothing at which parents or trustees may not cavil. It is perhaps no more than right that parents should feel a deep interest in the proper education of their children. But have parents no *duties* in the matter? Is there nothing for them to do—nothing to refrain from doing, which may properly be styled the duties of parents, not only to themselves and their children, but to the teacher? As speaking our views we here copy portions of a report from Joel Mann, published in the Rhode Island Educational Magazine:

"The necessity of their hearty co-operation with teachers is so great, that we hope to be excused for presenting again this topic. The efficiency of Schools, particularly as it respects discipline, depends greatly on this co-operation. If parents speak ill of the teacher in the presence of children; if they take up in their defence when they have been subjects of deserved correction; if they even pity them as these who have been ill-treated, it will encourage insubordination, neglect of study, and improper behavior, and make it more and more difficult to govern, either by mildness or severity. Parents are surely not aware of the injury they do to their own children, and to the School, and to the neighborhood by such a course.

We might say also that there is an utter impropriety in the direct interference of parents with the exercises and government of the School. If a teacher fails essentially in performing his duty, or does what calls for interposition, a complaint should be made to the proper officers, and they are bound to attend to the matter. All lynch law proceedings are illegal and impolitic. They multiply difficulties and remove none.—They weaken the authority of the teacher, and encourage imprudence and idleness.

We may add a word here on the subject of the proper government of children at home. That is the place where in youth the character receives its first impress and is chiefly formed. If parents think they can safely turn off the government and discipline of their children on school teachers, they are greatly mistaken. If they do this, they are false to the trust committed to them by the Creator, and recreant to the welfare of the State and country. 'A child left to himself bringeth his mother to shame,' is a truth inscribed on the page of inspiration, and illustrated in the experience of mankind. It is not difficult to determine by the conduct of children at School, whether they are properly managed at home. It is rare for a teacher to have difficulty with those who have been trained to subordination, to respectful behavior, and obedience under the paternal roof. And we think we may say in truth, that there is no one thing, that more seriously threatens danger to our republic, than the rearing up of a generation which from early life have been permitted to have their own way,—to set aside law and authority at their pleasure, and to make their own depraved wills the rule of their actions. He has not begun to form a correct view of education, who does not know that the most important part relates to this matter."

### BRILLIANT SCHOLARS.

We referred, recently, to the fact that our brightest students do not make our most prominent and efficient men; and that these who, yearly, take the first collegiate honors are rarely heard of afterwards in professional or mercantile life. In a late number of the London Literary Gazette, we find the following:

"Mr. Hugh Miller, the geologist, in a leading article in the 'Witness' newspaper, of which he is editor, has written an able and ingenious reply to Mr. Macaulay's assertion, in his late Indian speech, of the superiority of distinguished university men for the practical affairs of life. The instances adduced by Mr. Miller, if they do not refute Mr. Macaulay's statements, at least show how much may be said on the other side of the question. 'Two boys were once of a class in the Edinburgh Grammar School—John, ever trim, precise, and dux; Walter, ever slovenly, confused, and dolt. In due time, John became Bailie John, of Hunter Square, Edinburgh; and Walter became Sir Walter Scott of the Universe.' 'Oliver Cromwell got but indifferently through college; John Churchill spelt but badly, even after he had beaten all the most accomplished soldiers of France; and Arther Wellesley was but an uniformed and vacant young lad for some time after acquiring his first commission.' In literature, besides Scott, the instances of Goldsmith, Cowper, Dryden, Swift, Chalmers, Johnson, and others, are cited, to show that excellence is often attained after the absence of precocity. The converse, indeed, is too often true, and the proverb of 'soon ripe, soon rotten,' too often verified. The competition scheme, according to Mr. Miller, would have, on the whole, the effect not only of excluding the truly able, but also of admitting the inefficient. The class is large of those who seem to attain to their full development in the contests of the academy and the college; *and, eminent there, are never heard of afterwards.* Mr. Miller's own case is one in point, where highest scientific and literary eminence has been gained without juvenile scholastic distinctions. Mr. Macaulay's rhetorical paradoxes must, therefore, be received with great mistrust."

At first glance, the superficial thinker may draw from this an inference unfavorable to the higher branches of education.—But, only the superficial thinker would thus be led into error. Education with a purpose is one thing, and education without a purpose is another and a very different thing. Now, among the crowds in college, has one in ten an object in life to be gained through education as a means? No; not one in twenty. How few ever look beyond the day of graduation? When the brilliant student leaves his Alma Mater, too often all his learning becomes either dead lumber, or a mere matter of ornament and display. He finds no use for the lore he so studiously acquired.

On the other hand, take a young man, with a strongly developed purpose, yet deficient education, and as he lives, and works, and strives, to rise above his position, he, at the same time, applies himself to the sources of knowledge, and quickly draws therefrom the needed intelligence. And yet defect will ever cling to him in consequence of early educational disabilities, because, for the large portion of his time, he must be a worker, not a learner. Early advantages would have given him a double power. If we expect our sons to become efficient and successful men, we must induct them, early into the practical affairs of life, as well as provide for their liberal education. We must let them come in contact with the effective and productive, as well as the scholastic world. Take a boy from school at fifteen or sixteen, and give him two years of close application to some business or profession—then return him to school again, and he will acquire a more thorough education by the time he is nineteen or twenty, than if he had been kept at his books the whole period. Moreover, such a boy will be in little danger of being spoiled by learning. In this period of useful labor, the mental powers are tested, and aims in life developed, so that the subsequent education may have specific reference to the future business or profession. It is a very difficult thing for a boy, or his parents, to determine, while the former is yet at school, the business for which he has a particular adaptation; but let the boy engage for a year or two in some productive employment, and the difficulty, in nine cases out of ten, will cease to exist.—*Home Gazette.*

### "MEN WANTED."

Yes, *men* are always wanted. The supply seldom meets the demand. And yet many complain that there is no place for them—they can find nothing to do—they are not wanted in the world. Inefficient, lazy, unskillful men are *not* wanted; but men of capacity and industry—men who have made themselves master of their business—be it sawing wood or preaching sermons—are always wanted. A skillful mechanic seldom need seek long for employment. An energetic, upright merchant has always plenty of business.

An able lawyer never waits long for clients. The country has need of all its industrious and skillful citizens. Its manufacturing and mechanical establishments, its banks and railroads, its mercantile and marine interests all demand intelligent and active men to conduct or assist in conducting them. And the supply of such men is not equal to the demand. Many promising projects fail for the want of capable and experienced men to take charge of them.

Let the rising generation ponder well this truth. If they would take an active part in the world's business, and receive a due share of its honors, they have only to prepare themselves by giving diligent attention to their business. Let the young mechanic, instead of spending his evenings loafing at the corner, improve them in acquiring knowledge of the history and principles of his trade. Let him not be content with a slight knowledge of business—let him study its theory and master its practice. Let him follow the example set by the great men which every trade can furnish, and success is certain. He will not have to wait for an "opening,"—he holds in his hands the opening key. He need not seek for employment—employment will seek him. Men are wanted—let our youth see that they make men of themselves.—*Portland News.*

### THE COMING CENTURY.

Mr. Everett said in his recent speech: "The pioneers are on the way; who can tell how far and fast they will travel? Who that compares the North America of 1753, but a century ago, and numbering but a little over a million of souls of European origin; or still more, the North America of 1653, when there was certainly not a fifth part of that number,—who that compares this with the North America of 1853—its twenty-two millions of European origin, and its thirty-one States, will venture to assign limits to our growth—will dare to compute the time-table of our railway progress: or lift so much as a corner of the curtain that hides the crowded events of the coming century?"

Time brings about some queer revolutions. A writer in Putnam's says that the man who will be President of the United States in 1,900 is, in all likelihood, running barefoot at this very moment among the huckleberry bushes of Oregon, while the leader of the next war of invasion is not the son of an ex-Congressman, but the youth that will be corrected next week, for giving a pair of black eyes to an apple-vender in the vicinity of the Five Points.

# Historical.

### WISCONSIN.—No. I.

*Boundaries—Early Explorations—History—Increase of Population—Condition of Settlement—Soil.*

Wisconsin is bounded on the north by Minnesota and Michigan; on the east by Michigan and Lake Michigan; on the south by Illinois, and on the west by Iowa and Minnesota. It stretches in a north and south direction 285 miles, and east and west, 255 miles. Its area in land is 53,924 square miles, or 34,511,360 square acres.

The first visitors to this State were French missionaries. In 1660, Rene' Mesnard was appointed to visit Green Bay and Lake Superior, to carry the cross to the wig-wams of the savages. Trusting in "the Providence which feeds the little birds of the desert, and clothes the wild flowers of the freest," he plunged into the wilderness, and reached the bay, which he called Theresa, in October. Eight months afterward, by invitation of Hurons, he started for the bay of Che-goi-me-gon, via. Keweena Lake and the Portage, where he was lost in the woods. His breviary and cassock was subsequently known to be among the Sioux, by whom, it is probable, he was slain. Elevn years later, Allonez and Dablon visited Green Bay, and the region between the Fox river and the head of Lake Michigan, proclaiming the Gospel to the Masceutins and Kickapoos on the Milwaukee river, the Miamis at Chicago, and the Foxes on the river boaring their name. During the months of May and June in the following year, (1673,) Marquette and Joliet, with five other Frenchmen, ascended the Fox river to the portage which separates that stream from the Wisconsin; and having crossed the narrow head lands, the two brave discoverers of the Mississippi embarked alone on the Wisconsin, and passed down through the heart of the State which has since taken its name from that noble river. As they sailed solitarily down the stream, "between alternate prairies and hillsides, beholding neither man nor the wonted beasts of the forest," how faint were their conceptions of the agricultural wealth of the country stretching far around them, and of the position which Wisconsin was destined one day to hold among the sister band of commonwealths, which were to spring up on this Continent.

The territory of which Wisconsin is a small part, was ceded by France to Great Britain in 1763. It thus remained until the independence of the United States was acknowledged, twenty years afterward. It was then claimed by Virginia as a part of the Illinois country, which Col. G. R. Clark had conquered, and that claim was not relinquished until March, 1784. Nor did the British fully relinquish *their* claim until 1796, the year after the ratification of Jay's treaty. After several subdivisions of the great North-west Territory, in compliance with a request made the previous year, Congress passed and approved, April 20, 1836, an act establishing Territorial Government for Wisconsin. Its organization was completed on the 4th of July following. The portion of the original Territory, now constituting the State of Iowa, was cut off in June, 1838. At a session of the Legislature held the previous year at Burlington, (now in Iowa,) the seat of government was located at Madison. The first session held at the present capital was in November, 1838. the *State* of Wisconsin was admitted into the Union May 29th, 1848.

Only seventeen years have elapsed since Wisconsin was a wild tract of land, inhabited mostly by Indians. Since then she has dispensed with nearly half her territory; has arisen to a first class State; and contains more than three hundred thousand inhabitants, or about the same number as either of the old States of New Hampshire and Vermont. The census of 1850 shows that Wisconsin has increased in population in a greater ratio than any other State. In 1825, it was only 1,444. In 1840 it was 30,000; and its ratio of increase the next ten years was 890 per cent.

Wisconsin has more square miles of territory than New York; has as many acres, it is probable, of arable land; and has the resources for supporting nearly as many people. New York has been a State since the original confederation; now contains 3,100,000 inhabitants; and will probably one day contain 5,000,000. There are those now living, who will see in Winsconsin two millions of people, and twice that number will, it is likely, be cultivating her prairies and digging in her inexhaustible mines, a hundred years hence. Millions of acres, which have been surveyed and sold, are as yet unimproved; and millions more—not less than two millions—have been surveyed and are unsold. Much of the land which lies in the market, is in the fat valleys of the Wisconsin, La Crosse, Black, Welt, and Barabee rivers. The trail of the red man is still visible, but the axe and plowshare of civilized enterprise are seen to do their work there, and the teeming soil is to pour its treasures into the lap of industry.

The prairies of Wisconsin, though not so large as those of Illinois and some other States, are numerous and exceedingly rich. Their soil is composed of a dark brown, mellow mould; the subsoil, of a clayish loam. The soil of the timbered lands is somewhat similar to the subsoil of the prairies, both in its nature and productive powers. The so-called "evergreen districts," though sandy and less fertile than the prairies, are good for grazing purposes, and much more productive than the pine plains of New England. Oak openings are numerous and extensive, and constitute the "gardens" of the State. They owe their present condition, it is said, "to the action of the annual fires, which have kept under all other forest growth, except those varieties of oak which can withstand the sweep of that element. This annual burning of an exuberant growth of grasses and of underbrush, has been adding, perhaps for ages, to the productive power of the soil." Thus have the savages, by the means of fire, cleared up this young State, to a large extent, and prepared it for uses of civilization.

J. Clement.

### EARTH-SHINE AND MOON-SHINE.

The phenomena of "the old moon in the new moon's arms" is thus explained in Chambers' amusing and instructive Tracts:

"It has been stated that the moon is invisible when out of sunshine. This is strictly true, although a word of explanation may be needed to prove the fact. Often, within a day or two of the time of new moon, the dull surface of its body may be seen faintly traced out on the twilight sky. Not only the crescent of the shining portion is visible—the entire face of the hemisphere turned towards the earth is also obscurely perceptible. The old moon lies, as it is said, within the arms of the new. Now, the light by which the old moon makes its appearance under these circumstances, is really sunshine, notwithstanding the position the solar orb holds beyond the lunar sphere; but it is twice-diluted sunshine—the silver has been transmuted into lead by the touch of earth. The sunlight does not penetrate through the the moon's substance, but it comes to the earth—is thence thrown back to the moon, and from the moon returns to earth again. At the time of new moon, the earth, it will be remembered, is on the opposite side of the moon to the sun; consequently, the illuminated half of the earth is shining on the moon, and the leaden hue we perceive is the moon seen by earth-shine.—This earth-shine is thirteen times stronger to the moon than the moon-shine is to us, on account of the comparatively larger dimensions of the terrestrial sphere. Some astronomers state that this earth-shine on the moon changes its ash-grey tint into a green one when the part of the earth opposite to the new moon is that which contains the verdant and forest-covered plains of South America. There can be no doubt that this earth-shine on the moon is more vivid when the terrestrial atmosphere, through which it has to pass, is clear, and that is made dull when that air is laden with clouds and mists. Arago believes that we shall, some time or other, be able to ascertain the mean state of our own atmosphere's transparency, by watching the ashy tints that appear on the obscure portion of the moon.

### THE ROYAL FAMILY OF RUSSIA.

The following amiable family picture may be interesting at this time, when Russia is thrusting her ursine nose into the politics of Europe.

Peter I—the founder, as he may be called of the present imperial family—was the murderer of the two daughters and the son of his brother Ivan, and the murderer, (it is asserted, according to more than one of the analists of his reign,) by his own hand, of his son Alexis. He was himself murdered by Menzikoff, (a name that has again risen up in history,) the favorite of his wife Catharine, and who, when united to Peter, was the wife of a living husband, and their children declared afterwards incapable of reigning, because born in sin. Anne, the eldest daughter of Ivan, put 14,000 Russians to death, and banished twice as many. A revolution displaced the younger Ivan to put on the throne Elizabeth, daughter of Peter I., and her reign was remarkable for her drunkenness and debauchery. Peter III., her successor, was notoriously the offspring of crime, and was dethroned and strangled by his wife, Catharine II., the same infamous woman who had assasinated the dethroned Emperor Ivan, and whose own son, Paul—the father of the present Emperor Nicholas—was strangled by his courtiers.

Reading Works of Thought.—It is wholesome and bracing for the mind to have its faculties kept on the stretch. Reading an essay of Bacon's, for instance, or a chapter of Aristotle or of Butler, if it be well and thoughtfully read, is much like climbing up a hill, and may do one the same sort of good. Set the tortoise to run against the hare; and, even if he does not overtake it, he will do more than he did previously, more than he would ever have thought himself capable of doing. Set the hare to run with the tortoise: he falls asleep.

# Sunday Reading.

Written for the Rural New-Yorker.

### "GONE—ALL GONE."

Friends of my childish years,
Where are they now?
Where are the lips that pressed
My cheek and brow?
Where is the beaming smile,
The love-fraught tone?
Cometh the echo back
"Gone—all gone."

Hopes of my childish heart,
Why did they fly?
Why did my fancied bliss
Thus quickly die?
Why did it leave me thus
Strangely alone?
Ever to whisper low
"Gone, all gone."

Dreams of my early days
Come to my heart,
Though all I loved has faded,
Why need ye depart?
But mock me not now with hopes
Forever flown,
Tell me not now of joys
"Gone, all gone."

Hush thee, my trembling heart,
Why should I weep?
Though friends that I loved, rest
In Death's long sleep.
Though the visions of childhood
Long since have flown,
Faith points where peace and joy
Ne'er can be gone. Jenny.

### THE SABBATH A FRIEND.

1. To Education. Compare countries with and without the Sabbath. Its ministrations powerfully quicken and invigorate the human intellect, while a vast amount of knowledge is accumulated.

2. To Government. Where are honored Sabbaths and Despotism co-existent? It shows the nature of human rights—adapts laws to the actual wants and circumstances of men—creates a conscience that sustains laws and qualifies men to make as well as to obey laws.

3. To Health. By promoting cleanliness, by furnishing needful rest for the body and mind, by promoting cheerfulness and elasticity of spirits through its power to produce a peaceful conscience, and by its sublime influence over the hateful passions of men.

4. To Good Morals. By keeping in sight the character of God by unfolding the claims of His holy law, by creating a distaste for unlawful pleasures, by creating a public sentiment that frowns on immorality, and thro' that sentiment causing wise and effectual laws for the suppression of vice and crime.

5. To Piety. By causing a right view of God to prevail, by constantly pouring on men's minds those great elements of piety, the divine truths of Revelation, by thus generating all right affections toward God and man, by shadowing forth and pointing men to the Sabbath of Heaven.

Therefore the Sabbath is the Friend of the nation, the family, everybody's friend, and never fails to repay true and devoted friendship for it with the most precious blessings for time and eternity.—*Boston Traveller.*

### SATURDAY NIGHT.

Saturday night! How the heart of the weary man rejoices as, with his week's wages in his pocket, he hies him home to gather his little ones around him and draw consolation from his hearthstone for the many hard hours he has toiled to win his pittance. Saturday night! How the poor woman sighs for very relief as she realizes that again God has sent her time for rest; and though her rewards have been small, yet is she content to live on, for her heart builds up in the future a home where 'tis always Saturday eve! How the care-worn man of business relaxes his brow, and, closing his shop, saunters deliberately around to gather up a little gossip ere he goes quietly home to take a good rest!—How softly the young man pronounces the word, for a bright-eyed maiden is in waiting, and this Saturday night shall be a blessed time for him—there will be low words spoken by the garden gate, and there will be pressure of hands—perhaps a pressure of lips—blessed Saturday night! To all, kind Heaven has given a little heaven which works in the heart to stir up the gentle emotions, and Saturday night alone seems the meet and fitting time for dreaming gentle dreams. Blessed Saturday night! and we can but pray that through life we may bear with us the remembrance of its many holy hours now gone into the far past—memories which every Saturday eve but recalls like a benediction pronounced by one loved and gone.

### MEANING OF "LIFE-MEMBERSHIP."

Not long since, an agent of one of our benevolent societies called upon an individual who had on a former occasion, years ago, contributed liberally. He was told that his "cause was an excellent one," and so forth; "but," added the individual, "I have constituted myself a *life-member* of your society, and do not expect to be called upon any longer for donations." "You have misunderstood the meaning of life-membership," said the agent. "Ah! how so?" inquired the benevolent gentleman. "Life-membership means that you are to *continue to give to this cause all your lifetime*, and to increase your donations from year to year, as the Lord prospers you."

Strange and ridiculous as it may seem, there are, occasionally, amiable and intelligent men who blunder into such a notion, and think to insure themselves for life against the calls of agents by once for all constituting themselves life-members!—The attention of such is solicited to the above legitimate and common sense definition of life-membership.

# Miscellaneous.

## GLIMPSES IN THE "OLD COLONY."

BY MRS. M. W. H.

**No. III.—A Day Among Pilgrim Relics.**

The library, which is kept in Pilgrim Hall, contains a valuable collection of ancient books, besides a considerable number of miscellaneous works, presented by various individuals.

I may as well mention in this place, a curiosity of more recent date than any of which I have yet spoken, that cannot fail to interest the reflective mind. It is the congratulation of Mongundus to the Pilgrim Society, he being the first of the Chippewa tribe of Indians who ever visited Plymouth. The instrument is drawn up and written in good English by Mongundus himself. The document is short and sententious, breathing the sentiments of the Philosopher, the Man and the Christian. It is accompanied by a good pencil drawing of a Chippowa warrior in full-dress, drawn and presented by Waubudick, son of Mongundus. They were on their way to their forest home, after visiting England, where the old man buried his wife and three children. The date of this visit was 1848. Ere long will the sentiment or prediction of Mongundus be realized:—"Not many years more will pass, before the waves of civilization beat over the last remnant of my people—be it so—it is the will of the Great Spirit."

In the "Pilgrim Memorials" it is stated that there are many other valuable relics of the Pilgrims scattered about in various quarters. Among these is mentioned, "a large arm-chair which came over in the May-Flower, with staples attached to it, by which it was fastened to the deck; it is owned by Madam Warren, of Plymouth. A bead purse wrought by Mrs. Penelope P. Winslow, wife of Gov. Josiah Winslow, while on her voyage to America—a gold ring worn by the Governor, and containing his hair. These are owned by a lady in Bridgewater, the daughter of Pelham Winslow, a great-grand-son of Gov. Josiah." The veritable cradle in which the infant Peregrine was rocked by Old Ocean, is in good preservation, apparently fit for a century's service. The visitor any day may rest his weary limbs in the "old arm-chair," that occupied a place at the fire-side of the venerable Gov. Bradford, by calling at the office of the Register of Deeds for Plymouth County. To the politeness of the worthy incumbent of that office we are indebted for an examination of the original records* of the organization of the old Colony Government. The original charter and seal, with the box in which it came, besides many other interesting relics.

It may not be uninteresting to the Agricultural reader to learn something of the first importation of Cattle into the "Old Colony." Of what particular breed they were, it probably mattered little to those who, on the occasion of the arrival, in the Ann, of about 60 passengers, made an entry in the diary to this effect:—"The best dish we could present them with is a lobster, a piece of fish, without bread, or any thing but a cup of fair spring water." "The September following, 1623, the ship Ann was hired for the company and sailed for England with Mr. Edward Winslow as passenger, and was freighted with beaver and clap-boards." The next March, it is recorded, "Mr. Winslow returned from England with a good supply of clothing, and cattle, consisting of one bull and two heifers."

In three years their cattle had increased to the number of twelve, which with the goats, about twice that number, were divided by lot among the inhabitants, then numbering one hundred and fifty-six; these being divided into companies of thirteen persons. In the mean time, it would seem, there had been another importation, as it is said, "To this lot fell one of the four heifers that came in the Jacob, called Raghorn." Another is called the Blind Heifer, &c.

1627. "Edward Winslow hath sold unto Myles Standish his six shares in the Red Cow, for and in consideration of the sum of five pounds ten shillings, to be paid in corne at the rate of six shillings p. bushell, freeing sd Edward from all manner of charge belonging to the sd shares during the term of the nine years they are let out to halves, and taking the benefit thereof." Mr. Russel estimates the value of the "Rod Cow," in 1627, to be "about $160 of our currency—reference being had to the comparative value of money between that time and the present." He refers the first "Cattle show in New England" to the division of which I have spoken.

Plymouth is a very pleasant, quiet village, reminding us of a gentleman who habitually and gracefully wears his best clothes, and has nothing to do but to enjoy life. The neighborhood abounds in delightful eminences, fresh-water ponds and streams. The sea view from various points cannot be surpassed in beauty. The beach, three miles in extent, stretches itself about a mile from the shore, protecting the harbor from the inroads of the Ocean. This village is deservedly becoming quite a fashionable summer resort for invalids and loungers.—Where sea-bathing is desired, Clark's Island, in the harbor, affords a very convenient and interesting locality. At the end of Court st., and near the Railroad Depot, a beautiful hotel has been erected for the accommodation of the public. It is called the Samoset Hotel, and fully answers the following description:—"It commands a fine view of the harbor, bay and highlands. In the rear, at a short distance, it has the attractions of hill and wood-land scenery, affording agreeable and convenient walks. It is 50 by 80 feet, constructed in a handsome style of architecture, and of perfect finish in every part."

The Pilgrim Society was formed in 1820, to "commemorate the landing, and honor the memory, of the intropid men who first landed on Plymouth Rock." It is a singular fact that the single rock on which our fathers landed is the only one in Plmouth harbor: "there is not known in the township a single ledge, save these the fisherman reaches with his lead at various points off the cost."

In December, 1769, a number of gentlemen formed themselves into a society by the name of the "Old Colony Club." In that year was the first celebration by that Club of the Landing of the Pilgrims. At this remote period the bill of fare for their dinner is quite an interesting item. "1, a large baked Indian whortleberry pudding; 2, a dish of sauquetach, (succatash—corn and beans boiled together;) 3, a dish of clams; 4, a dish of oysters and a dish of cod-fish; 5, a haunch of onions, roasted by the first Jack brought to the Colony; 6, a dish of sea-fowl; 7, a dish of frost-fish and eels; 8, an apple pie; 9, a course of cranberry tarts, and cheese made in the Old Colony."

This Club was broken up a few years after, from differences of opinion existing among its members in regard to the struggle in which the Colonies were at that time engaged with Great Britain.

The day of the landing has been celebrated by the Pilgrim Society every year since its formation, with more or less "pomp and circumstance," those occasions always commanding the efforts of some of the best orators of the times. The first of the past month (August) being the anniversary of the sailing of the Pilgrims from Delft Haven, was celebrated with great *eclat* by that Society and its invited guests.

There has already been a considerable sum of money raised by subscription to purchase sufficient land to enclose Pilgrim Rock in a handsome square, surrounded by a walk, and to erect a suitable monument on or near the rock. This seems to be very appropriate and desirable, and I think M. De Tocqueville long ago furnished an admirable inscription for such a monument:—"Here is a stone which the feet of a few outcasts pressed for an instant, and the stone becomes famous; it is treasured by a great nation; its very dust is shared as a relic. And what has become of the gateways of a thousand palaces? Who cares for them?"

I have already extended this communication beyond the limits of newspaper article, yet I cannot lay down my pen without mentioning a melancholy coincidence that occurred at the recent celebration. Hon. Judge Mitchell, a venerable gentleman of considerable celebrity as an antiquarian, was in Plymouth to participate in the enjoyments of the occasion, and while passing along the street nearly opposite to Pilgrim Hall, was seized with a fit and expired. He was 84 years of age, and of the fifth generation from Experience Mitchell, who came to Plymouth in the ship Ann, 1623.

---

Do Right.—What can be more honorable than to have courage enough to execute the commands of reason and conscience; to maintain the dignity of our nature, and the station assigned to us; to be proof against poverty, pain, and death itself; so far as not to do anything that is scandalous or sinful to avoid them; to stand adversity under all shapes, with decency and resolution. To do this is to be great above title and fortune. This argues the soul of heavenly extraction, and is worthy the offspring of the Deity.

---

The true secret of earthly happiness is to enjoy pleasures as they arise: for that man who can keep his eye upon the bright present while it is bright, tastes the cup of sweetness prepared for him; but we are prone to look forward to dark objects, while we should be enjoying those that are more agreeable.

*These records make in the whole twenty-two volumes.

---

### BETTER THAN DIAMONDS.

A BEAUTIFUL STORY.

I was standing in the broad, crowded street of a large city. It was a cold winter's day. There had been rain; and, although the sun was shining brightly, yet the long icicles hung from the eaves of the houses, and the wheels rumbled loudly as they passed over the ground. There was a clear, bright look, and a cold, bracing feeling in the air, and a keen north-west wind that quickened every step. Just then a little child came running along—a poor, ill-clad child; her clothes were scant and threadbare; she had no cloak nor shawl, and her little bare feet looked red and suffering.—She could not have been more than eight years old. She carried a bundles in her hand. Poor little shivering child! I, even I, who could do nothing else, pitied her.—As she passed, her feet slipped upon the ice, and she fell, with a cry of pain; but she held her bundle tightly in her hand, and jumped up, and, although she limped sadly, attempted to run on as before.

"Stop, little girl, stop," said a sweet voice, and a lady in a huge shawl, and with furs all around her, came out of a jeweler's store close by. "Poor little child," she said, "are you hurt? Sit down on this step and tell me." How I loved her, and how beautiful she looked! "Oh, I cannot," said the child: "I cannot wait—I am in such a hurry. I have been to the shoemaker's and mother must finish this work to-night or she will never get any more shoes to bind." "To-night," said the beautiful woman, "to-night!" "Yes," said the child—for the stranger's kind manner had made her bold, "yes, for the great ball to-night, and these satin slippers must be spangled; and—." The beautiful woman took the bundle from the child's hand and unrolled it. You do not know why her face flushed and then turned pale; but I, yes I, looked into the bundle, and on the inside of a slipper I saw a name—a lady's name—written, but I shall not tell it.

"And where does your mother live, little girl?"

So the child told her where, and then she told her that her father was dead, and that her little baby brother was sick, and that her mother bound shoes that they might have bread, but that sometimes they were very cold; and that her mother sometimes cried, because she had no money to buy milk for her little sick brother. And then I saw that the lady's eyes were full of tears; and she rolled up the bundle quickly, and gave it back to the little girl, but she gave her nothing else—no, not even one sixpence, and, turning away went back into the store from which she had just come out. As she went away, I saw the glitter of a diamond pin. Presently she came back and stepping into a handsome carriage, rolled off. The little girl looked after her for a moment, and then, with her little bare feet colder than they were before, ran quickly away. I went with the little girl, and I saw her go to a narrow, damp street and into a small, dark room; and I saw her mother—her sad, faded mother, but with a face so sweet, so patient, hushing and soothing a sick baby. And the baby slept, and the mother laid it on her lap, and the bundle was unrolled; and a dim candle helped her with her work, for, though it was not night, yet her room was very dark. Then, after a while, she kissed her little girl, and bade her warm her poor little frozen feet over the scanty fire in the grate, and gave her a *little* piece of bread, for she had no more; and then she heard her say her evening prayer, and folding her tenderly to her bosom, blessed her, and told her that the angels would take care of her. And the little child slept, and dreamed—oh! such pleasant dreams—of warm stockings and new shoes, but the mother sewed on, alone. And, as the bright spangles glittered on the satin slipper, came there no repinings in her heart? When she thought of her child's bare, cold feet, and of the scant morsel of dry bread, which had not satisfied her hunger, came there no visions of a bright room and gorgeous clothing, and a table loaded with all that was good and nice, one little portion of which spared to her, would send warmth and comfort to her humble dwelling?

If such thoughts came, and others—of a pleasant cottage, and of one who had dearly loved her, and whose strong arm had kept want and trouble from her and her babes, but who could never come back—if these thoughts did come, repiningly, there came also another; and the widow's hands were clasped, and her head bowed low, in deep contrition, as I heard her say, "Father, forgive me, for thou doest all things well, and I will trust thee." Just then the door opened softly, and some one entered. Was it an angel? Her dress was of spotless white, and she moved with a noiseless step. She went to the bed where the sleeping child lay, and covered it with soft, warm blankets. Then presently a fire sparkled and blazed there, such as the little old grate had never known before. Then a huge loaf was upon the table, and fresh milk for the sick babe. Then she passed gently before the mother, and drawing the unfinished slipper from her hand, placed there a purse of gold, and said in a voice like music, "Bless thy God, who is the God of the fatherless and the widow"—and she was gone; only, as she went out I heard her say, "*Better than diamonds—better than diamonds!*" What could she mean? I looked at the mother. With clasped hands and streaming eyes she blessed her God, who had sent an angel to comfort her. So I went to a bright room, where there was music, and dancing, and sweet flowers; and I saw young, happy faces, and beautiful women richly dressed, and sparkling with jewels; but none that I knew, until one passed me whose dress was of simple white, with only a rose-bud on her bosom, and whose voice was like the sweet sound of a silver flute. No spangled slipper was glittering upon her foot; but she moved as one that treadeth upon the air, and the divine beauty of holiness had so glorified her face that I felt, as I gazed upon her, that she was indeed an angel of God.

---

### ALWAYS BEGIN RIGHT.

We once knew an old Friend, who had but one piece of advice to young beginners: it was, "If thee'll only begin right, all will go well." We have often thought that there was more in the recommendation than even the good Quaker saw, for there is scarcely any thing to be done in life to which the adage, "begin right," will not apply. Success is but a synonym for beginning right.

The great bulk of enterprises that fail owe their ruin to not having been begun right. A business is undertaken without sufficient capital, connexion, or knowledge. It ends unfavorably. Why? Because it was not begun right. A young professional man, whose probationary period of study has been spent in pleasure rather than in hard reading, complains that he cannot succeed. Why, again? Because he has not begun right either! A stock company blows up. Still why? Ten to one, the means employed were not adequate to the end, or else it was started with inefficient officers, and in either case it was not begun right. Two young house-keepers break up their gay establishment, the lady going home, perhaps, to her father's, taking her husband with her. Why? They did not begin right, for they commenced on too large a scale, forgetting that the expenses of a family increase every year, and that, in no event, is it safe for a man to live up to his income. An inventor starts a manufactory, in which his improvements in machinery is brought into play; but after a while he finds himself insolvent; his factory is sold; another reaps where he has sown.—Why? Alas! like too many others, he has undertaken more than he has means to carry through: he did not begin right; and his ruin was the consequence.

But, above all things, life should be begun right. Young men rarely know how much their conduct, during their first few years, affects their subsequent success. It is not only that older persons, in the same business, form their opinions of them at this time, but that every beginner acquires, during these years, habits for good or ill which color his whole future career. We have seen some of the ablest young men, with every advantage of fortune and friends, sow the seeds of ruin and early death, by indulging too freely in the first years of manhood. We have seen others, with far less capacity, and without any backing but industry and energy, rise gradually to fortune and influence. Franklin is a familiar illustration of what a man can do who begins right. If he had been too proud to eat rolls in the street when he was a poor boy, he would never have been Minister Plenipotentiary to the Court of France.

Always begin right! Survey the whole ground before you commence any undertaking, and you will then be prepared to go forward successfully. Neglect his however, and you are almost sure to fail. In other words, begin right. A good commencement is half the battle. A false first step is almost certain defeat. Begin right!—*Public Ledger.*

### THE VAGARIES OF TABLE MOVING.

A correspondent of the Manchester Guardian, in describing some experiments, says:—"The table being put in rapid motion, a bible folded in paper, was placed upon it, when the table stopped instantly, and could not be induced to go again so long as the precious volume remained upon it. The bible was removed, and a copy of Bunyan's Pilgrim's Progress placed in its stead, when the table revolved as before. A prayer book was tried with like results, and the whole service of the church of England failed to arrest its rotary motion. Whilst it was still revolving with considerable velocity, the bible was again and again substituted, but with unvarying results. After repeating these experiments several times, one of the party suggested that the bible should be unfolded and opened, to try if some portions of it were more powerful than others. This was done; when, lo! and behold what had been believed to be the bible proved to be a copy of *Gulliver's Travels!* Fancy the consternation of the operators at this discovery, (the hoax only being known to one of the party.) I may add the experiment was again tried, but Gulliver exposed had lost its power.—*European Paper.*

### A SNAKE STORY.

A correspondent, writing from Texas, gives us a good story, for the perfect truth of which he pledges his sacred honor.—"One night, my wife and myself were awakened by a noise from the shelf, which contained our store of crockery, followed by a crash, which showed that a great portion of our cups and plates had been flung to the floor. Springing up to discover the author of this 'attack upon China,' I found a large snake in a somewhat unpleasant fix. He had crawled upon the shelf, attracted by a number of eggs which were scattered about. One of these he had swallowed, and, in order to get at the next, he had to put his head and a portion of his body, through the handle of a jug which happened to stand between the coveted delicacies. The handle was just opened enough to let his body, in its natural state, slip cleverly through, but not sufficient to let it pass when puffed out by the egg. In this position he had swallowed the second egg. His snakeship thus found himself unable to advance or retreat, and in floundering about to escape from this novel stock, had caused the accident which had aroused us."—*Post.*

# For the Ladies.

### THE UNGUARDED MOMENT.

Yes, my lips to-night have spoken
Words I said they should not speak;
And I would I could recall them—
Would I had not been so weak.
Oh! that one unguarded moment!
Were it mine to live again,
All the strength of its temptation
Would appeal to me in vain.

True, my lips have only uttered
What is ever in my heart:
I am happy when beside him,
Wretched when we are apart.
Though I listen to his praises
Always longer than I should;
Yet my heart can never hear them
Half so open as it would.

And I would not, could not, pain him,
Would not for the world offend;
I would have him know I like him
As a brother, as a friend;
But I meant to keep one secret
In my bosom always hid,
For I never meant to tell him
That I loved him—but I did.

---

### THOUGHTS IN SHADOW.

—The shadow deepens, my love,—there is light, but it scarce seems the free, undimmed sunbeam on our pathway. Is the night drawing near, or is it the gloom of clouds,—the clouds of a passing storm which shall make our future but the purer and brighter?

It is cloud-shadow, for here and there hope gleams through—here and there the silver lining is turned toward us—here and there the pure blue sky almost gladdens our watching eyes.

—Is there no joy for the day of darkness and storm—no home nook where we may find peaceful shelter?

Ah, love! the light of affection—the sweet joy of sympathy, knows no wasting or dimness,—it is as full, as fresh—ah! more tender than before. It is stronger—it binds us closer—it seems a holier tie, if this were possible. O, it is not all sorrow, though the sky is lowering.

How blessed, too, to trust in "Our Father." In this hour of trial he hides not his face from us. As ever, he is good and merciful—mindful of our every want—and careful for our truest happiness. And his gracious promises! can we despair when we listen to them? He has all Power, and can turn our shadow to sunlight. He can heal our sickness. He can give us our happy home again. And if the night come He can light us through "the valley of shadows," to our eternal rest. In the assurance of faith let us pray, let us believe, let us *rest* in Him—in his tender, compassionate love.

Sorely your sufferings cut my heart, and I would I could bear your anguish. But I can only give you earthly care—can only offer you the earnest service of a heart bound to yours by the closest tie—a tie which makes us one. How sweet, then, to feel that I can leave you in the hands of Him "who doeth all things well." My prayers go up to Him with a firmer faith—for I trust my dearest treasure in the care of "Our Father." May the cloud soon pass—may our way be bright—may our deserted home lose its silence and loneliness, and be to us a true and happy home again.—B

---

### WOMAN AND LADIES.

In the days of our fathers there were such things to be met with as men and women; but now they are all gone, and in their place a race of gentlemen and ladies—or, to be still more refined, a race of "ladies and gentlemen" has sprung up. Women and girls are among the things that were; but "ladies" are found everywhere. Miss Martineau wishing to see the women wards in a prison in Tennessee, was answered by the warden, "We have no ladies here at present, madam." Now, so far as ladies were concerned, it was very well that none of them were in prison; but then it sounds a little odd—ladies in prison! It would seem bad enough for women to go to such places.

A lecturer discoursing upon the characteristics of woman, illustrated thus:—"Who were the last at the cross? Ladies. Who were the first at the sepulchre? Ladies."—On the modern improvement we have heard of but one thing that beats the above. It was the finishing touch to a marriage ceremony performed by an exquisite divine, up to all modern refinements. When he had thrown the chain of Hymen around the happy couple, he concluded by saying:—"I now pronounce you husband and lady."—The audience stuffed their handkerchiefs into their mouths, and got out of the room as quick as possible to take breath.

---

Ladies and Jewelry.—We overheard the following fragment of conversation, the other day, on board the Alida:—"I met Lord Ellesmere and his party at Niagara, the other day. I knew the ladies were persons of distinction the moment I saw them, because they were no jewelry, or any other ornament whatever."—*Home Jour.*

---

Every one must see daily instances of people who complain from a more habit of complaining; and make their friends uneasy, and strangers merry, by murmuring at evils that do not exist, and repining at grievances they do not really feel.

MOORE'S RURAL NEW-YORKER

ROCHESTER, SEPTEMBER 10, 1853.

**PUBLISHER'S NOTICES.**

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ ADVERTISEMENTS must be brief, appropriate to the objects of the paper, and accompanied with the cash.

☞ FOR TERMS, &c., see last page.

## The Advance in Breadstuffs.

SEVERAL weeks ago, in an article on the Wheat Crop of 1853, we made some remarks upon the prospective demand for wheat and flour, expressing the opinion that there would be an advance in prices. For reasons then given we believed the prices of breadstuffs would soon rule higher, corresponding nearer to those of other staple commodities, though we did not anticipate any special foreign demand or rapid advance. Considering any material rise in foreign markets quite problematical, our conclusions were based upon other supposed facts and causes, some of which were enumerated—and the gradual advance in prices during the past month, principally for home consumption, confirms the opinion then expressed.

Recently, however, the foreign demand has affected our markets to some extent—and the advices by the last arrival must cause, and temporarily sustain a material advance in prices. We notice that a rise has followed the announcement of the news in all our principal markets. So far as the farming interests are concerned, the advices by this arrival are the most important received for many months. Though a continuance of the present foreign demand and prices is uncertain, a great impetus will be given to the trade in breadstuffs throughout this country. It is said that engagements have been made ahead in Liverpool to deliver Baltimore brands of flour as high as 30 shillings—and it is supposed that the letters by the last steamer have brought out extensive orders, which cannot fail of giving fresh impetus to the speculation on this side. The fact that money is plenty in England and France is favorable to American producers and operators. England is "in funds" and prepared for any deficiency of grain and flour resulting from the reported short crop,—while France is full of money, and can therefore pay promptly for her import of breadstuffs.

As but comparatively little wheat has been marketed, the present rise must inure to the benefit of producers rather than speculators. Whether wheat growers shall take advantage of the rise, or wait for a further advance, each must determine for himself. The price is now pretty well up, but there is no certainty of its permanency.

## Whole World's Temperance Convention.

THIS Convention, instituted by the friends of the women who were excluded from the meeting of delegates at the Brick Chapel, in New York, in May last, was held in Metropolitan Hall, New York, on Thursday and Friday of last week.—There were large audiences present at the sessions, the interest increasing at each meeting. Among the prominent speakers and actors were HORACE GREELEY, Rev. Miss BROWN, Rev. JOHN PIERPONT, W. H. CHANNING, LUCY STONE, PAULINA DAVIS, Mrs. BLOOMER, Miss MARY JACKSON, an English reformer, P. T. BARNUM, JOHN P. HALE, W. L. GARRISON, Miss ANTHONY, FRANCES D. GAGE, Mrs. NICHOLS, and others. Rev. T. W. HIGGINSON, of Mass., who stood by the women in the Brick Chapel, was President of the Convention. The Amphion Glee Club were present and sang several pieces. Miss BROWN made the first speech after the President, and from the reports of her remarks in the New York papers, we fancy that it was marked by her usual force and eloquence.

HORACE GREELEY reported a series of fifteen resolutions, from which we copy the following:

Resolved, That the fundamental, undeniable, scientifically demonstrated fact, that alcohol is a poison, of itself suffices to prove that it ought not to be presented in such forms and combinations as will tend to disguise its character and blind the uninformed to its baleful potency; but should always be sent forth from the drug store and the chemical laboratory, where alone it should be sold, either pure and undiluted, or in such combinations as do not disguise its deadly properties and do not tempt a depraved appetite or a reckless desire for novel sensations; for since Satan is only perilious to the peace and happiness of Eden when disguised, it is a crime to assist him in disguising himself.

Resolved, That we impeach the use of fermented or alcoholic wine in the solemn celebration of the Eucharist, as a profane and impious desecration; since that which poisons and destroys men can be no true symbol of that which purifies, restores and saves; and we challenge the current assumption that wine devoid of alcohol is unattainable in a country, and in an age when the resources of chemistry are so abundant as in ours, as founded in the grossest ignorance, the most indolent heedlessness, or the most flagrant dishonesty.

Resolved, That while all well directed efforts to reclaim the unfortunate victims of intemperance to virtue, self-respect, usefulness and happiness, should receive our ready and ardent co-operation, it is nevertheless a truth not to be concealed, that drunkenness is a crime; that no father, husband or son, no mother, wife or daughter, has any moral right to be a drunkard; and that they who are such are deserving of sympathy only in common with the libertine, harlot, gambler, thief, burglar, robber and assasin.

The Maine Law was declared to be the best enactment regarding the liquor traffic ever adopted, and friends of Temperance are exhorted to make the passage and upholding of a restraining law the controlling object in voting for law makers. Mr. GREELEY made a speech in support of his resolutions. Able addresses were also made by the other speakers above named, of both sexes. Letters were read from NEAL DOW, HORACE MANN, S. P. CHASE, J. R. LOWELL, E. H. CHAPIN, and others, expressing sympathy with the cause.

According to the proceedings as reported in the N. Y. papers, the Convention was characterized throughout by much dignity and ability on the part of officers and speakers—which, added to the large number in attendance, rendered the whole a strong and influential demonstration. The Tribune characterizes it as, "on the whole, the most spirited and able Convention in behalf of Temperance ever yet held."

## National Educational Convention.

A SESSION of this body was recently held at Pittsburgh. The attendance was large, and the proceedings of a spirited character. During the meeting a number of very interesting papers were read. One of them was a very extended discussion of the question of the public schools,—what is proper to be done to render them unobjectionable to all sects, and remove the clamor on the part of any for a division of the school fund and the necessity of establishing parochial schools. Bishop PETTER and Prof. HENRY were constituted a committee to prepare an address urging the people to raise the sum of $5,000 to be offered as a premium by the Association for two works on education,—one on its History, the other on its Philosophy.

Subsequently the citizens of Pittsburgh held a meeting, at which Ex-Governor JOHNSON presided and several hundred dollars were subscribed towards raising the desired amount, and a committee appointed to solicit further contributions. †

THE FRUIT FARM of Mr. H. N. LANGWORTHY, of Irondequoit, near this city, which has long ranked as one of the best fruiteries in Western New York, has recently been purchased by the Messrs. CHERRY, of the (adjoining) River Bank Nursery. The farm contains about 40 acres, and sold for $8,000. After many years of judicious management, and skillful culture, Mr. L. had realized a most beautiful and desirable homestead, but impaired health has induced him, not without painful emotions we are confident, to dispose of the property. It is a source of pleasure to know, however, that the premises pass into the hands of gentlemen of taste and enterprise. The farm will prove a most valuable addition to the River Bank Nursery establishment, and we congratulate the proprietors upon the acquisition.

THE PEACH TRADE of this city is unusually large this season, and just now at the culminating point, so far as quantity is concerned. Last week, and the preceding, choice peaches sold readily at $2 and $3 per basket of about 3 pecks. One dealer informs us that he disposed of 200 baskets, none of which were sold for less than $2. This week, however, the market is becoming drugged, and prices range at from 50 cents to $1 per basket, according to quality. In size and appearance peaches are very fair this season, but deficient in flavor and sweetness.

THE WEATHER has been exceedingly warm for the past few days. On Monday the mercury was quite elevated—ranging from 94 to 98 degrees—and Tuesday about ditto. We believe it touched the nineties on each of the three preceding days. Pretty warm for September. Rain is much needed hereabouts, and a change in the atmosphere would be decidedly agreeable.

## Literary Notices.

THE SHAWM—A Library of Church Music. By WM. B. BRADBURY and GEO. F. ROOT, assisted by THOS. HASTINGS and T. B. MASON. Published by Mason Brothers, New York.

THIS book presents strong claims to the patronage of choirs and singing classes. The combination of distinguished authors, and the peculiar priviliges of the large publishing house from which it is issued with regard to copy rights, are made subservant to the wants of the musical public. We venture to say that the copiousness and variety of good practical Church music in this collection, are not to be found in any similar work; while the ingenious arrangement of the Elements of Music, and the Cantata of Daniel, very much increase the aggregate merit of the volume. That the publishers have performed their duty, will be evident on examination. See advertisement.

THE TEACHER AND PARENT—A Treatise upon Common School Education; containing practical suggestions to Teachers and Parents. By CHARLES NORTHEND, A.M. A. S. Barnes & Co., New York, 1853.

THE author of this volume has been engaged for many years as teacher and superintendent of schools, and gives the fruits of long experience The subject chosen is one of vast moment in all its varid relations, and commends itself to the attention of all interested in the cause of Education. It should be read by both teacher and parent.—Sold by G. W. FISHER, Rochester.

THE REDEEMED CAPTIVE—A Narrative of the captivity and subsequent deliverance of Rev. JOHN WILLIAMS, who was taken a prisoner in the French and Indian War, and spent years in captivity with the Indians.

THE present is the seventh edition of this memoir, which will continue to be read with interest as long as faithful christian labors and prayers, and a reverence for the great and good men who suffered in the cause of liberty and right, shall have a place in the hearts of American citizens. It may be had at DARROW'S.

## Letter from Kentucky.—Crops, &c.

BURLINGTON, Ky., August, 1853.

EDS. RURAL:—As you have expressed a desire for some off-hand sketches, some "pencilings by the way," or "jottings on the crown of a hat," of incidents of travel or loiterings by the river side of a sojourner in the southwest, I may from time to time rehearse some of the accidents and incidents, "men, animals and birds," (as Pat said,) which, duly chronicled, may interest the readers of the RURAL.

The southwest is rapidly developing its resources and extending its commercial relations,—becoming rather locomotive in its operations, having partaken something of the go-ahead feeling which propels our eastern friends, and it is to be hoped even Kentucky will exhibit unmistakable signs of advancement, without the danger of "running off the track."

Kentucky, in common with many of her sister States, has suffered much from dronth during the summer, and the earth is still parched and dry for want of refreshing showers; consequently the staple crops must fall short of the average amount produced. Corn is doing better than was anticipated a few weeks ago, though the crop will not probably exceed two-thirds the average of last year from the same number of acres. The number of hogs fattening for market greatly exceeds the number of last year, and as a consequence a falling off in price is expected, though this may be somewhat checked by the diminution of the corn crop.

Not as much tobacco is grown in this part of the State as in the more southern, where it enters largely into the staples raised for the mart of trade. As probably most of your readers know, the seed is sown in beds, and when sufficiently grown is, like cabbage, transplanted into carefully prepared ground. The early drouth prevented the putting out of the plants until it was late, and the probability now is the seed will not be perfected, while there is danger of much of it being damaged by frost. The smaller amount planted than usual, and the present state of the crop, will not warrant the expectation of more than half the usual quantity.

Hemp is raised quite largely, and promises a better return than the other crops I have named. Fruit of all kinds is abundant. Although the Kentuckians have done less than the more northern farmers in the way of cultivating choice fruits, yet where industry has solicited the kindly offices of dame nature, she has not withheld an ample reward.

The commerce of the Ohio has suffered much from the low stage of water, as none of the larger boats have been able to make their regular trips though recently the upper branches, as if in pity for the parent, have poured out their fountains of supply, and an ordinary stage of water now affords a transit for the better class of boats, as is evinced in the crowds of drays and carts with which the levees of the larger towns are thronged. On the whole, Kentucky must this year fall far short of her usual amount of the staples of her trade, and her revenue from these sources be greatly diminished. I may find time hereafter to chronicle more varied observations upon men, manners and incidents.

J. O. HUDNUTT.

BANKS IN NEW YORK—*Their Circulation.*—By the Quarterly Report of the Superintendent for the quarter ending on the 11th of June, 1853, the following facts are presented:

| | |
|---|---|
| Incorporated Banks in New York city | 12 |
| Banking Associations | 40 |
| Incorporated Banks in the country and other cities | 48 |
| Other Banking Associations | 115 |
| Individual Banks | 50 |
| Banks having given notice of closing | 29 |
| Total Banks in the State | 294 |
| Capital of all the Banks in the State of all descriptions | $73,183,251 |
| Circulation | 30,065 550 |
| Deposites | 79.996,528 |
| Specie | 13,384,410 |
| Cash Items | 17.883,543 |
| Public Securities | 19,820,646 |
| Private Securities | 157,598,813 |

MONUMENTAL BLOCK FROM UTAH.—The Territory of Utah has contributed its block of marble to the Washington Monument, and a deputation of Elders have reached St. Louis with it, on their way to Washington. The block is described by the St. Louis News as being of whitish limestone, ungrained, with fine particles of flint, and not susceptible of a very fine polish. The stone was inscribed and ornamented by a young artist named William Ward, and is 3 feet long, 2 wide, and 6¼ inches thick. In the centre stands the Beehive, the emblem of industry; over it is the motto, "Holiness to the Lord." Above this is the all-seeing eye with rays. Beneath the hive is the word "Deseret." Over these, springing from the ground, which is covered with different kinds of foliage, is a semi-circular arch, enriched with Convolvulus. On each side are spandrils; in one is the symbol of union, enriched with foliage; in the other is the cornucopia. Next the edge is a fillet one and a half inches wide, and three-fourths of an inch deep.

IMPORTANT DECISION.—We learn from the Batavia papers that Judge DIBBLE has decided that the sale by the Seneca Chiefs, in 1842, of their lands near Buffalo, to the Ogden Company, was fraudulent and illegal, and that he has granted a warrant for the removal of the occupants of the land. We hope that the decision will be sustained; for we never doubted that the Ogden Company obtained those lands by one of those swindling operations in the extermination of the Indian tribes.

THE YELLOW FEVER.—A telegram dated New Orleans, Sept. 4, says:—The interments for the past week have been 955, of which the deaths from yellow fever were 814,—a decrease of six hundred from the previous week.

The deaths in Natchez average from 13 to 15 daily out of a population which does not possibly exceed 4.000.

In Mobile, on Friday last, the number of interments were 37—a large increase.

## News Paragraphs.

☞ The stock of the Crystal Palace had a tumble of ten dollars a share on Friday. This brings it down to ten per cent. below par. In June it was selling for $170. Eighty dollars difference on a share, the fall taking place when the exhibition is in full blast, has a bad look for the speculation, in a pecuniary point of view.

☞ The Daily Union learns that the General Association of New York, (Congregational,) has just adopted a plan for the "Plymouth Theological Seminary," and fixed upon Rochester as its location. There is no better point in the State for such institutions, and we are glad to perceive that the fact is so generally appreciated.

☞ It is stated that since the 1st of January, when the new steamboat law took effect, to this time, there has not been the loss of life of a single passenger, or even an injury to one, upon either the Mississippi river or any of its tributaries, whilst in seven months of 1852, corresponding to these, there were over 500 persons killed.

☞ The New York Times mentions a rumor that a large purchase of Porter's revolving rifles has been made in that city by parties interested in the affairs of Cuba. The number of implements are set down at a thousand. Six charges to each will make this stock equivalent to six thousand muskets.

☞ At the late election for delegate in Oregon, eight thousand votes were thrown. This shows a great increase of population. In 1849 the vote did not exceed 700; in 1851, 2,500. Since 1851, Washington Territory has been taken from Oregon. Such an increase in unexampled in the history of any State or Territory, except California.

☞ Three sisters of Kossuth are living in New York. One is at the head of a boarding house at No. 1 Irving Place, and the others, who have recently arrived in this country, are at 761 and 762 Broadway, where they intend opening a lace and silk store, about the 1st of September.

☞ Black Snake, the celebrated Indian, now 106 years of age, is still hale and hearty, residing at Allegany Reservation, N. Y. He was one of the most active of his tribe in bringing about a treaty in behalf of the United States, with Gen. Washington, at Philadelphia, in 1787.

☞ The Boston Transcript learns from a friend, who passed last Friday night on Mt. Washington, that for twelve hours the mercury was not higher than 30°; and that in the morning there was a considerable quantity of ice and icicles.

☞ The editor of the Fredonia Advertiser has been shown "a couple of bean pods each measuring twenty-six inches in length, and containing thirty-seven beans, with several intervening vacancies for one of the same sort."

☞ It is stated that in the New Orleans workhouse, where there are over two hundred prisoners confined, there has not been a single case of yellow fever this season. All the other city prisons are said to be equally exempt from epidemic. If true, this is a remarkable fact.

☞ At one of the largest wholesale warehouses in Boston, the head corresponding clerk is a young woman "who writes a beautiful and rapid hand, and fulfils the duties of the situation to the complete satisfaction of her liberal employer."

☞ The Albany papers of Monday state that the body of a boy about 17, was found in a ravine near that city, under circumstances that leave no doubt that he had been murdered. He is unknown, but supposed to have been a canal driver.

☞ The *Detroit Advertiser* calls attention to the extensive and valuable coal formations which are said to exist in Michigan, which may be mined at a profit in localities within a short range of the city of Detroit.

☞ There is a girl in Troy, N. Y., aged 12 years, of French parentage, whose face is almost entirely covered with hair of a dark color and about two inches long. She is intelligent, fond of books, and attends school regularly.

☞ Advices from Venezuela to August 17th state that the political disturbances, in that state, had been nearly settled. Two other earthquakes had destroyed what remained of the city of Cumana. American flour $15 per barrel.

☞ The Watertown (Jefferson Co., N. Y.,) Journal says, the drouth and grasshoppers have almost entirely destroyed the crops in the central and northern parts of that county, and that the farmers are selling off their stock at ruinous prices.

☞ The first printing office in Oregon was established by Geo. L. Curry. He was afterwards for some time a member of the Territorial Legislature, and is now the acting Governor. A few years since he was an apprentice boy in Boston.

☞ The Rev. Eleazer Williams, of Bourbon notoriety, requests the editor of the Malone Palladium to announce that he has returned to his home, near, or at Hogansburgh.

☞ The Commissioner of Patents has refused to grant an extension to S. Colt, of his patent for improved fire-arms, the patentee having already derived nearly $1,000,0000 therefrom.

☞ A man by the name of GAGE, in the town of Freedom, Cattaraugus county, while intoxicated, struck a man named BARNES, with a club, a few days ago, killing him instantly.

☞ The number of letters passing through the mail between California and other parts of the U. States, last year, was 4,400,000; this year it will not be less than 5,500,000.

☞ Accounts from Natchez state that the greatest alarm was prevailing there, more than half of the inhabitants having left the city in consequence of the ravages of the yellow fever.

☞ Mr. Hall, one of the editors of the New Orleans Crescent, was shot while in his office, on the 27th, by Mr. Houghton, a lawyer, and it is feared that his wounds will prove fatal.

☞ Mrs. Sherman, 75 years of age, was instantly killed on Sunday, at New Haven, Oswego Co., by being thrown from a wagon, while on the way to church.

☞ The next term of the State Normal School commences on the 19th of the present month.—Prof. S. B Woolworth is still at the head of the School.

☞ The Niagara Courier says the orchards of that county have rarely been so bare of fruit as they are this season. The crop of apples will be almost a total failure.

☞ The Jamestown, Chautauque county, papers, announce that the hotels in that village have closed their bars, and are hereafter to be Temperance hotels.

☞ Hon. Richard J. Bowie is the Whig candidate for Governor of Maryland at the approaching election.

☞ The shipment of breadstuffs from New York for the week ending the 16th ult., embrace 45,589 barrels of flour, and 113,470 bus. of wheat.

## News Brevities.

—— There have been several deaths from yellow fever in Philadelphia, recently.

—— The Penn Yan Fire proves quite extensive, and the losses serious.

—— Last week the St. Louis Sub-Treasury contained $1,200,000 in specie.

—— A company has just been formed in London for stocking the river Thames with salmon.

—— The potatoes in some parts of Cortland Co., are blighted badly.

—— Francis Jackson, of Wellsville, N. Y., committed suicide, last week, by shooting himself.

—— The New York Tribune appears again in new type throughout. It is a splendid sheet.

—— The new cars on the Central railroad are to be a foot wider than those now in use.

—— Patrick O'Donohue was executed at Cortland on Friday, for the murder of Mrs. Kinney.

—— Dwight Lyman, an Episcopal clergyman of Pennsylvania, has just become Roman Catholic.

—— The contribution to the Washington Monument during August was $3.518.

—— The Boston Pilot attributes the frequency of railroad accidents to the blind prevalence of Protestantism!

—— The battle of Chapultepec, Mexico, is to be celebrated at Hartford, Conn., by a military ball, on the 14th inst.

—— The Sacketts Harbor and Ellisburgh R. R., have just added thirty new freight cars to the rolling stock of the Company.

—— A man named J. L. Fish, has been arrest-at Ohio city for murder, he having shot a boy for stealing his water melons.

—— The directors of the Crystal Palace advertise the Exhibition complete in all its parts, and that it will close in the month of December.

—— A new weekly paper has been commenced at Tonawanda, called the Niagara Pilot—S. S. Packard, editor.

—— A son of a Mr. Stewart, of Hamburgh, Erie Co., aged six years, was so badly cut by a scythe lately as to cause his death.

—— B. F. Johnson, Secretary of the State Agricultural Society, will deliver the Address at the approaching annual Fair of Seneca County.

—— The New York Art Union is to be reopened for the exhibition and sale of pictures by American Artists.

—— Passenger trains now run between Sandusky and Chicago, connecting with the steamers of the Buffalo and Sandusky line.

—— The Hon. James A. Pearce, of Maryland, will deliver the address at the Ohio State Agricultural Fair.

—— Rev. Byron Waller has been mulcted in $5,000 damages, in Carroll county, Ky., for seduction.

—— Ex-President Van Buren has made arrangements to spend the coming winter in Switzerland.

—— In 1831 there was only one European coffee planter in the interior of Ceylon; now there are about 300.

—— Robet Corry, a lad 14 or 15 years of age, was killed in Philadelphia a few days since, by a stone thrown by another lad.

—— It is said that *ninety miles* of cotton cloth are daily manufactured in Manchester, N. H.—Long piece, that.

—— Mrs. Phebe Patterson proposes to establish in New York city a printing office, where type setting will be performed wholly by women.

—— According to present appearances the potato disease will prevail to a great extent in Great Britain the present season.

—— Grace Greenwood, just returned from the old world, is about editing a paper for children, to be called "The Little Pilgrim."

—— The Maryland tobacco planters have proposed to hold a convention of all the tobacco growers, in Louisville, during November next.

—— The canal tolls received at Oswego, from the opening of navigation to Sept. 1st, are $210,669, being an increase of $39,393.

—— Messrs. Gurley & Stevens have just erected an elegant Silk Factory in Morrisville, Madison Co. The enterprise deserves success.

—— W. Patton, charged with killing John Worley at Charlestown, Kanawha co., Va., has been arrested at Alexandria, Ky.

—— The total amount contributed in various sections of the country for the relief of the New Orleans sufferers, is about $140,000.

—— Texas advices leave no doubt of the election of ex-Governor Bell to Congress, and Mr. Pease, dem., Governor of the State.

—— The people of Manchester, N. H., propose to establish a cattle market. The cattle trade of that city is estimated at $100,000 a year.

——One hundred and forty-five thousand bushels of wheat were sold in New York, on Thursday, the value of which was over $180,000.

—— The elections in Vermont and Maine for State officers and members of the Legislature, take place this month.

—— Peaches, in the Chicago market, fell in three days from 15 cents a-piece to six cents per dozen. So says the Journal.

—— The Crystal Palace is now illuminated in the evening, and open to visitors. The display is said to be very fine, and attracts large crowds.

—— A destructive gale passed over the town of Lapeer, Cortland Co., on the 27th ult., unroofing buildings and doing other serious damage.

# Foreign Intelligence.

## Arrival of the Atlantic.

*Advance in Breadstuffs—Import Duties Repealed—Export of Breadstuffs Prohibited in Greece—The Queen's Speech—Eastern Affairs.*

THE U. S. mail steamship Atlantic, from Liverpool, whence she sailed on Wednesday, 24th, about 1 P. M., arrived at New York on Sunday afternoon about 5 o'clock, bringing advices four days later than the Europa.

The Asia arrived out Sunday morning, 20th.

The U. S. corvette St. Louis sailed from Malta, August 4th, to the Eastward.

Cotton was dull, and there had been a large advance in Breadstuffs. The political and general news is interesting.

The prospects of Eastern affairs may be briefly summed up. They exhibit no new complication on the one hand, and on the other they show no more symptoms than before of an early adjustment. On the favorable side we have the assurance in Queen Victoria's speech that she has "good reason to hope that an honorable arrangement will be speedily accomplished." On the unfavorable are reports of an outbreak in Servia, with the express intention of forcing hostilities.

Parliament was prorogued on the 20th ult. by commission. The Queen's speech was all congratulatory. America was not mentioned. The Queen says she has good reasons to hope that an honorable arrangement of the eastern question will speedily be accomplished.

Lord Palmerston stated in the House of Commons that the Czar will evacuate the Principalities without unnecessary delay.

The eastern question otherwise offers nothing new, and appears no further from nor nearer to an adjustment. The Divan recommends the Sultan to accept the note.

The rumored intentions of the Austrians to occupy Bosnia is denied.

The Hospodar of Moldovia has been superseded by the Sultan for his Russian leanings. He refuses to give up, so the English and French consuls have withdrawn.

Capitalists are wanted to construct a ship canal from the bend of the Danube to the Black Sea, thus avoiding the mouth.

A decree of Napoleon fixes a uniform rate of import duties of breadstuffs to 25 centimes, to Dec. 31, and to the same date no tonage duties are to be charged on ships importing corn pro rata for parts of their cargoes.

The text of the Austrian protests against the Smyrna affair has been published and has been sent to all the foreign ministers. It takes the ground that if Capt. Ingraham has broken international law, it has been explained.

The Emperor of Austria is affianced to Princess Elizabeth of Bavaria.

The Duke of Bravant has married the sister of the Princess Mary of Austria, at Brussels.

The import duty on breadstuffs into the two Sicilies is repealed.

Some popular demonstration against the Ahites has been made at Leghorn.

The export of breadstuffs is prohibited from Greece.

The King of Ava had submitted to peace and it was proclaimed in Burmah.

The Chinese imperialists assisted by foreigners, were repulsed in an attempt to retake Shia-Boo-Kaing.

MARKETS.—Liverpool Cotton Market dull, and quotations unchanged, although favoring buyers. Sales for three days 15,000 bales.

The Liverpool Breadstuff Market was wildly excited by speculative feeling. Wheat had advanced 4 d; white quoted 7s10d@8s4d; deliverable in November 8s6d; red 7s4d@8s.

Flour advanced 1s@1s3d@1s6d per bbl; Baltimore, Ohio and Philadelphia 29s@29s6d; deliverable in November 30s; western canal 28s.

Indian corn firm at 6d advance.

Provisions—Bacon quiet. All tendency to a further decline appears checked. Beef and pork steady and in request; cheese buoyant; lard inactive; yellow steady.

The London money market was rather quiet. Consols closed for money and account at 98¼ a98⅞.

Glasgow iron market steady. Pig 67s6d.

From James M'Henry's Circular.

LIVERPOOL, August 23.

BREADSTUFFS.—We have renewed excitement; quotations of flour and wheat have reached high figures. Speculators have taken large parcels of Philadelphia flour at 30s per barrel; and of prime white wheat at 8s. 6d. per 70 lbs.; other sorts in proportion. Some purchases have been made for export to France; but our dealers and consumers decline to follow the advance. Indian Corn and other articles are without change.

---

FREE DEMOCRATIC NOMINATIONS.—The State Free Democratic Convention met at Syracuse, Sept 1st, and made the following nominations for State officers:—Secretary of State, Charles B. Sedgwick, of Onondaga. Comptroller, Seth M. Gates, of Wyoming. Attorney General, John Jay, of New York. Treasurer, Nathan Soule, of Onondaga. Canal Commissioner, Chas. G. Cassors. Prism Inspector, Horace Boardman, of Clinton. Engineer, Silas Cornell, of Monroe. Judge of the Court of Appeals, (full term) Leonard Gibbs, of Washington. Do. (short term) E. J. Chase, of Niagara. Clerk of the Court of Appeals, Thomas W. Frost, of Oneida.

---

A FEARFUL ACCOUNT.—Mr. Everett, late Secretary of State, is generally known as a gentleman of extensive information; one who will not "speak without book" on important subjects involving statistical facts. From a computation of his, it appears that the use of alcoholic beverages costs the United States directly, in ten years, $120,000,000; has burnt or otherwise destroyed $5,000,000 worth of property; has destroyed 300,000 lives; sent 250,000 to prison and 100,000 children to the poorhouse; caused 1,500 murders and suicides; and has bequeathed to the country 1,000,000 orphan children.

---

GREAT FIRE IN AUGUSTA, ME.—A fire at Augusta, on Saturday, destroyed six saw mills, machine shops, and blind factories, and a valuable grist mill, the best in the State, built by the late D. Emery, Esq.; also all the dry-houses with their contents. The large Kyanising Ship House, recently owned by the Kennebec and Portland Co., which was purchased a few days since by the Water Power Co., also destroyed with a few other buildings. The whole loss is estimated at from $150,000 to $200,000.

---

AN IMMENSE WORK.—In a recent debate in the House of Commons, it was stated that the catalogue of the Library of the British Museum, now in process of compilation, has already cost a hundred thousand pounds, and is so far from being complete, that it cannot be finished in less than forty years. This catalogue already fills 1,200 folio volumes. When completed, it will form, "a neat and portable work of 13,000 volumes!"

## The Western Hog and Cattle Crop.

THE prospects of the coming season, throughout Kentucky, and we believe Ohio and Indiana, are favorable for an increase over last year. In Kentucky, it is said the number of hogs is unprecedented, and as the corn crop will be a full average one, they can all be fattened. A letter from a farmer in Mason county, Ky., says:

Stock hogs are $3 per hundred, gross, and freely offered. Fat hogs *refused* at same price. The amount of old corn is considerable at $1.50 per barrel in the crib. New corn is selling at $1,25 per bbl. in the field.

Cattle coming in to winter and fall beef are more scarce than I ever knew them. I am now grazing 700 cattle—only 100 of them will be fit for killing this fall, whereas usually one-half would have been good beef. I found it utterly impossible in Kentucky to get aged cattle for grazing, fat. Beef is six cents per pound here now, and must advance with the fall demand.

The California trade has taken off most of the extreme Western Cattle, and oxen have been bought in this county for that market. Tennessee has even been hunted over for old oxen to feed for the New York market, by Kentuckians and Ohioans.

---

NEW WHEAT FROM OHIO TO LIVERPOOL.—By the Sarah Sands, Mr. Ira Gould sends to Liverpool five hundred barrels of flour, made from Ohio wheat of the present harvest. They will be in Liverpool within six weeks of the time when the wheat from which they were made left the farmer's yard, having in the meantime passed over some eight hundred miles by land and water to be manufactured, gone through all the necessary process, and finally made another voyage of 3,000 miles.—*Montreal Herald*, 25th ult.

---

GIGANTIC CEDAR.—There is now on exhibition at Adam's & Co.'s Express office, Broadway, New York, a piece of bark taken from a most extraordinary vegetable production in California. The thickness of the bark is eighteen inches, from which an approximate idea of the size of the tree itself may be derived. Its dimensions are as follows:—Entire height 300 feet, height of the first limb from the ground 160 feet, circumference of the trunk 96 feet. The tree is a cedar, and stands in Calvaras county. "Woodman, spare that tree."

---

IMPORTANT QUESTION SETTLED.—The Washington Star says that the Secretary of the Interior, to whom the question was submitted by the Commission of Pensions, has decided that the war between the United States and Mexico terminated on the 30th of May, 1848, when the ratified treaty of peace was exchanged between the two countries. Therefore, those persons who enlisted into the army of the United States subsequent to that date, are not entitled to bounty land.

---

GEN. TAYLOR'S FAMILY.—The St. Louis Republican says:—In noticing the death of Col. Bliss, several of the papers have fallen into the error of supposing that Mrs. Bliss was the only surviving member of Gen. Taylor's family. This is an error. There is a sister, the wife of Dr. Wood, Surgeon U. S. Army, and Col. Taylor, son of General Taylor, both still living.

---

SINGULAR.—The Patterson (N. J.) Intelligencer gives a curious incident of the late thunder storm: "A little girl was standing at a window before which was a young maple tree. After a brilliant flash of lightning, a complete image of the tree was found imprinted on her body. This is not the first instance of the kind, but it is a singular phenomenon"

---

GUANO.—A cargo of 800 tons guano was received at this port Monday, 29th ult., per barque Rocket, from the coast of Peru, for manuring purposes. A large amount of this article is annually imported into the Middle and Southern States, but heretofore only a small quantity has been brought to this section of the country.—*Boston paper.*

---

ICE AND FROST IN AUGUST.—On the 28th ultimo there was a severe frost at Detroit and vicinity.—In many places tender plants were entirely ruined, having been turned black. At the residence of a farmer a pail of water was covered with ice. At Cleveland, Ohio, there was also a severe frost on Saturday night week.

---

☞ Several carrier pigeons thrown up at Bourdeaux, (France,) at 5 o'clock on the morning of Saturday, July 30, reached Brussels the same day. The first bird entered the dovecot at 40 minutes after 4 in the evening, thus accomplishing, in twelve hours, a journey of 211 leagues, or 18 leagues (54 miles) per hour for 12 consecutive hours.

---

☞ An heiress of great wealth and beauty, and of tender years, vamosed the "Academy of Visitation," connected with the convent in Georgetown, D. C., on Saturday last, and was soon in the arms of her lover. Great excitement prevailed at the convent. Search was made in every direction, in vain. Matrimonial services have been performed ere this.

---

☞ The Placerville Herald, of the 20th contains a letter from a correspondent of San Bernardino, giving an account of the discovery of a truncated pyramid on the great American desert, some 200 miles north-west of the junction of the Gila with the Colorado. It is said to have been about 130 feet high, but 25 feet had been displaced by some convulsion of nature.

---

☞ The Canal Revenues of this State, to the close of the third week in August amount to $1,662,562, against $1,607,760 last year. The increase on up freight, being merchandise from tidewater, is $67,700, and on the down freights on the produce of this State, $9,388. There is a decrease of $22,286 on the produce of the Western States.

# Market Intelligence.

RURAL NEW-YORKER OFFICE,
Rochester, Sept. 7, 1853.

THE news by the Atlantic has produced an important change in our market for breadstuffs, though prices are yet unsettled. Flour has advanced materially, and sells to the trade at $6@6,13—a rise of full 50 cts over last week.

Wheat has also advanced, but we hear of no large sales, as the market is unsettled, and both buyers and holders apparently surprised. Good samples sell at $1,28@1,30 in the street.

Butter is in demand at 17@18c. No material change in other articles.

### Rochester Wholesale Prices.

### NEW YORK MARKET.

NEW YORK, September 5.

FLOUR—For Western and State flour prices are 3 ½@5c better, influenced by the favorable advices per Atlantic. Supply high an demand good for future delivery, but at prices below the views of holders. Canadian scarce and nominal. Sales of Western Canal 7,500 bbls, $6,87@6,50 for common to straight State; $6,41@6,56 for common to good Ohio, Michigan and Indiana.

GRAIN—Considerable excitement in the wheat market, and prices 5@7c better. Demand not active, and market dull. Sales 21,000 bush white Michigan 144, 147@150c; 15oc for choice Genesee early in the day; 2500 bush white Southern 140c, 3000 bu good red do 145c.

OATS—Firm and in demand, 49@50c for State.

CORN—Firm, in part for for export and part speculative. Sales 25,000 bu, 73½@74½c for unsound; 75@76c for white Southern; 77c for do yellow.

PROVISIONS—Fair demand for pork; $15,37@15,50 for mess.

LARD—Steady, 11@11¾c.

BUTTER—Steady and in good demand.

CHEESE—Firmer. Sales at 8¼@9¾c.

### ALBANY MARKET.

ALBANY, Sept. 5.—Flour—The effect of the foreign news upon our flour market has been to suspend business almost entirely, until its action upon the market at N. York is seen. Holders asked 37½@5oc. advance on the closing prices of Saturday. For extra Genesee $7 was demanded, and the common brands of State and Western ranged from $6@6,25 with no sales of moment. Corn meal does not participate in the advance, and is steady at $1.30.

Grain—No wheat afloat. Corn is steady at 74c for western and mixed. Oats 46@47c for fair to good Western.—For prime samples of four-rowed Barley better rates are paid: sales 8,000 bu. at 76@77c. for two-rowed, and 84c for four-rowed.

Feed—Sales 20,000 bush. at 18c. for second quality and 18¾c for middlings.

### BUFFALO MARKET.

BUFFALO, Sept. 5.—The Atlantic's news has created much excitement upon the market, and prices have advanced on flour 40@50c. Sales Ohio and Michigan at $5,-40 to arrive, good Ohio $5,40 Michigan $5,31. The rates appear to have been $5,31@5,50 for good to fancy brands, and $5.75@6 for extra.

There is good speculative demand for wheat, and holders have advanced materially in their views. Sales white Michigan $1,23—white Ohio to arrive the same.

Corn—Quiet, and holders firm at an advance to which buyers do not seem inclined to accede. We hear of no sales.

Oats—Dull and heavy. We hear of no sales.

### NEW YORK CATTLE MARKET.

NEW YORK, Aug. 29—At Washington Drove Yard—The offerings comprised 2,500 beeves, all brought in by drovers from the south and west. A fair demand prevailed, and all but some 200 were taken at prices ranging as in quality, from 8 to 9½ ₩ lb. The market closed still.

At Browning's—Cows and Calves are more plenty—85 on sale. All disposed of at from $25 to $55, as in quality.

Sheep and Lambs—Market well stocked, but demand brisk. Sales of sheep at from $1.75 to $1@6. Lambs from $1,50 to 2,75@4,75. Left over 500.

At Chamberlain's—250 Beeves, 50 Cows and Calves, and 4,000 Sheep and Lambs. The Beeves sold at from 7@9½ per lb. Cows $25 to $35@50. Calves 4½ to 7c. ₩ lb.—Sheep $2 50 3,50, 5,50@6,50. Lambs $1,50 to $3@4.

### CAMBRIDGE CATTLE MARKET.

CAMBRIDGE, Aug 31.—At market, 3,212 Cattle, about 2,000 Beeves, and 1,212 Stores, consisting of Working Oxen, Cows and Calves, yearlings, 2 and 3 years old.

Prices—Market Beef—Extra sold at $7.50 per cwt.; 1st quality, $7@7,25; 2d do, $6,50@6,75; 3d do, $5,50@6; ordinary, $4,00@5,00.

Hides—$6 per cwt.

Tallow—$7@7.50 per cwt.

Pelts—75c@1,25

Calf Skins 11c per lb.

# Marriages.

IN Mt. Morris, on Monday evening, Sept. 5, by the Rev. D. CHICHESTER, Mr. RICHMOND A. NICHOLS, foreman in the office of the Rural New-Yorker, and Miss HELEN J WEEKS, of the former place.

# Deaths.

IN Gates, on the 5th inst., suddenly, of inflamation, Mrs. PEASE, wife of CHAS. PEASE.

**Monroe Academy, Henrietta, N. Y.**

THE Fall Term of fifteen weeks will commence on the 12th of Sept. inst. The Rev. H. H. HAFF, formerly Principal of the Darien Centre Seminary, and well known as an able and successful instructor, takes charge of the Institution.

Tuition from three to six dollars per term, according to the age of the pupil and the studies pursued. Board can be had with the family of the Principal at cost, by paying five dollars per term for room rent, use of furniture and oversight of kitchen, &c., or good rooms can be had for students to board themselves at moderate charge. The building is to be thoroughly repaired and refitted. Circulars at SAGE & BROS. Bookstore, Rochester.

J. H. M. C. HASELTINE, *Sec'y.*
East Henrietta, N. Y., Sept., 1853. 193-3t.

**FINE FOWLS.**

HAVING raised from select stock, a few broods of buff Cochins and Shanghais, in order to obtain for private use, a small flock known to be pure and genuine, I have for sale about twenty pairs, and at prices that any one can pay, who is able to own half a dozen common fowls. They are broods of April, May, and June—genuine as imported;—being of stock received from the importer, bred immediately from fowls brought from China. 193tf

Sept. 1, 1853. Rochester, N. Y.

**SYRACUSE NURSERIES, SYRACUSE, N. Y.**

THORP, SMITH, HANCHETT & CO., particularly invite the attention of Nurserymen, venders and planters, to their immense stock of Trees of every description, being of unusually fine growth.

Standard Fruits—*Apples, Pears, Cherries, Plums, Peaches, &c.*, for orchard planting, vigorous, stocky and well formed.

Dwarf and Pyramidal Pear Trees on the best *Angers* or *French Quince stocks*, (embracing every good variety that will work well,) 2 yrs. old, very beautiful, vigorous and well formed.

Dwarf Cherries on *Mahaleb stocks*, 1, 2 and 3 yrs. old trees, finely formed and handsome.

Gooseberries, Currants and Raspberries—Our stock consists of the choicest varieties, including the new celebrated sorts.

Grape Vines of all the hardy sorts, with some FORTY FOREIGN VARIETIES, grown in pots from single eyes.

We would particularly request persons who are desirous of purchasing, to examine the above trees, as they are not only worked on the best stocks that can be procured, and grown in good soil, but they are stout, stocky and vigorous, and mature their wood early in the fall; and as we personally pay the most strict attention to our trees, in every stage of their growth, we feel that no stronger guarantee of accuracy can be given in this respect.

Ornamental Trees—such as *Horse Chesnut, Sugar* and *Silver Maples, Elms, Black Walnuts, Silver Abeles, Tulip Trees*, &c.—We have large and fine for street planting.

Shrubbery—A splendid collection containing every thing new and rare.

Roses—One of the largest collections in the country, including all the novelties. Also the celebrated "AUGUSTA" ROSE, which has given such universal satisfaction the present summer.

Bulbous Roots—We are now receiving from Holland, by steamer, a splendid importation of *Bulbous roots*, comprising all the choicest varieties.

Green House Plants, *Fuschias, Pompom, Chrysanthemums, Verbenas, Dahlias*, Strawberry and Hedge Plants, &c, &c.

All articles packed in the best manner for transportation to any part of the United States, and all orders strictly complied with in every respect. For further particulars and prices, see Catalogues:

No. 1, A general descriptive Catalogue, combining Nos. 2, 3 and 4 in one volume. No. 2, a general Catalogue of Fruit Trees. No. 3, a new descriptive Catalogue of Ornamental Trees, Shrubs, Roses, Flowering Plants, &c. No. 4, a descriptive Catalogue of Dahlias, Verbenas, Chrysanthemums, Geraniums, Fuschias, bedding out and green house plants. Also a wholesale Nursery trade list.

The above Catalogues will be sent gratis to all applications (post-paid) enclosing for the wholesale list 1 penny stamp—for No. 1, a letter stamp—and Nos. 2, 3 and 4, two penny stamps each.

THORP, SMITH, HANCHETT & CO.
Syracuse, N. Y., Sept. 5, 1853. 193-3t

**American Botanic Garden & Nurseries.**

5,000 STANDARD PEAR TREES, 3 years old, 5 to 7 feet high, mostly Virgalieu and Bartlett. 5,000 do. 2 yrs. old, 3 to 5 feet high, including many other leading varieties. These trees are all healthy and vigorous.

5,000 PEACH, one year from bud, strong and fine.

20,000 BALSAM FIR, 3 years cultivated, very fine.

10,000 AMERICAN ARBOR VITÆ, 2 years cultivated.

The above, and many other articles, are offered *at wholesale* at *very low prices*. Also a general assortment of FRUIT AND ORNAMENTAL TREES, *Shrubs, Roses, Pæonias, Phloxes, Spireas, Tulips, Hyacinths*, &c., &c., *at retail*. Particular attention is given to the cultivation of HARDY EVERGREENS, for door-yards and for hedges.

Catalogues furnished *gratis*. Orders solicited.

Address DELL & COLLINS.

**CIRCULAR.**

WE have just published, and would respectfully invite the attention of the trade to

DANIEL WEBSTER'S LIFE, EULOGY, AND FOUR GREAT ORATIONS.

This volume is printed in the best style of typographical art, on a superior quality of paper. It contains one hundred and eighty-four pages, and is illustrated with the most accurate and splendid Steel Portrait of Mr. Webster extant. The Life is from the accomplished pen of LOUIS GAYLORD CLARK, the able and popular editor of the Knickerbocker Magazine. The Eulogy is by an eloquent and appreciating American writer. The four great Orations comprise the most eloquent and popular of Mr. Webster's intellectual efforts, viz:

Adams and Jefferson, Bunker Hill Monument, First Settlement of New England, and Reply to Hayne.

The work is duly entered according to Act of Congress, and is stereotyped in the best manner. It is an authorized edition, and sanctioned by Mr. Webster's family and executors.

TERMS:—Paper bound—For 100 copies, 35 cents; 1,000 copies, 30 cts.; retail, 50 cts. Muslin bound—for 100 copies 50 cts.; 1,000 do., 45 cts.; retail, 75 cts.

Liberal terms of exchange. Address all orders to

WILBUR M. HAYWARD & CO,
Publishers, Rochester, N. Y.

N. B.—Agents wanted to wholesale and retail the above work. 193-4t

Rochester, Sept. 5, 1853.

**FOR SALE.**

A VALUABLE FARM OF 163 ACRES, four miles North-west of Weedsport (a good market, on Erie Canal,) and 3½ miles from the Syracuse and Rochester direct Railroad. The said Farm has 140 acres improved, and in a good state of cultivation, and is well situated for two farms if desirable as there are two houses, two barns, two orchards of a good variety of fruit, and a fine timbered lot on each end of the farm. Fifty acres is seeded to Clover and Timothy, and 30 acres is intended for wheat this fall. For further particulars, inquire of, or apply to the subscriber on the premises.

N. B.—Purchasers wishing only a hundred or fifty acres can be accommodated. JACOB EAKER.
Conquest, Cayuga Co., N. Y., Aug. 5, 1853. 193-3t*

PURE BRAMAH POOTRA FOWLS for sale by the Subscriber. Price, $10 per pair, or a cock and two pullets for $12. Address, post-paid,

JAS. M. HARPER, New Hartford, N. Y.
Sept. 5, 1853. 193-2t*

**ACADEMY AT OVID.**

THE Fall term of this Institution will commence on Wednesday, September 14th, and continue fourteen weeks. This School is open to youth of both sexes.

Instruction is given in both the ancient and modern languages; in General Agricultural Chemistry; in Civil Engineering, in Music, and in all branches of study pursued in the most approved Schools in the country.

Lectures are given on Chemistry, in all its branches; Physiology, Natural Philosophy, the science and art of Teaching, and on Morals.

The Board of Instruction consists of Rev. AMOS BROWN, EDWIN PIERCE, WILLIAM H. BREWER, GEORGE B. VOSE, and Misses ISABELLA MEAD and ANGELINA JAMESON. The Gentlemen are all of them graduates of some of the best New England Colleges, and the Ladies have proved themselves entirely competent to their stations.

Charge for instruction on the Piano Forte is $10 per quarter, and $4 per quarter for French, Painting, or Drawing, &c.

Pupils boarding themselves, or with their particular friends, are charged $4, $6 and $7 per term of fourteen weeks for tuition, according to the studies pursued.

The Trustees beg leave to assure the public, that no measures on their part will be spared to make this a FIRST CLASS INSTITUTION. They will immediately erect additional buildings to be used as a boarding house for Young Ladies, Chapel, &c., at a cost of $10,000 or more, and will make all other necessary improvements.

Catalogues with an appendix, affording all requisite knowledge of the School, will be sent to persons requesting it, on application to Rev. A. Brown, Principal.

HALSEY SANFORD, Sec'y.
Ovid, August 10th, 1853. 190-4w

**THE NEW SINGING BOOK READY!**
**THE SHAWM.**

A COMPLETE LIBRARY OF CHURCH MUSIC, containing about ONE THOUSAND Tunes, Anthems, Chants, Set Pieces, &c., including a new and original Sacred Cantata or Oratorio, entire.

By WILLIAM B. BRADBURY and GEORGE F. ROOT, assisted by THOMAS HASTINGS and T. B MASON.

Every teacher of music and leader of a choir, should examine this new work. The union of so many distinguished authors, has secured for it an unprecedented variety and richness of new as well as old material, with several important original features, which give it peculiar interest.

Any professional musician, desiring a copy for examination, can have it sent to him free of postage, by remitting 60 cents to the publishers. MASON BROTHERS,
191-3t 23 Park Row, New York.

**Hickok's Patent Improved Cider Mill and Press.**

WE have been appointed sole agents for the sale of this Mill and Press in the city of New York. This is the most approved mill now in use. Catalogues, with description and drawing will be forwarded by addressing us post-paid. Price $40. LONGETT & GRIFFING,
187-3t 25 Cliff St., New York

**ALBANY DRAIN TILE WORKS,**

*No. 60 Lancaster St., Albany, West of Medical College.*

THE subscriber, successor to JOHN GOTT, formerly A. S. BABCOCK & CO., is prepared to furnish Draining Tile of both Horse Shoe and Sole patterns, at from $12 to $18 per 1000 pieces. The tile are more than a foot in length, and fully equal to any of American or Foreign manufacture. They are so formed as to admit water at every joint, and drain the land perfectly from 12 to 20 feet on each side, according to the nature of the soil.

Also, LARGE TILE for drains about dwellings, yards, &c., at from $4 to $8 per 100 pieces. These are cheaper and more durable than brick drains.

Full directions for preparing ditches, laying tile, &c., will be sent free to those addressing the subscriber, post-paid. The tiles can be sent safely any distance. Orders are respectfully solicited. DAVID GALLANAN,
192-3t. Albany, N. Y.

☞ **PEOPLE'S COLLEGE OF THE STATE** OF NEW YORK, INCORPORATED APRIL 12, 1853.—This Institution has been chartered by the Legislature of this State, for the purpose of reducing the expenses of Academic and Collegiate Education, and thereby open the Halls of Science to all classes of society by reducing the cost of tuition, board and clothing, and enabling the student to defray the greater part of the expense in labor.

Provision will be made to educate young men corporeally and mentally for specific purposes, by pursuing full and definite courses of study for each of the pursuits represented in the College—either Agricultural, Mechanical or Professional—and thus graduates will be qualified for entering at once upon the business of their choice.

At a regular meeting of the Trustees named in the Charter, held at Owego, on the 25th day of May, the following appointments were made:

D. C. MCCALLUM, of Owego, President of the Board of Trustees.

A. I. WYNKOOP, of Chemung, Vice President.

TRACY MORGAN, of Binghamton, Treasurer.

HARRISON HOWARD, of Lockport, Secretary and General Agent.

Agents are being commissioned in each county of the State, that the people may have an opportunity to contribute to the capital stock, which is distributed in shares so small that every individual may become interested in an institution which commends itself to the favorable consideration of every intelligent person.

For further information upon the subject, application may be made, post-paid, to the Secretary, who will send a pamphlet containing the act of incorporation and objects of the Institution, and other needful information.

18S-tf H HOWARD, Secretary.

The undersigned, having been appointed Agent for Rochester and Monroe county, will be most happy to furnish any new information desired, in reference to the College, to receive stock subscriptions, (the shares are one dollar each,) or to address audiences, on invitation, explaining at length the plans and objects of the People's College, and also as he views the idea of a true education.

Respectfully, G. F. NEEDHAM.

**SUFFOLK PIGS.**

THE subscribers are prepared to receive orders for pure Suffolk Pigs, bred from stock imported by the late William Stickney in 1848,—also by the subscriber in January last. Address

JOSIAH STICKNEY, Boston or Watertown,
or ISAAC STICKNEY, Boston, Mass.
Boston, August, 1853. 190-13w-1m

**SUFFOLK PIGS FOR SALE.**

TWENTY PAIRS of pure bred SUFFOLK PIGS for sale by the subscriber. Also Breeding Sows. They can be safely forwarded by Railroad, Express, &c., to almost any part of the country. C. J. HOLDEN,
June, 1853. [186m3] Walpole, N. H.

**Improved Portable Cider Mill and Press.**

HICKOK'S Improved Portable Cider Mill and Press, received the following premiums in 1852, viz.:—A Silver Medal at the Fair of the American Institute, N. York. Diploma at the Franklin Institute, Philadelphia. First premiums at the State Fair at Utica, and at the Columbia and Rensselaer County Fairs, and diploma at the Westchester County Fair.

Descriptive circulars sent free to all post-paid applications. See page 254 of this paper, for engraving. Price, $40,—and all persons living near Rochester or away from any agency, may order of me, and when they get the mill they may deduct the freight and remit the balance to me.

Manufactured by W. O. HICKOK,
Harrisburg, Pa.

Sold by LONGETT & GRIFFING, 25 Cliff-st., N. Y.
EMERY & CO., Albany.

PROUTY & CHEW, Geneva.
HIGGINS & CALKINS, Castile, Wyoming Co.
C. E. YOUNG, Main-st., Buffalo.
O. GREGORY, Binghamton.
CHAS. ASHLEY, Ogdensburg.
D. LANDRETH, Philadelphia. 188-8tw1m

SPRINGFIELD, Ohio, May 1, 1852.

MR. W. O. HICKOK: *Dear Sir*,—I purchased one of your improved cider mills at the State Fair at Lancaster, Pa., last year. Since then I have tested it effectually, and must say it surpasses any machine, for the purpose it is intended for, that I have ever seen, and I have examined a good many, before purchasing and since. Its construction being simple, it never gets out of order. It surpasses my most sanguine expectation. Could I not procure another one, I would not part with mine for four times the price of them, as I know its value.

Yours truly, CHAS. M. CLARK.

**GARDEN OR FIRE ENGINE.**

THE Subscribers manufacture, and furnish to order, a Garden or Fire Engine, which for its power, capacity and usefulness cannot be surpassed. From the size of the Air Chamber, sufficient power is obtained to enable one man to throw a steady stream of water to the height of 50 feet perpendicularly, thereby rendering it a desirable article as a protection against fire, for washing windows of second and third stories of buildings, carriages, &c. With our newly invented Water Diffuser, as a Garden Engine it defies competition: the Diffuser is a perfect and simple article, (which we intend to get patented,) and its superiority over the Rose Sprinkler, is that it will throw four times the quantity of water a much greater distance, and spread it perfectly even, with less power applied.

N B.—A Garden Engine with a Diffuser of the above description, used in orchards and gardens, to throw soapsuds on the young trees, will destroy many kinds of vermin likely to destroy the fruit, and be an invaluable addition to the implements of the nurseryman and horticulturist. COWING & CO.
Seneca Falls, N. Y., June, 1853. 183w10

**ATKINS' SELF-RAKING REAPER.**

THIS MACHINE is now offered to the public and warranted to be a good Self-Raking Reaper. It is also believed to be a good mower, but not yet having been sufficiently tested in grass (though it soon will be) it is not warranted to be equal to a machine made mainly or wholly to mow.

The raking apparatus is of novel and very simple construction, and not liable to derangement, and every farmer who has seen it in the harvest field, says it performs the raking better than a man can possibly do it.

Price of machines at Chicago, $175, of which, $75 must be paid on giving the order, $50 upon successful trial, and $50 in note payable 1st Dec.

The machines are most thoroughly built and warranted.

☞ Descriptive circulars, with cuts, sent to post-paid applications. [182m3.] J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, June, 1853.

**TO BOOKBINDERS.**—FOR SALE—The Tools, Stock and Fixtures in a well established BINDERY, now doing a good business. The owner has been in it for the last twelve years, and only wishes to leave to do other business that will be better for his health.

For particulars concerning the business, address Democrat Office, Rochester, N. Y., or to the subscriber,

F. H. MARSHALL.
Rochester, July 21, 1853. 187-tf

**A RARE CHANCE.**

PERSONS wishing to add an agreeable and lucrative business, to the pleasure of traveling can have the opportunity, by purchasing the Patent right for a State, for *Mumma's Premium Corn Sheller and Vegetable Grinder*. This Sheller is certainly better adapted to the wants of the farmer than any other, as it is simple, durable and easy to work with one hand, yet it has the advantage of two cranks, or horse power. It shells *large* and *small* ears perfectly clean at the same moment, and separates the cob. It is fed moderately by the shovel, or thrown promiscuously in by hand, and is capable of shelling from 30 to 40 bushels per hour. It is also adapted to grinding vegetables for feed for stock.

Extensive sales have been, and are being made for the right for this sheller, in different States. The Proprietor will wholesale the right for one or more States, at a rate the purchaser can make *large profits*, with proper exertion. His terms will be easy, so that the buyer can soon realize the most of his money from the proceeds of sales.

Address E. ROBINSON,
192-3t Greencastle, Franklin Co., Penn.

MONEY TO LOAN on Bond and Mortgage, on improved farms. L. A. WARD,
[169m6.] 36 State St., Rochester, N. Y.

# Poetical.

BLACKWOOD'S MAGAZINE has pronounced the following poem to be "the best lyric of the century." This certainly is a high, as well as a deserved compliment. It is the production of one of our countrymen, Capt. GEORGE W. CUTTER, of Covington, Kentucky.

### THE SONG OF STEAM.

When I saw an army upon the land,
A navy upon the seas,
Creeping along, a snail-like band,
Or waiting the wayward breeze;
When I saw the peasant faintly reel,
At the toil which he faintly bore,
As he turned away at the tardy wheel,
Or tugged at the weary oar.

When I measured the panting courser's speed,
The flight of the carrier dove,
As they bore the law a King decreed,
Or the lines of impatient love;
I could but think how the world would feel
As they were out-stripped afar,
When I should be bound to the rushing keel,
Or chained to the flying car!

Ha! ha! ha! They found me at last,
They invited me forth at length;
And I rushed to my throne with a thunder blast
And laughed in my iron strength!
Oh! then you saw a wondrous change
On the earth and ocean wide;
Where now my fiery armies range;
Nor wait for wind or tide.

Hurrah! hurrah! the water o'er
The mountains steep decline;
Time—space have yielded to my power—
The world—the world is mine!
The giant steam of the queenly west,
And the orient floods divine.

The ocean pales where'er I sweep,
To hear my strength rejoice,
And monsters of the briny deep
Cower trembling at my voice.
I carry the wealth and the lord of earth,
The thoughts of the god-like mind,
The wind lags after my going forth,
The lightning is left behind.

In the darksome depths of the fathomless mine,
My tireless arm doth play,
Where the rocks ne'er saw the sun decline,
Or the dawn of the glorious day;
I bring earth's glittering jewels up,
From the hidden ease below,
And I make the fountain's granite cup
With a crystal gush o'erflow.

I blow the bellows, I forge the steel,
In all the shops of trade;
I hammer the ore, and turn the wheel,
Where my arms of strength are made;
I manage the furnace, the mill, the mint,
I carry, I spin, I weave,
And all my doings I put in print
On every morn and eve.

I've no muscles to weary, no breast to decay,
No bones to be "laid on the shelf,"
And soon I intend you may "go to play"
While I manage the world myself:
But harness me down with your iron bands,
Be sure of your curb and rein,
For I scorn the strength of your puny hands,
As the tempest scorns a chain.

# Rural Sketch Book.

## FOUR CHAPTERS OF A WHITE LIE.

### Chapter First.

"How unfortunate! Mamma writes me that she cannot find her emerald bracelet, Now I don't dare tell that I have lost it, as you remember I did, returning from Mrs. Lacy's party. It is the last gift of my father, and very valuable. I'm sure I don't know what to do." And Lena Atley threw the letter impatiently down.

"It's well you are here in New York," replied her queenly cousin, shaking the heavy curls from her shouldors, as she looked up unwillingly from her book—"what does aunt say?"

"She wishes to know if by mistake I could have brought it on, or if I remember when I last saw it, and where?"

"Easily answered, little simpleton. Just tell, in a general way, that you wonder at her for thinking you so careless as to bring it here, and say that before you went to the party, you saw it fastened to the toilet cushion in her room—you know you dressed there."

"But won't that be a falsehood, almost?" urged Lena timidly.

"A fiddlestick, you little puritan; where's the lie? You haven't brought it to New York, have you? You DID see it on your mother's toilet table didn't you? You MUST learn to distinguish between a prudent way of getting over a matter, and sheer falsehood, you little country bit of perfection."

Lena seemed satisfied—she could not brook the sneer of her beautiful cousin—nor could she bear the term puritanical, which her fashionable New York relatives styled her acts of conscience. The letter was written, sealed, and sent; but that night, in the midst of splendid throngs, Lena's heart beat with shame for the deed at which conscience rebelled.

### Chapter Second.

"Mary, come here; I want to see you alone a moment;" and Mrs. Atley entered her dressing-room, followed by her handsome, innocent looking little chambermaid.

"Mary, I have lost my emerald bracelet," she said firmly, when she had seated herself. "I want to know if you remember seeing it?"

Mary turned pale; she was extremely timid, and the thought that she might be even suspected, frightened her exceedingly.

When she answered her voice trembled. "Indeed, ma'm, I don't think I've seen it at all."

"But, Mary," and the tone grew sterner, "Lena writes that the last time she saw it, it was in this room, on last Wednesday week. That night I left you here alone. I am positive that no one but yourself has since been in. I missed it that very night—tell me if you have taken it—find it—return it to me, and I will forgive you."

"Oh! Mrs. Atley, indeed, I don't know any thing about it," exclaimed the girl, beginning to wring her hands with a look of torror; "I never was a thief—mother will tell you that. She brought me up to the Sunday School and good things. I'd sooner spill my heart's blood than touch it. O! now indeed I remember. It seems as if Miss Lena had it;" repeated the girl, trembling so she could hardly stand upright.—"I do think—I believe I saw it on her arm; yes, I am sure Miss Lena must have taken it to wear to the party."

"That is the coolest impudence I have heard yet," exclaimed Mrs. Atley, her lips quivering with passion; "I might have forgiven you had you been candid and told the truth. But the charges you make against my daughter—the soul of candor itself—place you entirely out of the reach of my sympathy. I am astonished! confounded at your duplicity, and really no less than convinced by your manner. No honest girl would blush and stammer and then turn pale—or turn her guilt upon another. I shall dismiss you if you do not restore the bracelet I heard you speak of it, I saw you look at it that evening; but the thought never entered my mind that you would steal. If I do not get the bracelet soon, very soon, I shall write to William Harmon, and do you think he will marry you when he hears that you have been suspected as a thief?—You may take to-morrow to restore me my property—you know I do as I say."

With a cheek as white as any corpse, and a wild light in her glazed eyes, Mary tottered from the room, felt her way along the entry (for darkness seemed to have fallen upon her) up the stairs, into her own little chamber. There, falling headlong on the floor, she laid in silent, bitter agony. Her spirit was almost broken. Where now were all her happy dreams? Dashed like a temple by some strong wind—their ruins choked up her heart. The long sunny road was darkened. The little cottage with its honeysukle, its garden, its fruit trees, struck by pitiless lightning. The priest and the altar, the manly form of William, with his honest, dark eyes—shut from her guileless thought by the cloud of doubt, of horrid accusation. Visions of officers, and jails, and witnesses, and disgrace, floated before her.

For a long time she laid there; but at length, slowly rising, her brain beating with a dull, heavy throb, she clasped her hands, and broke into the wildest grief.

"I'll never go home—it'll kill mother!—The little children shall never think they had a thief for a sister; and as for William—God help me! we were going to be married so soon—and I was so happy; but I can't meet his eye now—I can't prove anything—I was in the dressing room; I did ask Miss Lena what did the pretty thing cost, and when she said five hundred dollars, I did say 'Oh how nice it would be to have all that money.' O, I'm ruined—I'm ruined! Mother, did I leave home for this?"

Away, in the dark night, has that poor girl gone—the burden of suspicion crushing her life out. On, on she hurries—she so fearful of the dark—she who had nursed a hundred idle little superstitions of ghosts and fairies. Night with its cloudy arms, welcomes her now, and covers her innocent shame from the sight of even inanimate things by the wayside.

### Chapter Third.

MRS. LACY'S compliments, ma'am; and here is the bracelet Miss Lena were. She heard she had lost it, ma'am, but hadn't no idea it was in her house—but it got dropped between the cushions on the sofa, she expects, and she's very glad she's found it, ma'am, for Miss Lena felt so bad."

"That poor child," was Mrs. Atley's first exclamation as she took the parcel mechanically, and returning to her room, placed it on her toilet table; "I've almost broken her heart, I have sent her away despairing, and shall never forgive myself."

And had her own daughter deceived her thus? The thought was death to her fond hopes. She threw the bauble on her dressing table; and sat down, overwhelmed with distress. Her first thought was to write to Lena, her second to inform poor Mary by letter, as speedily as possible, and she had just seated herself for the latter purpose, when a hurried knock startled her, and a pale woman stood before her exclaiming with a startling voice and manner—"Mrs. Atley, where have you sent my child? For God's sake, where have you sent my child? I heard nothing from her,—I came to see if she was sick, and the servants toll me that she is gone—*gone where?* Tell me, or I shall go crazy!"

Her distress was fearful, when she had listened to Mrs. Atley's broken words of self accusation. "Where shall I go? where shall I find my poor child? Oh, Mrs. Atley, I hold you responsible for the life of my poor girl. And she had such a dread of the jail—and she hadn't any courage at all! Where shall I find my poor child?—Oh, Mary, where are you this hour?"

It is a fearful thing to charge the innocent unjustly—to listen not to the prayers of the helpless—to judge with harshness those who have none to plead their cause.

### Chapter Fourth.

"Why, Lena, you look like a ghost. An hour ago your cheeks were red as roses.—What is the matter, my *petite* cousin?"

Lena said nothing; and her face assumed a deadlier hue, as she pointed to a single paragraph.

"*I have found the bracelet; but I fear its loss and your deception have caused the death of poor Mary Gree.* Nobody knows where she is; we have been searching for her two days, and have come to the conclusion that she has destroyed her life through fear and too great sensitiveness. My child, what an awful lesson is this!"

The evil counseller kept silence. She dared not reply when charged with tempting her to wear the bracelet, and then to cover her fault. In an hour Lena was ready and on her way home. Early in the morning she was driving rapidly through thick woods. The sun slept red and warm on the wayside flowers. The birds sang as if they were singing the first jubilee song of creation. Everything seemed happy and holy but that one young heart.

She had reached within a mile of her mother's house, when a haggard face passed close by the carriage. She knew it. It was poor Mary's lover; and a deathly faintness dimmed her vision as, on looking back she saw him crouching forward and beating his forehead, as if in great agony and utter despair.

Other voices were heard, and the tramp of many feet. And they bore, near the carriage that slacked in speed as the mournful group passed by, a limp, dead body. It was poor Mary; she had perished in the woods, a victim to angry suspicion, and a "*harmless white lie.*"

### AN HEIRESS FOR A SIXPENCE.

A BEAUTIFUL young heiress had become so disgusted with the flattering set of soft-pated, pomatum-haired, moustache-lipped, strongly perfumed suiters for her hand, that she shut herself out from the fashionable (?) world; turned all her property into money; deposited it all in banks; donned a cheap wardrobe; put on a mask, and thus went, pedestrian-like, through the city in which she had hitherto moved with so much display and magnificence. She asked alms of those who of late had knelt at her feet, and sued for her hand.

They knew her not, and casting a look of scorn upon her veiled face, and coarse wardrobe, bade her "begone!" She entered the country—here she met with derision and scorn. A few kind-hearted people, it is true, bestowed aid; but these were of the poorer class, who had hard work to procure their own daily bread; but they could not turn a fellow creature hungry from their door, and therefore gave a small pittance from their scanty store.

One summer's day a large company met on———Beach. They were mostly from the city. The distinguished heiress, from some cause or other, had wandered there.—She asked alms of one or two, termed "upper tens." They spoke tauntingly, but gave nothing. What they had said had been heard by quite a number of their company. Most of them laughed, or looked as if they "served her right!" The beggar woman turned about, and was walking sadly away, when a well-looking gentleman stepped forward, and catching hold of her arm thus spoke:

"Stay! my good woman—tell me what you want?"

She replied, in a low trembling tone, "I want a sixpence—*only a sixpence!*"

"You shall have ten times that amount. Here," he added, drawing from his pocket an eagle, and placing it in the gloved hand, of the woman, "take this; if this is not enough, I will give you another."

The heiress returned the eagle exclaiming. "I want a sixpence—only a sixpence!"

Seeing that she could not be made to take the coin, the gentleman drew forth a sixpence and gave it to the stranger being beside him who, after thanking the generous donor, walked slowly away. After being laughed at for so doing by his comrades, he set out in pursuit of the beggar woman saying:

"Perhaps she is an heiress—or an angel in disguise. I mean to ascertain."

Not that he thought this. He wished to show his indifference to what his comrades had said, besides satisfying himself about the strange female, whom he had aided.—He soon overtook her and thus spoke:

"Pardon me, madam, for pursuing you; I would know more about you."

As the speaker ceased, the mask dropped from the face of the female, and the beautiful heiress was portrayed before the astonished gentleman.

That they were afterwards married, the reader has already imagined, for the heiress used this means of procuring a worthy husband, and the generous gentleman had long been looking for "an angel in disguise."

The happy husband is often heard to say, that he "got an heiress for a sixpence."

### AN EXTRAORDINARY MAN.

DAVID WILSON, an old Revolutionary soldier, and native of New Jersey, died, after a short illness, in Dearborn county, Indiana, aged one hundred and seven years, two months, and ten days. He had at different periods of his life, five wives, and at the time of his death, was the father of forty-seven children! While residing in Pennsylvania, near the old Redstone Fort, his wife gave birth to five children in eleven months!—This extraordinary man when in his one hundred and fourth year, mowed one week for Esq. Pendleton, of Hamilton, county, Ohio, about two miles from Cincinnati, during which he cut one acre per day of heavy timothy grass. He was about five feet six inches in height. His frame was not supported by *ribs*, as the frames of ordinary men are, but an apparently solid sheet of bone supplied their place. He could hold up his hands in a vertical position, and receive a blow from the fist of a powerful man, on the lateral portion of his body, without inconvenience. He served throughout the entire Revolution, under Gen. Washington; was in most of the Indian wars since, and was the companion of Marion and Rodgers, as well as many other distinguished pioneers of our Western and Southern wilds. Our readers may rest assured that this statement is correct, as we received it from Mr. Alexander Wilson, of North Madison, who is the forty-fifth child of the subject of this paragraph.—*Madison (Ia) Banner.*

# Wit and Humor.

### POWERFUL REASONING.

AT a young men's debating society, somewhere down in Indiana, the question for discussion was, "Which is the greatest evil, a scolding wife or a smoky chimney." After the appointed disputants had concluded the debate, a spectator arose and begged the privilege of "making a few remarks on the occasion." Permission being granted, he delivered himself in this way:

"Mr. President, I've been almost mad a listening to the debates of these 'ere youngsters. They don't know nothing at all about the subject. What do they know about the evils of a scolding wife? Wait till they have had one for twenty years, and been hammered and jammed, and slammed, all the while; and wait till they have been scolded because the baby cried, because the fire wouldn't burn, because the oven was too hot, because the cow kicked over the milk, because it rained, because the sun shined, because the butter wouldn't come, because the old cat had kittens, because they came too soon for dinner, because they were a minute too late, because they sung, because they tore their trowsers, because they invited women to call again, because they got got sick, or because they did anything else, no matter whether they couldn't help it or not, or because they didn't do something else, no matter whether they could or not, before they talk about the evils of a scolding wife; why, Mr. President, I'd rather hear the clatter of stones and hammers on twenty tin pans and nine brass kettles, than the din, din, of the scolding wife. Yes sir-ree, I would; to my mind, Mr. President, a smoky chimney is no more to be compared to a scolding wife, than a little nigger to a dark night."

### FRANKLIN ON SPELLING.

Dr. FRANKLIN says in one of his letters:—"You need not be concerned in writing to me about your bad spelling; it is generally the best, as conforming to the sound of the letters. To give you an instance, a gentleman received a letter, in which were these words:—'Not finding Brow at *hom* I delivered your *messeg* to his *yf*.' The gentleman called his wife to help him read it.—Between them they picked out all but the *yf*, which they could not understand. The lady proposed calling her chambermaid, because 'Betty,' says she, 'has the best knack of reading bad spelling of any one I know.' Betty came, and was surprised that neither of them could tell what *yf* was. 'Why' says she, '*yf* spells wife—what else can it spell?' And indeed, it is much better, as well as a shorter method than *doubleyou i, f, e*, which in reality spells *double-wifey.*"

### A DEFINITE WITNESS.

AN inquisitive lawyer, famous for examining witnesses, had a nice old gentleman, and witty withal, upon the stand, questioning him upon his ability to loan money and give credit, resorting to all sorts of interrogatories to draw from him a statement of the amount of his property and in what it consisted—in fact how much he was worth. The old gentleman considering the questions rather impudent, for he was quite wealthy, answered that he had a wife, he always called her dear—a boy and girl that he would not sell for any money—a mortgage on two cows down east—a nice litter of pigs and the mother of the same—a barrel of cider that never saw daylight, and "a puppy that knows more than you do, for which I have been offered twenty-five dollars!"—*Boston Post.*

BRAINS AND DIGESTION.—The question, "Why printers did not succeed as well as brewers?" was thus answered. Because printers work for the head, and brewers for the stomach, and where twenty men have stomachs, but one has brains.

THE Logan Gazette says a man recently poked his head out from "behind the times," when it was taken off by a "passing event."

# Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

### MISCELLANEOUS ENIGMA.

I am composed of eighteen letters.
My 1, 10, 8, 8, 2, 9, 7 is a city in New York.
My 16, 5, 1, 2, 11, 13 is the capital of one of the United States.
My 1, 7, 14, 3, 7, 17 is a city in Massachusetts.
My 15, 7, 11, 12, 7, 17 is a city in England.
My 6, 5, 9, 18, 11 is a girls' name.
My 9, 16, 12, 13 is what girls are often called.
My 8, 16, 11, 17, 13 is a girls' name.
My 4, 6, 16 is an article in great use.
My 14, 16, 5 is a nickname.
My 1, 2, 14, 14 is a kind of fish.
My 15, 2, 11, 18 is a narrow passage.
My 8, 5, 10, 3, 6 is a musical instrument.
My 1, 6, 18, is a very useful insect.
My 18, 13, 6 is a very useful member.
My 11, 7, 14, 18 is a part of the face.
My 14, 10, 17, 12, 2, 13 is a day of the week.
My whole is
Where fierce carnage was done,
And bloody glory won. J. S. W.

### ANSWER TO ENIGMA, &c., IN NO. 36.

Answer to Enigma—*Wind.*

**FRUIT AND ORNAMENTAL TREES, &c.**

THE Subscribers have the pleasure of announcing an immense stock of trees, &c., for the Autumn trade, embracing

Standard Trees for Orchards.
Dwarf and Pyramidal Trees for Gardens.
Ornamental Trees for streets, parks and pleasure grounds.
Rare and beautiful Lawn Trees.
New and Rare Weeping Trees.
Evergreen Trees, embracing the rarest species of Pines, Firs, Spruces, Yews, Cedars, Junipers, &c.
Hardy Flowering Shrubs.
Roses, of all classes and embracing the newest and best sorts.
Dahlias, the finest English prize sorts.
Chrysanthemums, including the finest of the new pompone varieties.
Phloxes, and Peonies, superb collections.
Bedding Plants, a complete assortment.
Bulbous Roots, just imported from Holland and of the first quality.
Hedge Plants.
Box Edging.
Rhubarb, Asparagus, &c, &c.

The favorable season has given everything a vigorous and fine growth.

All orders, whether for large or small quantities, executed with the greatest care and in strict compliance with the wishes of the purchaser.

Packing done in the most secure and skillful manner, so that parcels can be transmitted thousands of miles with safety.

Nurserymen and dealers in trees will be supplied on the most reasonable terms. The following Catalogues are sent gratis and pre-paid to all who apply and enclose one postage stamp for each. No. 1. Descriptive Catalogue of Fruits. No. 2, Descriptive Catalogue of Ornamental Trees, &c. No. 3, Descriptive Catalogue of Dahlias, Greenhouse Plants, &c. No. 4, Wholesale Catalogue.

ELLWANGER & BARRY,
Mount Hope Nurseries, Rochester, N. Y.
Sept. 1, 1853. 191-3t

**N. Y. State Agricultural College.**

THIS Institution was chartered by the Legislature of the State of New York, for the purpose of presenting to Agriculturists the means for acquiring a knowledge of the Arts and Sciences appropriate to their vocation; to prepare Students for practical, active labor, by training the mind in a system which shall inculcate an intimate acquaintance with the sciences essential to agricultural success.

To insure the development of principles and their application to the soil, the Legislature has required the purchase of not less than three hundred acres of land.

The Trustees, having accepted the trust confided to them by the Legislature, organized the State Agricultural College, by the following appointments:

JOHN DELAFIELD, President of the College.
HON. JOHN A. KING, Ch'n of the Board of Trustees.
JOEL W. BACON, Secretary.
N. B. KIDDER, Treasurer.

At a meeting of the Board, on the 4th of June, a Report was presented by B. P. Johnson, from a Special Committee, on the Location of the College, declaring "that after an examination of the Oaklands Farm in Seneca County, they are entirely satisfied that the price asked for it, is its fair value in the market, for farming purposes; that it is, by previous preparation, by position and variety of soil, in every respect adapted to the objects of the Institution; that the title is perfect, and recommend that the chain of title be entered at large on the minutes of the Board," &c. This farm is situated midway between the market towns of Waterloo and Geneva, and in full view of the Seneca Lake, and overlooking the village of Geneva; elevated about 125 feet above the lake, it is free from causes disturbing health; its soil varies from a strong clay to a sandy loam, presenting varieties sufficient for testing by experiment every doubtful question in relation to soils, and to exhibit the most approved system of cultivation.

The Trustees are prepared to receive from Farmers and friends of agriculture, proposals for the Capital Stock of the Institution, which will be distributed in shares of fifty dollars each, payable

10 per cent on Subscribing.
40 " 1st July.
50 " 1st October.

The Trustees may be addressed (post-paid) at their respective residences, as follows:

Hon. JOHN A. KING, Jamaica, Queens County.
HENRY WAGER, Westernville, Oneida "
B. P. JOHNSON, Agricultural Rooms, Albany.
WM. KELLY, Rhinebeck, Duchess Co.
N. B. KIDDER, Geneva, Ontario Co.
JOEL W. BACON, Waterloo, Seneca Co.
TALLMADGE DELAFIELD, Geneva, Ontario Co.
WM. BUEL, Rochester, Monroe Co.
JOHN DELAFIELD, Oaklands, Seneca Co.

The Officers of the College will endeavor to present subscription books in each County, that the College, so entirely agricultural and peculiarly the Farmer's institution, may find its support widely diffused throughout the State.

The President will, upon application to him, give all needful information in relation to the ordinances, rules and regulations of the College, and the courses of instruction to be pursued.

By order of the Board of Trustees,
JOEL W. BACON, *Secretary.*

**CLOVER STREET SEMINARY.**

THE Fall Term of this Institution will commence Sept. 12th, and continue 15 weeks. After a vacation of the Holidays there will be another term of 15 weeks, closed by the Annual Examination.

TERMS.—Prices for board, room rent, furniture, fuel, washing and tuition in the common branches, $45,00 per term. Students are expected to furnish their own lights and table napkins.

Pupils expecting to join the Teacher's Class must enter the first week of the term, to ensure the payment of their tuition bills by the State. Circulars may be found at WANZER & Co.'s, 24 Buffalo street, Rochester.

J. H. COGSWELL,
191-4t Secretary of Board of Trustees.

**MOORE'S RURAL NEW-YORKER:**

A WEEKLY HOME JOURNAL,

**For both Country and Town Residents.**

PUBLICATION OFFICE,
BURNS' BLOCK, CORNER STATE AND BUFFALO STS.,
ROCHESTER, N. Y.

**TERMS, IN ADVANCE:**

TWO DOLLARS A YEAR—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

**Terms of Advertising**

ONE DOLLAR per square (ten lines—100 words, or less,) for each insertion,—*in advance.* ☞ The circulation of the NEW-YORKER is much larger than that of any other newspaper published in the State, out of New York city. Only a limited space, however, is devoted to advertisements, and hence preference is given to those most appropriate—such as the cards and notices of dealers in Agricultural Implements and Machinery,—Horticulturists and Seedsmen,—Booksellers and Publishers,—Inventors, etc. All orders by mail should be accompanied with the cash.

To enable us to accommodate as many as possible, brief advertisements are preferred. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

**THE WOOL GROWER AND STOCK REGISTER.**

THIS is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals.* It is ably conducted, published in the best style, and finely illustrated. Each number contains a careful Review of the WOOL and CATTLE MARKETS, and much other *useful* and *reliable* information which can be obtained from no other source. The Fifth Volume commences with July, 1853.

TERMS:—FIFTY CENTS A YEAR; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

# MOORE'S RURAL NEW-YORKER.

VOLUME IV. NO. 38. ROCHESTER, N. Y.—SATURDAY, SEPTEMBER 17, 1853. WHOLE NO. 194.

**MOORE'S RURAL NEW-YORKER:**

A QUARTO WEEKLY

**Agricultural, Literary and Family Newspaper.**

CONDUCTED BY D. D. T. MOORE,

WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter—interspersed with many appropriate and handsome engravings—than any other paper published in this Country.

☞ FOR TERMS, &c., see last page. ☜

## Rural New-Yorker.

### Progress and Improvement.

### THE STATE FAIRS.

THOUGH we consider Town and County Agricultural Fairs more important and beneficial to practical cultivators, the annual exhibitions of our State Societies are the most prominent auxiliaries of improvement and should be well sustained. The large numbers and territory represented, and influence exercised, render our State shows of vast importance and difficult management. Unless the duties of executive officers, judges, &c., are discharged properly—with prudence, sound judgment, zeal and impartiality—the result will frequently prove adverse to the producing interest, and most unsatisfactory to its representatives. In order to sustain our organizations, and enhance the interest and usefulness of their exhibitions, wise and faithful officers, and zealous members, are indispensable: with such, any and every State Society will prove most efficient—a great stimulus and permanent benefit to all interested in its proceedings.

But our present object is, or was in the outset, to call attention to the approaching Fairs, rather than criticize the management on such occasions—to encourage rather than discourage attendance at the approaching exhibitions. The Fairs of New York and Ohio are to be held next week—each commencing on the 20th, and continuing four days. The shows of these Societies have hitherto been the most extensive and attractive in the Union—and it behooves those interested to see that such prominence is this year maintained. So far as ascertained, the arrangements for each are progressing finely, and it is presumed the convenience of exhibitors, and accommodation of the public, will receive due attention. Both organizations have reputations to maintain, and should aim to achieve additional laurels. Guided by past experience, each should exhibit evidence of improvement in attention to details, and general management. Though we do not anticipate that either of the shows will be as largely attended as have some of their predecessors, we trust the result will be eminently satisfactory to both contributors and spectators.

Pennsylvania and Michigan hold their shows week after next—the former commencing on the 27th, the latter the 28th, each continuing three days. These Societies are comparatively young, but from the vigor and enterprise displayed in their management are wielding a large and salutary influence. From the preparations making for their approaching shows, we think each will this year exceed any previous effort. The location of the Penn. Fair—at Pittsburgh—will naturally secure a large attendance from the Western Counties, and from what we know of the farmers of that section, we are confident they will be well represented on the occasion. That Michigan will do her duty, making a creditable display, is taken for granted—for we doubt whether any State Society in the Union has more efficient officers or zealous members. We anticipate favorable reports from both the "Keystone" and "Peninsular" exhibitions.

Among the Fairs to be held early in October, those of Wisconsin, Illinois and Indiana, are the most prominent, and particularly interest many in our parish of readers. From the spirit manifested thus far we think these exhibitions will prove highly creditable—comparing favorably, if not indeed exceeding, the displays of societies in much older States. New Hampshire and Canada West also exhibit early in October—the Fairs in each taking place on the 5th, 6th, and 7th. Of the prospect in regard to these we have heard little, but presume the shows will be such as to fully maintain the good reputation already acquired by the President's fellow citizens and Her Majesty's loyal subjects.

Vermont and Rhode Island lead this year, holding their exhibitions the present week. Of their prominent features we hope to give some account in our next number.

### SECURING INDIAN CORN.

FROM the unusual wet spring, much of this crop was late in the planting, very little being got into the ground before the first of June—except on very dry soils—and on low and heavy lands, in many cases, not until the 10th, and so on to the 18th, which is now very promising, more so on account of the drouth than the earlier planted.

Early frosts will materially affect the crop in all the Northern and Western States; therefore great care should be used in securing it. It is well settled that cutting at the root and shocking up, produces more, and a better article than any other method. It may safely be done always, as soon as the kernels are fairly glazed, however green the stalks may be, taking care not to make the stook too large.

If frost has touched the corn, cut it up at the root immediately, and set up in moderate sized shocks, according to its ripeness, and it will come out bright and well filled, and is a far preferable process to topping—especially after being frosted, as the effect is the simple drying, and no assimulation of the sap, to fill and perfect the kernel, having lost all the green leaves that carry on the circulation, and eliminate the juices of nutrition.

It is a very mistaken notion that, to save late corn, it must be topped; for when it is safe to top it, it is safe to cut up and shock. There is a loss of from 3 to 12 per cent. in the weight at all times between topping and cutting up, except when dead ripe in the hill. The experiment has been so thoroughly tried, that there is no mistake relative to the two processes.

There is s good deal of science in making up shocks properly; especially if not fully ripe, they must not be too large, nor to close at the bottom, nor yet so loose as to allow them to lop in and disturb the uprightness of the shock. In commencing, set up a good sized bundle and bind it firmly, straddle out the bottom till it stands firm and upright, then build around on all sides equally, bind in the tassels and another good and secure band two-thirds of the distance from the bottom, and they will not blow over or lop down.

The best bands are hop vines when to be had, or rye or oat straw—as stalks, when very green, are tender and not to be depended upon. Many farmers bind them into bundles as they are cut up and then shock them, which is a very good and secure process, convenient for loading if taken under cover to husk, which may be done without unbinding—though generally not as thorough a method for husking clean.

NITRATE OF SODA AS A MANURE.—Mr. PUSEY in a recent No. of the Journal of the Royal Ag. Society, gives an account of the application, to an acre of early-sown barley, injured by late frosts, of 42 lbs. of Nitrate of Soda, together with double the quantity of common salt. It restored the color of the crop, and caused it to grow half a foot higher than that to which it was not applied, increasing also the product from 40 to 47 bushels. The gain was 300 per cent. on the cost of the application.—This is a remarkable result from so trifling a cause.

### THE CHICKEN FEVER.

MR. MOORE:—I am not a very old man, nor yet a very young one; still I have lived to see a great many explosions beside steam boilers and saltpetre, and a great many Tom-fooleries and humbugs "come like shadows, so depart"—Cow Cabbage, Tree Corn, Morus multicaulis, Rohan Potatoes, *et id omne genus*; together with fruits, flowers, grasses and grains—"peas, beans and barley corns" without number.

This everlasting great American Nation, as Sam Slick says, like always to be in a stew about something. They are like a barrel of new cider; they can't remain quiet, but are bent upon and require excitement—fermentation—something to stir up their ideas and raise the steam, to go on a bust of speculation. It is not exactly gullability, it is self-moving, loco-motive genius—the rolling of the "almighty dollar," and the race after the chances of destiny to make it without work, that induces every man, woman and child to bite at the hook that is baited with any thing and every thing new, from Mormonism to Spiritual Rappings, and the most absurd manias become the most epidemical. The fever that now prevails from Eastport to Corpus Christi—the chicken fever—is only exceeded in intesity by the terrible infliction prevailing in the South.

What must be the inevitable result of this mania? One half of the population have run mad, to become chicken and hen nurses, and to pamper and bring up a race of gigantic, long-legged, big-boned, naked-breeched barbarians, without a single valuable qualification that I can see, except *size*, which in fact constitutes no value—unless a pound of their fat and muscle is made with less food, than the same weight of the common varieties, which is not claimed to be the case. They are no better layers, nor produce larger eggs, nor indeed near as large as the Dorkings, Malays and their crosses; their flesh is coarse and lacks flavor, and in my opinion, have no valuable quality except their music—that is exquisite—compounded of the creaking of the dry axle and the filing of a mill saw. Yet not long since, in your city, a pair of those fowls sold for a hundred and fifty dollars, and at various other places at enormous prices.

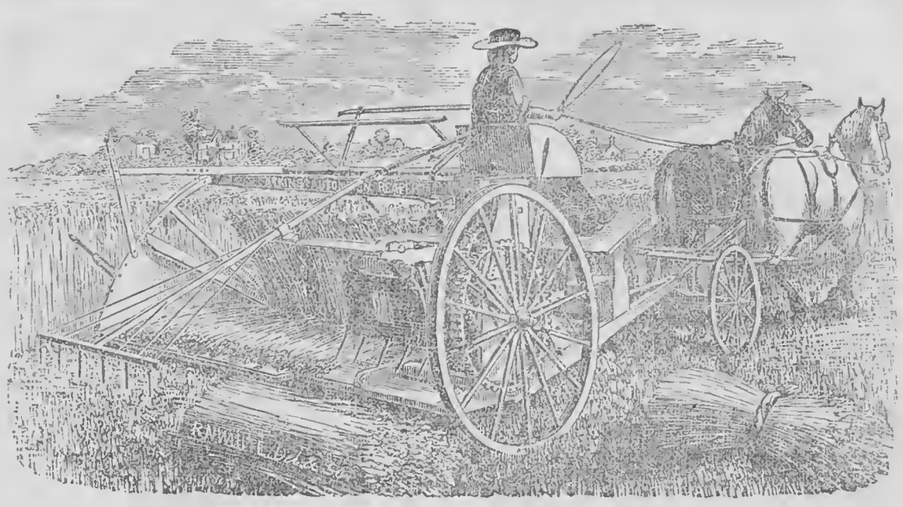
To keep up the excitement, Hen Conventions are as formally called, and as numerously attended, as the more important conventions of Hard and Soft-shelled politicians—the press is subsidised—editors themselves are idolizing at the shrines of Chittagong and Bramha Pootra, and prostituting their papers to keep up the steam; in fact there is hardly a print in the Union, but what has from one to a dozen puffing advertisements. Fortunes are made, and will be lost, in this rage after the marvelous humbug. It is estimated, that at least 200,000 chickens are now in the process of rearing in this county alone, from the pure *critter* to all imaginable crosses.

Is it not a pertinent question to ask what will be the result, even other than in a pecuniary point of view—in the improvement of our domestic poultry? The introduction of various breed of cattle, horses and swine, has very palpably improved the stock of the country—though few of the costly originals are admired or adopted generally, in their primitive varieties. None of the breeders of these exotic fowls talk of adopting these nondescripts for domestic use.—They are like Pindar's Razors, made to sell—to make money, while high-tide lasts—and if any one can afford, and chooses to fool away ten or one hundred dollars, perhaps it is as legitimate an operation as sending curling tongs to Guinea, or warming pans to the West Indies. Whose business is it?—their heirs and not mine; but I cannot help asking *cui bono?*

L. MANLY.

Chestnut Ridge, September, 1853.

REMARKS.—Though our correspondent tells considerable truth, in a forcible and pleasant manner, we cannot fully endorse his sweeping denunciation of the so-called improved varieties of fowls. Strong as it is, however, his article is to the point, and perhaps needed to check the fever which is so prevalent.—EDS.



ATKINS' AUTOMATON SELF-RAKING REAPER.

ATKINS' Self-Raking Reaper is one of the most ingenious contrivances of this inventive age. The above engraving probably gives as good a representation of it as can well be made upon paper, yet conveys only a partial idea of its construction or manner of operation. We saw it in operation at the N. Y. State Ag. Society's Trial of Implements, at Geneva, last year, and were much interested in its novelty and prospective value. Soon after the trial we stated, in this paper, that the machine "attracted more attention, from its novelty, than any other on the ground. It is the invention of Mr. JEARUM ATKINS, of Illinois, and was exhibited by J. S. WRIGHT, Esq., of the Prairie Farmer. It is certainly a most curious piece of mechanism, and though simple in operation, must be seen to be understood. The reaper cuts in the same manner as others, with the Hussey knife, and the rake draws the grain across the platform, and holds it against a sheet iron palm, which turns with the rake a quarter round, when the rake opens and the grain drops in the rear and out of the way of the team, when it again comes round. On the first trial, an accident prevented its successful operation, but on being repaired it worked admirably"—proving decidedly the most perfect self-reaper exhibited.

Since the Geneva trial the machine has, we believe, been farther perfected, and brought to general notice both in this country and England. It was exhibited in England last winter, and very naturally attracted attention as a superior invention—something ahead of ordinary "Yankee notions," clever as such usually appear. In speaking of it the London Times says:—"Some of our most eminent agriculturists regard it with great interest, and appear to entertain very favorable expectations of its performance. The mechanical arrangements by which the automaton power is secured are remarkable, both for their novelty and simplicity."

Those of readers interested, or wishing further information, are referred to the advertisement of Mr. WRIGHT, in this paper.

### BREEDING.—REPLY TO FARMER D.

WITHOUT desiring to enter into a controversy of any sort, it will perhaps be not only allowable, but for the benefit of your readers to notice some points in the article of "Farmer D." upon the subject of In-and-in Breeding. The ruinous effect of such intercourse in the human family is readily admitted, while your correspondent denies the production of the effect from the same cause in the intercourse of the brute creation. The effect in the human family is the reproduction of the bad points, defects and diseases to which both parties are subject, and the deterioration, and subsequent destruction of the race. Are there any facts in animal physiology which point to an exemption from the stern mandates of this law when applied to brutes? Have they not blood, bone and muscle? Are they not improved by careful breeding, and does not the experience of every herdsman and breeder, your correspondent included, bear testimony to the necessity of selecting the most perfect males, and pairing them with care and skill in order to improve the breed? Have not breeders for years been careful to mingle and cross different strains of blood in order to avoid the bad, and secure the good in both families. Was not the reason assigned for transferring HALTON, one of the most perfect of his race, from Canada to Madison Co. in this State, the fact that Mr. FERGUSSON could not longer breed from him without incurring the penalty of in-and-in breeding? Are not many of the sales and transfers of blooded animals made each year for the same reason?

Farmer D. reasons that if it had been necessary to restrict the intercourse of animals, some provision would have been made to effect that object, and as such provision has not been made, it will be an impeachment of the wisdom and intelligence of the Creator to assume the necessity of such restriction. The history of creation informs us that to man was assigned dominion over the beasts of the field. Is it an impeachment of the wisdom of the Creator to assume that with the conferring of dominion, was also conferred the power and *propriety* of restricting intercourse, that the race might be improved and perfected for man's use? Your correspondent assumes farther, that there are now upon the earth precisely the same kinds of animals and reptiles that were originally named by our first parent, Adam. Others have not so read the history of ages. The geologist assigns different eras and ages to creation, whose history is distinctly written upon the enduring rocks by the hand of God, and from whose unerring pages may be traced records of animals and reptiles unknown except from information thus obtained.

In support of the position which was assumed in the article upon native cattle, a position never before to our knowledge seriously questioned, it may be proper to introduce some well known and reputable witnesses. First we shall summon YOUATT, who holds language as follows:—"The breeding from close affinities—the breeding *in-and-in*—has many advantages, to a certain extent. It may be pursued until the excellent form and quality of the breed is developed and established. It was the source whence sprung the cattle and the sheep of Bakewell, and the superior cattle of Colling; and to it must also be traced the speedy degeneracy—the absolute disappearance of the new Leicester cattle, and, in the hands of many an agriculturist, the impairment of constitution, and decreased value of the new Leicester sheep and the short-horned beasts."

BLACKLOCK speaks of the practice of breeding in-and-in, as "destructive to flocks, as are marriages of near relations to the human family." Mr. DICKINSON characterizes it as a practice that produces tenderness of constitution, affects the form, renders the bones small and weak, makes the skin thin and weak, produces thin, short hair and engenders disease which not only deteriorates, but ultimately destroys the family. Others might be quoted, all to the same purpose, and those who favor the theory of Farmer D. concede that breeding in-and-in is a very nice matter, which can be trusted to few hands without producing unprofitable results.

MORRELL, in his excellent work on sheep, says to this vile system may be traced "so many worthless specimens of sheep, both in form and fleece, throughout the length and breadth of the land." It was a knowledge of the ruinous effects of such a practice, that gave rise to what is known as a system of crossing, from which has originated some of the best breeds of cattle, sheep, and horses known among breeders.

More, very much more of the same tenor might be added, but for fear the discussion may crowd out something more profitable, nothing further need be said at the present time.

H. C. W.

DROPSY IN SHEEP is induced by long exposure to cold and wet weather. Tapping is unsafe, unless performed by a skillful veterinary. The best plan is to bleed freely, and give two or three doses of Epsom salts. It is better, however, in general, to kill the sheep at once, as rarely a permanent cure can be effected.——*Morrell.*

### FARMIMG A HAPPY VOCATION.

The cultivation of the soil is one of the oldest, as it is one of the most necessary and honorable vocations in which man has ever been employed. In all civilized countries more persons are engaged in tilling the soil than in any other occupation—aye, probably more than in all other kinds of business which man's ingenuity has devised. Notwithstanding young men, as well as some of the seniors, have sought out and are continually seeking for some more easy and productive way of living than by cultivating the soil, yet farming is, nevertheless, the most healthful and delightful calling that man can choose for life. There are other employments which seem to be more inviting and productive than that of agriculture, but when tried it is found too often, alas, that what seemed so inviting proves to be little else than a delusion.

Read the lives of our own WASHINGTON, WRIGHT, CLAY and WEBSTER. Great and distinguished as they were in their day, when or where did they appear nobler or happier than when at home, conducting and superintending the affairs of their farms? What young man, with a well cultivated mind and a christian heart, would not rather, for his own happiness and peace of mind, be SILAS WRIGHT, the Farmer, than SILAS WRIGHT, the Governor?

Honor and fame whenever attained, and by whomsoever won, are costly adornments. How much more peaceful and happy is he who is contented to live well and exert a healthful moral influence within a narrow sphere, relatively, than he who covets world-wide reputation! Man seems to act as if he thought that his future as well as his present enjoyment, depended upon being known as well as knowing. How many, alas, have made themselves miserable and wretched by seeking distinction, which, when attained, instead of revealing them great men has only resulted in making them great in that strange and coveted spell, a *name*. Their littleness, which never need have been known beyond their family circle, is rendered conspicuous by being elevated upon some slight pinnacle of fame.

True greatness, no less than true happiness, is found in the honest and faithful discharge of personal duty. Do this, and if you have superior powers of mind—such as are calculated to benefit the world—never fear that you will not be known. For, whether you shine with your own light, as doth the sun, or with reflected light, as doth the moon, your pathway in either case will be luminous and attractive to all whose deeds are not evil. Remember that no good deed of yours, no matter where or when it is performed, will ever go without its reward—while, on the other hand, no evil that you do can ever be erased.

It seems impossible for man to devise an occupation here in this state of probation, that has so many permanent and lasting charms as that of cultivating the earth. As has been truly said, "God made the country—man the town, or city." Where can the man whose mind has been disciplined and stored with useful knowledge, be so pleasantly located, for contemplation and meditation, and observation of God's works, as in the country? And where so congenially employed as upon the farm?—Here all that various and curious phenomenon of the atmosphere may be and is observed—the changes of the seasons—and what is more interesting than these to him who lives with his eyes and ears open, ever ready to communicate the mysteries of this nether world to man's inner and chief self? The creaking of the reptile, no less than the song of the bird or the shrilling of the insect, is music to his soul, far more inspiring than the screeching and bellowing of the fashionable concert-room of the town. Aye, says Nature's true disciple, one day in the open, sunny field is better than a thousand in the town.

If any body in God's universe has reason to be thankful and take courage, it is the intelligent farmer. Mark ye, the *intelligent* farmer—for ignorance is a rebel everywhere, and no rebel can be happy anywhere. Let him, then, that would live to be good and happy, and contented and useful, and enjoy this life and prepare for that which is to come, live in the country on a farm.—W.

### MONROE COUNTY AGRICULTURAL SOCIETY.

FARMERS OF MONROE:—Your attention is asked to the Annual Cattle Show and Fair of your County Society. The fair for the Western District will be held at Brockport, on Tuesday, Sept. 27, and for the Eastern District at Rush, Thursday, Sept. 29. Ample arrangements have been made and liberal premiums offered, so that nothing is wanting to ensure the best exhibitions ever held in the County, or in Western New York, but the active co-operation and assistance of every farmer in Old Monroe.

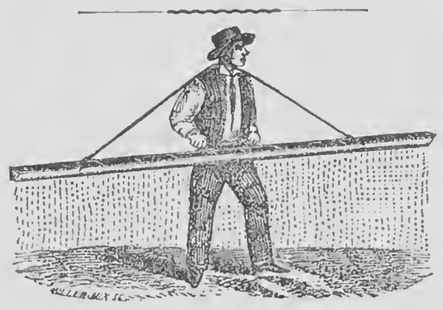
FARMERS OF MONROE, will you not come out to the exhibitions—each one bringing the choicest stock, implements, and productions from the farm, in order to compare them with the stock and crops of his neighbor? Resting from the labors of the farm, with the whole household, come out and spend two or three days in an annual Farmer's Jubilee, where, with grateful hearts you can confer with your neighbors and friends on the measure of success which, under Providence, has blessed your year's labor, and where, by a free and frank comparison of theory and practice, each one may add something new and useful to his former stock of knowledge, that will enable him to prosecute the labors of another year to better advantage and profit.

The premium list for the present year far exceeds any one heretofore offered, and is designed to embrace every thing valuable raised, grown or manufactured by the farmers, or their wives and daughters. The officers of the Society, while they are willing to spend their time and money to ensure a good and useful fair, feel that they have a strong claim upon every farmer in the county for aid and means to enable them to succeed in the enterprise which has for the present year been committed to their charge. If matters connected with the fairs have not heretofore been conducted in a manner that has met your approbation, we urge you for the present year to lend us your assistance and counsel, that we may be the better enabled to make the fair what it can and should be made. The assistance and contribution of *every one in the County* are necessary to make the fair creditable to the farmers of Monroe, and if it is not so made the fault will be all their own.

The Ladies of Monroe, are especially invited to render all needed assistance, as the fair would be wanting in an essential element of success if they should not be present. In this department the fairs at Brockport and Rush will present some inducements for them to contribute, though the large amount of premiums for which ladies are invited to compete are offered for the exhibition at the Court House in Rochester, which will take place Saturday, Oct. 1st.—The list of premiums for articles which the ladies may exhibit is larger than any heretofore offered, and is intended to comprise every article of household manufacture, in both useful and ornamental branches. Any deficiency will be provided for by special premiums. We trust the ladies from every town, and especially those resident of the city, will aid us with their contributions, and favor the Society with their presence. We assure them all no effort shall be spared to render the occasion pleasant and useful.

Mechanics and Manufacturers are earnestly invited to present their articles at the exhibition. The premiums in this department are large and valuable, well worthy their competition. [For Premium List and Regulations, see pamphlet and bills issued by the Society.]

ONE OF THE OFFICERS.



### PATENT TIMOTHY AND CLOVER SOWER.

This is a very desirable and ingenious hand implement for sowing Clover and Timothy seed. It is a simple hopper with a zinc bottom perforated with holes at equal distances. The seed is distributed by a notched rod, which is vibrated by means of a lever attached to the top of the hopper. It sows the seed accurately, and is so arranged as to sow any desired quantity from 2 to 16 quarts per acre. It is a very neat and valuable contrivance for the easy, rapid and perfect performance of a labor which is otherwise very difficult. The engraving represents the manner in which it is operated. It is manufactured and sold by E. D. HALLOCK, of this city. Price, $5.

SALE OF CATTLE AT AUCTION.—In the vicinity of large cities, it is always necessary to dispose of more or less stock in the fall of the year, as it is inexpedient for their owners to keep them over winter.—Several gentlemen near New York, having stock which they wish thus to dispose of, have arranged with Col. Jas. M. Miller, the well known cattle auctioneer, to sell the animals at public auction. The sale will take place on the farm of Mr. James Bathgate, at Morrisania, on the 27th inst. It was first appointed for the 20th, but postponed on account of the New York State Fair.—Many of the animals will be of choice breeds, and those who are in want may find it a good opportunity to purchase.—*Boston Cultivator.*

### BLOOD CATTLE.—PEDIGREES, &c.

EDS. RUEAL:—A few days since, at some expense of time and money, I attended a sale, advertised as a "Sale of Thoroughbred Cattle," &c. Judge of my surprise, when I found, instead of *thirty* or more head of thorough-bred, but *one* animal which was clearly shown as such. Now I would not be understood as imputing to the owner any unworthy design,—far from it; but the impression among many who had come from distant parts of this and other States, was that, through *sheer ignorance* of pedigree, or what constitutes a thorough-bred animal, the advertisement of this sale was an imposition upon the public.

For the purpose of informing such as do not understand this matter of pedigree, allow me to explain that a full blood, pure bred, or thorough-bred animal—there is no shade of difference of meaning in these terms—is one that has been bred, through both sire and dam, from one distinct breed, and this to be shown by well authenticated history of their descent from well known breeders, or from pedigrees recorded in the various Herd Books.

I give you a specimen of a pedigree which would not show a thorough-bred, the owners' faith in their thorough breeding, to the contrary notwithstanding:—"Lady," a cow, got by Snap, (thorough-bred,) dam by Dragon, (thorough-bred,) grand-dam, from John Smith's stock; Smith's cattle *unknown* as a thorough-bred stock. Again:—"Growler," got by A, (Short-horn,) dam by B, (Devon,) and, although tracing back of this to the best of cattle, would be, *not thoroughbred* but *cross-bred*. P.

### FRENCH AND SPANISH SHEEP.

FRIEND MOORE:—The article in the RURAL of Sept. 3d, headed, "Is a Cross of the French an improvement on the Spanish Merino?" by G. W. NORTON, I deem worthy of notice. He says—"By this table it will be seen that the French lambs have not only larger carcasses than the Spanish, but that they yield a larger percentage of wool according to the weight of carcass." Now this is all right, as far as it goes; but in order to make the matter plain, he should have gone farther and stated that the Spanish gave the greatest amount in dollars and cents, in proportion to their weight, which is the case according to his figures, and turns the scale in their favor.

I have no prejudice against the French or any other breed of Merino sheep, but like to see FAIR PLAY.

Victor, N. Y., Sept. 5, 1853.

BONES.—Have these carefully saved.—Keep an old barrel beside your ash house, and whenever you find a bone, throw it in. It is wonderful how they accumulate. If you want to dissolve them, make a pile of bones and fresh ashes; wet moderately, and leave it for a month or so. In every two hundred lbs. of bones there is enough animal matter, phosphate of lime, and salts to grow an acre of wheat; and, we know not how many barrels of apples. When you plant a fruit tree, give it plenty of bones at the root.

### AGRICULTURAL PRODUCTS OF THE EMPIRE STATE.

THE Tribune gives, in advance of their official publication, the statistics of agricultural products in this State, as furnished by the Census of 1850. In these tables the capital invested in farms and the products which the soil yields to the industry of its tillers, are given separately for each county. The following are the statistics:

The richest of all the counties appears to be Dutchess, whose farms are valued above $25 000,000, and the poorest, Hamilton, which is set down at $220,000. The first county in horses is Jefferson, which has 15,400, and the first in asses and mules, Suffolk, having 214. Orange, on the other hand, takes the lead in working oxen, her number being 12,000, or double that of any other county; while in milch cows all are excelled by Oneida, which has 48,000, or 13,000 more than even Herkimer. The first county in sheep is Steuben, having 156,000, while Dutchess is the chief in hogs, her pig pens containing near 50,000 individuals, or but a few thousand less than her human population. In value of live stock Oneida is first, her figure being $2,600,000.

Of wheat Monroe produces 1,450,000, Livingston 1,111,000, Ontario 929,000, Niagara 917,000, Orleans 854,000, Genesee 734,000, Steuben 653,000, Wayne 614,000, and Hamilton 223,000 bushels. Of rye Columbia is the greatest producer, her crop being 526,000 bushels; Dutchess comes next with 321,000, and Ulster next with 305,000. The great producer of Indian corn is Dutchess, 782,605; next Onondaga, which has 782,220 bushels; Monroe yields 767,000, Chatauque 704,000, Oneida 645,000, Wayne 660,000 and Washington 500,000. Taking these three grains together, Monroe is far ahead of all other counties—her produce in all 2,216,000 bushels; Hamilton produces but 6,415 bushels.

Dutchess raises 1,000,000 bushels of oats, and Columbia and Otsego exceed 900,000 bushels each. Onondaga is first in barley, with 440,000 bushels to 304,000 in Cayuga, and 295,000 in Madison. Albany raises more buckwheat than any other county, her yield being 219,000 bushels; next to her is Ulster, with 150,000. There is no very great difference in the number of bushels between the crops of buckwheat, barley and rye, taking the whole State together. The oat crop is about double that of wheat, and above 50 per cent. greater than that of maize. The number of bushels of potatoes (15,100,000) is two millions less than that of maize, and two millions more than that of wheat; this esculent is also produced in more equal proportions in the different counties, the largest crop (600,000 bushels) being in Rensselaer; in Albany, 2,222 bus. of sweet potatoes are returned.

The State produces 10,000,000 lbs. of wool, the largest share of which, or 669,000 lbs., we owe to Chautauque; and 940,900 of flax, of which Rensselaer has 268,000 lbs. and Washington 530,000, or more than half of the whole. However, we trust this will not long be so; this staple is destined to a more extensive cultivation. The hemp crop might as well have been omitted, the whole State having only four tons to boast of.

The value of orchard products is set down at $1,760,000 for the State, and this sum is much more equally distributed among the counties than we should have supposed. Oneida has $88,000, Wayne $83,000. Oswego $70,600, Westchester $67,500, Monroe $67,000, Onondaga $66,000, Washington $65,000, Queens $63,000, Cayuga $60,000, Rensselaer $56,000, Herkimer $47,000, and Erie $45,000. In market gardening, the lead is taken by Queens, which returns $309,000, and next to this New York, which we are astonished to find figuring in agricultural tables, but which raises of vegetables a crop worth $121,000. Kings is next on the list, her product being $88,000; Monroe also claims $85,000, and Albany $59,000—all depending on nearness to the markets of large cities.

In butter St. Lawrence stands peerless, producing nearly 28,000,000 lbs., or above a third of the whole product of the State; Oneida has 3,960,000 lbs., Orange 3,770,000 lbs., Delaware 3,780,000, Jefferson 3,580,000; five other counties exceed 2,000,000, and 25 exceed 1,000,000. Of cheese, Herkimer is the great producer, her amount being 9,948,000 lbs., to 5,218,000 in Oneida; 4,290,000 in Erie, and 4,160,000 in Jefferson.—Kings, New York, Richmond and Rockland produce no cheese.

The production of hay is quite equally distributed, Oneida taking the lead with 167,000 tons, to 132,000 in Jefferson, 124,000 in Chenango, 129,000 in Delaware, 126,000 in Chautauque, and 122,000 in St. Lawrence. In silk cocoons Chautauque takes the lead, producing 511 lbs. to 300 lbs. in Yates, and 200 lbs. in Chenango; the whole production in the State is 1,774 lbs. St. Lawrence is ahead in maple sugar, its yield being 1,236,000 lbs. to 788,000 in Cattaraugus and 787,000 in Chautauque. Beeswax and honey are equally distributed. In value of household manufactures St. Lawrence takes the lead, with $82,000, followed by Jefferson with $80,000, Steuben with $76,000 and Alleghany with $64,000. In value of animals slaughtered, of course New York is set before every other county, her return being $1,600,000; but we fear that if proper deduction were made for all the starved, heated, fevered, and otherwise diseased creatures, here converted into food for human beings, this sum would be reduced perhaps below that of some other counties where the people are fortunate enough to eat healthy and wholesome meat.

A GOOD CHEESE should contain all the butter of the milk as well as the curd; and in curing, the *butter should remain unchanged.*

### THE ROLLER AND ITS ADVANTAGES.

THERE is no agricultural implement so seldom met with in this country, perhaps, as the *roller*, and yet it is one of the most useful of utensils. Where your ground is soft and loamy, if you have not time to pick up the stones upon it, you can roll them in, and produce, at little expense, a smooth and clean surface, rendering your fields free from small hummocks, and fitting them for plowing and mowing. And it has been mentioned by some that the roller is a useful implement upon ground in which the frost has heaved out the grass and clover roots. It may possess an advantage in this respect, and no doubt would be a fine thing to level and press down damp land where clover is sown, and would be likely to heave.

The roller which I would recommend for general use, and one which we have used with great advantage, is made with two separate rollers, each one being four or four and a half feet in length, with strong iron bands around their ends to prevent splitting, and a good wooden or iron shaft running directly through them, to which is attached a frame work, &c. The rollers can be made out of large hollow elm logs, or of separate pieces put together. A good, straight, hollow log, is, however, preferable, particularly if the outside of it is sound.—You can work it down to your liking, and put strong cross arms in the ends of the roller, through the centres of which the shaft should run. Some farmers, I believe use iron rollers, but probably on the whole wooden ones are better, so they can be made large without incurring much expense.

The roller is an admirable implement to pass over barley ground after harrowing it, or even after you have drilled in the barley; for when the grain ripens, if you do not care to cradle it, or even if you do, you possess the advantage of cutting it low to the ground, and in this way secure a greater amount of straw, not to mention the clean surface which close mowing makes, thus leaving your barley lot in the finest condition to plow. We invariably roll our barley ground; we think it pays in three or four ways: first, the small stones are rolled into the ground out of the way, so that they will not dull scythes; second, you can rake up your barley with a horse rake, and not run the risk of collecting stones in the winrows to be ultimately threshed; third, you create a smooth surface, either for plowing or mowing; and fourth, you get more straw, and make your work look better where the field is rolled than where it is not.

I therefore recommend double rollers.—Roll down your grass and barley and wheat lands; save money and labor in picking up stones; and, in a word, make your lots appear smooth and handsome by using an implement which is both cheap and simple. —W. TAPPAN, *in Plough, Loom and Anvil.*

### HARVESTING BEANS.

As the grasshoppers in many sections are making destruction with some crops, it will be well to commence harvesting as soon as any product which they attack, will any how answer to come off. Beans will do very well to be harvested, as soon as they begin to harden a little, even while they are in the doughy state, if the leaves begin to put on a yellowish cast.

If pulled and laid by themselves a short time to wilt, they may then be stacked or "stooked" as it is called, and allowed to dry and ripen at their leisure.

The best way to do this has been found to be something like the following:—Drive one or two short stakes into the ground which shall be a foot high from the surface. These are to keep the leaves when placed upon them, so they shall not touch the ground; if they rest upon the ground they will be very likely to rot. On each side of these short stakes, drive one that shall be four or five feet high. The beans may then be packed loosely between these two high stakes, their tops to the centre and their roots outward. In this way they may be suffered to become dry, at which time they will be found to be fully ripened, and generally in a good condition.

Several other modes are adopted by which they can be ripened after being pulled.—Any of them will do well, provided they are kept from the ground, and not packed together in the large masses, so that the air cannot work somewhat freely through the heap or stook.—*Me. Farmer.*

### DON'T SELL YOUR BEST STOCK.

DON'T allow these speculators and drovers to pick out the likeliest and best of your stock, leaving you only the ordinary and the poorest to breed from. It is the worst policy you can adopt. By continuing such a course, it will be but a short time before you will have only ordinary and poor to select from. Supposing you can get a *little more* for those likely lambs than for the others, you will do well to remember that it costs no more to keep them than it does poor ones; and next shearing time the large fleeces will tell the story in favor of keeping the best you have.

If you intend to make a practice of raising a colt every year, keep the best mare you can afford. Haven't you noticed that when a man comes to purchase a young horse he is always particular to know all about the stock, &c., before he concludes his trade? Keep the best, then, for yourself.

Don't sell your best cow because you can get five dollars more for her. Keep her, and she will more than make up the difference ere another year comes around. Just so with everything. Select the best seed for your own use, and you will always have as good as any one, and be sure of the highest prices for any you may wish to dispose of. Think of it.—*Me. Farmer.*

### SALE OF EARL DUCIE'S SHORT-HORNS.

Col. Johnson, Secretary of the State Ag. Society, furnishes the following extract of the sales of this celebrated herd, received by him from H. Strafford, Esq., the auctioneer. We give the highest priced animals, by which it will be seen that Col. Morris, President of the N. Y. State Ag. Society, and Mr. Becar, of New York, have become the purchasers of the celebrated Duchess Bull "Duke of Gloucester," at 650 guineas, and Duchess (Cow) 66th, for 700 guineas. Mr. Jonathan Thorne, of Dutchess county, bought Duchess 59th for 359 guineas. It will be recollected that these animals were descended from the celebrated herd of the late Thomas Bates, whose Duchess animals sold at very high prices; and the best were purchased by Earl Ducie:

*Extract of Sales.*—"Duchess 66, rich roan, calved Oct. 25th, 1850, got by 4th Duke of York, (10,167,) 700 guineas. There was great competition for this beautiful animal, which was ultimately knocked down to Col. Morris, President of the N. Y. State Ag. Society.

Duchess 59th, roan, calved Nov. 21, 1847, got by 2d Duke of Oxford, (9,046,) 350 guineas.—Jonathan Thorne, U. S.

Oxford 6th, red, calved Nov. 6, 1846, got by 2d Duke of Northumberland, (3,646,) 205 guineas. Mr. Tanqueray, London.

Duchess 64th, red, calved Aug. 10, 1849, by 2d Duke of Oxford, 600 guineas. Mr. Thomas, New York.

Oxford 11th, red roan, by 4th Duke of York, 250 guineas. Mr. Tanqueray.

Mystery, red, three years old, by Usurer, 200 guineas. Mr. Tanqueray.

Oxford 15th, red, one year old, by 4th Duke of York, 200 guineas. Lord Burlington.

Duchess 68th, red, calved Sept., 1852, by Duke of Gloucester, 300 guineas. Jonathan Thorne, New York.

Duchess 69th, white, calved March, 1853, by 4th Duke of York, 400 guineas. Lord Spencer and the American party (Col. Morris and Mr. Becar,) competed strongly for this five months old calf, but it was knocked down ultimately to Mr. Tanqueray.

Oxford 16, red roan, calved May 17, 1853, by 4th Duke of York, 180 guineas, Mr. Tanqueray."

There were 49 cows and calves sold, which produced £6,867 giving an average of £140 2s. 10d. each—upwards of $680.

*Bulls.*—Duke of Glo'ster (11,382,) red, calved, Sept. 14, 1850, got by Grand Duke, (10,234,) dam Duchess 59. After some competition, this splendid animal, which is described as the most perfect of its kind, and combining the best blood in the kingdom, was knocked down to the American party for 650 guineas. We understand he has become the property of Mr. Tanqueray, Col. Morris, and Mr. Becar; and we have the best authority for saying that these gentleman, rather than lose him, were prepared to bid to the extent of 1,200 guineas to secure the purchase.

Fourth Duke of York, (10,167,) roan, calved Dec. 22, 1847, got by 2d Duke of Oxford, dam Duchess 51st. This was another noble animal, which, after spirited competition, was knocked down at 500 guineas to Mr. Bell, formerly bailiff to the late Mr. Bates, This bull was purchased at Mr. Bates' sale in 1850, by Earl Ducie, for 200 guineas—his lordship having given a commission to go up as high as 600 guineas.

Fifth Duke of Oxford, sold for 300 guineas—a calf five months old.

Francisco, calf, five months, 150 guineas.

Thirteen bulls and bull calves brought £2,494 16s., being an average of £191 18s. each—$926.

### NEW KIND OF WOOL.

The French scientific world is making a great stir now about pine wool, or forest wool, as it is called. This is something new in France, altho' it has been known for many years in Germany.—A Mr. Pennevitz, of Breslau, first discovered that the aciculary leaves of pines, firs, and coniferous trees generally, are composed of fibres extremely fine and strong, which are surrounded and kept together by a resinous substance. Mr. Pennevitz was not long in seeing all the utility that this discovery might be to the industrial world and he invented a chemical proceeding by which the fine thread-like substances contained in the long, narrow leaves of the pine can be drawn out. He called it forest wool, because it curled and could be carded like ordinary wool. When, by decoction, and by the employment of certain re-actives well known in chemistry, the resinous substance has been dissolved, it is easy to separate the fibres from each other, to wash them and clean them perfectly. The first use which was made of forest wool was to substitute it for cotton and ordinary wool in bed clothes. A few years ago the hospital of Vienna bought five hundred of these covers, and after long use and trial, it has just renewed the provision.

What makes the wool invaluable for beds is that no kind of insect ever approaches a bedstead thus furnished, and although the aromatic odor of the wool is strong enough to frighten away insects, it is said to be very pleasant and healthy to persons occupying the beds. It costs much less than hair, and is much better in every way for stuffing furniture. It can also be spun and woven; the fine threads resembling flax, and being also quite as strong. Woven like cloth, it can be used for rugs, housings for horses, &c. The membraneous substance which remains after the washing and filtering, can be dried and made into bricks, which are excellent for fuel, and which produces a gas that can be used for lamps, and which gives a very brilliant and soft light. The water in which the leaves are washed is admirable for baths, and can be bottled and sent to any distance. —*Foreign Paper.*

Are your yards supplied with proper conveniences for watering stock?

# Orchard and Garden.

### A CHAPTER ON SHADE TREES.

Travelers passing through our western villages, and in fact through all the new and thriving towns throughout the country, remark the prevailing tase of setting out shade trees, and the great benefit and improvement it confers on the streets and the appearance of the towns.

There is no one simple act, that tells so palpably in favor of the taste, civilization and refinement of a population, as the cultivation of shade trees and shubbery; but in all the towns we have visited, great mistakes are committed in the choice of varieties. The Rock or Hard Maple, Elm, Bass or Linden, and Horse Chesnut, are about the only trees that should be tolerated.—The White or Soft Maple compose nine-tenths of all maples in our streets, and they are in our opinion very far from being handsome or desirabl trees. Early blossoming in the spring is the only saving qualification they possess. The shape of the top is bad, being loose and desultory, the leaves are small, thin and lack lustre, and the foliage changes early and drops with the first frost; while the Hard Maple keeps green and beautiful, its top is conical and close, and has no tendency to spindle up.

The Locust is a beautiful tree, but grows straggling and makes no top, is tender and liable to split and break with winds, late in leafing out and early in shedding its leaves, and moreover subject to be ruined by the borer, for which there is no defence.

The Buttonwood, Willow, Abele, or Silver Leaf Poplar, have great and fatal faults for street shade, the most prominent one their great and pernicious growth—a dozen or twenty years making great forest trees fit for saw logs, too high and too spreading altogether for beauty or comfort. Their far-reaching and searching roots disturb drains, cellars, walls and cisterns, throwing down an immensity of leaves; becoming a nuisance rather than an embellishment.—The Ailanthus or Tree of Heaven is a misnomer and decidedly, as a shade tree, belongs to that other place not to be named to ears polite. No kind of fruit or nut bearing tree can be tolerated for shade trees.

The climax of a beautiful tree, consists in a close, conical top, without a spindle or center, the limbs gracefully curving upward, with a glossy, heavy leaf,—early to put forth in the spring, and holding on the green to the latest period of vegetable vitality in the fall months.

The Evergreens, as the Balsam, Spruce, Scotch and Norway Firs, are exceedingly desirable, but from their slow growth, requiring great care and protection, are better adapted to yards and enclosures.

Individuals who build or buy tenements, that they intend to live and die in, should manage the operation of procuring shade trees better than to procure them from the itinerant pedlars of so important an item of beauty and comfort, that are to endure for generations, either as an embellishment or an eye sore to themselves or the public.

More than one half of the trees set out upon our streets, die the first year from faulty and bad management. They are badly taken up by being despoiled of their roots and set too deep to keep them firm, and then the tops are cut down to bare poles, having neither the ability nor vitality sufficient to elaborate dormant buds to raise the sap, and the tree dies.

To avoid all of those troubles, the trees intended for use should be selected early in the spring, the tops sawed off to the naked body, or a few stumps of limbs left, and allowed to make one year's growth in their native places; by which process they put forth a strong, bushy top, of a reduced quantity of limbs, and will endure a shortening of the roots and never fail to grow beautiful trees.

All the fine and desirable shade trees are rather slow growers, and it might be tolerated to set out between each, one of the quick race, horse breed, to be cut away when the others have attained a respectable size.

Perhaps we are a little sensitive on this subject, but it is the result of our experience, and fire cant burn it out of us, unless it is made of better material than Buttonwood, Willow or the Tree of Heaven.

North Western Fruit Growers' Association.—This Society, organized for the promotion of improvement in fruits, will hold their third annual meeting on the first Tuesday of October, at Chicago, when it is expected there will be a large number present, and one of the finest shows of fruit ever made in the west. Dr. John A. Kennicott, of West Northfield, near Chicago, is President, and Samuel Edwards, of Lamoile, Ill., and F. K. Phœnix of Delevan, Wisconsin, are Secretaries; either of whom may be addressed at home previous to the meeting, and at Chicago at the time, upon business connected with the Society.

### REMEDY FOR THE CURCULIO.

At the meeting of the Horticultural Society of Cincinnati, held in July last, the Committee on the Curculio, appointed at a previous meeting, made the following report:

*To the President and Members of the Cincinnati Horticultural Society:*

Your Committee, as instructed, visited Mr. Considine's place, and were highly gratified at the fair display of fruit on his plum trees, many of them literally bending under their enormous loads. Mr. Considine explained to the Committee and the other gentlemen present the plan he had pursued to produce such a satisfactory result on trees which had never before perfected fruit. At the recommendation of Mr. M. Kelly, he had mixed six lbs. flour of sulphur, one half bushel quick lime, in one barrel water; this he threw over part of his trees with a garden syringe, after the fruit had set in the spring, at two or three different times only. It is to this cause he attributes the protection of his fruit from the ravages of the Curculio.

Mr. C.'s trees are mostly large, probably ten to fifteen years old; and he assured the Committee that he had never been enabled to save any fruit before the application of the above remedy—though, for many years past, his trees had bloomed and set fruit fully as well as this year, but all had fallen a prey to this little insect. It was really a charming sight to see so many trees so crowded with fruit, without the least evidence of the existence of such an insect as the Curculio.

After having examined these trees, Mr. C. took us to the other trees, to which this remedy had not been applied. On them but little fruit was found, it having mostly dropped off. Mr. C. states that they were equally as full set in the spring as the others, and he deemed that the circumstances surrounding them as to soil, &c., were about equal. The difference in the quantity of fruit was certainly remarkable, and induces the Committee to recommend to plum growers the application of this cheap, simple, and safe compound, next year, in order fully to test its merits. Should it prove successful, there is no calculating its immense value to the cultivator in adding this delicious fruit to the luxury of our desert.

### HOW WE MISSED IT.

Having determined during the heat of last summer on a strawberry bed, "made right," during the latter part of July or early in August, we selected a bed in the garden; and in spite of hot weather, weak limbs, shaky nerves, uncertain muscles, and despite the fear of dysentery and Asiatic cholera at work just over the street, we proceeded with great labor to dig it to the full depth of two spades length, depositing in the bottom of each excavation a plentiful supply of the best of manure. After smoothing and raking down the bed, it was in first rate order for the reception of Burr's New Pines with which it was carefully set. Now for the strawberries! What a thickening up of vines, and what a burdon of fruit there will be with the coming season. Yesterday, July 21, we counted the plants on the ground, perhaps a rod and a half square, and they amounted to just twelve! What was the matter? Precisely this: the soil being thrown up and pulverized in the July sun, and the autumn being somewhat dry, it was baked through and through, till there was no life or power of production in it; and though mulched in the fall with two inches of tan bark, it has just recovered its productive energies—a whole year being lost in the operation. From which we get the following moral. That our autumns, or summers, especially, are but poor seasons for the making of strawberry beds. They are so apt to be dry and the sun is so powerful that it is only exceptional that success can be reached. Next, that there is such a thing as over culture at the warm season. Lands are not benefited but greatly injured by being turned up naked to the summer heats, especially in dry seasons.—*Prairie Farmer.*

### A NEW MELON.

We had the pleasure lately of receiving a letter from C. A. Peabody, Esq., editor of the Soil of the South. Among other things he says,—"Enclosed please find some of the *Orange* Water Melon seed, a very singular, beautiful and excellent melon. By cutting into the rind, as you peel an orange, the entire skin peels off, leaving the whole pulp unbroken, which, with care, may be divided into quarters, just as you divide an orange. They are ornamental on the table, and a first-rate melon."

In regard to his strawberry he says,—"After a long and burning drouth my strawberries are again in bloom and fruit. I shall carry a sample of them to the Crystal Palace, loaded with fruit, to convince the northern skeptics that strawberries at the south do produce fruit for six months in the year."—*Southern Planter.*

A Grand Peach Orchard.—Mr. Bateham, of the Ohio Cultivator, has recently had an opportunity of examining a peach orchard set out six years ago by a Mr. Davis, of Milford, Clermont Co., Ohio. Mr. Batoham says it is the finest fruit he ever saw. One hundred acres of ground are covered with ten thousand peach trees. In 1850, they averaged one basket, or three-quarters of a bushel per tree, which brought him *ten thousand dollars.* This paid for his land and trees, and something to spare. Last year there was no fruit. This year they will average three baskets to a tree. They readily sell for from $1,25 to $1,50 per basket. The crop of this season will bring him $30,000, with a net profit of $25,000.

# Mechanic Arts, &c.

### IMPROVEMENTS AT THE CAPITOL.

The labors of Major B. B. French, the new commissioner of Public Buildings, are well employed in the improvements he is making at the Capitol. The whole work now in progress there (except the extension of the two houses of Congress) is under the superintendence of Major French, and he is acquitting himself admirably.

On the exterior the new group of statuary by Greenough, representing the "Triumph of Civilization," is being placed on the north base of the great staircase, on the east front. The group is composed of several pieces of art, embracing the civilized man, the savage, a woman with her son in her arms, and a trained dog, all to be placed upon a pedestal, consisting of an irregular mass of rock, and adjusted in accordance with the original idea of the illustrious American artist.

In the interior the building has been renovated beautifully from the base to the summit. The two rotundas of the Senate and House have been elegantly painted.—The frescoing of the Hall of Representatives is a great improvement; and when the curtains and carpets are arranged, the room will present a splendid appearance.

The large paintings have been much improved by the cleaning of the frames and the application of varnish to the canvass.—Should the great painting of the Discovery of the Mississippi, by De Soto, arrive in time to complete the series of pictures, the chief rotunda will be beautiful and grand indeed. It is stated that this painting is already on its way. We ardently hope it may arrive and be put up before the commencement of the next session of Congress.

But the great feature of these improvements is the new hall of the Congressional Library. This hall is now composed entirely of iron, having two galleries and three rows of alcoves surrounding the room.—The painting, gilding, carpeting and furnishing are truly elegant; the whole constituting a public library hall without its equal in the world. The room will be opened to visitors during the day; and we can assure all our readers who may be present on that occasion that they cannot fail to be much pleased.—*Washington Union.*

### GREAT TELEGRAPH CABLE.

We learn by the "Paducah (Ky.) Penant," that a great telegraph cable was laid across the Ohio River at that place, on the 26th ult., by Tal. B. Shaffner, Secretary of the American Telegraph Confederation, assisted by J. B. Sleeth, Mechanical Engineer. It is composed of a large wire, covered with three coatings of gutta percha, making a cord of about 5-8 of an inch in diameter.

To protect this from wear, and for security of insulation, there are three coverings of strong Osnaburg, saturated with an elastic composition of gutta percha, and around this are eighteen large iron wires, drawn as tight as the wire will bear, and the whole is then spirally lashed together with another large wire passing around at every 3-4 of an inch. The whole forms a cable of near two inches in diameter.

This wire conducts the electric current beneath the bed of the Ohio for a distance of 4,200 feet, and is said to be the longest telegraph cable in the Union. The company was much troubled before on account of unsuccessful efforts to cross the river with the wire, and secure it against accident. It is believed that this cable will effect a great saving to the company, and at the same time obviate much trouble.

Papier Mache Houses.—We have long been acquainted with wooden houses, brick houses, stone houses, and more recently iron houses have come in fashion. But who ever dreamed of paper houses. We have also heard of people living in glass houses—but now it seems papier mache houses are to have a run. We give the following from the Living Age:

Messrs. Bielefelt have commenced the manufacture of papier mache houses. The frame-work, the flooring and the doors are of wood; but the rest is constructed of paper. A number of cottages, stores and villas have been erected at Messrs. Bielefeld's works at Staines; and a gentleman had purchased them as an investment for Australia, whither he is going. These buildings can be readily taken down, and re-erected in a few hours. They have hollow walls so that damp is excluded and tropical insects will not attack the paper, from the poisonous ingredients it contains.

The Ericsson.—In reply to numerous inquiries in relation to the Caloric ship, we will state generally that our faith in Ericsson's entire success is still undiminished.—Between this and the first of the coming month, we think a practical answer will be given to all skeptics by the ship herself, that will put the Caloric motor question forever at rest. And, by the way, we are happy to see that the editor of the Mechanic's Magazine has completely backed down, withdrawing all his former objections to the Ericsson invention.—*N. Y. Mirror.*

Improved Smut Machine.—G. B. Turner, of Cuyahoga Falls, Ohio, has taken measures to secure a patent for an improvement in smut machines, the nature of which improvement consists in a peculiar arrangement of scouring plates, screens, and a blast spout, in such a manner as to scour and cleanse grain in a more perfect manner. None of the parts separate are new, but the arrangement of them is a superior one.

Cheap Paint.—For the outside of dwellings, fences and outhouses, where economy and durability are considerations:

Take a barrel, and put in it a bushel of quick lime; slack the latter by pouring over it boiling water—covering the lime four inches deep, and stirring it till slacked; dissolve two pounds of sulphate of zinc (white vitriol,) in water, which must be added to the whitewash. This will harden the lime when it is applied to the wood, leaving a firm, white, crystalized surface, not easily removed by the weather or friction. To make the wash a cream color, add four pounds of yellow ochre; for a fawn, four pounds umber and one pound lampblabk; stone color, one pound umber and two pounds lampblack.

# Domestic Economy.

### COOKING FISH

Some one gives the following very reasonable directions for cooking fish. To a part of them we can subscribe from having had experience thereto relating. The particular varieties of fish may not be common, but the classes to which they belong, include all eatible fish among us. Fish must be put into cold or boiling water, according to its firmness of flesh; for instance, turbot, salmon, mackerel, &c., should be put into cold water; while plaice, whittlings, haddocks, and such soft-fleshed as well as crimped fish, should be put into boiling water. The reason is obvious; by putting flaccid and watery fish into the water cold, it is rendered still more soft and watery; but the boiling water sets it and renders it firmer; on the other hand, the cold water penetrates and softens the fish that is of firmer texture and makes it more tender and delicate.—Keep the water skimmed while the fish is boiling.

Fish is cooked enough when it leaves the bone easily. Be sure to wash and clean your fish well.

In frying fish, having washed it, dry it thoroughly in a clean cloth, then flour it well, or whisk it over with egg, and dip into bread crumbs before frying it. Be sure your pan is very clean, and that your fat (of which there should be enough to cover the fish) boils before you put the fish in.—Fry fish quickly, of a fine light brown.—Some like fish fried in batter—as good a batter as any is a little ale and flour beaten up just as you are ready for it—then dip the fish in before frying it. Put plenty of salt in the water in which you boil fish, and a stick of horse-radish, excepting mackerel, with which you boil salt, mint, parsley and fennel.—*Prairie Farmer.*

To Dress Cauliflowers.—Having picked it into small pieces, which is absolutely necessary in order to remove the slugs with which it abounds, wash it thoroughly in several waters, and let it lay to soak for full an hour before you dress it. Put it into a saucepan of boiling water, with a lump of salt, and when tender it will be done; let it drain in a collander, and serve it up with melted butter. Some persons may prefer to see them brought to the table whole, but they must then take the chance of being helped, along with the cauliflower, to some unsightly insect which would be sufficient to disgust the least delicate stomach; besides, if properly boiled, and laid carefully in the dish, the pretty appearance of the vegetable is by no means destroyed by its having been divided.

Grape Tarts.—A lady, who speaks from experience, sends us the following recipe—which, at this season will be found useful:

Take three or four clusters of fine, large, green grapes, and stew them with a very little water and some sugar, for twenty minutes, or till they are quite soft. The larger seeds will burst out, and can easily be taken off with a spoon, while the grapes are cooling. Make a crust of puff paste, with a rim and spread the stewed grapes on, as for any fruit tart. This, when baked, will be found a delicious pie.

To Bake Apples.—The person who has eaten baked sweet apples with milk, needs no commendation of the article. For this purpose Tallman Sweetings are best. But those who have tart apples only, may secure a delicious dish by the following process:—Pare them, if thick skinned; cut out the largest portion of the core from one end and place the fruit on well glazed earthen dishes or pans, with the cored end upwards, and the cavity filled with refined powdered sugar. Then bake them. All we ask is a trial.

Salt your Cabbage.—We printed some time ago this recommendation and do so again that it may not be forgotten, that in boiling a cabbage whole, if some common salt be put into the water, when washing cabbages or greens, preparatory to cooking them, the snails, bugs, worms, &c., will come out and sink to the bottom, so that they need not be boiled with the vegetables. It is impossible to wash out with water alone, except the cabbage be taken to pieces —*Ger. Tel.*

Pineapple Jelly.—Pare and grate the pineapple, and put it into the preserving pan, with one pound of fine white sugar to every pound of fruit, stir it and boil it until it is well mixed, and thickens sufficiently; then strain it, pour it into the jars, and when it has become cool, cover the jellies with a paper wet in brandy; cover the jars tightly, and treat them as apple jelly.

Lemon Syrup that is commonly sold in the shops, and used in mineral water, is now made, it is stated, from sulphuric acid which can be purchased for sixpence a pound!

# Educational.

## EDUCATIONAL INSTITUTIONS IN THE U. S.

An article in the Westminster Review on this subject, notices in a very complimentary manner the institutions for education in this country, and recommends the adoption of similar methods of instruction in Great Britian, to prepare the masses for the change constantly going on in the transfer of political power to their hands. After noticing the energy and zeal for the diffusion of intelligence in the Eastern States, it speaks as follows of New York and the Western States:

While this remarkable activity is conspicuous in the Eastern States and New York, the new States of the West are not neglecting their duty. Congress has voted one thirty-sixth of all public lands for the support of education in them. In all the townships occupying areas of thirty-six square miles, laid out in exact squares—the sides facing the four cardinal points, and again subdivided into regular sections of one square mile—section No. 16, a central one, is termed the "School Section," and is allotted to the support of schools. Rude enough indeed are often the school-houses; improvised of logs, or provisionally occupying any house that can be procured, for the use of emigrants, frequently very poor and very ignorant, but anxious to be taught. "I began school on the 23d November with four scholars," writes a female teacher from Wisconsin; "the number soon increased to forty, between the age of six and twenty-two. The scholars are very backward." They have scarcely any books; four or five must use the same book. Then, too, "my schoolhouse is eighteen feet long, fourteen feet broad, and is built of logs, and cold, very cold." But our brave friend does not despond. "Next winter," she says, hopefully, "we shall have a well-constructed building for school and church." Meanwhile all is going on well. There is a zeal for learning among the poor, ill-clad children that come to her. "Two girls of the age of twelve and fourteen have come a distance of a mile and a half through the snow, with no other covering than a little shawl not larger than a pocket handkerchief, the rest of the clothing being proportionably scant." No doubt this earnest, devoted school mistress will allure all the little ragged community to school. Nothing indeed is more curious than this missionary spirit of the American women in the cause of education. Besides volunteers, as many as forty or fifty young women under the auspices of the Ohio Board of Education, "collected from various parts of New England, assembled at Hartford in Connecticut, and after passing muster as duly qualified, and going through some little further training for five or six weeks, proceed, accompanied by one of the society's superintendents, to take charge of their western schools. The wags, of course, say they go to get married; but though some, neglectful of their high calling, may now and then fall at once into matrimony, the great majority do good service as professional teachers, before in another form they continue their instruction as wives and mothers. We had ourselves, recently, direct evidence of the zeal for teaching which is widely diffused in the States. Paying a visit to Rock City,* in Cattaraugus County, in the State of New York, we stopped at a lone farm-house, as directed, to take a guide. A young man presented himself, who took us through the "city," and much surprised us by his intelligence and information, especially by his accurate knowledge of various statistical facts respecting England.—We found on inquiry that he had been and was a teacher. On returning to the farm-house he invited us to go in and rest; we there found a vigorous looking man of fifty, who some years ago had come into the forest, cleared a few hundred acres, and reared a family of ten children. All but two were there, verging from six to twenty years of age, and among them two pretty, well-mannered girls, busily engaged in household work. We soon discovered that they also had been out as teachers, the youngest as far as Wisconsin. They and our friend the guide had now returned to the homestead for the purpose of completing their own education in the highest branches of instruction, by attendance at the high or normal schools. On asking them to insert their names in a pocket-book, that we might forward them a book that they wished to see, we could not help smiling when we found that one had written down her name Belinda, the other Cleopatra. For these fine names, however, they were not responsible. Modest, sensible, and sincerely devoted to their calling, and as opportunities of acquirement admitted, well qualified for it, these young girls, like many hundreds of their countrywomen, will go forth to help to diffuse the blessings of sound education throughout the yet much neglected portion of their vast country. When will our farm-houses send forth such sisters of mercy as these?

* A remarkable denudation caused by some vast rush of waters, whereby an extensive formation of millstone grit has been laid bare to a depth of several feet, and broken into huge masses, the passages between which have been thought to bear a fantastic resemblance to streets, courts, and galleries. Hence it is is named Rock City.

## LEARNING TO SPELL.

Bad spelling is discreditable. Every young man should be master of his native tongue. He that will not learn to spell the language that is on his tongue, and before his eyes every hour, shows no great aptitude for the duties of an intelligent, observing man. Bad spelling is therefore an unavoidable indication. It indicates a blundering man—a man that cannot see with his eyes open. Accordingly we have known the application of more than one young man, made with great display of penmanship, and parade of references, rejected for his bad spelling.

Bad spelling is very conspicuous, a bad indication. He who runs may read it. A bright school-boy, utterly incapable of appreciating your stories of science, art, and literature, can see your bad spelling at a glance, and crow over it. You will find it hard to inspire that boy with any greater respect for your attainments. Bad spelling is therefore a very mortifying and inconvenient defect. We have known men who occupied prominent positions so ashamed of their deficiency in this respect, that they never ventured to send a letter till it had been revised by a friend. This was, to say no more, sufficiently inconvenient.

We say again, learn to spell, young man. Keep your eyes open when you read, and if any word is spelled different from your mode, ascertain which is right. Keep your dictionary by you, and in writing, whenever you have the least misgiving about the spelling of a word look it out at once; and remember it. Do not let your laziness get the better of you.

Learning will accumulate wonderfully if you add a little every day. Do not wait for a long period of leisure. Pick up the book and gain one new idea, if no more. Save that one, and add another as soon as you can.

# Scientific.

## CONCERNING COMETS.

The coment which is now visible in the heavens, is fast disappearing from the view in the northern hemisphere, its motion being retrograde to the earth's orbit. Its nucleus appears like a star of the second or third magnitude, with a luminous appendage some fifty or sixty times its diameter in length.

Nothing is known of the composition or design of this singular appearance, but it is supposed to be a condensation of atomic matter, commencing its career of forming a solid body—the incipient formation of a globe—a world, obeying the laws that govern all matter—attracting and agglutinating atomic particles from some region through which it passes; a strata of space situate equi-distant between the attractive forces of two or more systems—ours being one—returning after a voyage of hundreds or thousands of years to the great furnace, the sun, for consolidation.

Space is supposed to be perfect darkness, possessing no fixed matter to reflect or refract light—a perfect aerial vacuum and intensely cold, and may be filled or composed of simple uncompound elements that form this globe and all its concomitants, of which we know nothing.

The single atomic gaseous particles of matter, may remain in equilibrium for millions of years, too infinite to obey the laws of attraction or repulsion, till some adventitious circumstance may cause two or more to impinge and adhere, when the double attraction will attract others, and so on, till a mass shall secrete subject to the laws that govern all matter—motion commences and an orbit is formed of great eccentricity.—At each periodic return it becomes more and more condensed, and more obedient to the central power, receding less and less at every periodic revolution, and becoming less of an eclipse and more of a circle, until in the millions of years of time, it is fitted to become a new world, or the agent to destroy the old dilapidated ones, or take the place of those which will inevitably fall into the great attractive power, the sun.

This hypothesis is deducted from the self-existant laws of nature, that govern all matter, and not from the rigid facts of observation; for the infintessimal period since man's advent, compared with the eternity of the beginning, has not permitted an accumulated series of observations upon these rare and itinerant strangers.

That space is a vacuum—a region of non-resistance—is argued from a variety of facts, and none more cogent than the stability of our own atmosphere, which becomes more rare the further it recedes from the earth, and at about 45 miles it is beyond conception ethereal and rare, and yet passing thro' space, at a velocity of thousands of miles per minute, it is not disturbed in the slightest degree—it has never lost one particle in weight or hight.

The tails of some comets are millions of miles in length, composed apparently of the same materials that surround the nucleus, or even the nucleus itself, through which the fixed stars are sometimes visible. They are by some philosophers thought to be the sun's rays refracted from the body, by others to be atomic matter drawn after it by attraction—the same matter that forms the nebulæ and star dust, visible in various parts of the heavens, by the new and powerful glasses lately introduced.

These are all speculations, the truth of which we one day may know—*Deo volente.*

## WISCONSIN.—No. II.

*Vegetable, Animal, Mineral, and Forest Productions—Climate.*

The Vegetable productions of Wisconsin are wheat, corn, ryo, oats, barley, peas, beans, potatoes, flax, hops, tobacco, grass seed, buckwheat, hay and the products of the garden and orchard. According to the Census of 1850, this State yielded 4,286,131 bushels of wheat; 1,988,979, of corn; 81,253 of rye; 209,602 of barley; and 3,414,672 of oats. The crop of wheat and some other grains was that year a comparative failure. This year the yield of wheat—which was never better—must be an immense deal larger. The State is now yielding a million and a half bushels of potatoes annually, among which crop are a thousand bushels of the sweet kind. Upwards of a hundred thousand pounds of flax, and six thousand pounds of the seed, are raised.—The annual value of orchard products is now about ten thousand dollars, and is on the rapid increase; of garden products, for the market, thirty-five thousand.

The Animal productions are horses, horned cattle, swine, sheep, butter, cheese, domestic fowls, and eggs. The value of live stock three years ago, was estimated at $4,879,385; and of animals slaughtered, $920,178. These figures may seem small when compared with similar ones in the Empire State, but the day is not remote, when they will be quadrupled, and in fact rise above those of any of the Middle or New England States. Nearly four million pounds of butter are made here annually, yet not one-fourth part of the grazing capacities of the State are brought into use.

The Mineral productions are lead, iron and copper. Of the first article the yield is between forty and fifty million pounds annually. The amount shipped from Galena alone, in 1852, was forty millions, and nine-tenths of it was probably produced in Wisconsin. Iron, heretofore, has yielded only five or six thousand tons, but the figures will, from this date, be much larger.—An article of an excellent quality has just been discovered in Dodge county. It is said to be equal to the Lake Superior iron, and as soon as the necessary materials an fixtures for manufacturing it, can be placed upon the grounds, the work will be commenced. The copper mines are attracting more and more the attention of capitalists, and the mining business in that department will no doubt soon become highly remunerative.

The productions of the Forest are immense, and just beginning to find a market. The Indians have recently vacated some of the best river valley in the northern part of the State, and these valleys in some parts are heavily timbered. The forest yield of the State in 1850 was, in feet of sawn lumber, (pine,) 150,000,000; cubic feet of timber, 20,000,000; number of staves, 100,000,000; thousand shingles, 30,000; pounds of maple sugar, 610,976: also of wax and honey, cranberries, and a few other small items. Aside from the immense amount of pine lumber, oak scantling and plank and basswood siding and lath are manufactured in vast quantities. Wherever I have traveled in the State among oak and basswood timber, there is heard the clatter of the saw mill, driven either by steam or natural hydraulic power.

Wisconsin is unusually healthy for a young State. The atmosphere is pure; the summers are not excessively hot; the air is dry during the winter; copious springs are numerous; the large streams are full of clear water; and every thing tends to make the climate salubrious. In the middle of the present summer, I have traveled hundreds of miles in different parts of the State, and have found no unhealthy village—no prevailing epidemic. On this subject I believe the following remarks of Mr. Lapham, author of a work on the Georgraphy and Geology of the State, to be correct:—"Many of our most flourishing towns and settlements are in the immediate vicinity of large swamps and partially overflown meadows, yet no injurious effects upon the general health, are produced. It has usually been found, in making new settlements in the western wilderness, that, as the forests are cleared away, and the surface is thereby exposed to the direct influence of the sun and winds, a deleterious effect is produced on the general health, the decaying vegetable matter being thus suddenly made to send forth its malarious qualities. But in Wisconsin no such result is apprehended, or can be produced,—for a large proportion of the country consists of oak opening and prairie, and may therefore be considered as already cleared. The removal of the few remaining 'burr oaks' cannot have the same effect upon the soil as the cutting down of the dense forests of other States. And besides this, the fires that have annually raged over the surface, often kindled purposely by the Indians, on their hunting excursions, have prevented that rapid accumulation of vegetable matter which is always found in deep shady woods where the fires do not so often penetrate." J. Clement.

## PYRAMID IN THE AMERICAN DESERT.

One of the parties exploring a railroad route to the Pacific, has discovered in the vicinity of the Colorado, two hundred miles above its confluence with the Gila, a pyramid of which the following brief account is furnished in a letter to a California newspaper:

This pyramid differs, in some respects, from the Egyptian. It is, or was, more slender or pointed; and while those of Egypt are composed of steps or layers, receding as they rise, the American pyramid was, undoubtedly, a more finished structure. The outer surface of the blocks was evidently cut to an angle, that gave the structure, when new and complete, a smooth or regular surface from top to bottom.

From the present level of the sands that surround it there are fifty-two distinct layers of stone, that will average at least two feet; this gives its present height one hundred and four feet, so that before the top was displaced, it must have been, judging from an angle of its sides, at least twenty feet higher than at present. How far it extends beneath the surface of the sands, it is impossible to determine without great labor.
